Post-tonal rhythm has also been given attention from a compositional perspective, and to the extent that an analysis (and the music theory behind it) serves as an exegesis of compositional practice, the writings of contemporary composers are of interest. In extensions of serial technique duration, metre and so forth can either be yoked to the manipulations of the 12-note series itself, or themselves be subjected to analogous operations (see, for example, Krenek, F1960, and Babbitt, F1962–3). Outside a strictly serial context, rhythmic elements may be treated in the same way as pitch or pitch-class sets and arrays (e.g. Morris, 1987). In all these approaches essential isomorphisms between pitch and time are assumed to be present. For example, in her discussion of rhythmic contours Marvin (F1991), drawing on Morris (F1987), speaks of durational segments in 'duration space' which may be retrograded and/or inverted and compared in terms of various equivalence classes.

While such approaches to rhythmic structures may be useful as compositional techniques, their analytical application is not without its difficulties. First, if a mode of analysis proceeds in a pitch-to-rhythm fashion, then the determinative pitch structures must be apparent before rhythmic or metric parsing can begin. However, given that serial or set structures are not always (or even usually) aurally transparent, even to listeners with absolute pitch, their structural import would seem to emerge only through an analysis that takes scores, row matrices or set-type lists, and/or compositional sketches as a prerequisite. Even if row segments or unordered pitch-class sets are aurally discernible, they must also be distinctive enough to mark segment boundaries. Thus, for example, if the opening intervals of a given segment are common to a large variety of unordered pitch-class sets, then they will only weakly indicate the boundary between rhythmic segments, if at all. Investigations of rhythmic and metric discrimination in atonal contexts have found pitch cues to be of minimal salience (e.g. Clarke and Krumhansl, I1989–90). Another question concerns what features of a set or series of durations (or metric ordering) may be regarded as invariant under various operations. That is, we do not simply note the 'durational content' of a figure (e.g. 'That figure contains three short, two medium and two long durations') but rather attend to the durational transitions from short to long and so on as such transitions give a sense of movement and metre. One cannot, for example, reorder the continuously decreasing durations in an *accelerando* without wholly destroying the sense of tempo change. Similarly, Gjerdingen (I1992–3) reports that some real-time sequences of notes are heard in categorically different metres depending on whether they are heard in their 'prime' or 'retrograde' form.

Lewin's formalized approaches to post-tonal pitch and rhythm (F1981, F1984, F1987) show a clear awareness of the problems of directly applying pitch and pitch-class operations to rhythmic and metric elements. Lewin (F1987) presents a means of describing time-point and time-span relationships within the context of a generalized interval system ('GIS') that employs mathematical group theory. Lewin's goal is to add rigour to descriptions of musical relationships while preserving intuitions regarding pitch and temporal relationships. In the rhythmic domain he explores precedence relations for time-points, precedence relations in a metric context, proportional relationships among families of time-spans, equivalence classes among time-spans and durational patterns (i.e. augmentation and diminution, among other transformations), comparisons of duration as differences in length (in contrast to proportional relationships) and comparisons of duration in a modular duration-space. Lewin notes that his work has precedents and analogues in the compositional approaches developed by Babbitt, Carter and Stockhausen. His account of durational comparison – wherein, for example, a particular duration can be described as a 'semibreve less a quaver' or 'a breve plus a crotchet' – is very similar to the approach to rubato as

'stolen time' in various historical sources (see Hudson, H1994). Two of Lewin's observations regarding rhythm are particularly significant. The first is that any description (especially a formal one) of musical durations has non-trivial difficulties both in assigning a reference point in time by which durational succession, precedence and temporal interval can be regarded, and in choosing an integer unit of durational measurement. Lewin also notes that some of the rhythmic relationships he discusses are grounded in conceptual realms that do not accord well with musicians' experience of and intuitions about musical rhythm, and so must be used carefully in either composition or analysis.

Roeder (G1995) has developed a 'calculus of accent' which functions as a context-neutral approach to the determination of rhythmic stress. In his approach metre need not be present (though the presence of beats may be factored in); rather, changes in pitch contour and relative duration (peaks and valleys of pitch duration, as well as transitions from long to short durations and vice versa), along with other parameters, may be scaled and then used to give a formal account of relative stress. In this mode of analysis group boundaries are assumed to be known, and the goal is to fill in the degrees of accentedness among the members of a group. This also allows for comparison of the relative stress in different parameters – what Roeder calls a 'polyphony of [accentual] attribute functions' (p.39) – and avoids the artificial summation of 'aggregate' accents. Roeder's model does not require discrete pitches, so that he may (using integral calculus) produce accentual profiles in electronic and other musics which would ordinarily resist rhythmic analysis because they lack discrete durational elements and/or patterns.

Music theorists are not alone in developing formal approaches to rhythmic and metric analysis. As noted below, researchers in music cognition have developed algorithms for determining metric structure (in both final-state and real-time analyses), as well as formal descriptions of the timing and dynamics of real musical performances. While both groups pursue analogous research programmes, there are important differences. Music theorists, for the most part, employ formal theories of rhythm in order to deal with the rhythmic structure of post-tonal music. Theorists also typically use notated scores as the source of their data. These theorists are also often closely associated with compositional procedures and practices (and indeed may be composer-theorists or theorist-composers). Among cognitive scientists the emphasis is on the analysis of grouping, metre and/or accent in tonal music in order to create models that mimic listener behaviour. Moreover, much recent research by psychologists and cognitive scientists uses timing and dynamic information from live performances as the source of its data. Unfortunately, there has been little scholarly dialogue between music theorists and cognitive scientists who have explored formalized representations of rhythm and metre.

5. Psychological studies of rhythm and metre. Studies of musical rhythm go back to the 19th-century origins of modern psychology. Helmholtz, Wundt and their students examined basic thresholds of attention and discrimination in different sense modalities, which included the study of temporal discrimination in the auditory mode (see summaries in James, I1890). This research tradition has continued to the present day (though the observations of the earliest researchers have proved remarkably robust), and has established the basic constraints on sequential differentiation, preferred rates of attending, limits on successive integration and the psychological present, and so forth. Research in psychoacoustics has also yielded important results for studies of rhythm.

The most basic performance tests simply ask subjects to tap a series of beats spontaneously, or to tap along to a simple stimulus (see Fraisse, in *Action and Perception*, I1985, for a summary of earlier work). Such tests establish the upper and lower bounds for the production and maintenance of a beat, rate of tempo drift and so forth. Interestingly, they reveal little effect of musical training on basic beat-keeping abilities. In more complex contexts, however, including the perception and performance of polyrhythms (e.g. Handel and Oshinsky, I1981; Handel, I1983–4; and Grieshaber, H1990) and in passages that require subdivision (Yee and others, I1994), musically skilled subjects perform significantly better than non-musicians. The studies of polyrhythms also indicate that we do not hear 'two rhythms at once', but rather an integrated rhythmic/metric pattern, either by singling out one strand of the musical texture for attention (and ignoring others) or by constructing a composite rhythm from the various strands.

Judgment tasks have naturally focussed on musical attention and memory and their relation to rhythmic expectations. Jones (e.g. I1987, I1992) and her colleagues (Jones, Boltz and Kidd, I1982; Jones and Boltz, I1989; and Jones and Yee, I1993) have developed a dynamic model of attending which includes a metric component. Other studies (e.g. Dowling, Lung and Herrbold, I1987; and Gallun and Reisberg, I1994–5) have made use of interleaved melodies to study rhythmic attending. In such studies two familiar melodies (such as *Mary had a little lamb* and *Yankee Doodle*) are played in alternation, and while registral separation was important in allowing subjects to discern one (or both) of the melodies, metric position is also crucial. In this body of work an important consensus has emerged, namely that in the musical foreground structural judgments are made in a rhythm-to-pitch fashion, as metric position and grouping structure are the primary determinants of musical salience, while tonal considerations (scale degree, harmonization etc.) play a secondary role.

The earliest formal models for metre and rhythm used score-based data (equivalent to a 'deadpan' performance of the rhythmic patterns) and sought to identify downbeats and metric patterns using auto-correlation techniques which sought the onset(s) of the most common durational intervals (for a summary see Lee, I1991). Subsequent models, while still employing some form of auto-correlation, use real-time performance data as input. Desain and Honing (I1992) use a decompositional approach in designing their algorithm, a process that separately parses tempo tracking, metric period, down-beat location and so forth. They also employ a feed-forward component which mimics the anticipation of tempo, metre and grouping in established musical contexts (see also Rosenthal, I1988–9, I1992). Like Desain and Honing, Gjerdingen (I1989, I1992–3) makes use of neural network simulations to emulate human perception and performance. The 'analysis by synthesis' approach employs formalized theories of rubato, expressive variation

and so forth to model expert musical performance (e.g. Friberg, Sundberg, and Frydén in *Action and Perception*, I1985; Gabrielsson, I1985–6; Sundberg, Friberg and Frydén, H1991–2). These performance models can then be used to generate stimuli which can be used in tests of perceptual acuity and/or aesthetic judgment. While some researchers have investigated the variations from 'deadpan' performance which characterize performance in a perceptually constant tempo (Clarke, I1989, H1992–3; Shaffer and Todd, I1994; and Sloboda, H1983), others have attempted to model rubato (Todd, H1989) and *accelerandi* and *ritardandi* (Desain and Honing, I1991; Epstein, H1995; and Feldman, Epstein and Richards, H1992–3) using techniques such as fitting tempo changes to cubic splines.

The growing attention to the timing and dynamics of music performed under concert conditions reflects a concern with the ecological validity of psychological measurement and experimental design. In more recent studies rhythm tends to be studied within the context of a pitch sequence (and vice versa), and indeed musical examples excerpted from the standard repertory are often used as stimulus materials. For example, Drake (I1993), Drake and Palmer (I1992–3), and Palmer and Krumhansl (I1990) have studied the interaction between tonal and durational components, what they refer to as the 'joint accent structure' of contour, durational, metric and tonal cues. This approach is not without its difficulties, as such stimuli often contain unwanted complications of metre, tonality and so forth. Nonetheless, such tests, using musical sounds (rather than, for example, a series of pure sinusoids) and realistic musical timing (rather than purely isochronous durations), have begun to give a richer picture of rhythmic perception and performance.

While a considerable amount of research in rhythmic perception and performance remains to be done, it is clear that in ecologically valid contexts musicians almost never perform durations, attacks and articulations as literally indicated in the score. The translation of a given notation into a sound-event involves a considerable amount of variation, even when contextual factors are taken into account. The performance and perception of musical rhythm are far more complex than musical notation would seem to allow, and present both problems and possibilities for the musicological study of rhythm and metre.

6. Musical time and temporality. As Langer noted: 'Music makes time audible, and its form and continuity sensible. . . . It creates an image of time measured by the motion of forms that seem to give it substance, yet a substance that consists entirely of sound, so it is transitoriness itself' (K1953, p.110). It is perhaps for this reason – music's seeming ability to make time effable – that philosophers who discuss time and temporality are drawn to examples and images from music. To listen to music is to engage with the phenomena of duration, succession and motion, and to describe that experience one must capture relations of past and present, and senses of being versus becoming.

Once a note has begun to sound we are aware of its continued duration – that we are hearing the same note (the same 'event') prolonged in time. How are we aware that time has passed? Most philosophers subscribe to the longstanding idea that an awareness of duration requires an awareness of change. Without a change in the configuration of our physical environment there can be no sense of time's passage, and so duration involves the continuation of some features of the environment measured against changes in others. This is the position taken by philosophers since Heraclitus and Plato (in the *Timaeus*). James noted that such change may be proprioceptic and located such awareness in the kinaesthetic system (I1890, p.620). From this perspective physical change is prior to our psychological awareness of duration. An alternative approach was offered by Bergson (K1911). As Čapek (K1971, p.89) noted, Bergson asserted the reality of the temporal first on the psychological level. Langer developed Bergson's thesis in a specifically musical context, where she spoke of the listener's awareness of 'passage' or a sense of transience, made manifest by fluctuations in physical, emotional and/or intellectual tensions.

When one is presented with series of notes, they are usually heard as a coherent and continuous entity, rather than as a succession of isolated moments. Such a series helps define the 'psychological present' or 'specious present' in which the present moment is not an instant but a span of some (albeit perhaps limited) duration. This concept goes back to James (I1890), who characterized the present as a 'saddle back' rather than a knife edge. James's concept of the present gives coherence to both an individual note – integrating its onset, continuation and conclusion – and a series of notes within a coherent 'now'. Clifton (K1983), drawing on the work of Husserl, Heidegger and Merleau-Ponty, views the musical present as a nested sense of temporal contexts or 'horizons', including expectations of events yet to come ('protentions') as well as an awareness of what has occurred ('retentions') within which we structure our experience and knowledge of music (see also Ihde, K1976).

There is a dynamic quality to the succession of events within the musical present. For the transitions from note to note within a series of notes are not sensed as 'state changes' in our sonic environment, but rather as a species of motion. Philosophers such as Bergson (K1889, K1922) and Langer (K1953) saw this as a musical reflection of the essential nature of time. That is, time, especially time as made manifest in musical experience, is time-as-becoming as opposed to being-in-time. Hasty (G1997) argues that modes of description that treat musical rhythm and metre as static entities and patterns seriously distort the nature of the musical object. Drawing on the philosophical work of A.N. Whitehead (K1929) and the musicological work of Neumann (G1959), Hasty develops a projective theory of musical rhythm which aims to close the divide 'between the fixity of what can be grasped as order in abstraction and the fluidity of a felt order in experience' (p.3). Hasty feels this divide most keenly in the separation of metre and rhythm, an analytical premise that results in 'our concept of meter [becoming] separated from our intuitions of rhythm as something fully temporal and processive' (p.5).

Though most music affirms our sense of continuity and motion, many 20th-century pieces challenge or even deny the possibility of a coherent musical present as a compositional premise. Kramer (K1988) gives an extensive discussion of the various ways the horizons of the musical present may be distorted or broken in modern music and postmodern listening. He first distinguishes between musical linearity and non-linearity. Linearity is

'the determination of some characteristic(s) of music in accordance with implications that arise from earlier events of the piece' (p.20). Non-linearity, by contrast, is non-processive: 'it is the determination of some characteristic(s) of music in accordance with implications that arise from principles or tendencies governing an entire piece or section' (ibid.). Non-linearity is the antithesis of development. Linearity and non-linearity are not analogous to continuity and discontinuity. Discontinuities may arise in both linear and non-linear musical structures. Within the context of processive or goal-directed musical syntax we may find what Kramer terms 'multiply directed' linear time – a strategic reordering of a linear progression or linear process, such as beginning a piece with a cadential gesture. As an example of multiply directed linear time, Kramer gives an extended analysis of the first movement of Beethoven's op.135 (pp.123–36).

Beyond multiply directed linear time lies moment form. Stockhausen formulated the concept in an article which describes the compositional procedures involved in his *Kontakte* (*see* STOCKHAUSEN, KARLHEINZ). Moment forms 'are forms in a state of always having already commenced, which could go on as they are for an eternity' (Stockhausen, F1963, cited in Kramer, K1988, p.201). Moment forms stretch the horizons of the musical present to encompass the totality of each moment (which in some cases may be the entire piece). The elements of moment form are 'self-contained entities, capable of standing on their own yet in some nonlinear sense belonging to the context of the composition' (Kramer, K1988, p.207). Thus, if in a normal piece each event forms part of a larger tissue of protentions and retentions, building up a complex horizon that encircles the time-world of the piece, in moment form each section or element occurs within a self-contained horizon, a boundary that is impermeable to events that precede or follow. Pieces with a high degree of surface discontinuity and consisting of unfamiliar sounds (like much electronic music) are obvious examples of moment form. Music that uses the elements of tonal syntax may nonetheless be in moment form (see, for example, Kramer's analysis of Stravinsky's *Symphonies of Wind Instruments*, pp.221–81). While there may be a sense of temporal passage within (but not between) moments, in the most extreme cases even this sense of passage is lost. The result is a sense of stasis, or 'vertical time' in Kramer's terminology. Examples of pieces that create vertical time include Stockhausen's *Stimmung*, Rzewski's *Les moutons de Panurge* and Reich's *Violin Phase*. Vertical time is non-teleological, without any past retentions or future protentions impinging on one's experience of the sound event. The result is a collapse of the horizons of the moment down to a singularity, a single now.

7. CONCLUSION. Musical traditions reflect the different temporal sensibilities of their respective ages. Before mechanical time-keepers were common, natural processes, especially the motions of the sun and stars, were seen as a source of temporal regularity and order. In those eras the metaphysics and ontology of time and motion are rooted in Platonic philosophy and Ptolemaic astronomy, where the *primum mobile* regulates all subsequent motion and where God is the true source of all time and motion, mirrored in musical thought and practice. The theory and notation of musical rhythm in the Middle Ages was similarly 'top-down' in its approach: all shorter values stemmed from systematic division of the perfect long.

The musical time-keeping of the Renaissance was manifest in the use of heartbeat, respiration and other physiological processes as the source for periodicity in nature – not in the stars, but in one's own body. The integer unit of time was cast on a human rather than cosmic scale. Perhaps also the presence of clocks and clockworks encouraged the notion that shorter as well as longer durations could exhibit constancy and regularity. Yet the era of great clock-making was not the Renaissance but the 17th and 18th centuries, from Galileo's discovery of the laws of pendular motion (1603) to Huygens's refinement of the pendular swing (1673). The age of reason was an age of greater and greater precision in time-keeping; it is during these decades that one finds a correspondingly greater degree of temporal control in music, culminating in the use of standard metronome markings in the first quarter of the 19th century. This culmination had its consequences, however. First, one finds a partial revolt through the greater use of rubato, or more precisely that rubato where one part of the texture remains constant (i.e. the left hand of the piano) while the other part pushes ahead and/or pulls behind the beat. In the 20th century the urge for rhythmic control met either with total success (as in complex multi-serial works and tape music) or with a move to complete anarchy (in aleatory compositions and performances). Thus our anxious age, when the most precise temporal control is possible, either in performance (with every player having a personal click track) or in recording, is also the era when music achieved the widest degree of temporal flexibility and freedom.

JUSTIN LONDON

Rhythm and blues. A term coined in 1949 to describe music marketed primarily to African-Americans, initially used by *Billboard* to replace the term 'Race records', which had become unacceptable and had already been replaced by some record companies by the term 'Sepia series'. Like the Race and Sepia catalogues which preceded them, labels devoted to rhythm and blues and the rhythm and blues series of the major record companies encompassed the whole spectrum of African-American music, including blues, jazz, gospel music, popular vocal groups and comedians. However, as there was by this time a wider market available for many types of jazz, jazz records in the rhythm and blues catalogues tended to be those especially aimed at African-American dancers and party-goers, and placing a particular stress on overt swing and blues feeling. As a catch-all term for the African-American catalogues, rhythm and blues was supplanted by soul in 1969.

The term is also applied to certain characteristic African-American musical styles prominent during the late 1940s and the 1950s. Critical opinion has never coalesced on whether rhythm and blues in this sense is a genre of jazz or of blues, a hybrid of the two, or a separate musical idiom. Its most immediate jazz antecedents are the blues-based big bands which came to prominence in the early 1940s, such as those of Jay McShann, Lucky Millinder, Erskine Hawkins and Buddy Johnson, and the jump bands which flourished in the later swing era. These bands found that survival in the market place required increasing emphasis on an insistent beat, on blues and blues-ballad vocals, and on solo work emphasizing overt emotion and rhythmic excitement. To some extent, this was a conscious reaction to the direction being taken by the jazz avant garde of the day, the creators of bop. The vocalist and alto saxophonist Louis Jordan later said 'I wanted to play for the people, not just a few hep cats'. Bands working in this style included those already mentioned, as well as those of Roy Milton, Joe Liggins, Tiny Grimes and various groups led by Johnny Otis.

As the style developed, there was a particular tendency to emphasize saxophone solos in which honking and screaming effects were used to whip up excitement. Tenor saxophonist Illinois Jacquet was an early exponent and Big Jay McNeely an extreme example, but elements of this style are found in the work of many saxophonists of the period including Earl Bostic, Tab Smith, Eddie Chamblee, Willis Jackson, Al Sears and the much-recorded West Coast session musician Maxwell Davis. In the early 1950s increasing use was made of the electric organ by practitioners such as Wild Bill Davis, Doc Bagby and Bill Doggett. Out of these trends there developed in the later 1950s the style known as 'soul jazz', which reintegrated many rhythm and blues instrumentalists into the mainstream of jazz.

A further strand in rhythm and blues developed from the blues shouters featured by many bands of the late swing era. Indeed, Joe Turner contrived to record for the African-American market while retaining credibility with jazz critics. Other prominent artists in this idiom, such as Jimmy Witherspoon, Wynonie Harris, Roy Hawkins and Eddie Vinson played to more narrowly-defined audiences. Vinson also played alto saxophone in a style influenced by Charlie Parker and was one of the first musicians to begin incorporating elements of bop into the swing tradition, anticipating the soul jazz movement by some years.

A style of blues-ballad singing developed on the West Coast alongside the blues shouters and sometimes categorized as 'club blues'; this was influenced by the work of the King Cole Trio, although Nat King Cole himself had largely

1. Dinah Washington

2. *Little Richard*

moved into popular music before the rhythm and blues era. Singers like Cecil Gant, Roy Brown, and Charles Brown were sometimes dubbed 'Sepia Sinatras', no doubt alluding to their popularity with young women rather than their musical idiom, which remained firmly anchored in their blues roots. This style spawned a major disciple in Ray Charles who, in the 1950s, transformed the idiom by incorporating elements of black American gospel music into his work. This development was already implicit in the work of a number of female rhythm and blues singers, such as Dinah Washington (fig.1), Ruth Brown and LaVern Baker.

In New Orleans, local musical conditions led to the development of a distinctive local form, characterized by a swinging shuffle beat. The bands of Dave Bartholomew and Paul Gayten were the leading practitioners, and from this tradition the singer and pianist Fats Domino became one of the first and most comprehensively successful of African-American artists to make the crossover to the mass popular market. Records made in the continuing Southern blues traditions and down-home blues records made in the northern ghettos were marketed under the rhythm and blues umbrella, but are not normally regarded as examples of rhythm and blues style. However, blues singer-guitarists who worked with jazz and jump-oriented groups usually are. The key innovator in this style was T-Bone Walker, whose playing was influenced by Django Reinhardt and Charlie Christian. Later players such as B.B. King and Ike Turner placed an ever-growing emphasis on guitar solo work. This idiom has continued to attract new performers into the 1990s, whereas most rhythm and blues styles are kept alive only by surviving artists and overtly revivalist groups formed by white enthusiasts.

Rhythm and blues is also a term sometimes applied by writers on popular music to the African-American vocal group style Doo-wop, which developed in the early 1950s. These groups were often accompanied by instrumentalists active in other areas of rhythm and blues.

Many of the styles embraced by the term rhythm and blues played a part in the development from the mid-1950s of rock and roll as a new mass-market commercial idiom aimed at teenagers. In the early years of rock and roll many African-American artists adapted by simplifying their music and by eliminating adult themes from the lyrics. At this stage, as in the music of Chuck Berry and Little Richard (fig.2), musical distinctions between the two idioms are often small. They became greater as rock and roll became more definitely a hybrid between rhythm and blues and country music, whose stars were drawn from the latter and performed in conformity with the values of the general popular music industry.

HOWARD RYE

Rhythmic modes [modal rhythm]. The modern name for a medieval concept of rhythm in which the value and relative duration of each note is determined by its position within a larger rhythmic series, or mode, consisting of a patterned succession of long and short values. In notation, the value of the individual note is communicated not by the form of the note but by its position within a larger figure of notation (called a ligature, a group of pitches 'bound' together) and by the position of that figure among other figures. This is the earliest known coherent system of rhythm and rhythmic notation in Western music since antiquity. It was associated primarily with the polyphony of the Notre Dame school of the late 12th century and the early 13th, but some modern scholars have also applied it to medieval secular monophony, albeit with questionable results.

The rhythmic modes are described in a group of treatises from the 13th century, most importantly the *De mensurabili musica* of Johannes de Garlandia (ed. Reimer, 1972); the texts of the St Emmeram Anonymous (ed. and trans. Yudkin, 1990) and Anonymus 4 (ed. Reckow, 1967) that are based on Garlandia; Anonymous VII (*CoussemakerS*, i); the anonymous *Discantus positio vulgaris* (ed. Cserba, 1935); Lambertus (*CoussemakerS*, i); and Franco of Cologne (ed. Reaney and Gilles, 1974). Like the Notre Dame repertory in which it is found,

modal rhythm developed before the advent of mensural note forms, but all the theoretical witnesses draw upon mensural notation to reduce the ambiguity inherent in the system. Thus the original form of the system must be reconstructed to a certain extent; it can be seen in operation in a number of 13th-century manuscripts (e.g. *D-W* 628, *E-Mn* 20486 and *I-Fl* Plut.29.1; *see* SOURCES, MS, §IV, 4.).

Johannes de Garlandia defined *modus* or *maneries* ('style', 'kind', 'type'; the terms are borrowed from writings on logic, but *modus* has a long history in music theory as well) as 'that which flows together [*concurrit*] by the measurement of time, that is, by longs or by shorts' (Reimer, p.36). These 'long' and 'short' values are precisely measured, and the 'measurement of time' consists in the reiteration of a succession of such values in a given pattern. Garlandia presented six such modal patterns, all subsumed within a single system by a common unit of measure, the *tempus* ('temporal unit'), that was regarded as 'indivisible', that is, incapable of being divided into precisely measurable shorter values. Through this constant, the different values are related to one another ('flow together'), and the six modes can be combined with each other in a polyphonic texture.

Garlandia's six rhythmic modes were (L= long, B = breve): (1) L–B–L–B–L etc.; (2) B–L–B–L–B etc.; (3) L–B–B–L–B–B–L etc.; (4) B–B–L–B–B–L–B–B etc.; (5) L–L–L etc.; (6) B–B–B–B etc. Although the modal patterns are theoretically infinite in length, in practical terms they are always delimited, usually by a rest, but sometimes by juxtaposition with another pattern or some other kind of interruption. Such a temporally delimited pattern is called an *ordo* ('arrangement'). A statement of the modal pattern is 'perfect' (complete) when the *ordo* ends with the same value as the one with which it begins; it is 'imperfect' (incomplete) when it ends with some other value (in the case of mode 4, the perfect form ends with a restatement of the first two values). The rest that ordinarily follows and defines an *ordo* has the value of the next duration in the pattern, be the mode perfect or imperfect.

A breve of one *tempus* and a long of two *tempora* were regarded as the normal values, and are referred to as 'regular' (*recta*) and as defining proper measure (*recta mensura*); hence, the three modes that use them exclusively (1, 2 and 6) are termed the 'measurable' modes (ex.1). The orderly succession of longs and breves in these modes sets up an intrinsically ternary pulse, although metre is not an explicit part of modal theory. Modes 3, 4 and 5 proceed in the same ternary fashion; the long is equal to three *tempora*, not two, and the second of the two successive breves in modes 3 and 4 (the *altera*, 'other' breve) is equal to two *tempora*. The *altera* thus has the same duration as the *recta* long; it is a breve (short note) in comparison with the long that follows it. Values other than the 'regular' ones – the long of three tempora, the *brevis altera* of two, the duplex long of six, and the semibreve – were deemed 'beyond (regular) measure' (*ultra* [*recta*] *mensuram*), that is, as standing outside the group of 'normal' long and short durations; the modes that use them (3–5) are called *modi per ultra mensuram* ('modes by virtue of values beyond conventional measure'); one version of Garlandia's treatise calls them 'oblique' modes (ex.2). Taken together, Garlandia's six modes constitute a complete, closed system, accounting in patterned terms for all possible combinations of rhythmic values that could occur in the musical practice of the Notre Dame tradition.

The rhythmic modes were expressed in writing using the ligatures (neumes) and single notes of the 'square' plainchant notation developed in France during the 12th century. Each mode was identified by a particular succession of ligatures and single notes, as follows: 1st mode: 3–2–2 … 2; 2nd mode: 2–2–2 … 3; 3rd mode: 1–3–3 … 3; 4th mode: 3–3–3 … 2; 5th mode: 1–1–1 … 1 (or 3–rest–3–rest–3 … 3); 6th mode: 4–3–3 … 3. Ex.3

Ex.3

1. 4. 2. 5. 3. 6.

gives examples of the second *ordo* of each of the modes (note that, depending on the mode, a '2' can be read in three different ways, a '3' in five). Since a ligature cannot have more than one syllable of text, the mode-conveying

ligature patterns are clearly evident only in a melismatic context (*sine littera*); in passages with frequent changes of syllables (*cum littera*) the sequences of ligatures are broken up, thereby posing severe problems of interpretation (as they did in the 13th century, according to Anonymus 4). Repeated pitches, which also cannot be accommodated within a single ligature, can further disrupt the profile of the ligature pattern.

The strict patterns of the modes could be modified in various ways. Shorter values might be substituted for one or more of the longer ones, giving in mode 1, for example, L–S–S–L–B–B–B–B–L (S = semibreve). Garlandia termed this practice 'reduction', but Anonymus 4 called it *fractio modi* ('breaking of the mode'). Or, as another type of *reductio*, longer values could replace two or more shorter ones, in mode 2, for example, giving B–L–L (*ultra mensuram*)–B–L–B–L–L (*ultra mensuram*). Especially common is an extended form of the first mode that proceeds L (*ultra mensuram*)–L–B–L (*ultra mensuram*)–L–B–L *(ultra mensuram)* etc.; the notation of this pattern looks like that of the third mode (in fact, it is often considered to be an 'alternative' form of the third mode; Anonymus 4 called it an 'unusual mode, like the irregular ones'). A phrase might shift from one mode to another without a break, a practice called 'admixture' by Anonymus 4; thus the pattern L–B–L–B–B–L–B–L–B shifts from mode 1 to mode 2. The unpatterned ligatures and florid, often rapidly moving lines of *organum purum* were described by Johannes de Garlandia as being in a *modus non rectus* ('unconventional mode') in which the rhythmic values are not determined by their relationship to a mode, as they are in the *modus rectus* and *recta mensura* ('regular measure') defined by the modal patterns; Anonymus 4 called this unpatterned style a 'thoroughly mixed and common mode'. Anonymus 4, again in connection with *organum purum*, described a series of 'irregular' modes in which the porportional relationships among the values are distorted, in effect presenting performance liberties such as *tenuto*, *accellerando* and *ritardando* in modal, patterned terms. Just as the imperfect modes were developed to accommodate, for example, hocket and the intrusion of new syllables of text into an orderly succession of ligatures, all of these modifications and extensions served to relate the modal system to the realities of musical practice.

The modal doctrine laid the foundation for the European rhythmic language and its expression in notation for the next four centuries; its importance cannot be overestimated. Various theories have been proposed to explain the origins of the rhythmic modes and their relationship to musical practice. Waite (1954) argued that Leoninus developed the modal system, and that he used Augustine's *De musica* as a model. Others believe that modal rhythm emerged spontaneously in the music of the 12th century (Treitler, 1979; Crocker, 1990; Roesner, 1990). It seems likely that the 'rhythmic modes' as such arose as a theorectical synthesis of a pre-existing, broader polyphonic practice; once formulated, the modes could have served as models for subsequent composition and for the reinterpretation of earlier, less strictly 'modal' works. What role antique and contemporary poetry or poetic theory may have played in the development of the modal system is not yet entirely clear.

After Johannes de Garlandia, several theorists sought to include the semibreve in the modal system, and thereby to accord it precise measure. Lambertus extended the rhythmic modes to nine, including four patterns that describe various combinations of breve and semibreve motion; in effect, the hitherto 'indivisible' *recta* breve became ternary. In his *Ars cantus mensurabilis* Franco of Cologne described five modes, combining Garlandia's modes 1 and 5 into one and re-defining Garlandia's mode 6 as expressing movement 'entirely in breves and semibreves' (thus subsuming four of Lambertus's modes into one). A seven-mode system, alluded to but rejected by Franco, is mentioned in the 14th-century treastise once attributed to Theodoricus de Campo; the seventh mode moves entirely in semibreves. For Franco, and for musicians following him, however, the modes were used not as guides to the notation, but exclusively as descriptions of durational relationships; unequivocal mensural notation had taken over the former task from the rhythmic modes.

EDWARD H. ROESNER

Riadis [Eleftheriadis; Khu], **Emilios** (*b* Thessaloniki, 1 May 1880; *d* Thessaloniki, 17 July 1935). Greek composer. His father, Erricos Khu, was of Austro-Hungarian origin. Riadis took his first lessons in harmony and the piano in Salonica with Dimitrios Lalas (1848–1911), a friend and disciple of Wagner. He then studied at the Munich Academy (1908–10) with Walbrunn (form, instrumentation, fugue), Mayer-Gschrey (piano) and Becht and Stich (choral singing). Afterwards he was a pupil of Charpentier and Ravel in Paris (1910–15) where he established a reputation among French and exiled Greek composers: Schmitt is said to have described him as 'the Musorgsky of Greece'. Temporarily arrested as a Turkish subject at the outbreak of World War I, he returned to Thessaloniki (1915) where for the rest of his life he was professor of the piano at the State Conservatory. He is reported to have been also sub-director of this institution, but no documentary confirmation of this appointment is available. In 1923 he received the National Award for Arts and Letters. Although he gave occasional lectures – on Chinese music (1921 or 1922), on Mozart (1924) and on ancient Egyptian music (1926), for example – his enthusiasm for work is said to have slackened. Yet it seems that some of the chamber works were composed after his return to Greece, and on his deathbed he spoke of a complete string quartet existing in his head.

Riadis, whose sensitivity had much in common with that of Cavafy, sought to express a personal vision bound up with experience of the music of Asia and of Greece: 'One is only perfect in opposing nature. The other natural bears no good fruit', as he wrote on one of his manuscripts. Before the early 1990s his renown rested largely on his songs, masterpieces of the Greek national school, whose lyricism, as Anoyanakis noted, combines 'oriental sensuality with western "restraint"'. Their vocal lines, influenced by folk music and full of poignant nostalgia, are enhanced by subtle harmonies and arabesques in the piano accompaniments. Impressionistic and avoiding harsh dissonance, these accompaniments often adroitly imitate folk instruments and attain an extreme simplicity and transparency, as in *La chanson du vieux Bey*. Most of the other major works were left unfinished, many in several versions. But since 1992 the reconstruction of some of the existing chamber works, as well as the discovery of others hitherto unknown, by the composer Nikos Christodoulou and the cellist and conductor Vyron Fidetzis have done much to alter overall perceptions of Riadis's work. Despite their abstract titles, these string quartets and sonatas are as bold as the songs in their exploration of non-Western modes and rhythms, the profusion of chromatic alterations (double sharps and double flats especially) suggesting a striving for emancipation from the restrictions of the tempered system. Moreover, unlike certain Western adherents of 'exoticism', the composer recognized that these modes called for new harmonic and formal processes: those he adopts seem not unrelated to Eastern improvising traditions. Riadis also made corrections to published works and these are incorporated in Anoyanakis's edition of 16 songs (1973). The manuscripts include poems and other texts, among them a 200-page history of music.

WORKS

STAGE

Galateia (music drama, 3, P. Ch. Jablonski), 1912–13, act 1 in vs, act 2 in orch score, act 3 in vs sketches;
La route verte (op, 1, J. Valcler), ?1914, vs sketches;
Un chant sur la rivière (op, 1, Riadis), 55 bars of prelude for 2 pf; Salome (incid music, O. Wilde), 1922, only 96 bars of pf score extant; Hecuba (incid music, Euripides), orch, 5 movts, 1927; Riquet à la houppe (incid music, T. de Banville, trans. Riadis), 1929

INSTRUMENTAL AND CHORAL

Inst: Nanourisma [Berceuse], vn, pf, 1908; Fugue, c, 1909; Prélude tragique or Symphonietta, pf, 3 movts, 1911, rev. as Ombres macédoniennes, 2 pf, 1912; 3 danses grecques, pf, no.2, 1925; Sonate à 4, B, pf qt, *c*1928–35, restored by N. Christodoulou; Hommage à Ravel, pf; 2 sonatas, vc, pf, inc., restored by V. Fidetzis; Sonate à 4, C, pf qt, 1 movt extant, restored by Christodoulou; Str Qt, g, 3 movts extant, restored by Christodoulou; Str Qt, d, inc., restored by Christdoulou; Invocation à la paix, orch, inc.; Symphonie agreste, orch, only pf score sketches extant; Hécube (incid music), orch; frags., restored by Christodoulou, of other str qts

GEORGE LEOTSAKOS

Ribafrecha, Martín de. *See* RIVAFRECHA, MARTÍN DE.

Rïbakov, Sergey Gavrilovich (*b* Samara, 9 Oct 1867; *d* Moscow, 28 Dec 1921). Russian musicologist. He graduated from St Petersburg University, where he had studied history and philology; he also attended Rimsky-Korsakov's composition classes at the conservatory. In 1893 he was invited to join a folksong commission set up jointly by the Russian Geographical Society and the Academy of Sciences, and during the next few years he travelled extensively in the Urals, Siberia and other parts of south-east Russia. On his first journey (1895–7) he noted down over 200 folk melodies of the Bashkirs and Tatars, and in 1899, using a phonograph, he collected folk music of the Tajiks, Turkmens and Uzbeks. He wrote many articles on folk music in Russian journals, and also an essay on Russian church bells.

Ribeiro, Agnaldo (*b* Jequié, 1 Dec 1943). Brazilian composer. He was a composition student of Widmer and Jamary Oliveira, and also of visiting composers Peter Maxwell Davies and Günther Becker, all at the University of Bahia. In 1972 he became a member of the Grupo de Compositores da Bahia and has been a teacher of composition at the same school ever since. Most of his works reveal an undogmatic adherence to avant-garde concepts and techniques, since he avoids following any particular current of contemporary composition. He has won several prizes, such as the first prize for his *Corpus et Anticorpus* at the First National Competition of Composition (New Music), and received an honourable mention at the Latin American competition 'Agrupación Beethoven' in Santiago for his string quartet *Centaurus*.

GERARD BÉHAGUE

Ribeiro, [Julio] León [Alfredo] (*b* Montevideo, 11 April 1854; *d* Montevideo, 12 March 1931). Uruguayan composer. He studied first with Luigi Sambucetti-Balero. A letter of 7 March 1876 attests that he later studied the piano and composition with Carmelo Calvo, a Spanish conductor, organist and composer who had settled in Montevideo in 1867. Ribeiro taught harmony (from 1885) and the piano (from 1887) at Lira Conservatory in Montevideo, and from 1901 to 1931 he was director of the conservatory. His compositions include seven operas, symphonies, chamber works and piano music. His *Misa solemne* was first performed at Montevideo Cathedral in 1878 and his first symphony (1877) at the Teatro

Nacional, Buenos Aires on 25 August 1886. The opera *Liropeya* (1881) was his only stage work that was given a complete performance. *Colón* (1892), to a Spanish libretto, is the only extant opera from among those commissioned by the Uruguayan government to celebrate the 400th anniversary of Columbus's first voyage to America. Many of Ribeiro's manuscripts are in the Instituto de Estudios Superiores, Montevideo.

WORKS
(*selective list*)

OPERAS

Colón (alegoria melodramatica, 1, N. Granada), excerpts, Montevideo, Solís, 21 Oct 1892
Liropeya, 1881 (3, Ribeiro, after P. Bermúdez: *El Charrua*), Montevideo, Solís, 28 Aug 1912
Unperf.: Don Ramiro (3, after H. Heine); Nidia (3, L. Ambruzzi); Nora (L. Eridano); Yole (Ambruzzi); Harpago y Helena (E.U. Genta)

OTHER WORKS

Vocal works, incl. Misa solemne, 1878

LEONARDO MANZINO

Ribeiro, Mario Luis de Sampayo. *See* SAMPAYO RIBEIRO, MARIO LUIS DE.

Ribera [Ribeira], **Antonio de** (*fl* early 16th century). Spanish composer and singer. Little is known of his life before he entered the papal chapel choir, probably shortly before 1520. He served there until at least December 1526, but his name does not reappear on the register for July 1529, and he may have died in that period. It is not known when he reached Rome – Haberl's date of 1514 (*VMw*, iii, 1887, pp.189–296, esp. 251) is now disputed – nor where he served before he travelled there. Given the distribution of his works, it is probable that he worked at a major institution in Spain, possibly under a different name if Ribera represents his place of birth rather than his surname. Anglès, without specifying his source, believed him to be from Lérida (MME, ii, 1965, p.18).

Two of the works ascribed to Ribera have conflicting attributions. Most notable of these is the Holy Week motet *O bone Jesu*, which is preserved in a surprising number of sources and is also attributed to Peñalosa, Anchieta and even, in a Petrucci print of 1519, to Compère. The style of this piece is very like that of Peñalosa's motets, although the manuscript distribution possibly favours Anchieta as the composer. Its inclusion in the Petrucci collection, however, is intriguing, given that few motets by Spanish composers of this period travelled beyond the peninsula or the New World. The two other motets, both also preserved in *E-TZ* 2–3, are also written in the motet style cultivated by court composers such as Peñalosa: the structure is articulated by alternating passages of imitative counterpoint and homophonic declamation, with key words in the text being highlighted by sustained chords. The masses, one of which is also attributed in one source to another court composer, Tordesillas, share the same Gloria and also the stylistic features of the Peñalosa generation. Neither mass appears to be based on a cantus firmus, and both rely on contrasts in scoring and metre to lend structural coherence to the whole. At least three or four other motets, now lost, are attributed to Ribera in the late 16th-century inventories preserved at Tarazona Cathedral.

The two songs attributed to Ribera are found uniquely in the Cancionero Musical de Palacio (*E-Mp* 1335); they were added to it shortly after the first stage of compilation (*c*1500). *Nunca yo, señora, os viera* is an elegant villancico on the theme of courtly love, while *Por unos puertos arriba* displays the essentially chordal idiom typical of the romance at this time. It has been suggested that Ribera was the composer of the music of the Elche mystery play, but there is no firm evidence to corroborate this.

TESS KNIGHTON

Ribera, Bernardino de (*b* Játiva, 1520; *d* ?Toledo, late 1571 or early 1572). Spanish composer. A pupil of his father, Pedro Ribera, who was for many years *maestro de capilla* of the collegiate church in Játiva, Bernardino also studied with his father's successor, Jayme López. On 12 June 1559 the Avila Cathedral chapter inducted him as *maestro de capilla* in succession to the deceased Gerónimo de Espinar. He thus taught the young Victoria, who was then a pupil at the cathedral choir school, and he appears to have influenced him considerably. In October 1562 he was proposed as a suitable successor to the refractory *maestro de capilla* at Toledo Cathedral, Bartolomé de Quevedo; he competed for the post the following month and was formally admitted on 15 April 1563. In 1570 he presented the cathedral with an exquisitely illuminated

volume of his masses, motets and *Magnificat* settings; many of the illuminations have now been cut away preventing the complete transcription of numerous works.

On 2 November 1570 he received leave of absence for 30 days, on account of illness, and although he received a cathedral salary through 1571, he had vacated his prebend by 8 January 1572. Andrés de Torrentes substituted for him with the title of *cantor* from 9 February 1571, and was formally named *maestro de capilla* on 22 December 1571.

Ribera's sacred works (surviving in *E-Tc* 6, itemized in Rubio Piqueras, 1925 and in Stevenson, 1973) include two masses *de Beata Virgine*, the second of which uses the hymn *Ave maris stella* for a large proportion of the Credo. Three of his motets, *Conserva me, Domine*, *Beata mater* and *Hodie completi sunt* (all ed. in Reynaud) are particularly skilfully constructed, revealing him as a composer with a highly individual style. (Two further motets, *Virgo prudentissima* and *Rex autem David*, are ed. H. Eslava y Elizondo, *Lira sacro-hispana*, 1st ser., i, Madrid, 1869.) The manuscript also contains eight *Magnificat* settings, two each for tones 1–4. Further motets by him survive (in *E-P*, *V*, *VAcp* and *Zs*).

ROBERT STEVENSON

Ribible. *See* REBEC.

Rïbnikov, Aleksey L'vovich (*b* Moscow, 17 July 1946). Russian composer. He studied at the Moscow Conservatory with Aram Khachaturian, with whom he completed postgraduate work in 1969. He taught composition at the conservatory (1969–75) and directed the Russian State SO (1986–7) before founding the Contemporary Opera Company (1988) and later his own theatre studio in Moscow (1990). He has received various awards and prizes and his works have been performed in Britain, France, Germany and the USA. Rïbnikov initially took folklore as a basis for a decorative, virtuoso instrumental style (First Piano Sonata, *Skomorokh* ('The Jester') and the Bayan Concerto). In the late 1960s he turned to techniques such as dodecaphony (Second Piano Sonata, dedicated to Nadia Boulanger) and sonoristic methods (Concerto for String Quartet). Around 1975 he started to attempt to synthesize the various layers of his work; in this year he turned his attention to theatre. He is open to a broad spectrum of influences, ranging from Stravinsky and Berg to Bernstein, the accessibility and colour of whose work appeals to Rïbnikov particularly. His theatre works show the influences of both the avant garde and rock music; his stage works for children have become immensely popular.

WORKS

Stage: Zvezda i smert' Khoakina Mur'eti [The Star and Death of Joachino Murieti] (musical drama), 1976, Lenin Komsomol Theatre, Moscow, 1976; Yunona i Avos [Juno and Avos] (musical mystery), 1980, Lenin Komsomol Theatre, 1981; Liturgiya oglashennïkh [Liturgy for the Catechumens] (musical mystery), 1991, Studio Theatre, Moscow, 1992; Nochnaya pesn' [A Night Song] (choreographic sym.), 1997

Ribó, Jesús A. *See* SUBIRÁ, JOSÉ.

Ribock, Justus Johannes Heinrich (*b* Egestorf, nr Lüneburg, 1743; *d* ?Hanover, *c*1785). German physician and flute designer. After study at Helmstedt, Rinteln and Halle, he graduated as a doctor of medicine in Göttingen in 1763. About 1780 he practised at Lüchow, the home town of his family, and between 1777 and 1783 he had an animated correspondence with J.G. Tromlitz in Leipzig. His book on the flute compares contemporary flutes by Tromlitz, Quantz, Kirst and Grenser and proposes many improvements to the design of the instrument; it also contains the first German fingering chart for the five-key flute.

KARL VENTZKE

Ribs (Fr. *éclisses*; Ger. *Zargen*; It. *fascie*). In string instruments, most commonly used to describe the planking of the arched back of a lute. Used by some to refer to the side elements connecting the back and belly of instruments such as those of the viol, violin and guitar

families, though the term 'side' now seems more common, especially to the guitar. Such usage of the term rib thus runs contrary to that used in anatomy to denote bones at right angles to the spine: although in many cultures lute ribs are planked over an armature with transverse elements, once the glue has set the shell is lifted off this frame, leaving no internal 'skeleton'; it is the fore-and-aft planks themselves which are called ribs.

It is important to distinguish between the roles of ribs and internal barring. The basic structural function of ribs, whether constituting the arched back of lutes, or the sides of other string instruments, is to provide a stable soundbox with which the main resonating elements of the instrument (strings and belly) interact. Bars glued to the inside of the belly do help to strengthen stressed areas, but they are essentially integral parts of the resonating system; they have a far greater effect on tone control than ribs (*see* BARRING (ii)).

The comparatively straightforward structural function of ribs (as opposed to the tonal implications of barring) means that soundboxes can be constructed in a variety of ways – i.e. wholly from ribs (as in the lute); with rib sides and broad flatter backs (violin, guitar etc.); or without ribs (i.e. formed from a single piece of wood or other material, e.g. some types of the rebec, the Greek *lira charango*) – without substantially altering the tone. In addition to woods characteristic of different climatic zones, gourds, coconut shells and bamboo segments produce viable soundboxes, as do tortoise and armadillo shells and even recycled biscuit tins. Alternative methods of construction can result in instruments of closely comparable tone; e.g. the body of the Turkish *saz* (long-necked lute) may be either carved from solid wood or rib-planked.

In the present day some seemingly rib-built instruments comprise fibreglass shells, disguised with veneer 'planks'. These include not only bouzoukis and mandolins, but also replicas of Renaissance instruments. Providing the belly is made of good quality wood and barred properly, the tone of such instruments can be quite acceptable, proving that while ribs are often visually delightful, they are of less importance acoustically than the invisible internal barring.

IAN MORRISON

Ricardo, Niño [Serrapí Sánchez, Manuel] (*b* Seville, 1 June 1904; *d* Seville, 1974). Spanish flamenco guitarist. He came from a non-Gypsy background, and learnt his first guitar chords from his father, Ricardo. In his teens he played at the Café Novedades, a flamenco club in Seville. News of his abilities spread, and he was soon in demand as an accompanist with some of the great flamenco performers of the day. His father forbade him to tour, but at 17 he became accompanist to Pastora Pavón ('La Niña de los Peines'), the most famous *cantaora* in flamenco history. Throughout the 1920s and 30s Ricardo distinguished himself above all as an accompanist, both with Pavón and with two other prominent flamenco figures of the pre-Civil War era, the *cantaor* Manuel Torre and the *bailaora* La Argentinita. The death, in 1949, of Ramón Montoya (the dominant force in solo flamenco guitar in the 1940s) served to raise Ricardo's profile; his first solo recital was in Seville in 1955, at a time when flamenco was becoming increasingly commercialized. By then he had begun to work with performers such as Pepe Pinto and Juanito Valderrama. Later he collaborated with younger *cantaores* such as Enrique Morente and El Lebrijano, who became top flamenco stars. Ricardo's style of playing was very different from Montoya's: where the latter's sound was lyrical and meticulous, Ricardo's was rhythmic and rough, more authentically 'flamenco' and always exhilarating.

JAMES WOODALL

Ricartsvorde, Jean. *See* RICHAFORT, JEAN.

Riccati, Count **Giordano** (*b* Castelfranco Veneto, nr Treviso, 25 Feb 1709; *d* Treviso, 20 July 1790). Italian music theorist and acoustician. He studied with his father, the mathematician Jacopo Giordano, and at the University of Padua. In 1733 he withdrew to the family estates in Castelfranco Veneto and Treviso where he worked independently of the academic world. An amateur musician (singer, harpsichordist and violinist), he taught G.B. Bortolani ('il Melani') and Ignazio Spergher.

Riccati preceded Rameau in formulating a theory of the origin of the tonal scale in the triads based on the first, fourth and fifth degrees. He sent the document in which he claims to have made the discovery to F.A. Vallotti; its authenticity is confirmed by Vallotti's reply dated 13 January 1735. In this document Riccati examines the numbering of the chords with which Vallotti accompanied the diatonic scale in his compositions, showing that they are simply the consonant triads based on the first, fourth and fifth degrees of the scale. Riccati also tries to give a rational justification for the harmonic identity between a chord and its inversions. As opposed to Rameau's strict methodology based on Enlightenment ideas, Riccati based his 'experiment' on compositions by the great masters; his is substantially an empirical theory. In 1760, Riccati corresponded with Tartini, contesting his adoption of the circle as the basis of his harmonic system. Riccati also left a treatise on the temperament of the musical octave (which takes up four chapters of his manuscript *Le leggi del contrappunto*), in which he calculates the 'best' regular temperament, one that keeps the relative relationships of consonance of the various harmonic intervals as little changed as possible. He also analysed the effect of 18th-century irregular tempered systems on individual tonalities. In acoustics, however, his greatest achievement was to anticipate Leonhard Euler's mathematical solution of the problem of the transverse vibrations of bars which are free to vibrate at both ends, like those of xylophones. He was the first to tackle scientifically the problem of the diameter scaling of violin and harpsichord strings, as well as of organ pipes, and proposed the geometric scaling ratio for organ pipes which was then independently rediscovered by J.G. Töpfer in 1833 and subsequently adopted by most organ builders of the 19th and 20th centuries. He also anticipated other authors in demonstrating that in calculating the acoustical length of organ pipes, one must take account of 'end correction' (1767).

PATRIZIO BARBIERI

Ricchezza, Donato (*b* 1648; *d* 1716). Italian composer. He was active in Naples. His surviving works consist of sacred vocal music and oratorios, apparently written for the Oratorio di S Filippo (Girolamini). His oratorios from the 1680s show his familiarity with progressive idioms of his time: characteristic features include the use of obbligato accompaniments in the orchestra, the independent melodic character of the bass line in continuo arias, and the inclusion of sicilianos, an aria type only just becoming popular. Later oratorios show regressive tendencies, with static bass lines and a relative abundance of arias in 3/2 time similar to those popular during the composer's youth. The sacred music features a variety of combinations, from solo voice with continuo to large concerted works for soloists, chorus and orchestra.

WORKS
all in I-Nf

31 sacred compositions, incl. 2 masses
11 orats: La fede trionfante, 1683; S Giusto, 1683; S Eustachio, before 1689; Vita di S Eustachio, 1689; Il martirio di S Eustachio, after 1689; La ruina degli Angeoli; La madre di Maccabei; La gara degli elementi; In honore del glorioso S Francesco Saverio; Nabucco; S Martino vescovo

THARALD BORGIR

Ricci, Federico (*b* Naples, 22 Oct 1809; *d* Conegliano, nr Treviso, 10 Dec 1877). Italian composer, brother of LUIGI RICCI. Like Luigi he was educated at the Naples Conservatory, which he entered in 1818. His teachers included Zingarelli, the great contrapuntist Pietro Raimondi and, in their capacity as *maestrini*, his own brother and Bellini. His talent first showed itself in two masses and a sinfonia composed while he was still a student. In 1829 he cut short his studies to follow Luigi to Rome, where he became intimate with the painter Horace Vernet and his circle and sat more than once for Vernet himself. About this time he was recommended to Bellini, then in Milan, who, it was hoped, might secure him an opera contract at La Scala. But Bellini was either unable or unwilling to do this, and the start of Federico's theatrical career was delayed until the production in 1835 at the Teatro del Fondo, Naples, of *Il colonello*, the first of four comedies composed jointly with Luigi. This was followed by Federico's first venture on his own, *Monsieur de Chalumeaux* (1835, Venice), and a second collaboration, *Il disertore per amore*, written for Naples in 1836. Then came one of his most sensational successes, *La prigione di Edimburgo* (1838, Trieste), a *melodramma semiseria* drawn from Scott's *The Heart of Midlothian*. Besides the popular barcarolle 'Nella poppa del mio brick', it contains a remarkable mad role for the seconda donna (Madge Wildfire in the novel), in which the singer Rita Gabussi created a furore.

Federico's La Scala début with *Un duello sotto Richelieu* (1839) was not specially glorious, but in 1841 he scored a double success with *Luigi Rolla* (Florence), written for and dedicated to the tenor Napoleone Moriani, and *Corrado d'Altamura* (Milan), based on the same plot as Verdi's *Oberto, conte di San Bonifacio* and widely considered to be his masterpiece in the tragic genre (it was the only one of his serious operas to be printed outside Italy). Its success resulted in a commission from Carlo Alberto, King of Savoy, to provide for his court two occasional cantatas, the first of which was performed in 1842 to celebrate the wedding of the crown prince, Vittorio Emanuele. Ricci was now famous; he travelled widely and was known in the salons of Paris. But his serious operas written subsequently aroused less and less interest. Like his brother he succeeded mainly in comedy, to which he devoted himself exclusively after 1847. Two years after *Crispino e la comare* (1850, Venice), his final collaboration with Luigi, Federico triumphed in Vienna with *Il marito e l'amante*, not surprisingly, perhaps, for what is an obvious forerunner of Strauss's *Die Fledermaus*. However, the utter failure of *Il paniere d'amore* (1853, Vienna) decided him to accept the offer of an appointment as *maître de chapelle* of the imperial theatres at St Petersburg, a high-sounding title whose duties involved no more than the supervision of vocal studies at the conservatory. His compositions of the next 16 years include vocal chamber works and exercises for his students, but nothing for the stage. In Italy he was by now regarded as one of the most skilful composers of the older generation. In 1869 Verdi invited him to contribute a piece to the *Album Piave*, a set of romances to be published in aid of the librettist, then paralysed by a stroke, and a Milan committee, with Verdi's approval, asked him to supply a Recordare to the requiem commemorating the anniversary of Rossini's death; Ricci's setting shows something of the influence of Liszt. After Federico left Russia for Paris in 1869 he enjoyed an Indian summer of popularity as a composer of French *opéras bouffes*. The most famous of these, *Une folie à Rome* (1869, Paris), was originally composed in Italian as *Carina* (though first performed in Italian as *Una follia a Roma*) and was also given with great success at Genoa under Angelo Mariani. In 1876 he retired to Conegliano in the Veneto, where he died the following year leaving his last opera, *Don Quichotte*, uncompleted.

Less obviously original than his brother, Federico was the more accomplished and versatile composer. In comedy he had a lighter, more graceful touch, which would make his contributions to *Crispino e la comare* relatively easy to pick out, even if they were not indicated in the first printed score. His serious works are worthy to stand beside Mercadante's, though they do not aspire to the same grandeur; late offshoots of the Bellini tradition, they were inevitably among the casualties of the post-*Nabucco* era. But *La prigione di Edimburgo*, which holds a delicate balance between pathos and comedy, might well bear

revival. The late *opéras comiques* show an unexpected ability to keep up to date in matters of harmony and scoring, even if they remain tied to the expansive traditions of Italian *opera buffa*.

Estella di Murcia (mel serio, 3, F.M. Piave), Milan, Scala, 21 Feb 1846, *Mr**, vs (Milan, 1846); rev., Venice, *Mr*

L'amante di richiamo (op giocosa, 2, Dall'Ongaro), Turin, Angennes, 13 June 1846, collab. L. Ricci

Griselda (mel serio, 4, Piave), Venice, Fenice, 13 March 1847, *Mr**, vs (Milan, n.d.)

Crispino e la comare (mel fantastico-giocoso, 4, Piave), Venice, S Benedetto, 28 Feb 1850, *Mr**, vs (Milan, 1850), collab. L. Ricci; trans. C.-L.-E. Nuitter and Beaumont as Le docteur Crispin, Liège, 17 Dec 1866, with added nos. by F. Ricci, vs (Paris, n.d.)

I due ritratti (ob, 2, ?Ricci), Venice, S Benedetto, 21 Nov 1850

Il marito e l'amante (mel comico, 3, Rossi), Vienna, Kärntnertor, 9 June 1852, *Mr**, vs (Milan, 1852); in Fr. as Une fête à Venise, Paris, 1872, with added nos. by Ricci, vs (Paris, n.d.)

Il paniere d'amore (ob, 2, ?Ricci), Vienna, Kärntnertor, 25 May 1853

Une folie à Rome (opéra bouffe, 3, V. Wilder), Paris, Fantaisies-Parisiennes, 30 Jan 1869; in orig. It. as Una follia a Roma, Paris, 1870; *Nc**, vs (Paris, n.d.; Milan, 1870)

Le docteur Rose, ou La dogaresse (oc, 3, E. de Najac), Paris, Bouffes-Parisiens, 10 Feb 1872, vs (Paris, n.d.)

Don Quichotte (after M. de Cervantes), 1876, inc.

SONGS

Le rendez-vous au salon (Milan, 1840): 6 ariettes: Ballata antica, Una postilla al vocabolario d'amore, Il carrettiere del Vomero, La preghiera d'un bandito, Je ne rève qu'à toi, Il ritorno a Napoli; 6 nocturnes, 2vv: La solita conversazione, La mia felicità, Consiglio all'amica, Gli spazzacamini, Perchè, La traversata del lago

Etrennes à l'objet de ma pensée (Milan, 1841): Il suonatore di campane, Il n'est jamais content, Vicino e lontano, duettino, I cacciatori, duettino/chorus, Propositi d'amanti, notturno, 3 B, Serenata, 2 S, A, B, Le tue carezze!, Con quanto si contenta un lazzarone!, duettino

[9] Grida dei venditori di Napoli (Naples, ?1846): 1 Venditori d'ostriche e d'uova, 2 di gelse gelate, 3 di castagne, 4 di broccoli, sarde e cetone, 5 di ciliegie e di ricotte, 6 di fichi secchi, 7 di mele e di carne di maiale, 8 di fave, 9 di frutti secchi, carciofi e franfellichi

Album, in Venetian dialect (Milan, 1850): La colomba di Venezia, La morosa, La vezilia del Redentor, Amor, La bigolante, El dì di S Marco

Album (Milan, 1850): Una fontana a Roma, L'indifferenza, Desiderio di pace, Sentite che idea!, Non è tutt'oro quello che luce, Voi siete la più bella ragazzina, serenata, 2 B

Canti (Milan, 1864): Giuramenti, Una preghiera, Un arancino, Un cuore, Solito scioglimento, Alla fenestra affacciate

C'est pour vous (Milan, n.d.): Sta bene all'erta, Il pescator veneziano, La fioraia, Il immagine di Lei, Dolente istoria, Il disinganno, La mia bella è morta, Un ricordo a mezzanotte, duettino

Several individual It. and Fr. songs and duets, most pubd (Milan, St Petersburg, Paris)

OTHER WORKS

Cants.: La felicità (F. Romani), Genoa, for wedding of Vittorio Emanuele, 1842; Cantata (di Negro), Genoa, commissioned by King Carlo Alberto; Cantata (G. Pepoli), St Petersburg, in praise of Italy, 1854

Sacred: 2 masses, 4vv, orch, 1819, 1829; Dies irae, 4vv, orch; Recordare, S, A, Bar, B, orch, for Rossini requiem, 1869; hymn

Others: Solfèges (St Petersburg, n.d.); Canto patriotico triestino, collab. L. Ricci; pf pieces

JULIAN BUDDEN

Ricci, Francesco Pasquale (*b* Como, 17 May 1732; *d* Loveno di Menaggio, Como, 7 Nov 1817). Italian composer. Born of a middle-class family, he received a liberal education, then concentrated on music with Vignate at Milan. He joined the Franciscan Order of the Friars Minor and used the title Abbate. Appointed *maestro di cappella* at Como Cathedral in 1759, he was nevertheless able to travel extensively and was absent from his duties during much or all of the time between early 1768 and December 1777. He visited Paris, London, and, most importantly, The Hague, where he appeared in concerts (1766–80) and dedicated works to the prince and others attached to the court. In the 1760s and 70s a number of works, including symphonies, string trios, quartets and accompanied keyboard sonatas, were published there or in Amsterdam. Many of these appeared also in Paris and London, generally in the same edition with altered title-page. Several symphonies from the sets were also issued singly in periodical series. According to Brook, a work by Ricci (*c*1767) was probably the first to be published as a 'symphonie concertante'. However, despite this title, the piece was probably an ordinary symphony, perhaps a reprint of a piece from the sets published in The Hague (*c*1765) and Amsterdam (op.2, *c*1767). His fame was spread by the impact of the first performance of his *Dies irae*, which was published and widely distributed. According to Fayolle, the audience was struck with a 'saint effroi' by the introduction at the 'Tuba mirum' of a trumpet sounding from the cupola (the printed score calls for horns). Ricci was not the first to attempt this effect, however.

Ricci's name appears with that of J.C. Bach in the *Méthode ... pour le forte-piano* (Paris, *c*1788), devised for one of the conservatories at Naples. The nature of the collaboration is uncertain, but it is likely that the two musicians had become acquainted at Milan through Count Litta, a patron of both, and had continued their friendship in London. Ricci may merely have arranged and edited the work in memory of his deceased friend; the ascription to Bach may in any case be false.

WORKS

INSTRUMENTAL

Orch: 9 syms., str, 2 ob, 2 hn, 3 as op.[1] (The Hague, *c*1765; also pubd separately as Periodical Symphonies, no.1, 1763, no.2, 1780), 6 as op.2 (Amsterdam, *c*1767); [3] Symphonies concertantes, op.9 (The Hague, London and Paris, *c*1775); Fl. Conc., *D-KA*; Vc Conc., *D-Bsb*, *F-Pn*

Chbr: 12 trios, 6 for 2 vn, vc, op.3 (Amsterdam, *c*1765), 6 for vn, va, vc, op.10 (The Hague, *c*1775); 12 sonatas, 6 for hpd, vn, vc, op.4 (London, *c*1768), 6 for hpd, vn, op.6 (The Hague, *c*1770); 6 Qnts, various ww, str, #5 with hpd, op.5 (London, *c*1768); 6 str qts, op.8 (The Hague, *c*1773); Divertimento, hpd, vn (The Hague, *c*1770); Minuetti ballabili e Notturni, 2 vn, bc (The Hague, *c*1775); others, *D-Bsb*, *KA*, *I-Mc*

RONALD R. KIDD

Ricci, Luigi (*b* ?Naples, 8 June or 8 July 1805; *d* Prague, 31 Dec 1859). Italian composer, brother of FEDERICO RICCI. At the age of nine he entered the Naples Conservatory, where he studied the violin before turning to the keyboard and to composition. His teachers included Zingarelli and, privately, Generali, at whose instigation he composed his first comic opera, *L'impresario in angustie*, to the libretto set by Cimarosa in 1786; it was performed in 1823 by the students of the conservatory. In 1824 Ricci made his début at the Teatro Nuovo, Naples, with *La cena frastornata*, in which Generali had a hand; it was followed by four more works there in the years 1825 to 1827. His attempt to capture the S Carlo with *Ulisse in Itaca* in 1828 failed, as did most of his essays in the serious genre. The moderately successful *Colombo* (Parma) and *L'orfanella di Ginevra* (Rome) in 1829 were followed by four disasters: *Il sonnambulo* and *L'eroina del Messico* (Rome), *Annibale in Torino* (Turin) and *La neve* (Milan). But with *Chiara di Rosembergh* (1831, Milan), an *opera semiseria* composed for the soprano Giuditta Grisi, Ricci not only redeemed his reputation but also created one of the favourite pieces of the decade. From then on he continued mainly in comedy, achieving a notable success with *Un'avventura di Scaramuccia* (1834, Milan), written to a witty libretto, part romance, part theatrical satire, by Felice Romani. A performance at Pavia the following year earned him a benefit night, for which he added the one-act *farsa La serva e l'ussero*, an amusing piece that has enjoyed modern revival. In the same year *Il colonello*, the first of four works written jointly with his brother Federico, was produced in Naples. The series culminated in the fantastic comedy *Crispino e la comare* (1850, Venice), which held the stage until the end of the century.

In 1836 Ricci became *maestro di cappella* at Trieste. After the predictable disaster of his *Le nozze di Figaro* (1838, Milan), written to a new and undistinguished libretto by Gaetano Rossi, he gave up composing operas for seven years and devoted himself to religious music, also serving as *maestro concertatore* at the Teatro Grande (in this capacity he directed the première in 1848 of Verdi's *Il corsaro*).

The twins Franziska (Fanny) and Ludmilla (Lidia) Stolz (both sopranos; *b* 1827) accompanied Ricci to Odessa, where he directed the 1844–5 opera season. There he lived more or less openly with both, causing confusion as well as scandal. After returning to Trieste, the three were at Copenhagen (1847–8), where the sisters' engagement at the Opera was cut short by the king's death. Back in Trieste, Ricci married Lidia in 1849 without discontinuing the *ménage à trois*. (Lidia's daughter Adelaide, 1850–71, had a brief career as a singer, appearing at the Théâtre Italien, Paris. Fanny's illegitimate son Luigi, 1852–1906, was a theatre conductor and composer of operas and operettas. He called himself Ricci-Stolz after becoming the heir of his aunt, the soprano Teresa Stolz, sister of the twins and a pupil of Luigi Ricci.)

By the middle of the century Ricci was once more doing well with *opere buffe* such as *Il birraio di Preston* (1847, Florence) and, more notably, *La festa di Piedigrotta* (1852, Naples), whose tarantella remains a popular classic of light music. After the appearance of his last opera, *Il diavolo a quattro* (1859, Trieste), which had been commissioned at Copenhagen but not performed there, symptoms of mental illness became evident. He was transferred to an asylum at Prague, his wife's birthplace, where he died.

Luigi Ricci's is one of the more individual voices in Italian opera of the period. His chief gift was for comedy, to which he brought not only a complete mastery of the traditional devices but also a new, robust *buffo* manner characterized by a wealth of bouncing *allegretto* melodies, mostly in duple time, and a not infrequent use of folktune. Not even at his most sophisticated, as in *Scaramuccia*, did he match Donizetti's elegance and sentimental charm. He was clearly the leading spirit in the collaborations with his brother Federico, and most of *Crispino* is by him. The comic numbers of *Chiara di Rosembergh* were the most celebrated, but elsewhere there are bold strokes of harmony and rhythm that show an ability to rise to the serious dramatic occasion.

JULIAN BUDDEN

Ricci, Ruggiero [Roger; Rich, Woodrow Wilson] (*b* San Francisco, 24 July 1918). American violinist. He studied with Persinger from the age of eight and made his débuts at San Francisco (1928) and Carnegie Hall, New York (1929), playing the Mendelssohn concerto. Further studies with Michel Piastro and Georg Kulenkampff were followed by a tour of Europe in 1932, when he visited London, Paris, Berlin, Vienna, Rome and Scandinavia with distinct success. He studied next with Paul Stassevitch (1933–7), as well as with Persinger again, and made the transition from prodigy to mature virtuoso without apparent difficulty, eventually specializing in the 19th-century bravura repertory.

Ricci has been widely acclaimed for the uncanny accuracy, ease and elegance of his playing, especially in demanding, extrovert challenges. He toured the USSR three times, made his first world tour in 1957, and appears regularly in the USA and Europe. His première performances include Ginastera's concerto (1963) with Bernstein and the New York PO at Lincoln Center, von Einem's concerto (1970) with Ozawa and the Vienna PO at the Vienna Festival, and Gerard Schurmann's concerto (1978), written to celebrate Ricci's 50th anniversary as a performer and given with the Royal Liverpool PO under Walter Weller. With a special affinity for Paganini, he introduced the rediscovered Fourth Concerto to American audiences in 1971, and he was the first to record the 24 Caprices in their original version. He also plays jazz. He taught at Indiana University (1970–73), the Juilliard School (1975–8) and the University of Michigan at Ann Arbor (1982–8); in 1989 he was appointed guest professor at the Salzburg Mozarteum. He published *Left-Hand Violin Technique* (New York, 1988). He plays a violin dated 1734 by Guarneri del Gesù which formerly belonged to Huberman.

MARTIN BERNHEIMER/MARGARET CAMPBELL

Ricciarelli, Katia (*b* Rovigo, 18 Jan 1946). Italian soprano. She studied in Venice, making her début in 1969 at Mantua as Mimì. After winning the 1970 Verdi Award at Parma, she sang Leonora (*Il trovatore*) there and Verdi's Joan of Arc in Rome, both in 1971. She made her American début at Chicago in 1972 as Lucrezia (*I due Foscari*) and first sang at La Scala in 1973 as Angelica. Having made her Covent Garden début in 1974 as Mimì, she sang Amelia (*Ballo in maschera*), Elisabeth de Valois, Luisa Miller, Lucia, Aida, Alice Ford (*Falstaff*), Desdemona and Bellini's Giulietta. She made her Metropolitan début in 1975 as Mimì, then sang Micaëla and her Verdi roles. At Pesaro (1981–9) she sang Ellen (*La donna del

lago), Amenaide (*Tancredi*), Madama Cortese (*Il viaggio a Reims*), Bianca (*Bianca e Falliero*) and Ninetta (*La gazza ladra*). Her repertory also included Cherubini's Medea, Mathilde (*Guillaume Tell*), Norma, Imogene (*Il pirata*), Paolina (*Poliuto*) and the title roles of *Maria Stuarda*, *Caterina Cornaro*, *Lucrezia Borgia* and *Maria di Rohan*. In 1989 she sang Maddalena (*Andrea Chénier*) at Versailles. Ricciarelli recorded many of her bel canto roles and, less successfully, Aida, Tosca and Turandot. Her vibrant, warm-toned voice was enhanced by her truthful, appealing acting.

ALAN BLYTH

Ricci de Tingoli, Cesarina (*fl* 1597). Italian composer. She was related by birth to the family of Cardinal Giovanni Ricci (1497–1574) and by marriage to the noble Tingoli family of Rimini. Her only known publication, *Il Primo libro de madrigali a cinque voci* (Venice, 1597), contains 14 five-voice madrigals and an eight-voice dialogue by Ricci along with two madrigals by the otherwise unknown Alberto Ghirlinzoni. Only two partbooks of this print survive, but a manuscript tablature (*D-Mbs* Mus Ms 4480) includes complete versions of one of Ricci's and one of Ghirlinzoni's madrigals. The print is dedicated to Cardinal Cinzio Aldobrandini. All known authors of the texts set by Ricci (Antonio Ongaro, Tasso and Guarini) were associated with the academy Aldobrandini held at the Vatican. The dedication text, which was signed from Monte Colombo, a village near Rimini, suggests that Ricci was also close to this circle. Ricci's print contains short, homophonic pieces with repetitive villanella-structures as well as lengthy madrigals with passages in sophisticated imitative style. Her pieces are similar in style to some collections of Ruggiero Giovannelli who might have been her teacher.

CHRISTINE FISCHER

Riccieri, Giovanni Antonio. *See* RICIERI, GIOVANNI ANTONIO.

Riccio [Ricci], **Benedetto** (*b* ?Naples, ?1678; *d* after 1710). Italian composer. He was listed by Prota-Giurleo among the 'dilettanti' (together with Faggioli, Orefice and Mauro) who originated the Neapolitan dialect *opera buffa*. His *L'alloggiamentare* (text, N. Gianni; Teatro dei Fiorentini, February 1710) belongs, formally speaking, among the earliest examples of the genre, with its many (57) short musical numbers, frequent ensemble pieces, use of short and probably sometimes strophic arias, lack of exit arias, and in general rapid, fluid movement between recitative and song. As far as can be judged from the libretto, however, it is progressive in intent: the verse forms in the arias are often longer and more complex than those in the opera's predecessors; the possibilities of onstage music begin to be exploited, for example in Act 3 a serenata (which Viviani considered possibly a popular song of the day) and a dance; and there is some evidence that the dramatic material was shaped in terms of the musical, as in Act 2 scene iii, with its increasingly complex series of numbers. Riccio had earlier composed a serious opera, *L'Ateone* (D. Renda; Fiorentini, 1708) and two *melodrammi sacri*: *L'Iride in cielo* (1704) and *L'umanità consolata* (O. Pinto; Congregazione di S Maria del Parto dei Dottori, cloister of SS Apostoli dei PP Teatini, Christmas season, 1703; both in *I-Nf*). Two cantatas survive (in *I-Gl* and *I-Nc*); that in Naples, *Clori, vorrei narrarti quel che sò*, consists of a recitative and aria for soprano and continuo and is a conventional but skilful exercise in pastoral pathos with a neatly contrapuntal bass part. Some works by a 'Riccio' (*I-RI*) may also be his.

JAMES L. JACKMAN/FRANCESCA SELLER

Riccio, David. *See* RIZZIO, DAVID.

Riccio [Rizzo], **Giovanni Battista** (*fl* 1609–21). Italian composer and instrumentalist. He was appointed organist at the Venetian confraternity of S Giovanni Evangelista in 1609. His contract describes him as a violinist. No further details of his life are known.

Psalms and antiphons are the main textual sources for his motets; Marian antiphons are especially emphasized in the third book. A two-part mass and a *Magnificat* appear in the second. All three volumes contain instrumental pieces. He employed a style developed for relatively large numbers of performers in works for few, usually two, performers: there is, for example, frequent use of echo and dialogue techniques, instruments and voices are employed in the concertato manner, and there are occasional ritornellos. In these respects his style seems to be an adaptation of that of Giovanni Gabrieli to the small ensemble. His later works show an increasingly strong response to the *seconda pratica* vocabulary associated with Monteverdi, but his writing is never as florid as that of some of his contemporaries.

Riccio's instrumental works are chiefly canzonas, a few of which are based on themes by Gabrieli. Most are for two violins, or violin and trombone, but he also scored for sopranino recorder (*flautino*), cornett and bassoon. Although his writing is again not florid, he employed such relatively modern devices as trills and tremolo figures and frequently wrote cadenza-like flourishes at final cadences. (E. Selfridge-Field: *Venetian Instrumental Music from Gabrieli to Vivaldi*, Oxford, 1975, 3/1994)

ELEANOR SELFRIDGE-FIELD

Riccio, Teodore [Teodoro] (*b* Brescia, *c*1540; *d* Ansbach, *c*1600). Italian composer, active mainly in Germany. He referred to himself as 'Brixianus Italus'. He may have worked at Ferrara, and according to the preface of his first book of madrigals he was *maestro di cappella* of SS Nazaro e Celso, Brescia, in 1567. In 1575 he arrived at the Ansbach court of Margrave Georg Friedrich of Ansbach-Brandenburg, probably after spending some time in Vienna and Dresden. It is possible that he was recommended to Ansbach by Antonio Scandello, at that time Kapellmeister to the Dresden court. In 1578, when the margrave became administrator of the duchy of Prussia, the musicians were sent to Königsberg in Prussia where Riccio became a Protestant. From 1580 he was acquainted with the composer Johannes Eccard who is cited in the household register as vice-Kapellmeister. In 1585 Riccio married and became a householder near the town; in that year he was appointed Kapellmeister of the court for life. In 1586, at the end of his term as administrator, Margrave Georg Friedrich returned to Ansbach with most of his musicians. Riccio was mentioned as being in Ansbach in 1599, but had died by the time the margrave died in 1603.

Riccio was one of the many Italian composers who took important posts in Germany in and after about 1550; he was evidently a reliable and esteemed Kapellmeister. Apart from his madrigals, his works are in the traditional Lutheran style; polychoral writing was one of his chief preoccupations. J.S. Bach resolved a riddle canon by Riccio which has been found in a collection of album leaves in the state archive of Oldenburg, Germany.

WORKS

SACRED

Sacrae cantiones, 5–8vv (Nuremberg, 1576)
Missarum liber primus, 4–6vv (Königsberg, 1579)
Magnificat octo tonorum, 4–8vv (Königsberg, 1579)
Secundus liber sacrarum cantionum, 5–12vv (Königsberg, 1580)
Paraphrases psalmorum graduum cxxxiii ... et cxxxiv, 5vv (Königsberg, 1582) [Ps.cxxxiv is by Eccard]
Hymnaeus in honorem, Phil. Davveli, 5vv (Königsberg, 1584)
17 psalmi ... motectae et 4 Magnificat ... cum Litaniis, 8vv (Venice, 1590)
Several motets, 1578[1], 1583[2], 1589[17], 1591[1]
Several works in MSS: *A-KR*, *B-Bc*, *D-Nla*, frags. in *DK-Ou*

SECULAR

Il primo libro di madrigali, 5vv (Venice, 1567)
Il primo libro di madrigali, 6vv (Venice, 1567)
Il primo libro delle canzone alla napolitana ... con alcune mascherate, 5, 6vv (Venice, 1577)
Several further madrigals, 1583[23], 1586[22], 1590[11], 1590[27], 1594[19], 1600[5a], 1600[6]

WALTER BLANKENBURG/NORBERT DUBOWY

Ricciotti, Carlo [Bacciccia] (*b c*1681; *d* The Hague, 13 July 1756). Italian violinist and impresario, active in the Netherlands. He is first heard of with a French opera company at The Hague in 1702, where he worked, ultimately as director, until 1725. There are no records of Ricciotti as composer, while as practising musician we know only that he was violin teacher to Count Willem Bentinck and played first violin in the concerts held at the homes of Bentinck and Wassenaer. On 26 February 1740 the states of Holland and West Friesland awarded Ricciotti a patent for the printing of six *Concerti armonici a quattro violini obligati, alto viola, violoncello obligato e basso continuo*, published in The Hague. The title-page mentions only that the concertos are dedicated to Count Bentinck by Ricciotti, at whose expense they were printed: no composer is named. In the dedicatory letter to Bentinck, Ricciotti begged the count 'to take even greater pleasure in accepting these works since they stem from an illustrious hand [Illustre mano] which your Excellency esteems and honours, and to which I am bound out of respect'. When the concertos were reprinted by the London publisher Walsh, Ricciotti was named as the composer, and while this attribution can have no significance whatever, J.P. Hinnensthal (*Mf*, xxi, 1968, 322–3) also conjectured that Ricciotti himself was the composer. From the time of its publication to very recently, cases have been made for attributing the collection to numerous composers, including Pergolesi and Fortunato Chelleri. However, it has now been established without doubt that the works are by UNICO WILHELM VAN WASSENAER.

ALBERT DUNNING

Riccoboni, Luigi Andrea ['Lelio'] (*b* Modena, 1 April 1676; *d* Paris, 6 Dec 1753). Italian actor and author. He began his acting career at the age of 14 as a strolling player in Genoa. In 1698 he directed a theatre troupe for the Duke of Modena. He married the actress Elena Balletti, known as Flaminia, in 1706. In an attempt to reform the Italian theatre, he had translations of plays by Racine and Molière published.

In May 1716 Philippe II, Duke of Orléans, Regent of France, re-established the Comédie-Italienne as the Nouveau Théâtre Italien in Paris and installed Riccoboni and his troupe in the Hôtel de Bourgogne, its former home (Louis XIV had expelled its actors from France in 1697). The success of the first play in French at the Nouveau Théâtre Italien (*Le naufrage au port à l'anglais* by Jacques Autreau, music by Mouret) convinced Riccoboni that only works performed in French or partly in French would succeed. He retired in March 1729. The king awarded him and his wife a pension of 1000 livres each.

Riccoboni made the first comparative study of theatres of Italy, Spain, France, England, Holland, Flanders and Germany. Although incomplete, his *Réflexions historiques sur les théâtres de l'Europe* contains much of interest. He reports that

> no spectators sit upon the stage in the [Paris] Opera . . . With regard to the price, it is double that of any other entertainment . . . The decorations of the stage of the [Paris] Opera are very handsome, but not to be compared with those of Italy . . . The recitative [at the Hamburg Opera] is in their own language, but the airs generally in Italian; they have three different operas in one week.

(X. de Courville: *Un apôtre de l'art du théâtre au XVIIIe siècle: Luigi Riccoboni, dit Lelio*, Paris, 1943–58, 2/1967)

JAMES R. ANTHONY

Rice, Daddy [Rice, Thomas Dartmouth] (*b* New York, 20 May 1808; *d* New York, 19 Sept 1860) . American minstrel performer. He trained to be a woodcarver, and occasionally performed small parts at the Park Theatre in New York. He then became an itinerant player, and it

Cover of a sheet-music edition (c1829) of Daddy Rice's 'Jim Crow'

was probably in Louisville in 1828 that he created his famous 'Jim Crow' act, the first solo act by a blackface performer (see illustration). His first performance as Jim Crow was an instant sensation, and Rice rose from obscurity to ever increasing success in Cincinnati, Pittsburgh, Philadelphia, Boston, New York (in 1832) and even London (1836). Rice's popularity was unprecedented, and *Jim Crow* was the first American song to become an international hit. The tune resembles Irish and English tunes, but the lyrics are purely American; many verses are crude attempts at satirical and topical humour. Jim Crow was the first example of what became a stock character in minstrelsy, that of the southern plantation field hand, who was not only naive and fun-loving, but also boastful, like the frontiersman or river boatman. Dance was an essential part of the act, and it has been claimed to be the first clear use of African American dance on the popular stage. Rice also added other blackface songs to his repertory, such as *Clare de Kitchen* and *Long Time Ago*.

Rice created a new genre of popular entertainment, the 'Ethiopian opera', which consisted of blackface farces interspersed with songs. His first, in 1833, was *Long Island Juba*, or *Love by the Bushel*. He wrote and performed in numerous others. These pieces were the precursors of the minstrel sketches, which became central to the fully developed minstrel show of the 1840s and later. Although Rice was one of the first (with George Washington Dixon) to show the potential of black face entertainment and is often called 'the father of American minstrelsy', he rarely performed in minstrel shows, preferring to continue performing his songs and farces as entr'actes and afterpieces. His popularity gradually declined in the 1850s, his performances became sporadic and he died in financial distress.

ROBERT B. WINANS

Rice, Edward Everett (*b* Brighton, MA, 21 Dec 1848; *d* New York, 16 Nov 1924). American composer and producer. Nothing is known of his early training or career, but by 1879 he had produced several operettas in New York and on tours in the USA. His best-known work is *Evangeline* (1874), the most popular American musical stage work of its decade, one of the first works to be called a 'musical comedy', and perhaps the first of its genre in the USA to have a fully original score without adapted or interpolated songs. Rice reportedly suggested writing the show as 'a burlesque diversion to which an entire family might be taken, in lieu of the imported entertainment at which only the black sheep from every fold were expected'. During the 1870s Rice also wrote songs for a revival of John Brougham's burlesque *Po-ca-hon-tas*. *Adonis* (1884, W. Gill and H.E. Dixey) was popular in New York and London.

Rice formed his own troupe to introduce new burlesque extravaganzas in Boston; it revived his works for many years, continually adding new dialogue and topical songs. Rice could neither read nor write musical notation, but picked out melodies at the piano for an amanuensis to transcribe. He led in the reform of burlesque; while his productions succeeded largely on account of their comic routines, his music adeptly portrays the humorous and sentimental characters.

DEANE L. ROOT

Rice, Sir **Tim(othy Miles Bindon)** (*b* Amersham, 10 Nov 1944). English librettist and lyricist. He studied law, but after meeting ANDREW LLOYD WEBBER embarked on a career as a lyricist. Their first experiment with a stage work was *The Likes of Us*, based on the life of Dr Barnado, but *Joseph and the Amazing Technicolor Dreamcoat*, first performed by the pupils of Colet Court School (1 March 1968), eventually was taken up all over the world. Their operas *Jesus Christ Superstar* and *Evita* were first performed in concert and recorded before being staged (1971 and 1978 respectively); another collaboration, *Cricket* (1986), has only been given privately. With Stephen Oliver he wrote *Blondel*, which was the first work to be performed at the refurbished Old Vic Theatre

(1983). *Chess* (1984), with music by Benny Andersson and Bjorn Ulvaeus, was well received in London and Australia, although a Broadway production was short-lived. Rice has also written lyrics for many other composers, twice winning Academy Awards for film songs ('A Whole New World' in *Aladdin*, 1992, and 'Circle of Life' in *The Lion King*, 1994, both produced by Disney). His style, typified by numbers such as 'Don't cry for me, Argentina' (*Evita*) or 'I know him so well' (*Chess*), has inspired many imitators, but few have succeeded in matching his mixture of apparent simplicity with commercial sophistication. In 1991 he was appointed Chairman of the Foundation for Sport and the Arts, and was knighted in 1994. Rice has also written an autobiography, *Oh What a Circus: the Autobiography, 1944–1978* (London, 1999).

WORKS
(*selective list*)

all stage or film works; dates are those of first performance; composers and co-writers in parentheses

Joseph and the Amazing Technicolor Dreamcoat (A. Lloyd Webber), 1968, rev. 1968, 1972, 1973; Jesus Christ Superstar (Lloyd Webber), 1970, rev. 1971; *Evita* (Lloyd Webber), 1970, rev. 1978; Blondel (S. Oliver), 1983; Chess (B. Andersson and B. Ulvaeus), 1986; Cricket (Lloyd Webber), 1986; Tycoon (M. Berger), 1992; Beauty and the Beast (A. Menken), 1994 [selected songs only]; Heathcliff (J. Farrar), 1996; King David (Menken), 1997; Elaborate Lives, the Legend of Aida (E. John), 1998

PATRICK O'CONNOR

Rice, Timothy (*b* Gainesville, TX, 12 May 1945). American ethnomusicologist. He studied history at Yale (BA 1967) and took the doctorate in music at Washington University in 1977. From 1974 to 1987 he taught at the Faculty of Music of the University of Toronto; he then moved to UCLA, where he was appointed professor of ethnomusicology and systematic musicology in 1993 and department chair in 1996. He has been editor of *Ethnomusicology* (1981–84) and treasurer and a director of the Society for Ethnomusicology (1986–90); he is also founding co-editor of the *Garland Encyclopedia of World Music*.

Rice has published widely on the folk and traditional musics of Bulgaria (where he began conducting fieldwork in 1969), and Macedonia, addressing issues relating to music cognition, musical symbolism, ethnoaesthetics, the politics and economics of music and individual agency in culture. His book *May It Fill Your Soul: Experiencing Bulgarian Music* offers a penetrating analysis of Bulgarian music in the context of the dramatically changing political, economic and social forces of the past seventy years. He has also contributed to theoretical debates about the nature of ethnomusicology, and his seminal paper 'Toward the Remodeling of Ethnomusicology' stimulated lively debate; his related writings address the relationship of ethnomusicology to other fields, in particular music education.

CAROLINE BITHELL

Ricercare [ricercar, recercar(e), recerchar(e), ricercata] (It.: 'to search for'; Fr. *recherché*; Sp. *recercada*). In its widest sense, a piece of an esoteric nature; a technical exercise either of a practical nature or illustrative of some device of composition.

1. Introduction. 2. The preludial or rhapsodic ricercare. 3. The imitative ricercare.

1. INTRODUCTION. The general notion of musical composition as a process of seeking or finding is ancient: it is referred to in the Vulgate by the very word from which 'ricercare' is derived ('requirentes modos musicos', *Ecclesiasticus* xliv.5; Revised Standard Version: 'those who composed musical tunes'; Authorized Version: 'such as found out musical tunes') and is presumably the concept expressed in the terms 'troubadour' and 'trouvère', although these were primarily used of poets or poet-musicians rather than simply of composers. The idea reappears in the term INVENTION, and there is much to be said for the view that links the tradition of the didactic duet, often called 'ricercare' (see §3), with Bach's two-part inventions.

Originally the term 'ricercare' was used for a piece of preludial character for lute or keyboard instrument (as in the expression 'ricercare le corde', 'to try out the strings'), giving it a meaning comparable to that of 'tastar', 'tañer', 'tiento' etc. (*see* TOCCATA and TIENTO). The commonest type subsequently was the imitative ricercare, similar in scope to the fantasia and fugue. Some uses appear to combine two different meanings of the word, as, for example, imitative ricercares designed as exercises in vocalization, or elaborate and technically difficult compositions for viol illustrating the technique of setting a cantus firmus.

Few early authors attempted a comprehensive definition of the ricercare. For Vincenzo Galilei (*Dialogo*, 1581, p.87) it was a fugal form, comparable in its excessive complexity to the verse form known as the sestina. For Michael Praetorius also (*Syntagma musicum*, iii, 1618, pp.21–2) it was imitative, the equivalent of the *fuga*, which by that date had come to acquire something like its present-day meaning. Many 18th- and early 19th-century compilers of dictionaries mentioned its preludial function, often without referring to its fugal connotation; they include Brossard (1703), Walther (1732; his is a fuller definition than most, citing among others Galilei, Praetorius and Brossard), Rousseau (1768) and Lichtenthal (1826). All referred to the literal meaning of the Italian verb, which is usually glossed by the Latin 'exquirere' and similar words; and Rousseau, who gave only the French

form 'recherché', added that it was also used as the equivalent of 'cadence', a cadenza or improvisatory flourish over a cadential pedal point (see the full title of Giovanni Bassano's *Ricercate* referred to in §2 below).

2. THE PRELUDIAL OR RHAPSODIC RICERCARE. The term first occurs in Spinacino's *Intabulatura de lauto libro primo* (Venice, 1507/*R*). The 17 ricercares are placed at the end, and while in most of them the title is unqualified, in two cases it suggests a preludial function by referring to a chanson intabulated earlier in the volume (e.g. *Recercare de tous biens*). There are another ten in Spinacino's second book of the same year. In J.A. Dalza's *Intabolatura de lauto libro quarto* (1508), four of the pieces called 'tastar de corde' are followed by ricercares, usually called 'ricercare dietro' ('following'). Thus there may already have been a distinction between the most primitive kind of 'trying-out' and the more artistic, purely rhapsodic piece. Most of these early ricercares, like those in the Capirola Lutebook (*see* CAPIROLA, VINCENZO), include both chordal and scale passages and are as much ancestors of the toccata as of any other type.

The preludial style of ricercare was transferred to the keyboard in M.A. Cavazzoni's *Recerchari, motetti, canzoni ... libro primo* (1523/*R*). Here the two ricercares serve as preludes to two motet transcriptions, *Salve virgo* and *O stella maris* respectively. They are extended compositions of considerable interest, with passages of imitation but not primarily based on an imitative principle. One of their chief attractions is the idiomatic keyboard writing, chords and runs being blended together with great skill into a full yet clear texture. Several similar pieces, including another by M.A. Cavazzoni and one by 'Jaches' (perhaps Jacques Brunel, organist at Ferrara, 1532–64) are found in a source from Castell'Arquato (*see* SOURCES OF KEYBOARD MUSIC TO 1660, §2(i)). That source also includes some of the earliest surviving examples of the imitative ricercare, including one by 'Jaches' and four by Giacomo Fogliano.

The non-imitative ricercare did not entirely die out after the early 16th century; examples for solo viol are found in the works of Sylvestro di Ganassi dal Fontego and Diego Ortiz. The former included eight solo ricercares in his two instruction books of 1542–3. Ortiz, in his *Trattado de glosas* (1553), used the term 'recercada' not only in the sense of a rhapsodic piece for solo viol but also for viol and keyboard works based on various grounds (in which case the keyboard player added chords above the bass line), and transcriptions of vocal polyphonic pieces for the same medium. The six pieces based on the basse danse melody known as 'La Spagna' belong to a whole tradition of didactic works using this widespread cantus firmus. Those of Ortiz are perhaps the first to be designated ricercares; most of their successors, however, belong to the imitative type rather than to the improvisatory type cultivated by Ortiz. The close association between the ricercare and the Renaissance practice of diminution is exemplified in Giovanni Bassano's *Ricercate, passaggi et cadentie* (1585).

3. THE IMITATIVE RICERCARE. The precise origin of the imitative ricercare is disputed. Many scholars have assumed that it was the instrumental counterpart to the motet and derived directly from it. The study of the earliest instrumental ricercares cast doubt on this premise and suggested that the purely imitative type arose from the use of occasional imitation in the rhapsodic type; but this hypothesis overlooks the place of the ensemble ricercare in the development of the form. The anthology *Musica nova* (RISM 1540[22]) contains 18 compositions (out of 21) labelled 'R' for 'ricercare', all of which (together with two of the untitled works) are in motet style with pervading imitation. When it is remembered that the term 'motet' does not exclude cantus firmus and chordal techniques, its relevance to the history of the ricercare is seen to be considerable. The ricercares of M.A. Cavazzoni are strikingly similar to what one might expect of a keyboard arrangement of an inconsistently imitative motet; they are indeed closely related in style to the motet arrangements that follow them in the printed source. Thus the motet has a direct bearing on the early history of both the imitative and (at least in the case of keyboard music) the non-imitative or partly imitative forms. A similar transition from the non-imitative to the imitative type of ricercare is found in lute sources, probably through the influence of the keyboard form, as for example in the publications of Simon Gintzler (1547), Bakfark (1552) and Galilei (*Intavolature de lauto ... madrigali e ricercate, libro primo*, 1563).

The ricercares of *Musica nova*, by Julio Segni, Willaert, Girolamo Cavazzoni and others, have the form of a consistently imitative motet. Several short themes are given fugal treatment in turn. Although some works use more themes than would a motet of the same length, the general similarity to the sacred vocal style of the generation of Clemens and Gombert is unmistakable. The parts (all but one of which have to be reconstructed from a French reprint, *Musicque de joye*, RISM *c*1550[24]) show severe melodic lines, but these may have been ornamented in performance.

The early type of imitative organ ricercare is represented by the four examples in Girolamo Cavazzoni's *Intavolatura cioe recercari canzoni himni magnificati* (1543). They differ from the ensemble form only in the provision of ornamented melodic lines, notably at cadences. Sometimes the ornamentation blossoms out into lengthy scales and runs, resulting in a climactic effect peculiar to the early keyboard form, as, for example, towards the end of no.2. Although a few organ works of this period are virtually unornamented in the sources, there can be little doubt that they would have been embellished in performance.

The title-page of *Musica nova* indicates that its contents could be sung, or played on organs or other instruments, and the implied flexibility is found in the title-pages of many of its successors. These include Jacques Buus, *Recercari ... da cantare et sonare d'organo et altri stromenti* (1547 and 1549); Giuliano Tiburtino, *Fantasie et recerchari ... da cantare et sonare per ogni instrumento* (1549); Willaert, *Fantasie recercari contrapunti a tre voci di M. Adriano et de altri autori appropriati per cantare et sonare d'ogni sorte di stromenti* (1551); and Annibale Padovano, *Il primo libro de ricercari a quattro voci* (1556). One of the pieces from the second volume of Buus's work is actually included in his *Intabolatura d'organo di recercari* published in the same year (1549); thus it is possible to compare an embellished intabulation of the period with its plain original. The technique of ornamentation, in this as in his other organ ricercares, is more elaborate than in those of Cavazzoni. A written-out and embellished keyboard score of an ensemble ricercare is a rarity in this period, and organists normally had to

make their own copies from the printed partbooks, until in the late 16th century publishers took to providing an open score ('partitura'), either in addition to or instead of the separate parts.

Singers could perform these works to the appropriate solmization syllables. The term 'ricercare da cantare' occurs as late as Claudio Merulo's third book (1608), while the four-part ensemble ricercare itself was cultivated at least until the publication of Antonio Cifra's *Ricercari e canzoni franzese ... libro primo* (1619), published in four partbooks, with a separate organ score. (The second book, also 1619, is in score only and was probably originally for keyboard, though considered an ensemble work by Frotscher and Apel.) Of particular interest in the history of the ensemble ricercare are the works on 'La Spagna' by Mayone (1609) and Trabaci (1615). The element of vocal exercise is also provided by numerous collections of duets in imitative style, such as Francesco Guami's *Ricercari a due voci* (1588), Lassus's *Motetti et ricercari* (1585) and the famous *Ricercari a canto e tenore* by Grammatio Metallo (possibly first published in 1591; a 1595 edition, also lost, is mentioned by Fétis; for extant 17th-century editions see below). Such didactic duets do not always bear the heading 'ricercare': there are no specific titles to the pieces in Eustachio Romano's *Musica duorum* (1521) nor to those in Morley's *A Plaine and Easie Introduction* (1597) (*see also* BICINIUM).

The use of the term FANTASIA to denote a piece in fugal style probably arose from the development of the monothematic ricercare, in which the main structural feature of the motet, the contrapuntal treatment of several themes in turn, was abandoned in place of a much stricter design. Later still, when the term 'ricercare' had acquired an archaic connotation, 'fantasia' was used even for monothematic works (such as those by Sweelinck and Frescobaldi) if they were in a modern style or contained elements of rhythmic liveliness. Nevertheless, at least one of Sweelinck's fantasias is called 'ricercare' in its two sources, and one should not set too much store by the vagaries of 16th- and 17th-century nomenclature.

One of the earliest examples of a monothematic ricercare comes from Buus's first book. It is an arid piece, as one might expect of a lengthy experimental composition devoted to the exploration of a new technique. The form was further developed by Andrea Gabrieli, whose four volumes containing ricercares were printed posthumously in 1595, 1596 and 1605. The *Libro secondo* (1595) contains 11 ricercares (together with two by his nephew Giovanni); the *Libro terzo* (1596) has a further six; the *Libro quinto* (1605; a fourth book of which the contents are unknown has disappeared altogether) gives seven more, while the *Libro sesto* of the same year includes one. Gabrieli's ricercares illustrate a gradual reduction in the number of subjects, five actually being monothematic. Gabrieli made frequent use of inversion, augmentation, diminution and other fugal techniques. Moreover, he was perhaps the initiator of the device that can only be called the countersubject, invertible and appearing with most occurrences of the subject. Although the technique is not used with the regularity found in the later fugue, it clearly foreshadows that treatment. Gabrieli did not introduce the countersubject until the second entry of the subject (in other words, it is a continuation of the first voice), but later composers introduced two, three or even four subjects simultaneously from the outset. This technique is the ancestor of the double, triple and quadruple fugue and is not to be confused with the earlier method of working several themes in succession. In a sense, works such as these are monothematic fugues on a single two-, three- or four-part subject.

Andrea Gabrieli's fifth book contains seven works described collectively on the title-page as 'ricercari ariosi'. In the body of the book four of them are designated simply 'ricercar arioso', while the remaining three are based on French chansons: 'Ricercar sopra Martin menoit', '... Orsus au coup' and '... Pour ung plaisir'. Each follows a canzona based on the same material; but whereas the canzonas are fairly strict intabulations of their vocal models, the ricercares are rather freer fugal paraphrases and use longer note values. The 'ricercari ariosi' may also be based on vocal models. Although most organ music of the 1560s and later tended to use shorter note values, semiquavers now being as frequent as quavers had been in the works of Girolamo Cavazzoni, the development in the organ ricercare stopped short at the point reached by Buus, and in some cases reverted to a still plainer manner, perhaps as a conscious archaism.

The ricercares of Annibale Padovano, Sperindio Bertoldo and Claudio Merulo, like those of Andrea Gabrieli, survive only in posthumous prints or reprints. Merulo's ricercares (originally published in 1567) are not representative of his best work and include no monothematic examples. The ricercares of the Neapolitans Rocco Rodio (1575) and Antonio Valente (1576) are more significant. Rodio, particularly, included passages requiring virtuoso technique and extremes of chromaticism which recall the pedagogic significance of the term 'ricercare'. The collections of Mayone and Trabaci follow in the same tradition.

Volumes six and seven of the Giordano collection in Turin (*see* SOURCES OF KEYBOARD MUSIC TO 1660, §2(iii)) are devoted to ricercares. Although the word is there also applied to non-Italian works, given other designations by their composers, there are genuine examples of the form, including six that may be attributed to Giovanni Gabrieli with some confidence. These ricercares, like two by Giovanni Gabrieli printed in Andrea's *Libro secondo* (1595), use shorter note values than do those of his uncle and include antiphonal passages between high and low groups of parts in a manner reminiscent of Giovanni Gabrieli's ensemble music. While the Turin manuscripts separate the genres, several other sources include ricercare-canzona pairs based on the same material.

The high point of the organ ricercare was reached in the works of Frescobaldi. His *Ricercari et canzoni* was first published in 1615 and was reprinted with the capriccios in 1626. Some of the ten ricercares have several sections devoted to different subjects; others treat one or more subjects simultaneously from the beginning or nearly the beginning of the piece. In the first, three subjects are combined in this way. The ninth is based on four subjects; the fourth, sixth, seventh and tenth are based on solmization syllables; in the last case the subject is repeated throughout in the top voice only, against a multi-sectional ricercare that unfolds in the lowest three voices. The second consists in effect of three double fugues in which both subject and countersubject are treated alternately in their original form and in inversion. The eighth is subtitled 'obbligo di non uscir in grado': that is, no part may at any time proceed by step. These ricercares, in spite of their severity, their archaic flavour and their

comparative immaturity, are interesting for their single-minded pursuit of the contrapuntal ideal. The ricercares of Frescobaldi's *Fiori musicali* (1635), which were intended to replace the liturgical offertory, give a rather different impression. Four are multi-sectional in form. The sections are marked off by pauses, probably to indicate possible terminations in the context of liturgical performance. The ricercare of the first mass is an example of what may be called the variation ricercare: in each of its two sections the main theme is combined with different counterpoints. This technique is seen to perfection in the magisterial 'recercar cromaticho' from the second mass, which is in three sections and is preceded by a short toccata. The first ricercare of the third mass is similar in scope. In the alternative piece from the second mass, on the other hand, the main subjects, presented separately in the first three sections, are combined in the last. The last of these works has an optional fifth part, an ostinato which the performer must not only fit correctly into the polyphonic texture but also sing himself.

The tradition of the keyboard ricercare continued in Italy with such composers as Giovanni Salvatore (1641), G.B. Fasolo (1645), Bernardo Storace (1664), Luigi Battiferri (1669), Fabrizio Fontana (1677) and Gregorio Strozzi (1687). It seems fairly clear that one of its main functions in this period was to replace the liturgical offertory, and perhaps also other items of the Proper, when these were not explicitly provided for in the numerous organists' handbooks of the day; indeed, it is explained in Fasolo's *Annuale* that they may be used instead of the short substitutes provided for both the Gradual and the Offertory. Though the regular four-part ensemble ricercare virtually disappeared after Giovanni Cavaccio's *Sudori musicali* (1626), the two-voice type continued with G.B. Cali (1605), Giorgio Gentile (1642), Cristofano Piochi (1671 and 1673) and Stefano Corti (1685), as well as with Metallo's ricercares, which passed through at least 12 editions between 1605 and 1685. Piochi's 1671 volume also includes three-part works, to which his publication of 1675 is devoted. The character of a technical exercise is preserved in the 12 short unaccompanied fanfare-like ricercares from Girolamo Fantini's *Modo per imparare a sonare di tromba* (1638), and in such later publications as G.B. Degli Antoni's *Ricercate sopra il violoncello o cembalo* (1687) and *Ricercate a violino e violoncello o cembalo* (1690), as well as in the manuscript *Ricercari per violoncello solo* by Domenico Gabrielli (1690).

In Austria and Germany the severe manner of Frescobaldi was continued by Froberger, whose 14 ricercares are monothematic and employ the variation principle. The works in C♯ minor and F♯ minor exhibit the growing tendency towards tonal experimentation (both the severity and the tonal adventurousness are reflected in the fugues of J.C.F. Fischer's *Ariadne musica*). Other German composers of ricercares include Johann Krieger and Pachelbel; but the form did not undergo any rejuvenation until the time of Bach, who was probably thinking of its monothematic aspect when he revived the term in the *Musical Offering*. The king's subject, unsuited to stretto, is surrounded by a wealth of different counterpoints in the three-part work which begins the collection and in the massive six-part work which is its culmination. Though the latter exists in a two-staff version in Bach's own hand and was certainly intended primarily for the keyboard, he published it in open score and in so doing (as in the *Art of Fugue*, where the term 'contrapunctus' is chosen) revived an old Italian notation with all its implications of an idealized counterpoint irrespective of medium. The few modern composers who have used the term have generally implied by it a severe fugue with archaic mannerisms.

JOHN CALDWELL

Rich, Alan (*b* Boston, MA, 17 June 1924). American music critic. After premedical studies at Harvard (BA 1945) he studied music at the University of California, Berkeley (MA 1956), with Kerman, Sessions and Bukofzer. His career in journalism began with a position as music critic of the *New York Times* (1961–3) and continued with the New York *Herald Tribune* (1963–7), and *New York* (1968–81) and *California* (1981–3) magazines; in 1983 he was appointed music editor of *Newsweek*. Rich has written for a variety of other publications as well, and has won the ASCAP-Deems Taylor Award four times. He has also been active in teaching (lecturer at the University of California, 1950–56 and at the California School of the

Arts, 1983–94) and in radio. Rich is one of the better-known American music critics, owing not only to his wide exposure in magazines but also to his provocative critical stances, often athwart received opinion and delivered in a pithy style; his chief value is as an unpredictable gadfly.

PATRICK J. SMITH

Rich, Buddy [Bernard] (*b* New York, 30 Sept 1917; *d* Los Angeles, 2 April 1987). American jazz drummer and singer. He appeared on stage in his parents' vaudeville act before his second birthday, played drums and tap-danced on Broadway when he was four, and from the age of six toured the USA and Australia, leading his own stage band when he was 11. He joined Joe Marsala's band in 1937 and then played briefly with Bunny Berigan, Harry James, Artie Shaw and Benny Carter, and for somewhat longer with Tommy Dorsey (1939–42). After serving with the US Marines he worked again with Dorsey in 1944–5, then led his own band intermittently until 1951, while also playing with Norman Granz's Jazz at the Philharmonic, Les Brown, and Charlie Ventura's Big Four. A recording association with Lester Young produced the excellent *I found a new baby* (1946, Clef). From 1953 to 1966 Rich was with Harry James's group apart from spells with Dorsey (1954–5) and with his own small group (1957–61), when he also performed as a singer in a style resembling that of Frank Sinatra. In 1966 he organized a second big band, with which he achieved remarkable international success until its dissolution in 1974; among its recordings was the album *Swingin' New Big Band* (1966, PJ). Thereafter he played mainly in New York with a small group in his own club, Buddy's Place. In the 1980s he began to tour again, with a big band of young musicians.

Rich's playing was characterized by phenomenal speed and dexterity. He was an extrovert performer who produced complex patterns with metronomic clarity and simpler lines with an exquisite precision. Although he was a product of the 1930s Swing Era, Rich easily adapted to later jazz styles. In 1950 he participated in a recording session with bebop pioneers Dizzy Gillespie, Thelonious Monk and Charlie Parker. He was also among the first jazz musicians of an earlier period to include rock elements in his playing and band arrangements. He recorded Lennon and McCartney's *Norwegian Wood* in early 1967 and, to achieve an authentic jazz rock sound, used an electric rather than acoustic bass in his later bands.

JOSÉ HOSIASSON

Rich, John ['Lun'] (*b* London, bap. 19 May 1692; *d* London, 26 Nov 1761). English theatre manager and dancer. He was the son of Christopher Rich (*d* 1714), the manager of the company that staged Purcell's later dramatic operas and the early English-Italian operas. In 1714 John opened the new theatre at Lincoln's Inn Fields, which his father had built. He kept a full repertory of plays, but his real preferences were music, dance and spectacle. These elements were combined in his famous pantomime afterpieces, most of which had music by Galliard. Under the name of Lun, Rich danced Harlequin in them for many years, and he was highly praised for his artistry in mime and movement. Pepusch wrote music for him at Lincoln's Inn Fields, and it was here that *The Beggar's Opera* (1728) made 'Gay rich, and Rich gay'. He built the first Covent Garden theatre and continued to produce ballad operas, pantomimes and burlesques there from 1732. Handel worked in association with Rich at Covent Garden for his opera seasons between 1734 and 1737 and hired Lincoln's Inn Fields, 1739–41; his Lent oratorio seasons were at Covent Garden in 1743, 1744 and yearly from 1747. In his will Handel left Rich his 'Great Organ' that was installed at Covent Garden. After Rich's death the theatre was managed by his son-in-law, the tenor John Beard.

OLIVE BALDWIN, THELMA WILSON

Richafort [Richauffort, Rycefort, Ricartsvorde], **Jean** (*b c*1480; *d* ?Bruges, after 1547). Franco-Flemish composer. An inference that he was born in Hainaut has been derived from the conflation of two documents. A Flemish translation published in 1698 of Lodovico Guicciardini's *Descrittione di tutti i Paesi Bassi* lists Richafort among distinguished Netherlanders (and states that he was dead by 1556) whereas the 16th-century Swiss humanist Aegidius Tschudi described the composer as 'Gallus' in his musical commonplace-book (*CH-SGs* 463). If both sources are accurate, Richafort was a French-speaking Netherlander and hence might have been a native of Hainaut. However, he is identified in a benefice request of 1512 as 'clericus Leodiensis', indicating that he had taken clerical orders in the diocese of Liège, so he may have been born further to the east. The earliest records concerning his career come from the collegiate church of St Rombout, Mechelen, where he served as *maître du*

chant from at the latest December 1507 to May 1509, at a time when Marguerite of Austria was just beginning her residence in the city as regent of the Netherlands. During these years his choir included two of his brothers, Guillaume and François. On 21 August 1509 he was succeeded by Noel Bauldeweyn.

In the decade following his departure from St Rombaud Richafort seems to have established ties with the French royal court, although the absence of his name from extant court payment records suggests that he was not employed for any great length of time in the king's household or chapel. Evidence linking him with the court is provided by his motet *Consolator captivorum*, which begs St Louis to intercede and strengthen the rule of Louis XII (it cannot therefore have been composed for the king's funeral in 1515). That he enjoyed the patronage of Louis' queen, Anne of Brittany, is suggested by papal supplications from 10 November 1512 requesting benefices in the Breton diocese of Nantes for Richafort and two other musicians known to have been in the queen's service, Gilles Charpentier and Jean Nolin. He eventually obtained the requested benefice, to judge from a dispensation drawn up in Bologna for Pope Leo X on 30 January 1516 that identifies him as 'rector of the parish church of Touches in the diocese of Nantes' and as a singer in the chapel of Louis' successor François I. When Leo met with François in late 1515 and early 1516 to devise the Concordat of Bologna, the pope demonstrated his graciousness by rewarding several members of the king's entourage. He granted the position of apostolic notary to both the royal *maître de chapelle* Antoine de Longueval and the court's chief composer Jean Mouton. He also granted dispensations to Richafort and four other royal chapel singers (Claudin de Sermisy, Guillaume Cousin, Noel Galoys and Johannes Durand *dit* Le Fourbisseur) that allowed them to hold incompatible benefices. Later in the century Vincenzo Galilei reported that many musicians including Richafort came to Rome from France and Flanders at the time Leo was elected (*I-Fn* Anteriori Galilei, vol.I, f.138*v*). His statement has been challenged on the grounds that some of the men that he mentioned cannot possibly have been in Rome in 1513, but insofar as it applies to Richafort it contains at least a grain of truth: Richafort was in Bologna in 1516, shortly after the pope's election, albeit as a member of the French royal chapel, and Leo was evidently impressed with his ability.

Nothing is known of Richafort's whereabouts from 1516 to 1542. His name does not appear on a list of 34 royal chapel singers in 1517–18 or in any later records of the French royal court. Moreover, a reappraisal of documents from the court of Queen Mary of Hungary, the widow of Louis II of Hungary and Marguerite of Austria's successor as regent of the Netherlands, leaves little doubt that it was not Jean but Joachim Richafort who served the queen as singer and priest from 1532 to 1543, after which he obtained a prebend at St Donatien, Bruges. In July 1542 Jean Richafort succeeded Jean Claes as *maître de chapelle* of St Gilles in Bruges, a position he held through 1547. Since Jean Bart was appointed to take his place in 1548 and nothing more about Richafort is found in archives, he is presumed to have died about that time, probably in Bruges.

The only volume of music devoted exclusively to Richafort is one containing 19 motets, *Joannis Richafort modulorum quatuor quinque & sex vocum, liber primus*, published posthumously in 1556 by the Parisian firm Le Roy & Ballard. The remainder of his music was widely disseminated throughout the 16th century in more than 70 printed and 170 manuscript anthologies of music. His compositions span the range of styles cultivated at the French royal court during the first two decades of the 16th century, and reveal him as a worthy contemporary of his more prolific colleague in the French royal chapel, Jean Mouton.

In the dedication to *Livre des meslanges* (Paris, 1560), Pierre de Ronsard listed Richafort among the numerous 'pupils' of Josquin des Prez. Although there is no reason to take Ronsard's rhetorical remark as literal truth, the style of Richafort's music clearly identifies him as one of those gifted younger disciples of Josquin, eager to explore the ground broken by the master. Direct reflections of Josquin's music appear in Richafort's motet *Misereatur mei*, which emulates the tenor ostinato around which Josquin constructed his gigantic psalm setting *Miserere mei*, and his Requiem mass, which uses as its structural scaffolding a canon on the Sarum chant *Circumdederunt me* originally devised by Josquin for his six-voice chanson *Nymphes nappés*.

Richafort's chansons exhibit a wide variety of styles. Among his chansons for three voices can be found student works (e.g. *Je fus l'autrier*), 'three-part arrangements' (e.g. *Qui est celuy*), and pieces incorporating elements of the so-called 'Parisian chanson' (a majority of the chansons published posthumously). A similar range of styles may be found in his chansons for four voices. Three of Richafort's four chansons for five voices employ a style that seemingly was popular at the French royal court during the second decade of the 16th century: predominantly imitative counterpoint with a clearly audible borrowed melody in the topmost voice. The style of *Ne vous chaille*, however, a work for low voices that is texturally opaque and buries in an inner voice a tune drawn from a chansonnier of Marguerite of Austria (*B-Br* 11239), suggests that the piece was written while Richafort was still at St Rombout (Bernstein).

Richafort's pre-eminence, affirmed by Glarean and others, is revealed most clearly in his motets, which exhibit all those features one might expect from a fervent admirer of Josquin. They include works based on sequences, responsories (some, free of borrowed material, in the new *aBcB* form), antiphons and psalms, as well as newly composed occasional and devotional texts. Almost half of his motets incorporate a sectional repetition of some sort. As structural devices, Richafort employed cantus firmi, ostinatos, canons, paraphrase technique or simply points of imitation without any pre-existing material. A master contrapuntist following Josquin's lead, Richafort was among those who attempted to deepen and enhance the relationship between words and music. One of his most widely disseminated motets was *Quem dicunt homines*, a model of formal clarity, which served as model for parody masses by Divitis, Mouton, Lupus or Pierkin de Raedt, Pseudo-Josquin, Charles d'Argentille, Morales, Vincenzo Ruffo and Palestrina. The two earliest of these masses, by Divitis and Mouton, may have been composed in competition and possibly for performance before François I and Leo X at Bologna in 1516. In any case they are among the earliest masses using the full-fledged parody technique of the 16th century, a fact that suggests the French royal chapel as the cradle of the technique.

Richafort's own masses (except for the Requiem) are also parodies built on his own motets. One of his two secular Latin pieces, *Vinum bonum et suave*, sets an 11th-century goliard poem, a parody of the famous sequence *Verbum bonum et suave*.

WORKS

Edition: *Johannes Richafort: Opera omnia*, ed. H. Elzinga, CMM, lxxxi (1979–99) [E]

MASSES

Missa 'O genitrix', 4vv, E i (on Compère's motet; entitled Missa 'O gloriosa' *F-CA* 3)
Missa 'Veni sponsa Christi', 4vv, E i (on his own motet)
Requiem mass, 6vv, E i

MAGNIFICAT SETTINGS

Magnificat sexti toni, 4vv, E iii
Magnificat octavi toni, 4vv, E iii
'Fecit potentiam' and 'Sicut locutus est', 2vv, E iii (from an unknown Magnificat octavi toni)

MOTETS

Modulorum quatuor quinque & sex vocum, liber primus (Paris, 1556) [1556]

Ave Maria, 5vv, E ii; Ave virgo gloriosa, 4vv (inc.), 1556, E ii; Christe totius dominator, 4vv, E ii; Christus resurgens, 4vv, E ii (also attrib. Baston, Mouton; 5-v version in 1555[9]); Cognoscimus Domine , 4vv, E ii (attrib. C. Rupsch in *D-Rp* B220–22); Consolatur captivorum, 4vv (inc.), 1556, E ii; Domine quis habitabit, *B-LVu* 163 (lost); Ego sum qui sum, 5vv, E ii (also attrib. Hesdin, Mouton); Emendemus in melius, 4vv, E ii; Exaudiat te Dominus, 4vv

Gloria, laus et honor, E ii; Gloriosi principes terrae, 4vv, E ii; Hac clara die, 4vv, E ii; Hoc signum crucis, 5vv (inc.), E ii; Homo quidam, 4vv, E ii; Jam non dicam vos servos, 5vv, E ii (also attrib. Hellinck); Jerusalem luge, 5vv, E ii (also attrib. Hellinck, Caen, Verdelot); Laetamini in Domino, 5vv, E ii; Laus tua non tua fraus, 2vv, E iii; Misereatur mei/Miserere mei Deus, 5vv, E ii; Miseremini mei, 4vv, E ii (also attrib. Josquin, Mouton); Non turbetur cor vestrum, 5vv, E ii

O beata infantia, 6vv, 1556, E ii (also attrib. Willaert); O praesul egregie, 4vv, E ii; O quam dulcis et beata, 4vv, E ii; Pater noster, 5vv, E ii (Ct I–II in canon); Peccata mea Domine, 4vv, E ii; Philomena praevia, 4vv, E ii (attrib. 'Glandin' in *P-Cug* 48); Quem dicunt homines, 4vv, E ii; Salve regina, 3vv (inc.), E ii; Salve regina, 5vv, E ii; Sancta Maria, succurre miseris, 4vv (inc.), E ii; Saulus adhuc spirans, 5vv (inc.), E ii; Sufficiebat nobis/Mon souvenir, 4vv, E ii (T of Hayne van Ghizeghem's chanson in Sup; cf Jacquet's setting); Veni electa mea, 6vv, E ii; Veni sponsa Christi, 5vv, E ii; Vinum bonum et suave, 5vv, E iii

CHANSONS

Cuidez vous que Dieu nous faille, 5vv, E iii (? on monophonic chanson); D'Amours je suis desheritée, 5vv, E iii (?monophonic chanson in Sup); De mon triste et desplaisir, 4vv, E iii (?monophonic chanson in Sup); En revenant du bois, 3vv, E iii (?monophonic chanson in Sup II); Gentilz gallans, 3vv, E iii (monophonic chanson in T); Hors de plaisir, 4vv, E iii; Il n'est sy doulce vie, 4vv, E iii (?monophonic chanson in T); J'ay veu que souloye, 3vv, E iii (?monophonic chanson in T); Je fus l'autrier, 3vv, E iii (monophonic chanson in T); Je veulx laysser melancolie, 4vv (arr. vihuela only; ed. in MME, iii, 1945)

L'amour de moy, 3vv, E iii (monophonic chanson in Sup I/II); Le temps qui court, 4vv, E iii; N'avez point veu mal assenée, 3vv, E iii (also attrib. Josquin); Ne vous chaille, mon cueur, 5vv, E iii (also attrib. Werrecore; ?monophonic chanson in Quintus); Qui est celuy, 3vv, E iii (?monophonic chanson in T); Sur tous regretz, 4vv, E iii; Sy je m'y plain, 5vv, E iii (?monophonic chanson in T); Tru tru trut avant, 3vv, E iii (?monophonic chanson in T)

DOUBTFUL AND MISATTRIBUTED WORKS

Magnificat quinti toni, 4vv, ed. in RRMR, xciv (1993) (attrib. Richafort in 19th-century score *D-MÜs* 2784; by Divitis; 1910 description of MS falsely gives Richafort attrib. to all 10 Magnificat settings, but others, by Palestrina and Mouton, are all anon.)

Ad te levavi oculos meos, 5vv, ed. in CMM, vi/10 (1975) (attrib. Richafort in *D-Kl* 24; by Gombert)
Beata Dei genitrix, 5vv, ed. in CMM, xxxii/5 (1973) (falsely attrib. Richafort in *EitnerS*; by Layolle)
Congratulamini mihi omnes, 4vv, E ii (attrib. Richafort in *I-Bc* Q19; probably by Le Brung; also attrib. Josquin)
Gaudent in caelis, 8vv, ed. in CMM, xxviii/3 (1979) (attrib. Richafort in 1564[1], *D-Rp* A.R.786; by Verdelot; also attrib. Phinot)
In illo tempore: Dixit Jesus discipulis, 5vv (attrib. Richafort in *D-Mu* 4° Art.401; by Brumen)
Levavi oculos meos, 4vv, ed. in CMM, vi/5 (1961) (attrib. Richafort in *D-Bga* XX.HA StUB Königsberg 7; by Gombert)
O genitrix gloriosa, 4vv, ed. in CMM, xv/4 (1961) (attrib. Richafort in *DK-Kk* Ny kong.saml.1848 2°; by Compère)
Si bona suscepimus, 5vv, ed. in CMM, xxviii/2 (1973) (attrib. Richafort in *D-Mu* 8° 327; by Verdelot)

La rousée du moys de may, 3vv, ed. in Bernstein (attrib. Richafort in 1553[22], 1578[15]; by Willaert)
N'as tu point veu la viscontine, 3vv, ed. in Bernstein (attrib. Richafort in index of 1536[1]; by Willaert)
N'as tu point veu la viscontine, 4vv, *F-Pn* n.a.fr.4599 (inc.), *I-Fn* Magl.XIX.117 (anon.) (texture untypical of Richafort's 4-v chansons; see Bernstein, but cf D. Fallows, review of E, *EMc*, xxvii, 1999, pp.489–90)
Or, vray Dieu, qu'il est enuye, 3vv, E iii (attrib. Richafort in 1569[11], 1574[3]; probably by Crecquillon)

HOWARD MAYER BROWN/JOHN T. BROBECK

Richard I, Coeur-de-lion. *See* RICHARD THE LIONHEART.

Richard, André (*b* Berne, 18 April 1944). Swiss composer and conductor. He first trained in Berne as a chef, but began studying singing in Geneva in 1965. He took his diploma in music theory in 1972. He was professor of solfège (1972–5), and studied composition with Marescotti. He continued his studies in composition in 1975–8, in Freiburg, with Huber and Ferneyhough. After taking his singing diploma he taught theory. He became director of the Freiburg Institute for New Music in 1980, and organized the institute's Horizonte concert series until 1989. With A. Tamayo, he founded the Freiburger Solistenchor in 1983 for the first German performance of Nono's *Das atmende Klarsein*. This choir took part in the premières of all Nono's new choral works after *Prometeo* in 1984. In 1989 Richard succeeded Haller as director of the experimental studio of the Heinrich Strobel Foundation of SWF in Freiburg.

As a composer, Richard very soon freed himself from the conservative Genevan school of Marescotti through his studies with Huber and Ferneyhough, and adopted the principles of serialism. His few works are based on 'philosophical ideas', which he transforms into instrumental music. These ideas determine the experimental nature

of his compositions in their smallest structural details, but unlike his teacher Huber, he does not make them an obvious 'message' in his complex works. Building on Hailer's work, Richard has made the Freiburg experimental studio a leading centre of international research into live electronic music. His cooperation, with the studio, has been particularly important for the performances of Nono's late works. He has also worked as a conductor.

JÜRG STENZL

Richard, Balthazar (*b* Mons, *c*1600; *d* after 1660). Flemish composer and cornettist. He served the royal chapel at Brussels as cornettist and composer apparently from 1620 onwards: in a document of 1660 he referred to his 40 years of service as a musician there. In a list of chapel musicians dated 1641 he is recorded as receiving a salary as high as those of the assistant director of music and the organist. He was involved in a legal action between 1657 and 1660. In 1657 a protégé of his, Jean Corbisier, was named *maître de chant* at Notre-Dame du Sablon on his recommendation and with his guarantee that he would be fully capable of holding the position within a year. Corbisier's incompetence rapidly became evident, however; the matter was taken to court (see *vander StraetenMPB*, ii, 71ff), and Richard's reputation suffered in the process. Except for an instrumental piece attributed to him in the Rost Codex (*F-Pn*), none of the considerable quantity of music that he appears to have written seems to survive. It included *Litaniae beatissimae Mariae Virginis Lauretanae V. VI. VII. VIII. IX. et XII. tam vocibus, quam instrumentis modulatae, quibus missa octonis vocibus adjuncta est* (Antwerp, 1631). There were works by him in the library of King Juan IV of Portugal that was destroyed in the Lisbon earthquake of 1755, and there seem at one time to have been two or three by him in Rome (*I-Rvat*). An inventory of works belonging in 1666 to Jean Tichon, *maître de musique* of the Brussels royal chapel, includes a mass for 17 voices and 20 other pieces by 'Baltazar Ritchart' (*B-Ba*), and an eight-part canzona for violins and cornetts in the same list may have been by him too. An inventory compiled in 1677 at the Jacobskerk, Antwerp (now in *B-Aa*), includes the reference 'Richard, Balthasar, 18 boecken'.

MARY ARMSTRONG FERRARD

Richard, Sir **Cliff** [Webb, Harry Rodger] (*b* Lucknow, India, 14 Oct 1940). British pop singer. He came to prominence as Britain's equivalent to Elvis Presley, recording some creditable rock and roll performances such as *Move It* and Lionel Bart's *Livin' Doll*. By the early 1960s he settled into a more comfortable beat ballad style, achieving numerous hits with melodic numbers like *Theme for a Dream*, *Gee Whiz it's You*, *Bachelor Boy*, *The Young Ones* and *Summer Holiday*. The last two were theme songs from films aimed at the youth market in which Richard starred. On most of these records he was accompanied by the Shadows. Although he no longer dominated the British popular music scene after the early 1960s, he continued to give concerts and to release new recordings with occasional hits such as *Congratulations*, *We Don't Talk Anymore* (composed and produced in 1979 by Alan Tarney) and the Christmas song *Mistletoe and Wine* (1988). He has appeared in two West End musicals, *Time* (1986) and *Heathcliff* (1996). His mild sincerity, boyish good looks and mellow voice have sustained his career as an interpreter of popular songs for over 40 years, a unique achievement in British popular music. Although he has made few commercial recordings of religious or gospel songs, he is one of the most prominent evangelical Christians in the British entertainment profession. He was made an OBE in 1980 and was knighted in 1995. See also S. Turner: *Cliff Richard* (London 1994).

DAVE LAING

Richard, Etienne (*b* Paris, *c*1621; *d* Paris, ?May 1669). French composer and organist. He came from a family of organists who appear not to have been related to the family of musicians of the same name (to which François Richard belonged) who worked in Paris at the same period. From 1645 he was organist to Chancellor Séguier in Paris, a post that he shared with his brother Charles, whom, on his death in 1652, he succeeded as organist of St Jacques-de-la-Boucherie, Paris. He also succeeded his father, Pierre Richard (*d* 1652), as organist of two other Paris churches, St Nicolas-des-Champs (from 1651) and St Martin-des-Champs (from 1655). From 14 February 1657 until his death he was *maître-joueur d'épinette* to the king; he was also a viola player to the king's brother: he enjoyed considerable prestige at court. Several keyboard pieces – two organ preludes and a number of dance movements – are extant, primarily in the Bauyn manuscript (*F-Pn* Rés.Vm[7] 674–5) and in the Parville manuscript (*US-BEm*), though attributions are also made to Pierre and Charles Richard. His works are published in B. Gustafson, ed.: 'Etienne Richard: the Collected Works', *The Art of the Keyboard*, iii (New York, 1994).

EDWARD HIGGINBOTTOM

Richard, François (*b* *c*1580; *d* Paris, bur. 22 Oct 1650). French composer and lutenist. He is first mentioned in 1601, and in 1614 is described as *ordinaire de la musique de la chambre et de la chapelle du roi*. Around 1619 he was appointed lute teacher to the choirboys of the royal chapel, a post he shared by semester with René Saman. In June 1625 he was one of nine French musicians who accompanied Queen Henrietta Maria (wife of Charles I) to England, together with his son, also called François and a lutenist (*b* *c*1604). There he joined his brother Louis, who had been in the service of Queen Anne (wife of James I) from at least 1612, and who later played an important role as master of the music of Henrietta Maria. Louis probably returned to France with the queen in February 1642, and died after 1657. François and his son returned to Paris in 1629, where he is described as *compositeur de la musique de la chambre du roi*, a post for which his son was nominated as successor in 1638. He was also lutenist to Queen Anne (wife of Louis XIII). After the sudden death of his son in November 1646 he sold off the succession to his various offices. There is no evidence of kinship between these lutenist Richards and the family of keyboard players.

Richard's importance is as a composer of *airs de cour*. They are more likely to be by the father since the use of his court title in the 1637 prints predates the son's nomination as successor. Other airs appear in collections published in the 1620s by Antoine Boesset (with whom he collaborated in several court ballets) and Pierre Ballard. The 1637 four-part airs provide early examples of the use of basso continuo in France. A number of the lute airs have dance, particularly sarabande, interludes for solo lute, and one provides a very early example of the dramatic dialogue, later to be an important genre for Michel Lambert and Jean-Baptiste Lully.

DAVID LEDBETTER

Richard de Bellengues. *See* CARDOT.

Richardinus, Robertus (*fl* *c*1530). Scottish priest. He was an Augustinian canon of Cambuskenneth near Stirling, and after 1522 was sent to study in Paris. He has been tentatively identified with a Robert Richardson who was sent to Scotland in 1543 to preach against the pope.

In his commentary on the Rule of St Augustine, *Exegesis in canonem diui Augustini recens aedita* (Paris, 1530; ed. G.G. Coulton, Edinburgh, 1935), he advocated Gregorian chant, or settings where 'litera una intelligitur cum nota' (a phrase perhaps implying comprehensibility of the text to the listener), as replacements for the florid polyphony normally used in England and Scotland and the organ music used on feast days; he described liturgical practices at Notre Dame Cathedral in Paris and at Sens and upheld them, together with the (now lost) masses of Alexander Paterson of the Chapel Royal at Stirling, as models. He also interpreted St Augustine's term 'jubilus', in a sense almost opposite to its original meaning signifying the subordination of rational words to music, as singing with rational understanding, so that the heart and mind act in unison.

GEOFFREY CHEW

Richards, (Henry) Brinley (*b* Carmarthen, 13 Nov 1817; *d* London, 1 May 1885). Welsh pianist. The son of Henry Richards, organist of St Peter's, Carmarthen, who also kept a music shop, he was encouraged to abandon plans for a medical career when he won a composition prize at the Gwent and Morgannwg Eisteddfod in 1834. Gaining the patronage of the Duke of Newcastle he entered the RAM, where he was twice awarded the King's Scholarship (1835 and 1837). He went briefly to Paris for further study, becoming acquainted with Chopin, and on his return was appointed a teacher of the piano at the RAM, and later a director. He instigated the RAM's regional examination system and became superintendent of examinations for Wales and Scotland. He was said to be the finest pianist in Britain in the mid-19th century and also enjoyed a good reputation as a teacher. He was a prolific composer especially of vocal and piano music, almost all of which is now largely forgotten; some of his salon pieces, such as *Warblings at Eve*, enjoyed the favour of amateur pianists. Other compositions include an overture in F minor (Paris, 1840) and some additional numbers for the production at Drury Lane in 1846 of Auber's *Les diamants de la couronne*. A few pieces were published under the pseudonym 'Carl Luini'. He kept his connections with Wales and was prominent as an adjudicator at the competitive eisteddfods, took an interest in Welsh triple harp playing and was a leading member of the Cymmrodorion. His *Songs of Wales* (London, 1873), published in response to the success of Caradog's Choir at Crystal Palace in 1872, was widely sold, but his only lasting composition is *God Bless the Prince of Wales*.

OWAIN EDWARDS/A.F. LEIGHTON THOMAS

Richards, Kathleen. *See* DALE, KATHLEEN.

Richards, Lewis (Loomis) (*b* St Johns, MI, 11 April 1881; *d* East Lansing, MI, 15 Feb 1940). American harpsichordist. He studied the piano before attending the Brussels Conservatory, where he became interested in the harpsichord; he was appointed harpsichordist of the Société des Instruments Anciens, Paris. He made his American orchestral début with the Minneapolis SO in 1923 as soloist in Haydn's Concerto in D, preceding Wanda Landowska's American début by two weeks; Richards was thus the first 20th-century harpsichordist to play with a major orchestra in the USA. Through a friendship with Herbert Hoover, Richards was also the first harpsichordist to play at the White House, in 1927. Using a Pleyel harpsichord, Richards made several recordings of short pieces by Rameau, Mozart and Handel; royalty statements show that these sold very well in the late 1920s. In 1927 he was appointed director of the newly created Michigan State Institute for Music and the Allied Arts in Lansing; through pressure of administrative duties he gradually withdrew from his performing career. (L. Palmer: *Harpsichord in America: a Twentieth-Century Revival*, Bloomington, IN, 1989/*R*)

LARRY PALMER

Richardson, Alan (*b* Edinburgh, 29 Feb 1904; *d* London, 29 Nov 1978). Scottish composer and pianist. After practical experience with the BBC in Edinburgh he moved to London where he became a pupil of Harold Craxton and studied at the RAM (1929–30). In 1931 he toured Australia and New Zealand, and he was accompanist to Flesch from 1936 to 1939. He wrote a large amount of piano music, including two sonatinas (the earlier of which was given its première by the composer at the 1949 Edinburgh Festival), a *Sonata elegiaca* and numerous shorter pieces. The picturesque titles of many of these (*The Dreaming Spires*, *Adventures in Space*, *Silver Night*, *Over the Moors*) give a good idea of their character, though some of the names were apparently added as afterthoughts. Richardson was married to the oboist Janet Craxton, who (like Leon Goossens) inspired him to compose several works for that instrument. In later years, indeed, the oboe had an increasingly important role in his music, though his interest in it dates back as far as 1946, when he wrote his French Suite, a euphonious, melodious work in five movements, paying graceful tribute to the early French masters. Here, as in many other works, he wrote with brevity, civility and polish. In addition to his compositions he produced viola transcriptions of pieces by Purcell, Bach, Handel and other composers, in collaboration with Watson Forbes. In 1960 he was appointed professor of piano at the RAM.

CONRAD WILSON

Richardson, Arnold (*b* Ely, 6 Jan 1914; *d* London, 26 June 1973). English organist and composer. He studied with G.D. Cunningham and Benjamin Dale at the RAM, where he later became a Fellow and teacher. His first post (1934) was at St Alban's, Holborn, to which he invited Messiaen in 1938 to give the first complete English performance of *La nativité du Seigneur*. Richardson became borough organist of Wolverhampton in 1938 and succeeded Percy Rideout as organist of the West London Synagogue in 1955. He specialized in the interpretation of French music and played frequently at the Promenade Concerts, giving the first performance of Herbert Murrill's *Carillon*, a piece dedicated to him, in 1949. He was one of four British organists chosen to give the opening recital at the Royal Festival Hall in March 1954; he appeared there regularly afterwards. As conductor of the Wolverhampton Civic Choir from 1949 to 1972 he directed major choral works with the City of Birmingham Orchestra. He was made an honorary FRCO in 1971. His own compositions include a Mass in A (1935), a *Pastorale* for organ (1936) and a three-part Mass for men's voices (1939).

STANLEY WEBB

Richardson, Ferdinand [Heyborne (Heaburn), Sir Ferdinando] (*b c*1558; *d* Tottenham, Middlesex, 4 June 1618). English composer. He was a pupil of Tallis (to judge from his prefatory poem to the Tallis-Byrd *Cantiones sacrae*), became a groom of the Privy Chamber in 1587, and was pensioned in 1611. He wrote two pavan-galliard pairs, each with a 'Variatio', which survive in the Fitzwilliam Virginal Book. One of these pairs, without its 'Variatio', is in *GB-Lbl* Add.30485; this manuscript also includes another pavan–galliard pair and an 'Alman', and an anonymous setting of Dowland's *Lachrimae* pavan that may well be Richardson's work (all ed. in MB, lv, 1989). He arranged a pavan and galliard by Thomas Morley (*GB-Cfm* Mus.782, 'set by Mr. Heyborne'), printed in EKM, xiii (2/1964).

Richardson appears as the dedicatee of Farnaby's *Canzonets*, published in 1598 by Peter Short. His brother, Christopher Heyborn(e), was in some way associated with Morley's printing monopoly, granted in 1598.

JOHN CALDWELL/ALAN BROWN

Richardson, Vaughan (*b* ?London, *c*1670; *d* Winchester, June 1729). English organist and composer. From 1678 he was a chorister in the Chapel Royal, where he was a pupil of John Blow; his voice broke in 1688. It has been suggested that he may have been related to a Thomas Richardson, Gentleman of the Chapel Royal from 1664 to 1712, or a William Richardson who was his fellow chorister (and who published harpsichord music in 1708 and psalm tunes in 1729). He was temporary organist at Worcester Cathedral from 1686, and from June 1688 until his death organist at Winchester Cathedral. Among his students at Winchester was James Kent, who later became organist there.

Richardson's few extant compositions are of little importance. He was a typical English composer and organist of the transition period between the Restoration and Georgian eras.

WORKS

Service in C, composed upon the Peace of Utrecht, 1713, *GB-Lbl*, and in autograph MS formerly in the possession of J.S. Bumpus
O how amiable, anthem, 4vv, ed. J. Page, *Harmonia sacra* (London, 1800)

CHARLES CUDWORTH

Richard the Lionheart [Coeur-de-lion] [Richard I], King of England (*b* Oxford, Sept 1157; ruled 1189–99; *d* Limoges, 11 April 1199). English ruler, poet and musician. Though born in England, he never learnt English and spent most of his time in Aquitaine. He was the son of Henry II of England and Eleanor of Aquitaine, whose grandfather, Guillaume IX, Duke of Aquitaine and Count of Poitiers (whose titles Richard inherited in 1171 and 1169 respectively), was the earliest troubadour. Richard's reputation as a poet and singer has been much enhanced and exaggerated by the wholly fictitious story of his rescue from prison in Austria by Blondel de Nesle in 1194 (Broughton, 70, 126); the story is nevertheless accurate in claiming that he was a poet and singer.

Two poems by Richard are extant, of which only *Ja nus hons pris* survives with music. Both poems are topical, or 'political' – Richard was concerned to pursue his political goals even as a poet. In *Dalfin, je'us voill deresnier* (R.1274a, PC 420.1) he chided Robert, the Dauphin of Auvergne, for not coming to his aid against King Philip II Augustus of France. *Ja nus hons pris ne dira sa raison* (R.1891, PC 420.2; ed. in Gennrich, who calls it a rotrouenge; also ed. in CMM, cvii, 1997, vol.xii, no.1079) is a complaint about his fate as a prisoner in Austria and was apparently written during his period of captivity (1192–4). Both poems survive in trouvère as well as in troubadour sources, and *Dalfin* appears in the latter in Provençal. Though a minor artistic figure, he was nevertheless an important political personage who belonged to the earliest generation of trouvères.

ROBERT FALCK

Richard Wagner-Verband. *See* WAGNER SOCIETIES.

Richart de Berbezill. *See* RIGAUT DE BERBEZILH.

Richart de Fournival (*b* 1201; *d* 1260). French trouvère. He is often given the title *maistre* in sources and was the son of Rogiers de Fournival, personal physician to King Philippe Auguste of France. In 1240 he was recorded as 'Magister Richardus de Fournival, Canonicus' of the chapter of Notre Dame in Amiens, and by 1246 was chancellor. Like his father, he was a surgeon, and continued in that profession throughout his life. In addition to the 22 lyric poems ascribed to him in a substantial number of sources, he wrote a Latin *Biblionomia* and a *Bestiaire d'amour*.

Even without the large number of monophonic songs attributed to him, Richart would be of interest to the music historian because of his association with the early motet. Although none of his motets may be traced directly to a clausula as its source, one, *Chascuns qui de bien amer*, is based on a tenor from the Notre Dame repertory. Two of the motets are found in a collection (*D-W* 1206) that contains the earliest layer of French motet composition; thus, Richart may be regarded as one of the earliest poet-composers associated with the genre. (Neither the tenor nor the music for *Renvoisiement i vois a mon ami* is extant, and indeed it is uncertain whether this is a motet at all.)

Richart's 18 monophonic songs are remarkable for the variety of their structure matched by equally varied and subtle musical treatment. One song, *Mere au roi omnipotent*, is a Marian contrafactum of a song by Richart's contemporary, Moniot d'Arras, while another, *Oiés, seigneur, pereceus, par oiseuses*, is based on a celebrated crusader's song which was composed in the year 1188. Richart's contrafactum employs one of four melodies surviving with the model.

ROBERT FALCK/JOHN D. HAINES

Richart de Semilli (*fl* late 12th or early 13th century). French trouvère. Mention of Paris in three chansons seems to indicate that Richart was a native of that city. Ten works are ascribed to him in *F-Pa* 5198 and a few related sources, and *L'une est la chastelaine*, which is anonymous, may also be his. The re-use of the same poetic structure and melody in *Chancon ferai* and *Je chevauchai*, and in *De chanter* and *Quant la sesons*, is unusual within the work of one poet but not without parallel in the repertory. Richart's musical structures stand apart from the mainstream of trouvère music in their heavy reliance on repetition. *J'ain la plus sade* is constructed of one phrase and a variant, while *L'autrier chevauchoie* uses three phrases and their variants for 11 lines of text. *L'autrier chevauchoie*, *Molt ai chanté* and *Nous venions* each present the last melodic material three times in varied form. *Chancon ferai* and *L'autrier tous seus* are examples of rotrouenge form. Most melodies are quite simple, *Molt ai chanté* being somewhat more ornate. The patterns of *De chanter* suggest that the 2nd mode may be suitable, although no melodies survive in mensural notation. The authentic D mode and plagal F mode are favoured, although *L'autrier chevauchoie* concludes the main body of a strophe based on *d* with a refrain ending on *c*, while *Molt ai chanté* concludes the main body of a strophe emphasizing *g*, with a refrain preparation and refrain ending on *f*. *Je chevauchai*, *L'autrier chevauchoie*, *L'autrier tous seus* and *Nous venions* provided the models for other chansons. *Par amors* employs the same structure and melody as two other chansons, the question of priority being uncertain.

THEODORE KARP

Richault. French firm of music publishers. It was founded in Paris by Jean-Charles-Simon Richault (*b* Angerville, Essonne, 5 May 1780; *d* Paris, 20 Feb 1866). After an apprenticeship with the publisher J.J. de Momigny, Richault set up on his own in 1816 at 7 rue Grange-Batelière, occasionally also publishing jointly with Momigny for up to 20 years afterwards. His firm, normally styled 'Simon Richault', moved to 16 boulevard Poissonnière some time between November 1823 and July 1825; between 14 and 28 November 1841 it moved (or the house was renumbered) to no.26; and on 19 October 1862 it had just moved to 4 boulevard des Italiens. Meanwhile, in November 1839, Richault purchased the business of J.-J. Frey, many of whose publications he subsequently reissued. On his death, Jean-Charles-Simon was succeeded by his son Guillaume-Simon (*b* Chartres, 2 Nov 1805; *d* Paris, 7 Feb 1877) and the firm became known as Richault & Cie. Guillaume-Simon was in turn succeeded by his widow, Marie (*b* Naples, 30 Oct 1813; *d* after 1898) in partnership with their son Léon (*b* Paris, 6 Aug 1839; *d* Paris, 10 April 1895), who traded as Richault & Cie or Richault Fils & Cie. After León's death the firm was directed by his mother until in June 1898 it was acquired by Costallat & Cie (still in existence).

Particularly under the management of Jean-Charles-Simon, Richault was one of the most important music publishers in Paris during the 19th century, issuing a total of some 20,000 publications. Its catalogue included orchestral, chamber and vocal music, especially the works of important non-Italian contemporary composers, such as Beethoven, Czerny, Fesca, Liszt, Mendelssohn, Schumann, Spohr, Weber and notably Schubert. Among the French composers it encouraged were Alkan, Massé, Reber, Thomas and Berlioz; Richault was the first to publish Berlioz's *La damnation de Faust*, *L'enfance du Christ*, *Lélio*, four of the overtures and several vocal works, as well as a collection of his *mélodies* with piano accompaniment. Rather less attention was paid to opera, but full scores or orchestral parts or both were published of works by Adam, Monpou, Onslow and Thomas, as well as the handsome critical edition of Gluck operas edited by F. Pelletan and others (issued in association with Breitkopf & Härtel, in 1873–96). Vocal scores of at least 30 operas were published. According to Pougin (*FétisBS*) the firm acquired and reissued many editions previously published by Naderman, Sieber, Pleyel, Erard and others and, after Pacini's death in 1866, at least part of his stock, including his operatic publications. Richault's plate numbers were applied chronologically and are

generally reliable for dating purposes (although various series ran concurrently).

RICHARD MACNUTT

Riche, Anthoine le. *See* DIVITIS, ANTONIUS.

Richée, Philipp Franz le Sage de. *See* LE SAGE DE RICHÉE, PHILIPP FRANZ.

Richer. French family of musicians. André [François-Joseph] Richer (*b* Paris, 1712; *d* Versailles, 7 Sept 1757), a singer and composer, studied with Delalande and Bernier when he was a page in the *Musique du roi*. In 1729 he became *ordinaire de la Musique du roi*, in 1747 *chantre de la Chambre* and in 1757 *chantre de la Chapelle*. At the same time he was *surintendant* of the music of the duke of Orléans and the duke of Chartres from 1741. He composed cantatas and motets, some of which were performed at the Concert Spirituel. His marriage to Elisabeth Leroy produced three children who all had musical careers.

Antoine François Richer (*b* Versailles, 18 June 1739; *d* Montlandon, 17 March 1818), a singer and violinist, was particularly active at the court of Parma. Louis Augustin (*b* Versailles, 26 July 1740; *d* Paris, 29 April 1819), a singer, followed in his father's footsteps. After being a page in the royal chapel from 1748 to 1756 he became *maître de musique* to dukes of Chartres and Bourbon in 1757. In 1780 he acquired the reversion of the post of *maître de musique* to the Enfants de France in succession to La Garde. His talents as a singer were noted at an early age, and when the Conservatoire was founded he carried out the duties of professor of singing there. His first appearance at the Concert Spirituel in 1752 was very well received, and he continued to perform at the concerts of that organization until 1780. He composed cantatillas and *romances*. Angélique Henriette Elisabeth Richer (*b* Versailles, 15 Sept 1741; *d* Paris, 15 Sept 1809), a harpsichordist and singer, married F.-A. D. Philidor, her mother's first cousin, in 1760.

PHILIPPE VENDRIX

Richie, Lionel (*b* Tuskegee, AL, 20 June 1949). American soul singer and songwriter. He achieved success as the lead singer of the funk sextet the Commodores before becoming the most popular African American balladeer of the late 1970s and 80s. While the Commodores had a few minor hits with songs in their heavy funk style (e.g. *Slippery When Wet*, 1975), the band's popularity soared with Richie's ballads, *Easy* (1977), *Three Times a Lady* (1978), *Sail On* and *Still* (both 1979). These fused aspects of country music instrumentation and melody with rhythm and blues phrasing and grooves. Richie's collaborations with Kenny Rogers (*Lady*, 1980) and Diana Ross (*Endless Love*, 1981) signalled the end of his association with the Commodores. His solo career continued with unabated success; the albums *Lionel Richie* (1982) and *Can't Slow Down* (1983) both sold over two million copies. His first number one single as a solo artist, *All Night Long* (1983), departed from his ballad style in its syncretic Afro-Caribbean rhythms and lyrics. His many successful songs as a solo artist include the number one hits *Hello* (1984), *Say You, Say Me* (1985) and *We are the World* (1985), co-written with Michael Jackson and recorded for the benefit project USA for Africa.

Richmann, Jacob. *See* RIEHMAN, JACOB.

Richnovinus, Georgius [Rychnovský, Jiří] (*b* Rychnov, east Bohemia, *c*1545; *d* Chrudim, east Bohemia, 1616). Bohemian composer. From 1570 he was an organist in Chrudim, where he was commissioned by the town's literary fraternities to compose liturgical music. His work survives in manuscripts from Chrudim, from several other towns in Bohemia and from Bardejov, Slovakia. The quantity of extant music attests his reputation as a composer. His compositions (in *CZ-HKm* and *Pu*) include four mass Ordinary settings, two mass Proper cycles and two motets. The Ordinary settings – *Missa 'Maria Magdalena'*, *Missa 'Quem vidistis pastores'*, *Missa 'Et valde mane'* (ed. in Cw, cxviii, 1972) and *Missa 'Dum complerentur'* – are all for five voices and are parody masses; the Proper cycles – *Proprium in dominica Pentecostes* (ed. J. Černý, *Hudba české renesance* [Music of the Czech Renaissance], Prague, 1982) and *Proprium in dedicatione ecclesiae* – are based on chant; and the motets – *Znamenaj křesťan věrný* [Take note, faithful Christian] (partial ed. in DČHP) and *Decantabat populus* (ed. J. Snížková, *Česká polyfonní tvorba*, Prague, 1958) – are for five and four voices respectively. Many other works, including 19 motets that set Latin and Czech texts, have survived in fragmentary form; many are transmitted in collections of partbooks, individual volumes of which are lost.

JANA VOZKOVÁ

Richter, Anton Karl. Austrian composer and organist, son of FERDINAND TOBIAS RICHTER.

Richter, Ernst Friedrich (Eduard) (*b* Grossschönau, nr Varnsdorf, 24 Oct 1808; *d* Leipzig, 9 April 1879). German theorist, teacher and composer. From about 1818 he attended the Gymnasium at Zittau. In 1831 he went to Leipzig, where he began to study theology at the university but soon turned to music. On the founding of the Leipzig Conservatory in 1843, he was appointed teacher of harmony and counterpoint, with Hauptmann. From 1843 to 1847 he conducted the Leipzig Singakademie and after 1850 was organist at several churches. In 1868 he succeeded Hauptmann as Kantor of the Thomasschule and was named professor at the Conservatory.

As a composer, Richter was a classicist whose large choral works were influenced by Mendelssohn and Friedrich Schneider. His best-known compositions were the oratorio *Christus der Erlöser* (1849) and the cantata *Dithyrambe* op.48 (1859). He also wrote songs, sacred choral works, an overture, string quartets, organ works, violin and keyboard sonatas, and a cello sonata.

Richter's theoretical writing proved immensely popular during the second half of the 19th century and first half of the 20th. His successful approach is presented in his earliest treatise, *Die Grundzüge der musikalischen Formen und ihre Analyse* (1851). In its preface, Richter stated his intention to follow the 'practical way to the goal'. Contrary to the extended treatment found in the 'newer composition manuals' (such as those by Gottfried Weber, A.B. Marx and J.C. Lobe), his method treats the subject 'in its most general, most important features and in the shortest, clearest possible demonstration'. Richter's *Lehrbuch der Harmonie* (1853), adopted as the official textbook at the Leipzig Conservatory, had appeared in 36 editions by 1953 and was translated into nine languages. Each of Richter's basic texts – *Lehrbuch der Harmonie, Lehrbuch der Fuge* (1859) and *Lehrbuch des einfachen und doppelten Kontrapunkts* (1872) – presents its material in a single, slim volume that proved suitable for beginners.

Although Kirnberger's fundamental bass concept (as modernized by Friedrich Schneider) influenced Richter, his harmonic theories are most indebted to those of GOTTFRIED WEBER, which he adapted to recent harmonic practice. Weber indicated scale-degree function and chord quality through upper-case roman numerals for major chords, lower-case for minor and a superscripted circle for diminished. He categorized chords into three basic triad types (major, minor, diminished) and four basic 7th-chord types (dominant, minor, major, half-diminished). All chord formations were considered to be one of these types or a transformation thereof. Richter adopted Weber's system, adding two chords to Weber's repertory of fundamental types: the augmented triad, indicated by an apostrophe, and the diminished 7th chord, which Weber had considered an incomplete dominant 9th.

For Richter (like Weber), a key was formed from its tonic, dominant and subdominant triads, which create the scale. Thus, he considered the harmonic minor as standard and, because of his recognition of augmented chords as basic, was able to recognize a chord on every degree of the scale. The treatise also includes a substantial discussion of non-harmonic notes, including passing chords.

The premise of Richter's *Grundzüge der musikalischen Formen* is that 'each musical idea appears in a unique form'. His detailed discussion of sonata form displays a bipartite conception.

The counterpoint text distinguishes between the 'old' teaching method of Fux and the newer, harmonically orientated method, developed by Beethoven. Richter's method uses chorale settings, Fux's first, second and third species, and techniques from Albrechtsberger, Cherubini and others. He used note-against-note counterpoint to build a harmonic foundation, listing suitable chords: triads (excepting augmented) and strictly prepared and resolved 7th chords (with inversions). He restricted modulations to the rare use of closely related keys.

JANNA SASLAW

Richter, Ferdinand Tobias (*b* Würzburg, 22 July 1651; *d* Vienna, 3 Nov 1711). Austrian composer and organist of German birth. It seems reasonable to assume that he received his musical training from his father, Tobias (*d* 1682) – vice-Kapellmeister at the court of the Elector of Mainz from before 1651 and later Kapellmeister there – as well as from his godfather, P.F. Buchner. On 25 August 1675 he was appointed organist of the Cistercian monastery of Heiligenkreuz, Lower Austria, and from June 1676 he was also prefect of the choirboys; he remained there until 31 August 1679. It is not known why he left or where he spent the next four years, but on 1 July 1683 he was appointed court and chamber organist at the court of the Emperor Leopold I in Vienna (the retrospective decree is dated 1 January 1684). In 1690 he was promoted to first organist at the court chapel, a position he held until his death. During his tenure he was entrusted with the musical education of, among others, several of Leopold I's children, including the future emperors Joseph I and Karl VI. A number of south German organists visited Vienna to study with him, and Pachelbel too recognized his significance when he dedicated his *Hexachordum Apollinis* (Nuremberg, 1699) jointly to him, as a representative of the south German school of organists, and to Buxtehude, representing the north.

Richter's fame during his lifetime and immediately after his death rested on his accomplishments and reputation as an organist and as a composer of keyboard music. Most of this music consists of suites, which begin with a prelude and fugue and continue with a succession of dance movements. Although clearly influenced by Froberger and Poglietti, these works also adumbrate the stylistic changes that were soon to come to fruition in the music of composers such as Fux. They show a feeling for the dramatic that is not unexpected in a composer who

wrote a fair amount of stage music. For, together with J.B. Staudt, Richter was one of the leading composers of music for the Latin school plays produced by the Society of Jesus. These works were among the most important and effective agencies of the Counter-Reformation in Austria, and they enjoyed immense popularity and prestige in the 17th century. They depart from the Jesuit tradition in that the use of music is no longer confined to the prologue, epilogue and conclusions of individual acts, but frequently permeates the texts of the remainder of the drama, with arias, ensembles, choruses, ballets, instrumental interludes and dances. In style the music follows late 17th-century operatic practice, but Richter shows a remarkable sense of musical drama that elevates his work above much of the frequently mass-produced dramatic music of his Viennese contemporaries.

Richter's eldest son, Anton Karl (*b* Vienna, 1690; *d* Vienna, 11 Nov 1763), was accepted into the Vienna court chapel as a pupil of his father in 1699. He did not, however, enjoy the success expected of him, and when he was appointed sixth and last organist at court in 1718 it was mainly because of his father's long and meritorious service. With the reorganization of the court music in 1741 he was promoted to the position of second organist, from which he retired in 1751. As a composer he is known by a suite and two character-pieces (in *A-Wn*), all for keyboard and all of poor quality.

RUDOLF SCHNITZLER

Richter, Franz Xaver (*b* ?Holleschau [now Holešov], 1 Dec 1709; *d* Strasbourg, 12 Sept 1789). German composer of Moravian descent. Holleschau in Moravia is traditionally regarded as his native town, but there is no entry in the Holleschau church records to confirm this. The archives do, however, show that his father Matthias served in this town as a soldier. Richter could therefore at least have spent his childhood there, and his name does appear with the attribute 'Holleschoviensis' ('of Holleschau') in the registers of the Jesuit seminary at Ungarisch Hradisch (now Uherské Hradiště), where he was a pupil (1722–7). In Richter's death certificate the remark 'ex Kratz' ('of Hradiště') may therefore be the result of a confusion between the towns of his birth and his schooling, as is also the case in Marpurg's description 'aus Ungarn' ('from Hungary').

Between 1727 and 1736 Richter probably spent some time in Vienna: this is implied by his intensive study of Fux's *Gradus ad Parnassum* (1725) and his numerous arrangements of Caldara's church music, though Richter himself confirms merely a period in Italy (*Harmonische Belehrungen*, p.35). In 1736 Richter was taken on as a bass singer in the Stuttgart Hofkapelle; in 1737, after a short period in Schlitz near Fulda, he moved to the Benedictine Ritterakademie in Ettal as director of music. In 1740 he entered the service of Prince-Abbot Anselm von Reichlin-Meldegg in Kempten, Allgäu, as vice-Kapellmeister, later becoming Kapellmeister; he was married there to Maria Anna Josepha Moz in 1743. In 1741–2 he composed his early *Te Deum*, one of the most distinguished Baroque settings, and 12 of his string symphonies were published in Paris in 1744.

In 1746 Richter joined the Hofkapelle of the Elector Palatine Carl Theodor in Mannheim as a bass. He appeared in operatic productions there in 1748 (C.P. Grua's *La clemenza di Tito*) and 1749 (Galuppi's *L'Olimpiade*), but thereafter apparently sang mainly church music. Marpurg mentions Richter as second voilinist in the court orchestra, but there are no other references to him as an instrumentalist. During the 1750s Richter travelled to France, England and the Netherlands, and in 1760 he spent some time in Bonn, where he applied for the post of Hofkapellmeister; he was denied promotion in Mannheim. Between 1760 and 1767 he wrote his treatise *Harmonische Belehrungen*. Dedicated to the Elector Carl Theodor, this is in fact a course in counterpoint on the models of Fux and Meinrad Spiess,

but it refers to modern genres such as the solo concerto and the symphony.

As a composer Richter was most prominent at Mannheim in the instrumental field. Notable among his chamber works are the String Quartets op.5, published in 1768 but perhaps originating as early as 1757; Kirkendale comments that the motivic work in these was not equalled before Haydn. Although composing church music was not among Richter's duties as *Musicien et compositeur de la chambre de S.A.S. electorale*, some religious works date from his Mannheim years; his psalm setting *Super flumina Babylonis*, written in 1767–8 for the Concert Spirituel in Paris, received an excellent notice in the *Mercure de France*.

On 24 April 1769 Richter became *maître de chapelle* at Strasbourg Cathedral (for illustration see CONDUCTING, fig.3). As a composer he now devoted himself to church music, though his duties included also the supervision of secular music at the prince-bishop's court and the direction of the Strasbourg municipal orchestra. Ignace Pleyel was appointed his assistant in 1783 and succeeded him on his death in 1789.

Several authors have insisted that Richter was an active teacher, but the only pupil whom he definitely taught at Mannheim was F.X. Pokorny, who was visiting from the Oettingen-Wallerstein court; Ferdinand Fränzl, although trained at Mannheim, was one of Richter's pupils in Strasbourg.

Richter's compositional idiom changed from a late Baroque sound to a tonal language which reached the threshold of the Classical style. However, progressive Neapolitan elements were present throughout his output alongside more conservative Viennese features. In Mannheim he was strongly influenced by the new pre-Classical stylistic developments, and he adapted the Mannheim symphonic style with his own differentiated dynamics and instrumentation; in this regard he was no less innovative than his colleagues Johann Stamitz and Holzbauer. His works from this period nevertheless include such conservative traits as fugal techniques, Baroque sequences and the frequent use of minor tonality. However, Riemann's characterization of Richter as 'senior of the Mannheim School' essentially still holds good. Richter's Strasbourg works show a renewed interest in older techniques, especially those of Caldara's church music. Here he succeeded, at least to some extent, in blending traditional and contemporary stylistic features in a new kind of synthesis.

WORKS

Thematic catalogues: DTB, iv, Jg.iii/1 (1902) [symphonies]; DTB, xxviii, Jg.xvi (1915) [chamber works]; DTB, new ser., ii (1982) [sacred works]; The Symphony 1720–1840, ser. C, xiv (New York, 1985) [symphonies]

Edition: The Symphony 1720–1840, ser. C, xiv (New York, 1985) [S]

ORCHESTRAL

Syms. 6 grandes simphonies . . . en 4 parties (Paris, 1744), 1 ed. in S; 6 grandes simphonies ... en 4 parties (Paris, 1744); 6 simphonies, op.2 (Amsterdam, 1759); 6 sinfonie, op.3 (Paris, 1760), as A Third Set of Favourite Overtures (London, *c*1775); 6 simphonies, op.4 (Amsterdam, 1764), 2 ed. in DTB, iv, Jg.iii/1 (1902), 1 ed. in DTB, xiii, Jg.vii/2 (1906), 1 ed. in S; 6 sinfonie, op.7 (Paris, *c*1765) [incl. 1 from op.4], 1 ed. in S; 20 in contemporary anthologies (*c*1758–*c*1775), 2 ed. in S; *c*35 syms., *A-LA*, *B-Bc*, *CH-Bu*, *CZ-Bm*, *Pnm*, *D-Bsb*, *Dl*, *DS*, *HR*, *Mbs* [1 ed. in DTB, iv, Jg.iii/1 (1902)], *MÜu*, *Rtt*, *I-Rdp*, *S-L*, *Skma*; 12 syms., lost

Concs.: 6 Concertos ... in 5 Parts, hpd (London, *c*1765); 8 hpd concs., now lost, 1 ed. H. Höckner (Berlin, 1933); 8 for fl, *D-KA*, *Rtt* [1 ed. D. Sonntag (Heidelberg, *c*1965)], *F-Pc*; 1 for ob, *D-Rtt*; 1 for clarino, *US-Wc*; 6 for hn, 1754, lost; 1 for vc, before 1766, lost

Other orch: 12 minuets, listed in Breitkopf catalogue, 1779

CHAMBER

6 Sonatas, hpd, vn/fl, vc (London, 1759); 6 sonates, 2 vn, bc, op.3 (Amsterdam, 1760); 6 sonates, 2 fl/vn (Paris, 1763); A Second Set of 6 Sonatas, hpd, vn/fl, vc (London, *c*1763), 1 ed. H. Riemann, Collegium musicum, xviii (Leipzig, 1904), 1 ed. in DTB, xxviii, Jg.xvi (1915); 6 solos, fl/vn, bc (London, 1764)

A Second Set of 6 Sonatas, 2 vn, vc, hpd, op.4 (London, *c*1765); 6 Quartetto's, 2 vn, va, vc (London, 1768), ed. in DTB, xxvii, Jg.xv (1914), as op.5 (Paris, *c*1772); Divertimento, hpd, fl, vc, *B-Bc*; works for kbd, *D-HR*, *DO*; 8 trios cited in catalogues

VOCAL

Orats: Oratorium in duas partes divisum: Hic sta peccatrix [(Ettaler oratorium)] (?J. Graf Gondola), Kempten or Ettal, *c*1740, *D-OB* (score), *A-ST* (pts); La deposizione dalla croce (C. Pasquini), Mannheim, 12 April 1748, *D-MEIr**, lib *MHrm*, *HEu*; lost: Ovis misere perdita (Gondola), Ettal, 21 March 1738, lib *HR*; Jus coronae caelitus (F. Rosner), Ettal, 2 Sept 1738, lib *HR*; Amoris crucifixi . . . triumphus (Gondola), 21 March 1739, lib *HR*; Misericors Dominus et Justus, Kempten, 6 Sept 1740, lib *A-SEI*; Anacletus tradoedia, Kempten, Sept 1741, lib *D-OB*

Other vocal: 34 masses, most in *F-Sgs*, others *A-LA*; *CH-ZGm*; *CZ-LIT*; *D-Bsb*, *KPs*, *Mbs*, *OB*; *F-Pn*; *GB-Ob*; *I-Fc*; Requiem, *F-Sgs*, *Pn*; Mag a 4 (Paris, *c*1790); Dixit Dominus, 4vv, chorus, orch/org (Paris, n.d.); 6 Dixit et Mag, 17 other pss, 2 TeD, over 60 motets, cants. and smaller sacred works, most in *Sgs*, others *B-Bc*; *CH-E*; *CZ-LIT*; *D-DO*, *OB*, *WEY*; *F-Pn*, *Ssp*; *I-Mc*, for details see Mathias (1909), *EitnerQ*, Reutter (1993); 1 song in De vier muzykale jaargetyden: winter (Amsterdam, 1757–8); 1 aria in The Summer's Tale (London, 1765); arrs. of sacred works by Fux, Jommelli, Hoffmann, Caldara, 'Bordier', most *F-Sgs*

THEORETICAL WORKS

Harmonische Belehrungen oder gründliche Anweisung zu der musikalischen Ton-Kunst oder regulairen Composition (MS, *B-Br*); ed. and trans. C. Kalkbrenner as *Traité d'harmonie et de composition* (Paris, 1804)

JOCHEN REUTTER

Richter, Hans [Johann] (**Baptist Isidor**) (*b* Raab [now Győr], 4 April 1843; *d* Bayreuth, 5 Dec 1916). Austro-Hungarian conductor. He was the son of Anton Richter (1802–54), an organist and choirmaster, and Josefine Czasensky (1822–92), an opera singer and singing teacher. On the death of his father, Richter was sent to Vienna as a choirboy in the Hofkapelle, after which he studied at the conservatory of the Gesellschaft der Musikfreunde. He graduated in 1862, joined the Kärntnertortheater as a horn player, and in 1866 was sent to the exiled Wagner at Tribschen to copy the score of *Die Meistersinger* as it was being orchestrated. In 1868 Richter assisted at the opera's première; such was his musical versatility that he replaced an indisposed singer at one performance. For a year he conducted in Munich, but in August 1869 he was sacked by King Ludwig for refusing to conduct the royal command première of Wagner's *Das Rheingold* (he considered the staging inadequate). Instead he went to Brussels to conduct the première there of *Lohengrin*, returning to Tribschen to copy *Siegfried* and to play the trumpet and second viola in the surprise performance of the new *Siegfried Idyll* for Cosima Wagner on Christmas Day 1870. In 1871 Wagner and Liszt secured him the post of music director at the National Theatre in Pest, to which he brought a new musical discipline and where he raised standards. He remained there until 1875 when he joined the Vienna Hofoper. In January 1875 he married Mariska von Szitanyi, a singing pupil, and by 1882 they had six children.

Meanwhile Wagner's plans for a festival theatre at Bayreuth and the first staging of the *Ring* cycle were well advanced and Richter's involvement considerable. He travelled throughout Germany hearing singers and assembling an orchestra for stage rehearsals in 1875 and for the festival itself in 1876, both of which he conducted under the composer's supervision. In an effort to recoup the festival's financial losses Wagner's London supporters organized a festival in May 1877 and Richter had to take over most of the concerts from Wagner, whose conducting of his own music proved incomprehensible to the orchestra. Richter returned to London in 1879 for an annual series, called the Richter Concerts, which lasted for 23 years. From 1875 to 1900 he dominated the musical life of Vienna as music director of the Vienna PO (until 1898), first Kapellmeister at the Hofoper, vice-Kapellmeister at the Hofkapelle (full Kapellmeister from 1893) and conductor of the Gesellschaft der Musikfreunde from 1884. His influence there was enormous, his interpretations of the Beethoven symphonies revered. He conducted the first performances of Brahms's Second and Third symphonies and *Tragic Overture*, Bruckner's *Te Deum* and the revised Fourth and new Eighth symphonies, and Tchaikovsky's Violin Concerto. He also promoted the career of Dvořák, who dedicated his Sixth Symphony to him. In London he gave first performances of works by Parry, Stanford, Mackenzie, Cowen and Elgar, whose *Enigma* variations he introduced in June 1899. From 1885 to 1909 he conducted the Birmingham Triennial Festival including, in 1900, the première of Elgar's *The Dream of Gerontius*. In 1904 he mounted a London Elgar Festival – an unprecedented tribute to a living composer, who, in 1908, returned the compliment by dedicating his First Symphony to this 'true artist and true friend'. After the Richter Concerts came to an end in 1902 he conducted the first concert of the new London Symphony Orchestra (9 June 1904), with which he worked regularly until his last orchestral concert (Eastbourne, 22 April 1911). The universities of Oxford and Manchester conferred honorary DMus degrees on him and, in 1907, he was made an honorary CVO.

Hans Richter

Richter's first love was the music of Wagner: he conducted Wagner's operas from *Rienzi* to the *Ring* (but never *Parsifal*) in Vienna and London, and either *Die Meistersinger* or the *Ring* at every Bayreuth Festival from 1888 to 1912. From 1903 he appeared regularly at Covent Garden in the annual German Opera season, and in 1908 and 1909 conducted the *Ring* in English there. He deeply regretted that an English National Opera did not develop as a result. After Sir Charles Hallé's death in 1895 he was invited to take over the orchestra bearing its founder's name, but it was 1899 before he exchanged his Vienna Hofoper post for Manchester, where he included new works by Strauss, Sibelius, Bartók, Debussy and Glazunov in his programmes; he toured extensively with the orchestra throughout the British Isles. He retired to Bayreuth in 1911. In a career lasting 44 years he gave 2263 opera performances (899 of these Wagner operas) and 2088 concerts. 19th-century conductors were generally also composers or performers, but Richter, with his prodigious memory, and his ability to play every musical instrument except the harp and to make his players give of their best, concentrated solely on conducting and, although he left no recordings, built for himself an enduring international reputation.

CHRISTOPHER FIFIELD

Richter, Johann Christoph (*b* Dresden, 15 July 1700; *d* Dresden, 19 Feb 1785). German organist and composer. He lived in his native city throughout his career, becoming court organist in 1727 and remaining in that position for over 50 years. In 1750 his duties were expanded to include the direction of the Protestant court services, and in 1760 he was named Kapellmeister. Nothing is known about Richter's education beyond the fact that the Dresden aristocracy sent him to Italy in 1716 in order to enrich his musical education. In 1726 Augustus I (the Strong), Elector of Saxony and King of Poland, ordered him to learn to play Pantaleon Hebenstreit's invention, the pantaleon, a musical instrument resembling a large, tonally impressive dulcimer, which was a great favourite at the Dresden court. After 1734 Richter replaced Hebenstreit as court pantaleonist. He also became the principal performer on another instrumental novelty created by Hebenstreit, a porcelain glockenspiel.

Richter became widely known as an organist and he also wrote instrumental music and operas for court performances. His extant works include two operas (both in *D-Dl*): *Il re pastore* (Metastasio) and *Opera drammatica per festeggiare il gloriosissimo giorno natalizio della real altezza principesse, imp. di Sassonia*, given in Dresden in 1764. The second, for Maria Antonia's birthday, may be a setting of Metastasio's azione teatrale *Il natal di Giove*. Also extant are a *Concerto con echo* in 15 parts (*Dl*), a trio for two harpsichords and bass (*Bsb*), and a group of dances (*Bsb*). This composer is sometimes confused with the Dresden oboist Johann Christian Richter (1689–1744).

GEORGE J. BUELOW

Richter, Johann Paul Friedrich. *See* JEAN PAUL.

Richter, Karl (*b* Plauen, 15 Oct 1926; *d* Munich, 15 Feb 1981). German organist, harpsichordist and conductor. After studying in Leipzig with Rudolf Mauersberger, Karl Straube and Günther Ramin, he became choirmaster of the Christuskirche, Leipzig, in 1946 and a year later was appointed organist of the Thomaskirche. In 1951 he began to teach at the Musikhochschule in Munich (where he was organist of the Markuskirche), and he was appointed professor there in 1956. As an organist and harpsichordist, as choirmaster of the Munich Bach Choir and as conductor of the Munich Bach Orchestra, of which he was the founder, his musical activity extended far beyond the city of Munich. Highpoints of his numerous concert tours included the performances in Moscow and Leningrad, in 1968, of Bach's *St John Passion* and Mass in B minor. Although he also conducted Classical and Romantic orchestral works, his primary interest was the music of J.S. Bach. Richter's interpretations of Bach's vocal works, many recorded between 1958 and 1980, were especially admired for their discipline, rhythmic tautness and expressive intensity. As player and conductor he made few concessions towards the growing interest in 'historical' performances. Partly because of declining health in the 1970s, he was unable to defend this position with his previous vigour and conviction. From among his many recordings, the earlier of his two versions of the *St Matthew Passion* (1958) and his survey of Bach's sacred cantatas over three decades deserve special mention.

HANS CHRISTOPH WORBS/NICHOLAS ANDERSON

Richter, (Hermann) Lukas (*b* Bärenstein, 22 Feb 1923). German musicologist. He studied church music in Leipzig (1941–2) and musicology under Meyer, Vetter and Dräger at the Humboldt University of Berlin (1949–52), taking the doctorate there in 1957 with a dissertation on Plato's and Aristotle's teachings on music. He completed the *Habilitation* at Berlin in 1966 with a study of Berlin street songs (*Gassenhauer*). In 1963 he became research fellow at the Institut für Altertumskunde of the Akademie der Wissenschaften; he was appointed director of research in 1966. He was made honorary lecturer (1987) and subsequently honorary professor (1994) at Humboldt University, where he has taught since 1959. He was granted emeritus status in 1988. His chief interests are ancient music (both its sources and its sociological aspects), medieval monophonic song, Schütz, German folksong and urban song.

HORST SEEGER/CHRISTIAN KADEN

Richter, Marga (*b* Reedsburg, nr Madison, WI, 21 Oct 1926). American composer. At the Juilliard School she studied the piano with Tureck and composition with Bergsma and Persichetti (BS, MS 1951). As an undergraduate she had three compositions performed in New York

at a Composer's Forum series. Her Sonata for piano (1954), written for and recorded by Menahem Pressler, is one of four works commissioned by MGM Records; two commissions by the Harkness Ballet resulted in scores for *Abyss* (1964) and *Bird of Yearning* (1967–8). Inspired by two Georgia O'Keeffe paintings, her piano concerto (1968–74) makes effective use of an Indian rāga; it is the first of a series of works, entitled *Landscapes of the Mind*, that share thematic material and were composed between 1968 and 1979. Her compositions have been performed by major orchestras and she has received grants, awards and commissions from the NEA, the Martha Baird Rockefeller Fund, the National Federation of Music Clubs and Meet the Composer. In her compositions she uses multi-textural structures in a modern idiom, creating works that are easily accessible and which have been enthusiastically received. Evidence of the continued expansion and enrichment of her musical expression is to be found in such works as *Out of Shadows and Solitude* (1985) and *Qhanri*, subtitled 'Tibetan Variations' (1988).

WORKS
(*selective list*)

Dramatic: Abyss (Ballet), 1964; Bird of Yearning (1967–8); Riders to the Sea (op, 1, J.M. Synge), 1995–7

JUDITH ROSEN

Richter, Paul (*b* Braşov, 28 Aug 1875; *d* Cristian, nr Braşov, 16 April 1950). Romanian composer, conductor and pianist of German descent. He began lessons on the piano, the organ and harmony at an early age. At his parents' behest Richter studied medicine in Graz then went to Leipzig to study philosophy before transferring to the Conservatory there, where he studied with Jadassohn, Nikisch and Reinicke (1897–1902). During this period he conducted the Weltliche Oratorien-Verein choir. Richter became an important figure in the musical life of Braşov on his return there. A concert pianist and chamber musician, his commitments in Braşov also included the conductorships of the Kronstädter Männergesangverein (1902–19), the Municipal Orchestra (1917–35) and the Philharmonic Society Orchestra, and a teaching post at the 'Astra' Conservatory (1928–35); he also taught at the Musikverein in Sibiu. As a conductor he took part in numerous foreign tours and worked with musicians including Bartók, Enescu, Edwin Fischer, Huberman, Sauer, Strauss and Weingarter. Marked by sensitivity and discipline, Richter's works display his mastery of counterpoint in an affirmation of the Transylvanian Saxon cultural tradition. Strauss had particular praise for *Serenada* (1910). Late Romantic in style, his work also shows the influence of the diverse traditions of the Carpathian region. Further details are given in H.P. Türk: *Paul Richter* (Bucharest, 1975).

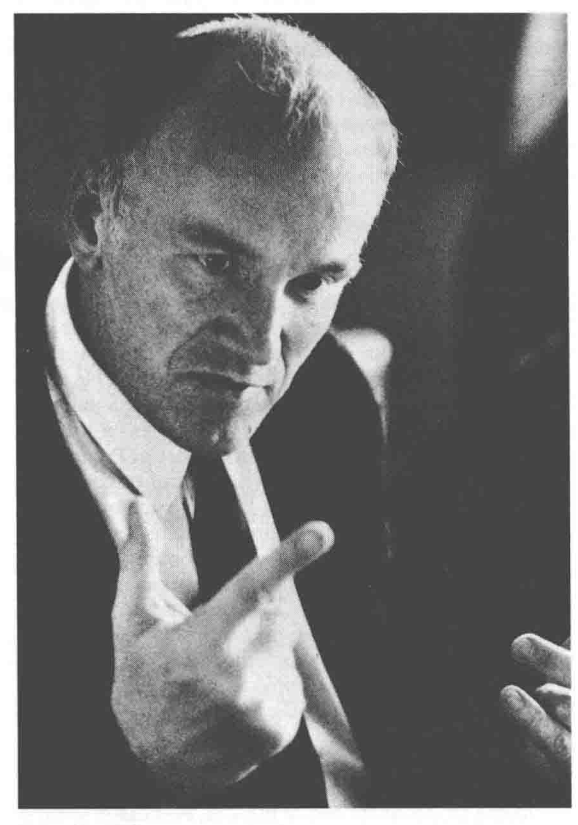
OCTAVIAN COSMA

Richter [Rikhter], **Sviatoslav (Teofilovich)** (*b* Zhytomyr, Ukraine, 20 March 1915; *d* Moscow, 1 Aug 1997). Russian pianist. His father was a German pianist and composer who studied in Vienna and taught at the Odessa Conservatory. His mother, from a landowning family of mixed national background, had been a pupil of his father. Richter grew up speaking both Russian and German. His first love was painting, which he learnt from his aunt, with whom he spent three years between the ages of four and seven, cut off from his parents by the Civil War.

On his return to Odessa in 1922, Richter began to learn the piano and to compose, being largely self-taught in both areas. As a child he also wrote plays. His earliest musical passion was for opera. He enjoyed sight-reading from vocal scores at home, and for a while he had ambitions to become a conductor. From 1930 to 1932 he worked as accompanist at the House of Sailors in Odessa in order to supplement the family income, and then at the Odessa Philharmonic. He made his solo début playing Chopin at the age of 19, and in the following year became an accompanist at the Odessa Academic Opera and Ballet Theatre.



In 1937 Richter entered the Moscow Conservatory to study with Heinrich Neuhaus, living in his teacher's house during his third year. He refused to study other subjects or to take examinations and was expelled on three occasions but reinstated at Neuhaus's insistence. He made his official début on 26 November 1940, in the Small Hall of the Moscow Conservatory, playing works by Russian composers, including the first performance of Prokofiev's Sixth Sonata. His association with Prokofiev continued with performances of the Fifth Piano Concerto and the Seventh Sonata, the latter being another première; in gratitude Prokofiev dedicated his Ninth Sonata to Richter. In 1952, at a time when Richter had broken a finger, he made his only appearance as a conductor, with the Moscow Youth Orchestra in the first performance of the revised version of Prokofiev's Cello Concerto (the work later to be known as the Sinfonia Concertante).

World War II separated the family again, and while Richter was studying in Moscow his father was arrested, along with others of German stock in Odessa, and executed. His mother left the city together with the occupying troops at the end of the war, eventually settling near Stuttgart. Richter was reunited with her in August

1961, having believed her dead since 1942. After the war Richter's fame spread rapidly in Russia and the Eastern bloc countries, but for many years he was not allowed to travel to the West. The reasons remain a matter for speculation, but it cannot have helped that he always placed art above politics, maintaining his friendship with Pasternak at all costs, for instance; nor can it have helped that he was homosexual, despite his marriage in 1946 to Nina Dorliak. His New York and London début performances in 1960 caused a sensation and were followed by a series of recordings which have had classic status ever since (including Schumann's *Fantasie*, Skryabin's Fifth Sonata, Liszt's concertos and Prokofiev's Eighth Sonata). His repertory was extensive, covering Bach to Prokofiev and including many less frequently heard works, but shunning complete cycles with the exception of Bach's *Das wohltemperirte Clavier*.

From 1960 to 1989 Richter made an average of 70 concert appearances per year. He toured extensively in Europe and Japan, preferring to play in small venues on the way and travelling by train and car rather than by air. He avoided long-term recording contracts, but many of his live appearances were recorded and his discography is probably the largest of any pianist.

In 1964 he founded a festival at Tours, housed in a converted barn. Here and elsewhere he developed associations with favoured chamber music partners, including his wife (the singer Nina Dorliak), the violinist Oleg Kagan, the cellist Mstislav Rostropovich and Benjamin Britten. His association with Britten led him to produce the latter's opera *The Turn of the Screw* for the Moscow December Nights Festival in 1984.

Sviatoslav Richter

In Richter's later years health and nervous problems led to many cancellations of concerts. Increasingly he preferred to play from the printed score in a hall lit by a single standard lamp, using Yamaha instruments whose neutral colourings did not impose ready-made beautiful sound on the music. Although he professed to love Wagner, Chopin and Debussy above all other composers, Richter's most memorable performances were in Beethoven, Schumann, Liszt and Prokofiev. The hallmarks of his finest playing are intense concentration over long timespans, often with unusually spacious tempos (notably in Schubert). At times this resulted in no more than plainness; but at his best his playing achieved an unequalled sense of inevitability and timelessness.

By his own admission he never took an interest in political questions and until the late 1980s he chose to make his Moscow apartment his home base. Unusually for Russians of his generation, he never taught. Painting remained an important means of expression, and in 1978 he gave an exhibition at the Pushkin Museum in Moscow. A Society of Friends of Sviatoslav Richter was formed in 1987, with a dual base in England and Germany, and has dedicated itself to assembling comprehensive details of the artist's life and works.

DAVID FANNING

Richter de Vroe, Nicolaus (*b* Halle, 1 Feb 1955). German composer and violinist. After training as a composer in Dresden (1968–73), he studied the violin at the

Tchaikovsky Conservatory, Moscow (1973–8). In 1980 he joined the Berlin Staatskapelle and resumed composition studies as a pupil of Goldmann at the Berlin Akademie der Künste (1980–83). In addition to participating in experimental ensembles, he attended Katzer's seminars on electronic music. In 1988 he became a member of the Bavarian RSO and in 1990 helped to found the XSEMBLE Munich.

An opponent of subjectivism, but interested in the Buddhist culture of attentiveness, Richter de Vroe places a close analysis of instrumental sound at the heart of his compositions. He deliberately suspends intentionality in his works by allowing random operations to contribute to the compositional process. While loose-knit event-fields eventually merge into definitive forms, he avoids creating an unambiguous musical syntax. Instead fields of interpretation emerge, filled with the enigmatic life of musical sound, noise and silence. Graphic and textural impressions, such as Japanese calligraphy, the tachystic gestures of Hans Hartung's work and the constructive minimalism of Sol Le Witt, often serve as inspirations for his music.

HELMUT ROHM

Richter-Haaser, Hans (*b* Dresden, 6 Jan 1912; *d* Bielefeld, 16 Dec 1980). German pianist, composer, conductor and teacher. After early tuition within the family, he began his serious musical studies at a Dresden music school before attending the Dresden Hochschule für Musik, where he studied the piano with Hans Schneider, in addition to the violin, percussion and conducting. He made his début in Dresden at the age of 16, performing Schubert's 'Wanderer' Fantasy as part of a centenary concert. Having begun to establish himself as a pianist, as well as being a conductor and composer, the war interrupted his career – his first appearance in front of an American audience was in a French prison camp. After the war he served as conductor of the Detmold SO, and in 1947 he taught the piano at the Nordwestdeutsche Musikakademie, where from 1955 to 1963 he was professor and director of a masterclass. Richter-Haaser's major international reputation was established after a concert in the Netherlands in 1953 conducted by Paul van Kempen, after which he began to tour extensively, especially in North and South America (he made his US début in 1959), as well as in Australia (1964). Although his repertory was broadly based, encompassing the Liszt Sonata, Musorgsky's *Pictures at an Exhibition* and many works of Chopin, including the *Allegro de Concert*, it was as an exponent of the core German literature – Mozart, Schubert, Schumann, Brahms and, in particular, Beethoven – that he was most highly regarded. From 1963 he devoted his attentions entirely to his concert activities and his complete cycles of Beethoven sonatas and concertos met with critical approval. Richter-Haaser belonged to a tradition that dated back to Gieseking and Backhaus and, while less physically propulsive than Schnabel, the natural directness and lack of selfconsciousness in his approach, combined with the cleaner lines he drew, could often prove revealing on their own terms. His compositions, which include piano pieces, orchestral works, chamber and vocal music, display the same unpretentious craftsmanship that characterized his piano playing, while in his D minor piano concerto op.28, for example, the Brahms-Reger tradition into which he had been born is clearly evident.

CHARLES HOPKINS

Richter Herf, Franz (*b* Vienna, 17 Dec 1920; *d* Salzburg, 4 July 1989). Austrian composer. He began formal studies in the piano and music theory at the Academy of Music, Vienna. He went on to study composition at the Mozarteum, Salzburg, where his teachers included Johann Nepomuk David, Egon Kornauth and Bernhard Paumgartner. He also studied conducting privately with Clemens Krauss. After completing his studies (1948), he began a career as a conductor. In 1949 he accepted a position as accompanist at the Mozarteum and was later promoted to lecturer and professor of music theory (1966). He also served as rector of the Mozarteum from 1979 to 1983.

Between the years of 1950 and 1970, Richter Herf composed over 50 works in a neo-classical style. He later studied Croatian folk music; fascinated with the music's unique tuning system, he constructed an organ capable of sounding 72 pitches within each octave. He called his harmonic and melodic experiments in this expanded musical language 'ekmelic music', borrowing the term from ancient Greek music theory. Using the idiom as the basis for vocal and instrumental compositions, he published a series of 26 ekmelic works numbered from opus one.

HORST-PETER HESSE

Ricieri [Riccieri], **Giovanni Antonio** (*b* Venice, 12 May 1679; *d* Bologna, 15 May 1746). Italian composer and singer. His name also appears (incorrectly) as Rizzieri and Rizieri. Son of Francesco Ricieri and Chiara Stella Bettanini, he was baptized on 23 May 1679 in S Silvestro near the Rialto bridge. Two months later the family moved to Bologna; seven years later to Imola, and then to Faenza, where Giovanni began his musical studies with Count Fabio Naldi. In about 1688, frightened by an earthquake, the family moved back to Venice; after a brief sojourn there they settled in Vicenza. There Ricieri continued studying music, first with Giovanni Castelfranco, then with Pietro 'tedesco di Baviera', as well as Matteo Zanoli. He later studied counterpoint with Domenico Freschi, *maestro di cappella* at Vicenza, and Francesco Alghisi. In 1700, after his father's death, Ricieri went to Ferrara where he sang soprano during the carnival opera season at the Teatro Bonacossi, as well as some concerts at the Accademia di Spirito Santo. In July of the same year he moved to Bologna, recommended by G.B. Bassani to his Bolognese colleague G.A. Perti, *maestro di cappella* at S Petronio. Ricieri was admitted to this *cappella musicale* on 1 March 1701 as a soprano.

In the same year he became a member of the Accademia Filarmonica as a singer; he was promoted to the rank of composer on 17 May 1704. However, because of his inclination to offer frank criticism of his contemporaries and to violent outbursts of temper (it is recounted that, in fury over a singer's error in a church service he was directing, he snatched his wig off and threw it into the congregation), he was banished from the Accademia Filarmonica on 2 July 1716. In 1722 he went to Poland in the service of the field marshal Count Stanisław Rzewuski. According to his own eccentric account (*Istorica narratione della casa Ricieri*) he organized a small theatre in Luboml, the winter residence of Rzewuski, and composed two operas entitled *L'inganno punito* and *L'imeneo preteso*. After four years he returned to Bologna, and in 1728 he was asked by his former patron to compose an opera. This he evidently did (the libretto of *L'Armidoro* exists in manuscript in *I-Bc*), but by the time it arrived in Poland Count Rzewuski had died, and it was probably never produced.

Four years later Ricieri decided to enter the Franciscan Order. However, after only three months of novitiate, he returned to his more mundane life as a musician. In 1733 he left Bologna for Venice and Padua, and, becoming acquainted with F.A. Vallotti there, discussed Vallotti's harmonic theories with him. By 1738 he had returned to Bologna, where he disputed with his pupil, G.B. Martini, in 1740: he accused Martini of not being able to answer a fugue theme given to him; Martini, in self-defence, sent him 12 answers to the same theme. Martini's judgment of Ricieri was that 'although he was a mediocre soprano singer, he became a skilful composer'.

His works demonstrate a mastery of counterpoint as well as concertato style. Martini praised his ability to combine the older church modes with the newer tonal ideas of his time. Among his pupils, besides Martini, were Angelo Caroli, Antonio Bernacchi and G.M. Nelvi.

ANNE SCHNOEBELEN

Rickenbacher, Karl Anton (*b* Basle, 20 May 1940). Swiss conductor. He studied under Herbert Ahlendorf at the Berlin Conservatory and at conducting courses with Karajan and Boulez. He spent his early career as a répétiteur and staff conductor at Zürich (1966–9) and Freiburg (1969–75), and has subsequently devoted himself to concert work. He was Generalmusikdirektor of the Westphalian SO in Recklinghausen (1976–85), principal conductor of the BBC Scottish SO in Glasgow (1978–80) and has appeared frequently as a guest conductor in Europe, the USA and Japan. In 1987 he was appointed principal guest conductor of the Orchestre Philharmonique du BRT in Brussels. Rickenbacher has made numerous recordings, notably of little-known works by Beethoven, Spohr, Liszt, Richard Strauss, Humperdinck, Schreker and others.

ANDREW CLARK

Rickenbacker. The brand name of a range of guitars manufactured in California. Adolph Rickenbacker (*b* Basle, April 1886; *d* CA, March 1976), a tool and die maker, George Beauchamp, a guitarist and designer, and Paul Barth, all of whom had worked for the National

String Instrument Corp. (maker of the 'ampliphonic resonator' guitar; *see* RESONATOR GUITAR), founded the firm Ro-Pat-In in 1931; the name was changed to Electro String Instrument Corp. in 1934. In 1932 the firm introduced two models of electric steel guitar, the Rickenbacker A22 and A25, designed to be played across the knees; they were nicknamed 'frying pans' because of their round bodies and long necks. Probably designed by Beauchamp in collaboration with Barth, these guitars were the world's first commercially produced solid-bodied electric guitars with electro-magnetic pickups. The company also produced one of the first electric Spanish-style guitars, the Electro Spanish, in about 1935. During the 1930s and 40s they made mainly lap electric steel guitars (including instruments with a double neck) and free-standing electric Hawaiian guitars.

Rickenbacker sold the Electro company in 1954 to the Californian businessman F.C. Hall, who founded the sales company Rickenbacker Inc. in 1965. From the late 1950s the Rickenbacker name came to be associated with solid-bodied electric guitars and a more successful range of semi-acoustic electric and electric bass guitars. These instruments are visually very distinctive, having angled headstocks and often the scimitar-shaped f-holes that are unique to Rickenbacker guitars; some of the designs were created for Rickenbacker by the luthier Roger Rossmiesl, who later worked for the Fender company.

In 1956 Rickenbacker brought out one of the first neck-through-body guitars, the Combo 400. The following year they produced their first solid-bodied electric bass guitar, the Model 4000. One of their most original-sounding instruments is the electric 12-string guitar, introduced in 1963 and popularized by its use, soon afterwards, by Roger McGuinn on the recording by The Byrds of *Mr Tambourine Man*. The company continues to produce a series of acoustic, electric and electric bass guitars. In 1984 the firm's name changed again to Rickenbacker International Corp.

Ricordi. Italian firm of publishers.

1. HISTORY. The firm of Ricordi was founded in Milan in 1808 by Giovanni Ricordi (*b* Milan, 1785; *d* Milan, 15 March 1853); it was directed from 1853 to 1888 by his son Tito (i) (*b* Milan, 29 Oct 1811; *d* Milan, 7 Sept 1888), from 1888 to 1912 by Tito's son Giulio (*b* Milan, 19 Dec 1840; *d* Milan, 6 June 1912) and from 1912 to 1919 by Giulio's son Tito (ii) (*b* Milan, 17 May 1865; *d* Milan, 13 March 1933). The firm was managed from 1919 to 1940 jointly by Renzo Valcarenghi and Carlo Clausetti, from 1940 to 1944 by Valcarenghi and Alfredo Colombo and from 1944 to 1952 by Colombo, Eugenio Clausetti and Camillo Ricordi. In 1952 it became a limited company, under the presidency first of Colombo, then of Guido Valcarenghi (from 1961), Carlo Origoni (from 1976), Gianni Babini (from 1982) and Guido Rignano (from 1988 to 1995). In June 1995 the company merged with BMG Ariola forming a new company BMG Ricordi S.p.a., of which Casa Ricordi is a division managed by Mimma Guastoni.

Giovanni Ricordi, a violinist, was leader of the orchestra of a small Milanese theatre, the Fiando. Probably in 1803 he had started a *copisteria*(copying establishment) beneath the portico of the Palazzo della Ragione. From 1804 to 1807 he was under contract as official copyist and prompter to the Teatro Carcano and in 1807 to the Teatro Lentasio. In 1807 he spent several months in Leipzig studying the techniques of Breitkopf & Härtel and, after returning to Milan, on 16 January 1808 he formed a publishing partnership with Felice Festa, an engraver and music seller. Their first, and probably only, joint publication was a duet from Farinelli's *Calliroe*, which they issued as the first in a series entitled *Giornale di musica vocale italiana*; the imprint gave Ricordi's address as Contrada di S Margherita (not mentioning the house number, 1108) and Festa's as Pantano no.4705. The partnership was terminated on 26 June 1808, and at about the same time Ricordi took a shop at 4068 Contrada di Pescaria Vecchia, from which address his plate number 1 (Antonio Nava's *Le quattro stagioni*) was issued. In 1811 he was appointed publisher to the Milan Conservatory. In the following year, probably in August, he moved to 1065 Contrada di S Margherita, and in the winter of 1815–16 to no.1118 of the same street. About 1824 the shop, which he used as his publishing address, transferred to Ferdinando Artaria's former premises, favourably located opposite La Scala (Dirimpetto all'I. R. Teatro alla Scala no.1148) and in 1828 he moved his printing works from 1118 Contrada di S Margherita to 1635 via Ciovasso. From 1838 Ricordi's imprints read '1720 Contrada degli Omenoni', but after about 1860 the firm's address was normally omitted from its publications. In 1844 a new shop was opened at the side of La Scala, 'di fianco alla Scala', and soon became known as the Casino Ricordi. By 1867 the main offices, and probably the works too, were at 1 via Omenoni; from 1875 at the latest there was a shop at the Galleria Vittorio Emmanuele; in 1884 new printing works were erected at 21 viale Porta Vittoria; and in January 1889 a shop was opened at 9 via S Margherita. In 1910 the works were moved to 42 viale Campania and the offices to 2 via Berchet. Both these premises were bombed in 1943, with the loss of machinery and the stock of unsold copies, hire material and almost all the non-autograph manuscripts. The reconstructed via Berchet premises were reopened in February 1950. The most valuable of Ricordi's rich archives survived the war and are still in the possession of the firm; they include some 4000 music manuscripts (chiefly autograph), a large quantity of correspondence, and approximately 25,000 printed editions; details of much of the collection are listed at the Ufficio Ricerca Fondi Musicali (the Italian RISM centre) in Milan.

During his first decade in business Giovanni Ricordi issued an average of 30 publications a year; in his second the yearly average was about 300. This expansion was largely the result of a succession of contracts starting from December 1814, which he won as prompter and exclusive copyist to La Scala, giving him the right to publish the

music performed there; in 1825 he purchased their entire musical archives. In 1816 he had a similar contract as copyist to the Teatro Re, and in the 1830s and 1840s concluded highly favourable agreements with the opera houses of Venice and Naples. By the end of 1837 he had not only purchased the stock and plates of Ferdinando Artaria but was able to boast more than 10,000 publications, the exclusive rights to operas written for Milan and Naples, an archive of 1800 autograph manuscripts and a branch in Florence. The latter, Ricordi Grua & Co., was opened towards the end of 1824; its name was changed to Ricordi Pozzi & Co. (1827), to G. Ricordi & Co. (1828) and to G. Ricordi & S. Jouhaud (*c*1840). In 1860 the association with Jouhaud terminated, and in 1865 Tito (i) opened an independent branch in Florence. A London branch, Grua Ricordi & Co., had been opened (1824), but it was closed four years later. In December 1840 Ricordi purchased the small business of Gaetano Longo (of Este). Expansion within the firm continued at such a rate that by his death in 1853 Giovanni had issued 25,000 publications.

Tito (i), a good pianist, had worked in the firm since 1825. Under his management, new printing methods were introduced, branches in Naples (1860), Rome (1871), London (1875), Palermo and Paris (both 1888) were opened, and the substantial businesses of Clausetti (1864), Del Monaco and Guidi (both 1887) and finally Lucca (30 May 1888) were taken over. The acquisition of Lucca, which had been Ricordi's chief rival from the 1840s and had itself between 1847 and 1886 absorbed five firms (including Canti), brought to the Ricordi catalogue some 40,000 editions as well as the Italian rights to Wagner's operas.

Shortly before his death, Tito (i) gave over the management of the firm to his son Giulio, a highly cultured man and the best musician in the family. Usually under the pseudonym J. Burgmein (or sometimes Grubmeni), he composed many piano pieces and songs as well as some orchestral music and stage works, culminating in a comic opera *La secchia rapita*, performed at Turin in 1910. He worked for his father for a short time from 1856 and permanently from 1863. It was he who regularly dealt with Verdi on the firm's behalf (from *c*1875) and who played a central role in Puccini's artistic development. Under his management, branches at Leipzig (1901) and New York (1911) were opened, part of the stock of Escudier, Ricordi's former Paris agent, was acquired (1889), and the firms of Pigna and Schmidl (both 1902) and Carelli (1905) were taken over. His son Tito (ii), who succeeded him, appears to have lacked both charm and judgment. He and Puccini disliked each other, and Puccini had *La rondine* published by Ricordi's rival Sonzogno. When Tito (ii) retired in 1919, the management of the firm passed out of the hands of the Ricordi family. Business expansion continued, however, and in South America the publishers Breyer-Hermanos (1924, Buenos Aires; Breyer had been representing Ricordi since 1885), Canulli (1925), Harrods (1928), Oerthmann (1935), Balerio y Bonini (1940) and Romero y Fernandez (1947) were all taken over; the Walter Mocchi musical archives were acquired in 1929, and the Naples firm of Pasquariello absorbed in 1946. Further branches were set up in São Paolo (1927), Basle (1949), Genoa (1953), Toronto (1954), Sydney (1956) and Mexico City (1958). Currently there are foreign branches bearing the Ricordi name in Buenos Aires, São Paolo, Feldkirchen (Germany) and Colonia Narvarte (Mexico). By 1996 Ricordi had published more than 137,000 editions; gramophone records, light music and plays are now in its catalogue.

2. Publications. The firm's earliest editions were printed from engraved plates, but in 1822–3 several publications were printed by lithography. About 1824 Ricordi took over Ferdinando Artaria's lithographic department, and a year or so later Tito (i) was sent to Germany to study the process. Nevertheless the firm only rarely used lithography, and printing direct from engraved plates remained the normal practice until the 1870s, when chromolithographic and offset processes were introduced. In their publications of vocal music Ricordi invariably used, until about 1844, the soprano and tenor clefs in addition to the treble and bass, and it was a further 20 years before the former were finally dropped. In 1877 the firm devised a new modification of the treble clef to indicate a line sung an octave lower, by a tenor. Ricordi's plate numbers are in general reliably chronological (but certain caveats are sounded by Gossett and Hopkinson). The sudden leap in 1890 from about 55,000 to about 94,000 is explained by the application in that year of Ricordi numbers to their recently acquired Lucca stock. Another useful Ricordi practice was the blind-stamping of dates on most of their publications issued between about 1860 and 1932; in all probability these stamps related not to the date of printing but rather to that of the binding or wrappering of a particular batch of copies. In the Ricordi archives there is a further valuable source of precise chronological information – a series of manuscript notebooks giving the dates on which many works to be published by the firm were sent, apparently, for engraving or printing.

Ricordi's first catalogue (1814) lists his first 176 publications. These were mainly piano arrangements of and variations on operatic tunes, pieces for one and two guitars (including several by Antonio Nava), and the operatic numbers that formed part of his *Giornale di musica vocale italiana*(which did not run beyond its fourth volume). The most notable single items from these early years were Asioli's *Trattato d'armonia* and Pollini's *Metodo per forte-piano o clavicembalo*, both published for the Milan Conservatory, and Ricordi's first complete vocal score, Mayr's *Adelasia ed Aleramo*, issued in association with the firm of G.C. Martorelli. Several supplementary catalogues were printed during the next few years, and then, in 1825, appeared a major catalogue of Ricordi's total production (more than 2300 items) to the end of 1824. By this time the firm was offering a range of instrumental music by international composers, methods and theoretical works for students, a large selection of Italian operatic numbers for piano solo and piano and voice (including many pieces by Rossini), and dance and ballet music for piano solo. Especially noteworthy are the first appearances of Paganini's works in print (opp.1–5), many pieces for violin by Rolla and for guitar by Nava and Giuliani, and vocal scores of five complete operas. The catalogue lists in full score about 60 operatic excerpts but only two complete works: Weigl's cantata *Il ritorno d'Astrea* and Beethoven's *Christus am Ölberge*. Much of the music in the catalogue first appeared in the series *Biblioteca di Musica Moderna*, a periodical collection offered by subscription in four (1820) and six (1821–30)

categories, three consisting of piano music and one each of vocal, violin and flute music.

The next general catalogue appeared in 1838 and advertised the firm's 10,000 publications to the end of 1837. During this period Ricordi had, through his connections with opera houses, established both an extremely powerful position for himself in the operatic world and a highly profitable business. Rossini had effectively retired and Bellini was dead; but Ricordi had published vocal scores and was in a position to hire out performing material of 19 operas by Rossini and eight by Bellini. Donizetti was still flourishing, and Ricordi either already had published, or was about to publish, all but a handful of his works composed after 1830. Also on Ricordi's books were the best of the other Italian opera composers – Mercadante, Vaccai, Pacini and Luigi and Federico Ricci – as well as Meyerbeer, whose *Il crociato in Egitto* had been published by the firm in 1824 and whose French operas were now achieving widespread success. In 1839, by publishing Verdi's first opera, *Oberto, conte di S Bonifacio*, Ricordi took the most significant single step in the entire history of the firm. Except for *Attila*, *I masnadieri* and *Il corsaro*, published by Lucca between 1846 and 1848, Ricordi published all Verdi's remaining operas (for illustration *see* PRINTING AND PUBLISHING OF MUSIC, fig.23), the Requiem and, after 1848, almost all his smaller works.

Shortly afterwards Italy's first regular musicological and critical journal, the *Gazzetta musicale di Milano*, was founded by Ricordi. From 2 January 1842 it was weekly, with monthly musical supplements that were reissued annually, until 1848, in a series entitled *Antologia classica*. For a short time in 1848 it appeared as the *Gazzetta musicale di Milano ed Eco delle notizie politiche*, the greater part being given over to political comment, but, after a break in publication, it reverted in 1850 to exclusively musical content. Apart from occasional breaks, it survived until 25 December 1902, after which it merged with Ricordi's *Musica e musicisti*, which had been started in June 1902. This was renamed *Ars et labor – Musica e musicisti* from 1906 until December 1912, when it merged with *Il secolo XX*. From 1865 to 1883 the firm had published a second periodical, the *Rivista minima*, a fortnightly review of politics, literature, art and theatre; it was edited until 1874 by Verdi's librettist Antonio Ghislanzoni, then by Ghislanzoni and Salvatore Farina, and from 1878 by Farina alone. In 1919 *Musica d'oggi* was launched, quarterly for its first year and thereafter monthly, until 1942, when it lapsed temporarily. From 1951 to 1957 it reappeared as *Ricordiana* and in 1958 reverted to *Musica d'oggi*; it ceased publication in December 1965.

The Italian passion for operatic and vocal music coupled with the paucity of original instrumental works composed in Italy during the 19th century was, not unnaturally, reflected in Ricordi's catalogues, and during the second and third quarters of the century a large proportion of the immense quantity of instrumental music, especially for piano, put out by the firm consisted of operatic arrangements. Especially large contributions were made by Czerny, Liszt, Döhler, Henri Herz, the Strauss family, Golinelli, Prudent, Truzzi, Adolfo Fumigalli, Ascher, Bonamici and Martucci; the firm also published numerous methods and exercises for all instruments. The Ricordi catalogue of 1875 advertised the *Biblioteca di musica popolare*, which came to be known as the *Edizioni economiche*. Designed to be produced inexpensively, this at first consisted only of vocal and piano scores of opera, printed in a new smaller format (subsequently used for all Ricordi's vocal scores); later, publications in all genres were added to the series. This catalogue shows that in the second half of the century the firm was maintaining its operatic tradition. Pedrotti and Boito had already been taken on, and from the 1870s operas by Ponchielli and Catalani were published. In 1884 Ricordi published Puccini's first opera, *Le villi*, after it had been turned down by Sonzogno; and, apart from *La rondine*, the firm went on to publish all Puccini's operas. After Verdi, Puccini has been Ricordi's most valuable asset by far. Sonzogno, however, proved to be their strongest rival since Lucca; the firm was the main publisher of Puccini's most successful contemporaries, Mascagni and Leoncavallo, leaving Ricordi the less profitable Alfano, Franchetti, Montemezzi and Zandonai.

After World War I the character of Ricordi's catalogue altered: much more emphasis was now given to new editions of earlier composers, both Italian and foreign. These undertakings included editions of Domenico Scarlatti, Beethoven and Chopin, and an anthology of early music; in 1947 an important collected edition of Vivaldi's instrumental works was launched. At the same time Ricordi continued to publish, though with far more competition and perhaps rather less energy and inspiration than in the 19th century, the works of contemporary Italian composers, including operas and other music by Pizzetti, Malipiero, Respighi, Wolf-Ferrari, Rocca, Tosatti, Rossellini, Bettinelli, Rota and Testi, and non-operatic works by Arrigo, Bussotti, Casella, Castelnuovo-Tedesco, Gentilucci, Ghedini, Maderna, Mannino, Nono, Petrassi, Turchi, Veretti and Zafred. A department dealing in American popular music was set up in Italy after World War II, while the New York branch, under the directorship of Franco Colombo, operated as a publishing house rather than an agency for the parent firm, and issued the music of such composers as Creston, Dello Joio, Hoiby, Kubik, Menotti, Thomson and Varèse. The Buenos Aires branch, as a continuation of the Breyer firm, similarly issued popular and serious music for the local market. Ricordi's output of literature has generally been small but has expanded in the 1980s and 90s; the more substantial items include Franco Abbiati's useful biography *Giuseppe Verdi* (1959) and the *Enciclopedia della musica*, edited by Claudio Sartori (1963–4).

Between 1700 and 1770 Italian music publishing was in eclipse. Marescalchi and Zatta brought about a temporary revival, but both had retired before Giovanni Ricordi opened his business in 1808. At this time Italian music normally circulated in manuscript copies; it needed a man of Ricordi's training, taste, energy and ambition to realize, after himself spending four years as a copyist, that through publication music could be circulated much more accurately, widely, swiftly and cheaply, as well as far more profitably, to everybody's advantage. His rise to power in his first 20 years seems to have been achieved with a simplicity and orderliness that are hard to believe; it is interesting to speculate what sort of opposition, if any, he encountered in clinching the useful appointment to the conservatory and his vital contracts with La Scala and other theatres. The fact is, however, that he brushed

aside, and continued to brush aside, almost all competition, just as his son and grandson were to do after him. All three had the happy knack of recognizing quality when they saw it; they also had the tact, the persistence and the influence to patronize and market it. In the entire history of music publishing there has been no other firm that through its own efforts, astuteness, initiative and flair has achieved a position of dominance such as Ricordi enjoyed in Italy in the 19th century, nor of power such as it has been able to maintain (on account of its rights on Verdi's and Puccini's operas) in the 20th.

It must be noted, however, that Ricordi has been criticized for allowing considerations of art to take second place to those of commerce. Verdi himself complained bitterly about the elder Tito's sanctioning, for financial gain, mutilated performances of his works. There is a clear moral obligation for the publisher owning the rights and autograph manuscripts of almost every one of Verdi's and Puccini's operas to make those works available, and in correct texts; but Ricordi was extremely slow in fulfilling that obligation. The firm's 1975 catalogue advertised the full scores of only seven Verdi operas; the others had never been put on sale and were available only for hire. Further, there was a widely held view that the existing scores of these composers' operas, whether on sale or for hire, contained inaccurate texts. From 1958 to 1963 there raged a battle almost as fierce as the Querelle de Bouffons between, on the one hand, Denis Vaughan and his supporters, who maintained that the scores were riddled with actual errors (Vaughan claimed to have counted 27,000 in *Falstaff*) and, on the other, Ricordi and its defenders, who held that the alleged divergences between autograph and printed texts were authorized modifications that had gradually evolved over successive contemporary performances and productions. This dispute could be resolved only by Ricordi's allowing unfettered access to their Verdi and Puccini archives and publishing a critical edition of the works of both composers. Happily, a critical edition of Verdi's works is now in progress under the general editorship of Philip Gossett: five operas and the Requiem are already issued (1997). Ricordi has also launched a Rossini edition, again under Gossett, of which eleven operas and five other works are in print, and a Donizetti edition, under Gabriele Dotto and Roger Parker, of which the first volume appeared in 1991. All three editions are published jointly with the University of Chicago Press. Puccini has been less favourably treated: Ricordi publish full scores of all but his first two operas, but no critical edition has been announced.

CATALOGUES
(*selective list*)

all published in Milan

'Catalogo della musica stampata nella nuova calcografia di Giovanni Ricordi', in A. Rolla: *Tre divertimenti a violino e viola* (1814)
Catalogo della musica di fondo e degli spartiti di Giovanni Ricordi(1825)

RICHARD MACNUTT

Ridderbusch, Karl (*b* Recklinghausen, 29 May 1932; *d* Wels, nr Linz, 21 June 1997). German bass. He made his début at the Städtisches Theater, Münster, in 1961. He was a member of the Essen Opera before moving to Düsseldorf in 1965, where he made the Deutsche Oper am Rhein his artistic base. In 1967 he made his débuts at Bayreuth and the Metropolitan in Wagner, and at Covent Garden in 1971 where he sang Fasolt, Hunding and Hagen. He sang regularly at the Vienna Staatsoper, his first appearance there in 1968, and was a notable Hans Sachs in Karajan's production of *Die Meistersinger* at the 1974 and 1975 Salzburg Easter festivals. Ridderbusch's voice was firm, clear, sonorous and rich in timbre; his style was direct, his stage presence imposing. He appeared successfully in Verdi, and in *buffo* roles including Ochs and Mozart's Bartolo, but he was at his best in the serious, dramatically demanding repertory, for example the Commendatore, Rocco, Hunding, Hagen, Hans Sachs and Caspar (*Der Freischütz*). His recordings, which include Hans Sachs, his *Ring* roles and Rocco, demonstrate the warmth and conviction of his interpretations.

GERHARD BRUNNER/R

Riddle, Frederick (Craig) (*b* Liverpool, 20 April 1912; *d* Newport, Isle of Wight, 5 Feb 1995). English viola player. Born into a musical family, at five he began violin lessons with Elsie Dudding. He then studied at the RCM with her teacher, Maurice Sons, a pupil of Vieuxtemps, taking the viola as second study with Ernest Tomlinson. In 1932 he joined the LSO as a viola player and in 1934 became principal, also holding that position in the Glyndebourne and Queen's Hall orchestras and then from 1938, with time out for war service, the LPO. In 1953 he moved to the RPO, retiring in 1977. He was a member of the Catterall and Philharmonia Quartets and the Philharmonic Trio (with whom he made a sparkling recording of Francaix's String Trio). He then had a trio with Jean Pougnet and Anthony Pini which made many records; their Hindemith First Trio ranks among the finest performances by British string players. As a soloist, Riddle played not only the key works for viola and orchestra by Mozart, Berlioz, Walton, Bartók and Hindemith but such contemporary pieces as Ghedini's *Musica da concerto* and works by Bax, Fricker and Rubbra. Concertos were written for him by Elisabeth Lutyens, Alan Hoddinott, Martin Dalby and Justin Connolly and sonatas by Rawsthorne and Arnold. He was an elegant, sensitive player with a supple tone of rare beauty, second only to William Primrose among British viola players of his generation. In 1937, with the composer conducting, he made the first recording of the Walton concerto, a performance still regarded as the benchmark. He also recorded Berlioz's *Harold en Italie* with Scherchen and Beecham. He taught at the RCM and the RMCM from 1948, numbering many leading players among his pupils, and was awarded the OBE in 1980. He played on violas by the Grancino brothers and Paolo Antonio Testore.

TULLY POTTER

Riddle, Nelson (Smock) (*b* Oradell, NJ, 1 June 1921; *d* Los Angeles, 6 Oct 1985). American popular arranger, composer and conductor. During the 1940s he played the trombone and arranged for a number of big bands, including those of Jerry Wald, Tommy Dorsey, Bob Crosby and Charlie Spivak. After a short period in the army, following which he gave up professional playing, he studied orchestration and composition with Castelnuovo-Tedesco, subsequently joining NBC Radio as a staff arranger and conductor. Both at NBC and Capitol Records, which he joined in 1951, he worked with many prominent popular singers, among them Peggy Lee, Judy Garland, Nat 'King' Cole and Ella Fitzgerald. Riddle was also the arranger for many of Frank Sinatra's film musicals including *Guys and Dolls* (1955), *High Society* (1956) and *Pal Joey* (1957), and the success of Sinatra in the late 1950s owed much to Riddle's alternately introspective and swinging arrangements.

In the 1960s and 1970s Riddle was most active in film and television, having left Capitol Records in 1962 to pursue a freelance career, and worked as the musical director on several transfers of Broadway shows to film, including *How to Succeed in Business Without Really Trying* (1966) and *Paint Your Wagon* (1969). Apart from these arrangements his own film scores include *A Hole in the Head* (1959) and *The Great Gatsby* (1975), which won an Academy Award. He provided music for such television series as 'The Smothers Brothers Comedy Hour' and 'Rowan and Martin's Laugh-In', and the themes to 'The Untouchables' and 'Batman' among others. Riddle took charge of the music for the inauguration ceremonies of President John F. Kennedy in 1961 and President Ronald Reagan in 1985. Among his last work was a collaboration with the singer Linda Ronstadt, which resulted in three albums of popular songs from the 1920s and 1930s: *What's New*, *Lush Life* and *For Sentimental Reasons*.

MARK TUCKER/R

RIdIM. *See* RÉPERTOIRE INTERNATIONAL D'ICONOGRAPHIE MUSICALE.

Řídký, Jaroslav (*b* Liberec, 25 Aug 1897; *d* Poděbrady, 14 Aug 1956). Czech composer and teacher. At the Prague Conservatory he studied with Jirák, Foerster and Křička (1919–23), continuing his training in Foerster's masterclasses in 1926. He worked as harpist of the Czech PO (1924–38) and conductor of the Czech Philharmonic Choir (1925–30), but his most important activity was in teaching composition at the Prague Conservatory and Academy of Music (1929–56), where he was appointed professor in 1955; in the previous year he had received the K. Gottwald State Prize. Řídký's music is in the tradition of Dvořák: lyrical, folklike in its melody and finely crafted.

MILAN KUNA

Ridler, Philipp Jakob. *See* RITTLER, PHILIPP JAKOB.

Ridout, Alan (John) (*b* West Wickham, Kent, 9 Dec 1934; *d* Caen, 19 March 1996). English composer and teacher. A gifted composer as a youth, he entered the GSM at the age of 15, and from 1951 studied at the RCM, where his teachers included Jacob and Howells; he later studied privately with Fricker and Tippett. In 1957–8, on a Dutch government scholarship, he studied with Badings for whom he wrote his *Psalm for Sine Wave Generators*, one of the earliest electronic works by a British composer; he also experimented with microtonal scales. On his return to Britain he undertook research with Thurston Dart, and from 1960 to 1984 was professor of theory and composition at the RCM. He became well known for his broadcast talks 'Background to Music'. While holding lectureships at Birmingham, Cambridge (1963–75) and Oxford (1987–90), from the mid-1960s Ridout was resident in Canterbury where he was known as an inspiring teacher at the cathedral choir school and at King's School. In 1964 a commission from the cathedral organist Allan Wicks began a creative partnership that resulted in a plethora of choral works, including seven canticle settings, versions of the Matthew and John Passions and several choirboys' operas. From 1993 Ridout lived in France.

His prolific output (over 900 works) is notable for its contribution to children's opera and ballet and educational works. He had a special affinity for wind instruments. His trenchant, taut style displays an eclectic choice of idiom, from medieval polyphony to 12-note serialism; many of his finest works affirm a rare lyrical sensibility.

WORKS
(*selective list*)

Ops: The Rescue (chbr op, 1, D. Holbrook), 1963; The Pardoner's Tale (1, N. Platt, after G. Chaucer), 1971; Creation (7 scenes, P. Dickinson), 1973; Phaeton (radio op, Dickinson), 1975; Wenceslas (2, Dickinson), 1977; The White Doe (2, A. Wicks, after W. Wordsworth), 1987; 6 children's ops

Ballets: Pedro the Parrot (1983); Fisherboy (1984); The Maid of the March (1989); Theseus (1992)

Vocal: The Quarrel (cant., P. Dickinson), vv, chorus, brass, perc, 2 pf, 1970; Christmas Orat., solo vv, chorus, orch, 1971; C.3.3. (cant., O. Wilde, J.W. von Goethe), Ct, chorus, wind, 1973; George-Lieder (S. George), high v, pf, 1985; Requiem, chorus, hp, str, org, 1987; Stronger than the Storm (cant.), SATB, 1993; Salve Regina, 4 choruses, org, 1995; 12 melodramas; 8 song cycles; other cants.; see Syms. [no.5]

HUGO COLE/MALCOLM MILLER

Ridout, Godfrey (*b* Toronto, 6 May 1918; *d* Toronto, 24 Nov 1984). Canadian composer. He studied with Ettore Mazzoleni, Charles Peaker and Healey Willan at the Toronto Conservatory, where in 1940 he began teaching theory and history. His first major work, the Ballade for viola and string orchestra (1938), was widely performed in Canada and the USA by William Primrose, and in Britain under Boult. During the 1940s Ridout gained valuable experience writing and conducting film scores for the newly created National Film Board, arranging popular music for symphony orchestra for 'big band' shows and providing over 200 background scores for CBC radio dramas. In 1948 he was appointed to the Faculty of Music, University of Toronto, where he became a senior professor.

Ridout was proud of his status as the eccentric traditionalist among Canadian composers. He acknowledged the particular influence, conveyed to him by his English-trained teachers, of such Victorian and Edwardian composers as Sullivan, Elgar and Holst. But his music is

much more widely informed, even taking occasional forays into serialism – without, however, following the stylistic implications of that technique. His preferred medium is the full orchestra, augmented where possible by solo voice or choir. His chosen texts are likely to be scriptural, or of romantic impulse. Of the works without text, some of the most engaging are programmatic or ceremonial. His melodies are often tonal and his bold harmonies, syncopated rhythms and brilliant orchestration have a contemporary, North American character. Rhythmic ostinatos can be sustained over a whole movement with almost Baroque consistency. His forms tend to be sectional, closed and symmetrical. His work is characterized by a striving for mastery rather than innovation, which perhaps partly explains his historical reconstruction of the orchestral score of Quesnel's Canadian opera *Colas et Colinette* (1790) from an extant second violin part.

WORKS
(*selective list*)

Orch: Ballade, va, str, 1938; 2 Etudes, str, 1946, rev. 1951; Music for a Young Prince, 1959; Fall Fair, 1961: Colas et Colinette, ov. for op by Quesnel, 1964; La prima ballerina (ballet), 1966, 2 suites, 1967; Partita accademica, band, 1969; Frivolités canadiennes [after melodies by Vézina], 1973; Jubilee, 1973; Conc. grosso, pf, str, 1974; George III his Lament, 1975; Tafelmusik, wind ens, 1976; Ballade no.2, va, str, 1980; Conc. grosso no.2, brass qnt, orch, 1980; No Mean City: Scenes from Childhood, 1983

Choral: Esther (H. Voaden), dramatic sym., S, Bar, vv, orch, 1952; Coronation Ode (Voaden), vv, orch, 1953; The Dance (Carmina burana cxxxvii, trans J.A. Symonds), vv, orch, 1960; Pange lingua (T. Aquinas), vv, orch, 1960; 4 Sonnets (J.E. Ward), vv, orch, 1964; When age and youth unite (C. Bissell), vv, orch, 1966; Cantiones mysticae no.3 'Dream of the Rood', Bar/T, vv, orch, 1972; many smaller pieces

Solo vocal: Cantiones mysticae (J. Donne), S, orch, 1953; The Ascension (Cantiones mysticae no.2) (V. Fortunatus), S, tpt, str, 1962; In memoriam Anne Frank, S, orch, 1965; 4 songs of Eastern Canada, S, orch, 1967; many songs and folksong arrs.

Other works: chbr pieces, inst music, arrs.

HARVEY OLNICK

Rieck, Karl [Carl] **Friedrich** (*d* Berlin, 14 July 1704). German composer, violinist and harpsichordist. Besser reported that Rieck soon mastered to the highest degree both the keyboard and the violin. According to Mattheson, he became director of music to Counts Fug and Räder in Silesia. From 20 January 1683 he worked for the electoral Brandenburg court at Berlin, in the first place as chamber musician. On 14 September 1698 he became director of the elector's chamber music and in 1701 Oberkapellmeister of what had become the royal Kapelle. About 1700 several servants of the Berlin court bore the name Rieck, but the relationship between them is as yet unknown; Karl Friedrich was sometimes known as 'the younger Rieck'. He is known to have composed for court festivities a vocal ballet and three cantatas; all but the ballet are now lost. The ballet was *La festa del Hymeneo* (*D-Bsb*, to a text by Ortensio Mauro), composed jointly with Attilio Ariosti for the wedding of Princess Louise Dorothea Sophie; for the same occasion at Oranienburg, Rieck wrote a dramatic cantata, *Peleus und Thetis, oder Das Glück der Liebe* (to a text by Besser). He wrote his cantata *Der Streit des alten und neuen Saeculi* (with words by Benjamin Neukirch) for the birthday of King Friedrich I on 12 July 1701. His other cantata was called *Triumph der Liebe*.

THOMAS-M. LANGNER

Ried, Aquinas (*b* Bavaria, *c*1810; *d* Valparaíso, Chile, 17 May 1869). Chilean composer of German origin. After receiving the doctorate in philosophy at Munich University in 1830, he emigrated, first to London and later to Australia, where he worked as a surgeon in a penal colony for seven years. On his return journey to Europe in 1844, he disembarked permanently at Valparaíso. In 1846 he composed a three-act opera in Spanish, *Telésfora*, the first lyric drama to be attempted in Chile; it was dedicated to the country's grandeur, but only one chorus was ever performed. All his works are lost, but in addition to *Telésfora* he is known to have completed three other operas (*Il granatiere*, 1860, to an Italian libretto, *Ismenilda* and *Ondega*) and to have left four incomplete (*Walhala*, 1863, to a German libretto, *Diana*, *Atacama* and *Idoona*).

SAMUEL CLARO-VALDÉS

Riedel, Carl (*b* Kronenberg, nr Wuppertal, 6 Oct 1827; *d* Leipzig, 3 June 1888). German chorus master and composer. He received his main musical education at the Leipzig Conservatory (with Hauptmann, C.F. Becker and others) from 1849 to 1852. In 1854 he founded a choral society (the Riedel-Whistling Verein) which in the following year became known as the Riedel'scher Verein and gave its first public concert. The choir performed sacred music of all periods, but Riedel gave special emphasis to Protestant works by J.S. Bach, Johannes Eccard, J.W. Franck and Schütz, as well as Liszt, Raff, Draeseke and other composers of the 'new German school', whom he supported as president (from 1868 until his death) of the Allgemeiner Deutscher Musikverein. He arranged and published the *Sieben Worte* and a compilation of selected pieces from the four Passions by Schütz (including the *St Mark Passion* later discovered as spurious) in the early 1870s. These rather free adaptations and his successful performances of them became very famous and stimulated further interest in Schütz among musicians and musicologists, including Chrysander, and Philipp and Friedrich Spitta.

MARTIN ELSTE

Riedel, Friedrich W(ilhelm) (*b* Cuxhaven, 24 Oct 1929). German musicologist. He studied church music in Lübeck (1949–50), and musicology under Blume and Albrecht at Kiel University (from 1951) with history and theology as auxiliary subjects. He took a doctorate at Kiel in 1957 with a dissertation on source writings on keyboard music in the second half of the 17th century. He directed the central office of RISM in Kassel (1960–67) and was an assistant lecturer at Mainz University (1968–71), where he completed his *Habilitation* in 1970 with a work on church music at the court of Charles VI. He has been a professor at Mainz since 1972. He is editor of *Ars organa* and has written a number of monographs and edited congress reports for the series Studien zur Landes und Sozialgeschichte; he is also co-editor of the *Kirchenmusikalisches Jahrbuch*, consultant on organ preservation for the government of Rheinland-Pfalz and president of the Joseph Martin Kraus Gesellschaft (1982–). In addition to his extensive studies of source materials and regional music, he specializes in the history of church and keyboard music, Baroque music in Austria and J.M. Kraus. He was awarded the Pro Musicae Austriaca prize in 1996.

HANS HEINRICH EGGEBRECHT/WOLFGANG RUF

Riedel, Georg (*b* Sensburg [now Mrągowo], East Prussia, 6 June 1676; *d* Königsberg [now Kaliningrad], 5 Feb 1738). German composer. In 1694 he entered the University of Königsberg, where he studied theology and philosophy. He received his musical training from Georg Raddäus, director of the Königsberg court musical establishment, with which Riedel subsequently held a position as precentor for a time. One of his first occasional works was a serenade written for the Königsberg student community for the celebrations of the coronation of King Friedrich I in January 1701; later there followed arias, canons, cantatas and other works for weddings, birthdays and funerals (as well as for his own obsequies). On 24 May 1709 Riedel became Kantor at the Altstadt church, thereby obtaining one of Königsberg's leading musical posts, of whose reversion he had already been assured since 1706. He occupied this office for nearly 30 years, until his death. He was apparently a wilful and eccentric musician. His settings of the entire Gospel according to St Matthew, of the complete Psalter and of the whole of *Revelation*, partly written in his own artistic hand (he was also a calligrapher), are unique in the history of music.

Erroneous biographical particulars in Döring (and subsequently in Eitner) are partly based on a confusion with another Georg Riedel (*b* Neidenburg [now Nidzica], East Prussia, 12 Sept 1715; *d* Königsberg, 21 July 1791), who, having previously been a Kantor in Wehlau (now Znamensk) was Kantor in the Löbenicht church in Königsberg from 1749 to 1753 and at the cathedral there from 1753 to 1791.

WORKS

Evangelium Sanct Matthäi, solo vv, chorus, insts, completed 1721, ?*RUS-KA*
Psalmen Davids . . . auff alle Sonn- und Fest Tage, solo vv, chorus, insts, completed 1724, ?*RUS-KA*

GÜNTER THOMAS

Riedelbauch, Václav (*b* Dýšina, nr Plzeň, 1 April 1947). Czech composer. From a gifted musical family, he studied composition with Zdeněk Hůla and accordion with Josef Smetana at the Prague Conservatory (1962–8), then studied composition with Václav Dobiáš at the Prague Academy of Musical Arts, graduating in 1973. He completed his education with scholarships in Italy (Siena, 1972, with Franco Donatoni) and in Poland (Torun, 1974, with Lutosławski and Tomasz Sikorski). He taught composition at the Prague Academy, where he subsequently became Docent. He has also been the artistic director of the Prague National Theatre Opera (1987–9), programme manager of the Palace of Culture, Prague, (1990–93) and director of the publishing house Panton (1993–6). He has received several awards and prizes.

Reidelbauch's early interest in large forms was later replaced with an inclination towards chamber music. This better suited his intimate knowledge of the technical and expressive properties of wind instruments, organ and accordion. His admiration for Janáček, Hindemith and impressionism culminated in the late 1970s in a liking for classical forms and inner contrasts, fixed rhythmical structures and individualized melody and harmony.

WORKS
(*selective list*)

Dramatic: Macbeth (ballet), 1979–82

JIŘÍ MACEK

Riederer, Johann Bartholomäus (*b* Nuremberg, bap. 3 March 1720; *d* Altdorf, *c*5 Feb 1771). German theologian and writer on music. After studies at Altdorf and Halle he held posts at the Dominican church at Nuremberg and parish church at Rasch before becoming professor of theology and deacon (later archdeacon) at Altdorf in 1752. His principal work on music was his *Abhandlung von Einführung des teutschen Gesangs in die evangelischlutherische Kirche überhaupts und in die Nürnbergische besonders* (Nuremberg, 1759/*R*). Supplementary material appeared in the first, third and fourth volumes of his *Nachrichten zur Kirchen-gelehrten- und Bücher-Geschichte* (Altdorf, 1764–8). Though based on earlier studies and perpetuating many of their errors and omissions, Riederer's work remains useful for the study of the chorale and related texts.

HOWARD SERWER

Riedl, Josef Anton (*b* Munich, 11 June 1927/9). German composer. He studied with Orff and Scherchen. In 1950, he co-founded the German section of Jeunesses Musicales with Herbert Barth, Reiner Bredemeyer and Eckhart Rolfs, serving as its director until 1960. He was strongly influenced by Pierre Schaefer, whose Groupe de Recherche Musicale he joined in 1953. In 1955 he went to the electronic studio of NWDR in Cologne and in 1959 worked in Scherchen's experimental studio in Gravesano. From 1959 to 1966 he was artistic director of Siemens Studio, Munich, of which he was also a co-founder. He began organizing the Neue Musik München in 1960 and founded the group Musik/Film/Dia/Licht-Galerie in 1967. In 1974 he established the Kultur Forum, Bonn. He was the director of that organization until 1982.

Riedl's earliest compositions are rather traditional works often for organ and piano, but he soon left the settled terrain of traditional musical sound for the world of experimental sound-generation. He began systematically both to extend the range of available sounds and to explore new organizational possibilities for them. Percussion and Lautgedichte (sound poetry) supplied compositionally complementary experimental fields since they provided duration (percussion) on the one hand and tone colour (Lautgedichte) on the other as basic structural materials. His next step was to pursue sound research in the electronic studio. Here too Riedl investigated two complementary realms at once, working on the one hand with found and technologically imitated or elaborated sounds (musique concrète), and on the other with electronically generated sounds that were not notated or performed, existing only on tape. Finally in so-called 'optical Lautgedichte' Riedl extended his spectrum to include the visual dimension.

Riedl's compositions largely defy traditional forms of notation and do not lend themselves to description in terms of traditional categories. Instead, they spill over the boundaries of music into literature, theatre, film and visual art-forms, as his compositions with paper, glass tubes and light, such as *Klangleuchtlabyrinth* (Donaueschingen, 1976), demonstrate.

WORKS
(*selective list*)

Dramatic: Geschwindigkeit (film score, dir. E. Reiz), 1963; Leonce und Lena (incid music, G. Büchner, dir. F. Kortner), Munich, 1963; Unendliche Fahrt (film score, dir. Reitz, A. Kluge), 1965;

Der Sturm (incid music, W. Shakespeare, dir. F. Kortner), Berlin, 1968

El-ac: Studie I, II, musique concrète, 1951; Paper Music, 1961, rev. 1968, 1970, 1980; Komposition no.2, elec, 1965; Klangsynchronie II, synth, elec, [1] 1965, rev. 1981, [2] 1965, rev. 1985; Polygonum, 1v, insts, other sounds, 1968, rev. 1970; Epiphyt I, II, III, [1] 9 pfmrs, [2] 5 pfmrs, tape [9 pfmrs], [3] 2 pfmrs, tape [9 pfmrs], 1975, rev. 1977, 1981; Reaktionen auf Komposition no.2, 1978, rev. 1980

Other works: Claves II, perc, 1951; Klangleuchtlabyrinth, 1976; Akustische Lautgedichte, 1979; Für Trommeln II, perc, 1979, rev. 1981; Wu-tkar; ssla ztastal-tkarbu, audiovisual, 1995

Principal publisher: Ars Viva

DÖRTE SCHMIDT

Riedt, Friedrich Wilhelm (*b* Berlin, 5 Jan 1710; *d* Berlin, 5 Jan 1783). German flautist, writer on music and composer. Like his father, he was a keeper of the silver (*Silberdiener*) in the service of Frederick the Great. He studied composition with Johann Gottlieb Graun and Christoph Schaffrath and was admitted into Frederick's Kapelle in 1741 as a flautist. He was also a founder of the Musikübende Gesellschaft becoming its director in 1749. Though he composed much chamber music for his own use and for the society, relatively little was published in his lifetime. Colleagues, like F.W. Marpurg, spoke favourably of his compositions, but later commentators like Charles Burney found them dry and mechanical.

Riedt's main theoretical work, the *Versuch über die musikalische Intervallen* (1753), was an attempt to calculate, systematize and evaluate all possible intervals used in composition. Like Rameau and others, Riedt engaged in considerable arithmetical manipulation to generate 21 pitches, 52 intervals, and various scales and chords. Of greater historical significance is his essay on ornamentation and variation in performance, *Betrachtungen über die willkührlichen Veränderungen der musikalischen Gedanken* (1756), which is notable for asserting that in a given melody only insignificant ideas may be varied by the performer. Riedt was explicitly critical of the contemporary practice of extensive improvisation and variation, and held that no changes should contradict the underlying harmony of the original idea, which must always remain recognizable. Riedt's position may be taken both as a reflection of the court's opposition to excessive improvisation and as a manifestation of the developing belief that the composer's written score must be rendered unchanged in performance. Riedt's suggestions for the application of his ideas tend however to be both pedantic and mechanical. He also published a few chamber works for flute, both singly and in Marpurg's *Musikalisches Allerley* (Berlin, 1761–3).

HOWARD SERWER

Riegel. *See* RIGEL family.

Riegel, Kenneth (*b* Womelsdorf, PA, 19 April 1938). American tenor. He studied in New York, making his début in 1965 at Santa Fe as an Alchemist in *König Hirsch*. Engaged at the New York City Opera (1969–74), he made his Metropolitan début in 1973 as Iopas (*Les Troyens*), later singing Tamino, Titus, David and Hoffmann. He has also sung at many other major houses in Europe and the USA. At the Paris Opéra he sang Alwa in the first performance of the three-act version of *Lulu* (1979) and created the Leper in Messiaen's *Saint François d'Assise* (1983). His repertory initially included Don Ottavio (which he sang in Losey's filmed version), Ferrando, Belmonte and Idomeneus, but in the 1980s his voice grew heavier and he sang such roles as Berlioz's Faust, Erik, Loge, Shuysky, Albert Gregor (*The Makropulos Affair*), Oedipus, Busoni's Mephistopheles, and Gustav von Aschenbach. A powerful and subtle actor, Riegel scored a huge success at Hamburg in 1981 as the Dwarf in Zemlinsky's *Der Zwerg*, which he later repeated at Edinburgh, Amsterdam and Covent Garden (1985) and recorded. He returned to Covent Garden as Loge (1991) and Herod (1992), which he repeated at Salzburg. In 1994 he sang his first Peter Grimes, in Munich. Riegel's other recordings include Berlioz's Faust, Shuysky, Herod and Alwa.

ELIZABETH FORBES

Rieger. Two firms of organ builders, one in Austria and one in the Czech Republic, founded by the Rieger family of German origin. Franz Rieger (*b* Zossen, 13 Dec 1812; *d* Jägerndorf [now Krnov], 29 Jan 1885) trained as an organ builder with Joseph Seyberth in Vienna, and set up a workshop at Jägerndorf in 1844. His sons, Otto (*b* 3 March 1847; *d* 12 Dec 1903) and Gustav (*b* 1 Aug 1848; *d* 1905), both trained in Vienna, Bamberg and Würzburg (with Balthasar Schlimbach), and took over the firm in

1873 under the name Franz Rieger & Söhne ('Gebr. Rieger' from 1879 onwards). Whereas Franz Rieger used slider chests, his sons began building organs with cone chests. They exhibited an organ with 12 stops, later installed in Sts Peter & Paul, Jaktař near Opava, at the international exhibition in Vienna, 1873. They also exhibited at the Paris Exposition of 1878. In 1890 a branch of the firm was set up in Budapest. By the end of 1903 the firm's opus-list (beginning in 1873) comprised 1072 instruments, including: St Paul, Christiania (now Oslo), 1877; Olomouc Cathedral, 1885; Stadtsaal, Innsbruck, 1891; Braga, Portugal, 1898; St Pölten Cathedral, 1902. Gustav Rieger made several significant innovations, including combined registers (using 'extension' to get two stops out of one rank) and free stop-combination based on a mechanical action (first realized in the concert organ at the Deutsches Haus, Brno, 1890).

After the death of Otto Rieger, his son, also called Otto (*b* 21 May 1880; *d* 28 March 1920), took over the management of the firm. During this period more than 1000 organs were built, including: London College of Music, 1906; Musikvereinssaal, Vienna, 1907; St Matyas, Budapest, 1908; Musikvereinssaal, Klagenfurt, 1911; Konzerthaus, Vienna, 1913; Mozarteum, Salzburg, 1914. The larger organs were provided with electric action. An *art nouveau* style was adopted for the cases, and Schweitzer's ideals (*see* ORGAN, §VII) soon became a guiding principle for the work of the firm.

Josef von Glatter-Götz (*b* 17 Nov 1880; *d* 23 Feb 1948), a trained engineer, bought the firm in 1924. In 1926 he opened a branch at Mocker, Germany. Important instruments from this period include: St Matthew's, Łódź, 1928; Cathedral, Viipuri (Finland; now Vybosg, Russia), 1929; St Jakob, Innsbruck, 1931; Rudolfinum, Prague, 1940. He took his two sons, Egon (*b* 24 June 1911; *d* 8 Sept 1940) and Josef (*b* 15 Dec 1914; *d* 1 May 1989), into partnership in 1936.

In 1945, after the end of World War II, the firm was nationalized by the Czech government and merged with the workshop of Josef Kloss. Under the name Rieger-Kloss the factory has built organs with pneumatic, electro-pneumatic and tracker action, e.g., Slovak Philharmonic Society, Bratislava, 1956; Congress Hall, Prague, 1981; St Egyd, Klagenfurt, 1992; Xinghai Concert Hall, Guangzhou, 1995; Trinity Lutheran Church, Rosell, Illinois, 1996; Concert Hall of the New Conservatory, Ostrava, 1996.

Meanwhile, Josef von Glatter-Götz and his surviving son were expelled from Czechoslovakia, and established a workshop at Schwarzach (Vorarlberg, Austria) under the name Rieger Orgelbau. After the death of the younger Josef the firm passed to his sons, Caspar (*b* 1 March 1945), Raimund (*b* 1 Jan 1948) and Christoph (*b* 9 Dec 1951). In 1993 Caspar left the family firm and took over the Orgelbau Egbert Pfaff at Owingen (Germany). Rieger Orgelbau has built organs and positives with slider chests and tracker action, selling mainly in Germany and the USA. Important examples are at: Neanderkirche, Düsseldorf, 1966; Presbyterian Church, Bryn Mawr, Pennsylvania, 1975; Augustinerkirche, Vienna, 1976; Ratzeburg Cathedral, 1977; Christ Church Cathedral, Oxford, 1979; Pacific Union College, Angwin, California, 1980; Hong Kong Cultural Centre, 1989; Stephansdom, Vienna, 1991; University of South Africa, Pretoria, 1995.

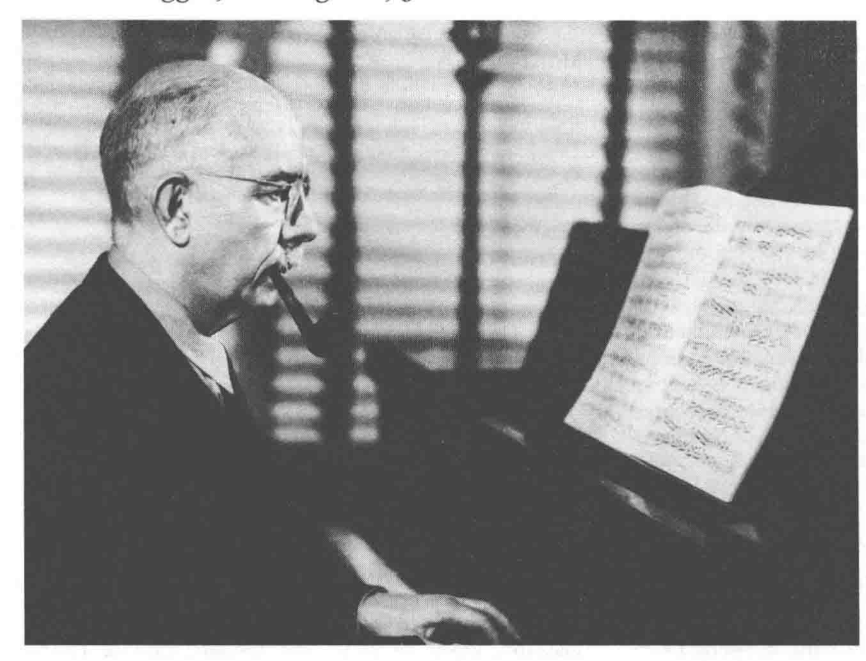
ALFRED REICHLING

Rieger, Gottfried (*b* Opavice [Tropplowitz], 1 May 1764; *d* Brno, 13 Oct 1855). Moravian teacher and composer of Austrian descent. As a youth he was a member of the orchestra of Count Sedlnitzky, playing wind and string instruments. On the recommendation of Dittersdorf he studied music theory with Damasus Brosmann in Bílá Voda. In 1787 he left the service of Sedlnitzky and became music director of the Brno theatre, for which he composed several singspiels including *Das wütende Heer*, *Die Herde von Bethlehem* and *Die Totenglocke um Mitternacht*; he was also in demand as a teacher. From 1804 to 1808 he was Kapellmeister to Count Haugwitz in Náměšti nad Oslavou, where he wrote the dramatic cantata *Thirza und ihre sieben Söhne*. On returning to Brno he was active as a teacher and conducted oratorio and symphony concerts. In 1828 he founded a music institute where he taught string and wind instruments, singing and music theory; here he had about 200 pupils, among them Hynek Vojáček. Rieger was known as an excellent teacher of counterpoint, and his *Theoretisch-praktische Anleitung die Generalbass- und Harmonielehre in 6 Monaten gründlich und leicht zu erlernen* (Vienna, 1833) was reprinted several times in Vienna and Brno.



Besides singspiels, Rieger wrote much sacred music including 19 masses, offertories and graduals. His dramatic cantatas, including *Mährens Brüderbund* (1797) and *Deutschlands Triumph nach der Schacht bei Leipzig* (1814), were popular. Numerous piano fantasies, variations and potpourris, as well as sonatas, two piano concertos and three piano trios, were published in Germany, while a string quartet and quintet and two symphonies remained in manuscript. Rieger, who stopped composing around 1835, continued his activities in the cultural life of Brno until he was 82, and is remembered now more for his teaching than for his compositions.

KAREL STEINMETZ

Riegger, Wallingford (Constantin) (*b* Albany, GA, 29 April 1885; *d* New York, 2 April 1961). American composer.

Wallingford Riegger

1. LIFE. Although born in Georgia, Riegger grew up in Indianapolis and New York. As a member of the first graduating class (1907) of the Institute of Musical Art, Riegger studied the cello with Alvin Schroeder and composition with Goetschius. Then came three years of advanced work at the Berlin Hochschule für Musik – the cello with Robert Haussman and Anton Hekking, composition with Edgar Stillman-Kelley – which culminated in his conducting début with the Blüthner Orchestra in 1910. After his marriage to Rose Schramm (1911), Riegger spent three years as principal cellist with the St Paul SO before returning to Germany in 1914 to become assistant conductor and voice coach at the Stadttheater of Würzburg. He took a similar post at Königsberg the following year and conducted the Blüthner Orchestra during its 1916–17 season before American entry into World War I forced him to return to the USA. Unable to establish himself as a conductor at home, he found himself isolated and his musical environment greatly restricted in a succession of teaching posts (at Drake University, Des Moines, 1919–22, the Institute of Musical Art, 1925–6, and Ithaca College, 1926–8), which he took to support himself and his family. (Henry Brant and Michael Colgrass were among his pupils.) It was at this time that he began to compose seriously. Although several of his early works won prizes (notably the Paderewski Prize in 1922 for his Piano Trio and the Coolidge Prize in 1924 for *La belle dame sans merci* – the first time the prize had been awarded to an American), the biting harshness of his first mature work, *Study in Sonority* (1927, for ten violins or any multiple thereof) provoked catcalls and derision at early performances.

In 1928 Riegger returned to New York and became acquainted with Cowell (and through him Ives and Ruggles), Varèse and Salzedo. Over the next few years he gained a reputation as one of the most articulate exponents of avant-garde modernism, and threw himself into the work of new music organizations such as the Pan American Association of Composers and Cowell's New Music Quarterly Recordings. At the same time he maintained relations with the League of Composers and in 1933 was invited to join the Central Music Committee of the Yaddo Festival. The most important performances of his music in these years were Stokowski's notorious rendering of *Study in Sonority* in Philadelphia and New York (1929), Erich Kleiber's première of the orchestral Rhapsody in New York (1931), and Slonimsky's first performance of *Dichotomy* in Berlin (1932).

Riegger's integration into the world of the avant garde introduced him to the art which absorbed much of his creative energy throughout the 1930s. These were the years during which modern dance became recognized as a major and indigenous American art form, and Riegger wrote for each of the great pioneers – Martha Graham, Doris Humphrey and Hanya Holm – as they began to build large-scale dances which not only represented a summation of abstract dance but moved in a fundamentally new direction, from concert to theatre dance. These developments were seen most clearly in the works for which Riegger produced his best dance scores, Humphrey's *New Dance* (1935) and *With my Red Fires* (1936). Both achieved lasting success, and the various arrangements that Riegger made of the finale from *New Dance* became his most popular pieces.

From 1938 Riegger turned again to absolute music and wrote the String Quartets nos.1 and 2, Symphony no.3, *Music for Brass Choir*, Piano Quintet, Woodwind Quintet, and Concerto for Piano and Woodwind Quintet, on which (together with the music of his early maturity) his reputation seems likely to rest. Wider recognition came to him than ever before, largely due to the Symphony no.3; commissioned by the Alice M. Ditson Fund of Columbia University, this work won the New York Music Critics' Circle Award in 1948 and a Naumburg Foundation Recording Award. It was also widely performed by Stokowski and others in Europe, where Riegger's special champion was the conductor Hermann Scherchen, and where, in dodecaphonic circles, Riegger was one of very few American composers to be taken seriously.

The last decade of Riegger's life saw a continual succession of commissions and frequent performances. Being summoned to testify before the House Un-American Activities Committee in 1957 for his communist sympathies hardly interrupted a series of honours and awards which showed the high regard in which he was held at the time of his death.

2. WORKS. An atonal or dodecaphonic harmonic idiom fueled by a forceful, aggressive rhythmic sense, ever threatening to break out of tight formal constraints, gives Riegger's most characteristic music its powerful impact. It is no accident that one of his most significant scores is entitled *Dichotomy*, or that he so rarely made use of the integration and resolution of sonata forms.

Riegger's progression from the well-crafted conventions of his Piano Trio op.1 was steady and autonomous. Each successive work showed a widening of his harmonic vocabulary and expressive range as he sought to reconcile the conflict he came to feel between 'the new and the old'. His first use of atonality came in the Rhapsody, which had a tortuous history of composition between 1924 and 1926, but within two years he was using it with complete security and personal authority in the Caprice for Ten Violins (renamed *Study in Sonority* at Stokowski's suggestion). It seems probable that Riegger first learned of 12-note technique through Weiss (Schoenberg's first American pupil), whom Riegger knew by the time of his first 12-note compositions (Three Canons for Woodwinds and *Dichotomy*). His rather literal, linear use of the technique, however (with its labelling of rows, retrogressions and inversions), suggests that he used it without any deep knowledge of the Second Viennese School; as late as 1948 he confessed to never having examined the scores of Berg's *Lyric Suite* or *Wozzeck*. Even at his strictest (in the String Quartet no.1, for example), Riegger took considerable liberties with the system, repeating notes within a series and varying the number of its tones. He also inserted dodecaphonic movements into otherwise freely atonal pieces (as in the Concerto for Piano and Woodwind Quintet) and vice versa. Riegger used pitch serialism to generate motifs that he then manipulated in traditional ways. He had absorbed counterpoint so thoroughly that it became an instinctive vehicle for his musical thought; canons, fugues, and passacaglias play an important structural role in his music, for the discipline they imposed not only stimulated his creativity but gave him a means of ordering the intensity of his harmonic and melodic material.

Once formed, Riegger's musical idiom remained consistent. The only major extension he then made to his musical language was the more systematic exploitation of tone clusters heard in his brass music. But there is a more relaxed, even playful mood about much of the music written during the 1950s, in which the quirky sense of humour that had always been one of Riegger's dominant personal characteristics finally found expression in the music of his old age.

Riegger composed slowly with extensive revision, and left a record of his "heartache ... also headache" in a substantial body of manuscripts and sketches. The definitive edition of his Symphony no.3 was published only in 1960 as the second revised version, and noteworthy changes he made in his own copies of published scores include the deletion of the first chord from *Music for Brass Choir* and extensive cuts in the Symphony no.4. Much of Riegger's music was written for specific occasions or performers, his craftsmanship thriving on technical challenge. The stark asperities of *Study in Sonority* and the monumental dissonances of *Music for Brass Choir* owe their textural homogeneity to the didactic imperatives of a summer school at Ithaca and Richard Franko Goldman's class at the Juilliard; the tonal choral works of the 1940s were written for Harold Aks's Interracial Chorus, an amateur choir open to all. But towards the end of his life Riegger felt that commissions interfered with the music he really wanted to write, and for some, therefore, he produced rather perfunctory tonal clichés (as in *Dance Rhythms*). Nevertheless, he was never financially in a position to refuse. Since leaving Ithaca in 1928 he had had no permanent employment and supported himself largely by editorial work and by arrangements made under his own name and a variety of pseudonyms.

In the early 1930s Riegger had been a highly selfconscious radical pioneer; this was still the case 25 years later, although he could no longer be considered avant-garde. He spoke regularly on attitudes towards innovation in music, but the contemporary explorations of total serialism, indeterminacy and electronics left him unmoved, even when undertaken by friends of long standing (Cage and Luening) or by pupils (Feldman). Even so, given the prevailing neo-classicism of most American music of the day and the fact that only in the late 1950s did dodecaphony become a standard compositional tool, his continued reputation for radicalism was justified.

STEPHEN SPACKMAN

Riegler, Franz Paul [Franz Xaver, François Sav., František Pavol]. *See* RIGLER, FRANZ PAUL.

Riego, Teresa Clotilde del (*b* London, 7 April 1876; *d* London, 23 Jan 1968). English composer of Spanish parentage. Educated at the Convent of the Sacred Heart and the West Central College of Music in London, she wrote her first song when she was 12. During the two World Wars she organized and sang in many charity concerts; her husband, F. Graham Leadbitter, had died during World War I. Although best known as a songwriter, she also composed piano, chamber and orchestral works. Most of her best-known songs were written during the first decade of the 20th century although she continued writing into her 70s.

Riego published more than 300 songs and ballads, many of which became extremely popular and were sung by the great singers of her time, including Emma Albani, Nellie Melba, Gervase Elwes, Clara Butt and Maggie Teyte. Most are decidedly unadventurous yet always with attractive melodies and written well for the voice. One of her most famous songs was *O dry those tears* (1901) which quickly became a bestseller and was frequently pirated as well as being published in many different arrangements. *Homing* (1917), to words by A.L. Salmon, was very popular during World War I and was still appearing in print in the 1950s.

WORKS
(*selective list*)

Inst: Paquita, pf (1913); Air, E♭, vc/vn, pf (1930)
Over 300 songs, incl. Slave Song (?T. del Riego) (1899); 2 Songs (H. Heine) (1900); O dry those tears (?Riego) (1901); The King's Song (F.E. Weatherley) (1902); Happy Song (Riego) (1903); Les larmes (E. Heros) (1904); Gloria (S. Coleridge), song cycle (1906); Lead kindly light (J.H. Newman) (1909) [with org obbl]; Thank God for a garden (Riego) (1915); Homing (A.L. Salmon) (1917); A star was his candle (F. Hoare) (1934); 3 Stuart Songs (R. Hall) (1955)

SOPHIE FULLER

Riehm, Rolf (*b* Saarbrücken, 15 June 1937). German composer. He studied music education in Frankfurt and composition with Fortner in Freiburg. In 1968 he won the Premio Marzotto and a fellowship from the Villa Massimo in Rome, and in 1992 was the recipient of the Saar arts prize. He was a member of the Frankfurter Vereinigung für Musik, Gruppe 8 in Cologne and the Linksradikales Blasorchester. In 1974 he was appointed professor of composition and music theory at the Musikhochschule in Frankfurt.

Riehm is a political composer. He regards his work in the arts as a duty of public awareness. Some of his pieces refer quite specifically to events that he wants to rescue from oblivion: *Notturno* (1977) alludes to the death of RAF prisoners in Stuttgart-Stammheim, and *Tänze aus Frankfurt* (1980) to the political conflicts of those years (the late 1970s). His compositional processes reveal a heterogeneity of materials and the dissolution of integration to a point where there is what the composer refers to as an 'excess of structures'. Riehm surrenders musical certainty, organization and moderation in favour of an anarchy that strives to create a continual sensual challenge to listeners, making them constantly self-aware. His music, while consciously renouncing traditional organizational models and academic conventions, creates a confrontation between the past and present for both the composer and the listener. Practical demonstrations of this appear in his compositions: *Berceuse* (1984–5) represents a reaction to Chopin's *Berceuse*, *Double Distant Counterpoint* to Contrapunctus XI in Bach's *Art of Fugue*, and *Das Schweigen der Sirenen* (for voice and orchestra, 1987; stage-piece, 1994) and the orchestral piece *Odysseus aber hörte ihr Schweigen nicht* (1993) to Kafka.

DÖRTE SCHMIDT

Riehman [Richmann, Rhiemann], **Jacob** (*d* Leeuwarden, 21 Feb 1726). German-Dutch oboist, viola da gamba player and composer. He, and at least two other musicians named Riehman (Jan [Johan] Frederick (*d* Leeuwarden, 14 Jan 1778) and Johan Daniel (*fl c*1738–57)), served the house of Orange-Nassau between about 1702 and about 1778. It is unlikely that any of these musicians served Karl, Elector of Hessen-Kassel (1654–1730), as has previously been suggested.

Of Riehman's opp.2 and 3 only a single incipit survives. His six op.1 sonatas, all of five movements in the order Preludio–Allemanda–Corrente–Sarabanda–Giga, are written in an idiomatic style that shows evidence of both Italian and French influence. Most exhibit thematic resemblances between the Allemanda and Corrente, and some show thematic linking of all the movements reminiscent of the variation suite. The preludes sometimes display the free multi-tempo sonata scheme seen in the preludes of composers such as Kühnel and Schenk. Technically his sonatas are not as difficult as Schenk's, but they do require considerable facility. His *Davids Harpzangen* is notable as the first Dutch publication to provide figured basses for the complete Genevan psalter and for a rich harmonic sense throughout.

WORKS

6 sonates, va da gamba, bc, op.1 (Amsterdam, 1710)

Sonate, vn, bc, op.2 (Amsterdam, between 1710 and 12), lost

Sonate, vn, va da gamba, bc, op.3 (Amsterdam, 1715), lost; ?incipit in MS catalogue of music collection of Friedrich Otto von Wittenhorst-Sonsfeldt, *c*1728–1760

Davids Harpzangen (Leeuwarden, 1717)

Suites de préludes, va da gamba (Amsterdam, 1727), lost, doubtful, probably by Jan Frederick Riehman

RICHARD G. KING

Riemann, (Karl Wilhelm Julius) Hugo (*b* Gross-Mehlra, nr Sondershausen, 18 July 1849; *d* Leipzig, 10 July 1919). German musicologist. He was one of the founders of modern musicology and the pre-eminent music scholar and teacher of his generation.

1. Life. 2. Music theory. 3. Music history. 4. Aesthetics.

1. LIFE. A gifted pianist, Riemann first studied philology, history and philosophy at the universities of Berlin and Tübingen. After serving in the military during the Franco-Prussian War, he began studying music in 1871 at the University of Leipzig, where his acquaintance with Oettingen's theories on harmonic dualism – the notion that the minor triad is generated below a harmonic fundamental in opposition to the major triad, generated above – helped form the basis for his own harmonic theories. In 1872 he published articles on tonality and musical logic in the *Neue Zeitschrift für Musik* under the pseudonym of Hugibert Ries and completed his dissertation, *Über das musikalische Hören*. After the dissertation was rejected at Leipzig, Riemann secured the support of Hermann Lotze, a prominent philosopher at the University of Göttingen, where the dissertation was approved in 1873. Between 1876 and 1895, Riemann held teaching positions at Bielefeld, Leipzig, Bromberg, Hamburg, Sondershausen and Wiesbaden. He returned to the University of Leipzig in 1895, where he was named professor in 1901. Though never promoted to *ordinarius*, Riemann became a celebrated teacher and educated some of the most important pianists, composers and musicologists of the next generation. He was active throughout his career as a music theorist, historian, performer, editor, music lexicographer, critic and aesthetician. His two dozen pedagogical books, on topics ranging from piano performance, through orchestration to double counterpoint, became standard works and made him one of the most influential writers of his time (for further biographical information, see Gurlitt, 1951).

As a scholar and mentor to an entire generation of musicologists, Riemann cast an enormous historical shadow over the formation and subsequent development of musicology as a modern academic discipline. He believed that musicology should explain 'the spiritual and expressive nature of the primitive elements of all musical experience ... to ascertain the physical properties of tones and the mechanical conditions governing their creation'. In examining the effects of tonal combinations on hearing and the imagination, the musicologist should study not only 'the simple, most basic manifestations of this tone material, but also the complex, richly differentiated formations into which it has miraculously evolved' (*Grundriss der Musikwissenschaft*, 4/1928, pp.8–9). Following this line of inquiry, Riemann's scholarly writings helped delineate the basic areas and subdivisions which arose later within musicology. In addition to his voluminous output on music theory, Riemann made important contributions to music history, aesthetics and music cognition, and towards the end of his career even made suggestive comments on the emerging discipline of ethnomusicology. Although he published on these diverse areas throughout his life, his earlier writings generally focused on theoretical concerns, his later contributions on historical issues.

2. MUSIC THEORY. As a music theorist, Riemann devoted his entire career to the elusive goal of explaining 'musical hearing' (*musikalisches Hören*) in scientific terms. To prove the scientific basis of his theories Riemann relied on three different conceptions of musical nature: acoustics, physiology and psychology. For Riemann, the central fact of acoustics – and of music cognition in general – was the *Klang*: the notion (long disputed) that both the major and minor triads were given in the acoustical resonance of a single, fundamental pitch (the major triad above, the minor triad below). As the organ of hearing, the ear

mediates between acoustical sensation and the cognitive activities of the mind. His consideration of the psychological component of musical hearing evolved around the notion of an innate, dialectical 'musical logic' that determined both the musical and historical development of the tone material. In 'Die Natur der Harmonik' (1882), he described the dominant as a mental concept which includes, in addition to the dominant triad, an aural image of the tonic triad lying a perfect 5th below the dominant. In this sense, Riemann argued for a broad concept of consonance, in which all harmonies are imagined in relation to a nominal tonic and, as deviations from this tonic, heard as dissonances.

Two decades of continuous revision to his harmonic theories culminated in *Vereinfachte Harmonielehre* (1893), translated in 1895 as *Harmony Simplified, or the Theory of the Tonal Functions of Chords*. It was in the subtitle of this translation that Riemann first referred to the concept of a harmonic 'function', the idea for which he is best remembered: borrowed from mathematics, the metaphor registers a change in his harmonic theories from a concern with cadential successions to the adumbration of a quasi-algebraic musical logic based on functional relations between harmonies. As Dahlhaus has pointed out, functional theories are concerned primarily with chordal identities. For Riemann, the dominant and subdominant triads were 5th-related (*quintverwandt*) to the tonic: the tonic, the dominant and the subdominant constituted the three main tonal functions, or harmonic essences. As an aggregate, the tonic, dominant and subdominant were susceptible to three other transformational modifications: the *Parallele*, *Variante* and *Leittonwechsel* (leading-tone change), each of which relates triads with common intervals. As Riemann defines them, the variant relates major and minor triads with common perfect 5ths, the parallel relates major and minor triads with common major 3rds, while the leading-tone change relates major and minor triads with common minor 3rds. Hence, the variant transforms a C-major into a C-minor triad and vice versa, preserving the common perfect 5th C-G; the parallel transforms a C-major into an A-minor triad and vice versa, preserving the common major 3rd C-E; while the leading-tone change transforms a C-major into an E-minor triad and vice versa, preserving the common minor 3rd E-G. In C major, the parallel thus transforms the F-major subdominant ('S') into a D-minor subdominant parallel ('Sp'). In this case, the addition of a D-F minor 3rd to the major 3rd F-A 'disturbs' the pure subdominant function of the major 3rd F-A: in relation to the subdominant F major, the D-minor subdominant parallel is a mere 'apparent consonance' (*Scheinkonsonanz*). It assumes a subdominant function by virtue of the interval it has in common with the F-major subdominant: the major 3rd F-A 'represents' the F-major subdominant within its D-minor parallel, what Riemann called 'triad representation' (*Klangvertretung*). Riemann used the paired concepts of *Scheinkonsonanz* and *Klangvertretung* to accord tonic, dominant or subdominant status to all harmonies within a given harmonic context, no matter how remote or distant.

On a number of occasions, Riemann attempted to integrate these functional transformations into a single, abstract grid (*Tonnetz*) of harmonic consonances. The *Tonnetz* (for illustration *see* TONALITY, ex.4) which Riemann took from Ottokar Hostinsky's *Die Lehre von den musikalischen Klängen* (1879) criss-crosses horizontals of perfect 5ths with diagonals of major and minor 3rds, the combinatorial consonances of the harmonic triad (*Klang*). While the tonal functions of his harmonic theories were intended to give more rigorous expression to the chord progressions and roman numerals of scale-degree theories, his functional relations, as David Lewin has pointed out (1984), have radically different musical geometries, as the twisted, multi-dimensional topography of the Tonnetz illustrates. While Riemann confined his own analytical attentions to the music of Bach and Beethoven, motions across this grid of triadic consonances can be used to explain some of the most magical harmonic effects in late and post-Romantic music.

Another major theoretical initiative concerned the metrical organization of music, which received its most extensive treatment in the *System der musikalischen Rhythmik und Metrik* (1903). Riemann based his metrical theories on three basic principles: *Agogik*, *Auftaktigkeit* and *Achttaktigkeit*. For Riemann, the agogic principle involved the notion that 'strong' (*schwer*) beats were conceptually lengthened with respect to 'weak' (*leicht*) ones. He believed that the agogic principle was consistent with that of *Auftaktigkeit*, in which all metrical units lead from weak to strong, from upbeat (*Auftakt*) to downbeat. Because of this, the entire metrical arrangement (*Ordnung*) was end-accented, from the individual 'bar-motive' to the four-bar phrase. The fact that music tended to arrange four-bar phrases into pairs led Riemann to further posit the eight-bar period (*Satz*) as the normative metrical unit in music: he understood *Achttaktigkeit* ('eight-barredness') as a synthesis of *Agogik* and *Auftaktigkeit*. In his analyses of Bach and Beethoven, Riemann thus measured the music against this end-accented, eight-bar template, occasionally even rebarring music to make it better conform to the theoretical norm. Such is the case in Riemann's diagram of the theme from the third movement of the Beethoven String Quartet in F major, op.135 (*Beethoven's Streichquartette*, 1903, p. 182). As usual in these diagrams, Riemann has represented the entire musical texture as a single melodic continuation: the alphanumeric annotations are ciphers for the functional identities of harmonies in this passage; the numbers in parentheses correlate the theme with the prototypical eight-bar period. Here Riemann has rebarred the music so that the theme begins with the half-bar anacrusis and cadences on a written down-beat, rather than in the middle of the bar, as in the original. His slurs, which group individual melodic figures from weak to strong, also contradict the bowing indications in the original score.

The publication of his metrical theories in their final form coincided with a fundamental reconsideration of the epistemological basis of harmonic theories and of his theoretical activities. For Riemann, the turning point was 'Das Problem des harmonischen Dualismus' (1905), in which he disavowed the objective existence of undertones but clung to the belief that the dual projection of the minor triad represents a psychologically real inversion of the major triad and thus forms the basis of music cognition. From this point on, Riemann's theoretical writings reflect a reorientation from a material/acoustical basis to a perceptual/cognitive one, a move pre-figured, however, as early as 'Die Natur der Harmonik' (1882). His thinking culminated in the 'Ideen zu einer "Lehre von

den Tonvorstellungen'" (1914–15), in which a concern for 'tone conceptualization' (*Tonvorstellung*) mediates and subsumes an earlier, more Helmholtzian concern with the brute facts of 'tone sensation' (*Tonempfindung*). Riemann never, however, followed through the implications of his renunciation of undertones in his harmonic theories: in stark contrast to the rigid symmetries to which harmonic dualism aspires, his commitment to dualism had long riven his harmonic theories with insoluble inconsistencies, contradictions and aporias. It is ironic that the project on which Riemann laboured the most during his life would remain a torso.

3. MUSIC HISTORY. Riemann's historical writing lacked the single-minded focus on a set of core issues that characterized his theorizing and is therefore more difficult to summarize. Since he only embarked on large-scale historical research after his theoretical system had largely been consolidated, tensions are often discernible between Riemann the theorist and Riemann the historian. Thus as a theorist, he saw no musical value in the church modes, which he deemed inadequate to the requirements of 'musical logic', but as a historian he discussed medieval and Renaissance polyphony in detail in the monumental *Handbuch der Musikgeschichte* (1903–13). At the same time Riemann never conformed to the basic tenets of German historicism: on the contrary, he saw no problem in drawing parallels between the monodic song of the Trecento and Schubert's lieder. In his music-historical activities, he strove to uncover an unchanging musical substance and 'make recognizable that which is a primordial law in all ages' (*Musikgeschichte in Beispielen*, 1911–12, p.1). His theoretical presuppositions often impinged on his historical views, and his *Geschichte der Musiktheorie im IX.-XIX. Jahrhundert* (1898) provides important links between his theoretical and historical ideas. The third section, 'Musical Logic', is a genealogy leading up to his own theoretical system, conceived as a quasi-scientific discovery history in which Riemann turns earlier theorists into precursors whose imperfect understanding of the underlying musical logic of harmony paved the way toward a full understanding. Thus Riemann's widely-criticized interpretations (such as his representing Zarlino as a harmonic dualist or his account of Rameau's fundamental bass) result from his underlying goal of reading the history of music theory in terms of the progressive actualization of his own theories. Based on his understanding of music history as the gradual (if not necessarily linear) clarification of immutable laws, music theory and music history could interact with and mediate one another: works were primarily regarded as milestones on the path to the full historical realization of a timeless musical logic. Riemann thus complemented his discovery history of music theory with a developmental history of musical practice, a gradual evolution of tonal consciousness that culminated in the music of Beethoven. Riemann's analyses of Beethoven's piano sonatas, for instance, offer 'proof' of the congruence between Riemann's theoretical musical logic and its concrete manifestation in musical works. It is telling that Riemann insisted as late as 1919 that music was still in the age of Beethoven: although Riemann's concept of music history allowed for periods of growth, fruition and decay, he was anxious – especially in his pedagogical initiatives – to forestall, or even prevent, the occurrence of this final phase. Historical or national stylistic differences, being excluded from the core of his musical logic, manifested themselves on a superficial plane which his theories did not presume to capture. Riemann was generally willing to grant different national traditions and historical periods their own developmental curves, all of which flow within a historical mainstream whose course is determined by the progressive actualization of a universal musical logic. For Riemann, the national tradition that formed the main current of that mainstream was the German – the close affiliation of German music with this musical logic had assured its hegemonic position since the 18th century. Riemann's keen interest in the recently rediscovered music of Johann Stamitz and the Mannheim School, which he regarded as the true historical origin of Viennese classicism, can best be explained from this angle.

In this historiographical connection, the notion of 'classicism' acquires an air of aesthetic transcendence for Riemann. After 1894 he defined 'a classical work of art' as 'one that resists the destructive power of time'. Because classicism 'can only become evident over the course of history, no living composer can be a classic ... genuine classics were romantics in their own age, i.e. minds that transcend the commonplace' (*Musik-Lexikon*, 4/1894, p.540). As Handschin has observed, the basic ideas of Riemann's musical logic are reflected in tendencies common in the Classical and Romantic repertories. Likewise Riemann's presumably autonomous musical logic corresponds to the aesthetic autonomy postulated for 18th- and 19th-century instrumental music, a repertory whose characteristics determine his enumeration of the traits of different historical periods and musics. He thus understood the Baroque period as the 'age of figured bass' and was a strong proponent of an instrument-based performance practice for medieval music. Similarly, his faith in the universal validity of musical logic led him for most of his life to reject comparative musicologists' suggestions that non-Western musics did not comply with the notion of harmonic function. In a practical demonstration, he arranged an 'original Chinese melody' for violin and piano, harmonizing it with a triadic accompaniment of tonic and subdominant harmonies.

4. AESTHETICS. Riemann wrote little of what is currently understood as aesthetics. Basing his approach on the literal meaning of the term, he was primarily concerned with the question 'Wie hören wir Musik?', which he answered from the perspective of his theorizing. Although he never wrote a fully-fledged theory of forms, he believed that musical form must be understood as a cumulative process that spans both the smallest musical detail and the form as a whole. Large-scale forms can be understood only by grasping the small-scale groupings of metrical and harmonic organization together with their combinations into larger units. A staunch advocate of absolute music, Riemann attached little value to vocal music. In a clear reference to Wagner, he wrote:

> Herder brilliantly pinpointed the essence of absolute music a hundred years ago, at a time when the free instrumental style had developed into an eloquent means of expression of individual sensation of few decades previously .... Is it not strange that this emerging self-consciousness of music's own power, its complete emancipation from its sister arts, could be so fundamentally misunderstood that barely half a century later one could even attempt to hear in Beethoven the demise of absolute music, depicting her as extending her arms in supplication towards word and gesture? (*Die Elemente der musikalischen Ästhetik*, 1900, p.204)

Cutting across the conventional divisions of late 19th-century music aesthetics, however, Riemann admitted to

an early predilection for the music of Liszt, in which he had been steeped in his youth. From there he gradually shifted to the 'sturdy oak' Brahms as the conservator of the great German tradition. In a manner corresponding to this unusual coupling of musical heroes, Riemann's theoretical enterprise exhibits similar tensions between progressive (such as his espousal of equal temperament and the significance he grants 3rd-relations) and conservative features (such as the subsumption of 3rd-relations under 5th-relations). Altogether, however, his entire musicological project centred around the ultimately futile ambition to perpetuate what he understood to be the current perfection of German music. To do so, he was forced to dismiss other progressive trends in the music of his own time as historically inconsequential, degenerate and moribund. Nietzsche, perhaps the first of his readers to diagnose the inherent contradictions in this aesthetic position, equated Riemann's pathological fixation on musical detail with a Wagnerian decadence in ironic contrast to Riemann's own moral rhetoric of virtuous classicism. Referring to Riemann's insistence on 'correct' musical structures and the universal applicability or 'truth' of his allegedly scientific musical system, the philosopher wrote to a correspondent in 1888 'with your Riemann you are wholly on the "right track" – the only one indeed that still exists'. (*See also* TONALITY, §3.)

WRITINGS

'Über Tonalität', *NZM*, lxviii (1872); Eng. trans. and summary in *Theoria*, i (1985), 132–50

Über das musikalische Hören (diss., U. of Göttingen, 1873; Leipzig, 1874 as *Musikalische Logik*)

BRIAN HYER, ALEXANDER REHDING

Riemenschneider, (Charles) Albert (*b* Berea, OH, 31 Aug 1878; *d* Akron, OH, 20 July 1950). American organist, conductor, scholar and librarian. His father Karl H. Riemenschneider, president from 1893 to 1908 of the Methodist Episcopal Deutsches Wallace Kollegium in Berea, first taught him music, and he was a piano, organ and theory pupil of James H. Rogers of Cleveland (1896–1902). He became piano and organ instructor at the Kollegium (1896) and director of its music department (1897). He subsequently studied the piano with Hugo Reinhold and composition with Robert Fuchs in Vienna (1902–3), the organ with Charles Clemens in Cleveland (1903) and with Alexander Guilmant, and composition and organ with Widor in Paris in 1904–5 and for five successive summer sessions. In Paris Riemenschneider developed lifelong friendships with Marcel Dupré and Albert Schweitzer. Meanwhile he continued his work at the Kollegium, which in 1913 was amalgamated with Baldwin University to form the Baldwin-Wallace College; their music departments merged to form the Baldwin-Wallace College Conservatory of Music, with Riemenschneider continuing as director until his retirement in 1947. In 1933, emulating the Bach Festivals in Bethlehem, Pennsylvania, he established the annual Baldwin-Wallace College Bach Festival, whose programmes include all Bach's major choral works in four-year cycles. He was president of the Ohio Music Teachers' Association (1930–31) and the Music Teachers National Association (1933), and in 1949 served as acting president of Baldwin-Wallace College. He was also for many years treasurer of the National Association of Schools of Music. He received the honorary DMus degree from the Sherwood Music School in Chicago in 1939.

In 1951 Riemenschneider's Bach collection, begun in the 1920s, was presented to the college as the Emilie and Karl Riemenschneider Memorial Bach Library. The Riemenschneider Bach Institute, founded in 1969 to administer the library, publishes a journal, *Bach*, and sponsors a biannual symposium-concert series. Among Riemenschneider's publications are an essay on Bach's use of the flute, and editions of Bach, including *Orgelbüchlein* (Philadelphia, 1933), *371 Harmonized Chorales and 69 Chorale Melodies with Figured Bass* (New York, 1941), *Six Organ Chorales (Schubler)* (Philadelphia, 1942), *Eighteen Large Chorales* (Bryn Mawr, 1952) and *Clavier-Übung* part iii (New York, 1959).

RODNEY H. MILL

Riemschneider [Riemenschneider], **Johann Gottfried** (*b* ?Halle; *fl c*1720–after 1739). German bass and composer. He was the son of Gebhard Reimschneider (1657–1701), Kantor of the Marienkirche at Halle, and is said to have been a schoolfellow of Handel's. He sang at Hamburg from about 1720, appearing in at least five operas by Keiser (1723–7) and arrangements of Handel's *Tamerlano* and *Giulio Cesare*. In 1729 Handel engaged him for London where he made his début as Clodomiro in *Lotario* and sang in *Giulio Cesare* (Achillas), *Partenope* (Ormonte) and the pasticcio *Ormisda* (1730). Rolli wrote in a letter of December 1729 that his voice was 'more of a natural contralto than a bass. He sings sweetly in his throat and nose, pronounces Italian in the Teutonic manner, acts like a sucking-pig, and looks more like a valet than anything'. The progressive reduction of the parts given him by Handel suggests no great confidence in his powers; his voice was a high baritone (compass of *A* to *g*′). In 1730 Riemschneider returned to Hamburg, where he sang in *Cleofide* (Handel's *Poro*) in 1732 and in 1739 was appointed Kantor and musical director at the cathedral (he held this post until his death), and where an oratorio by him was performed on Christmas Day 1737. His brother Gebhard Julius also sang at the Hamburg Opera. (*SartoriL*)

WINTON DEAN

Riemsdijk, Johan Cornelis Marius van (*b* Maastricht, 16 Dec 1842; *d* Utrecht, 30 June 1895). Dutch music scholar. Of noble birth (*jonkheer*), a doctor of law and by profession the chief officer of the state railways, he was also an active amateur musician. He studied the violin with J.H. Kufferath in Utrecht (from 1854) and later with Léonard at the conservatory in Brussels and with Bargheer in Detmold. From 1860 he played in the Collegium Musicum Ultrajectinum of Utrecht, where he came to appreciate the music of Brahms, whose influence is evident in his Piano Variations in B minor (1882; MS in *NL-DHgm*). As board member of Utrecht's music school and of its section of the Maatschappij tot Bevordering der Toonkunst, from 1868 he was an important figure in the city's musical life. In 1875 he founded an *a cappella* choir which performed early Netherlandish polyphony. A board member of the Vereeniging voor Noord Nederlands Muziekgeschiedenis from 1880 onwards, he was in charge of many of its editions; among the most significant of his studies is the work on old Dutch folksong and his restoration of 19 original melodies for its most authoritative source, Valerius's *Gedenck-Clanck* (Haarlem, 1626[14]).

JAN TEN BOKUM

Riepel [Ipleer, Leiper, Perile], **Joseph** (*b* Deutsch-Hörschlag, Upper Austria, 22 Jan 1709; *d* Regensburg, 23 Oct 1782). Austrian theorist, composer and violinist. He attended a Jesuit Gymnasium in Steyr from 1727, and in 1733 he began studies in philosophy at the Jesuit college in Linz; at this time he started reading Fux's *Gradus ad Parnassum*. After a year of study at the University of Graz, 1735–6, he served as valet to General Alexander Graf d'Ollone during the Turkish wars of 1736–9 and accompanied him through Bosnia, Serbia and Slavonia, then lived in Dresden

until 1745, taking daily lessons from Zelenka. Unable to find a position, he spent time in Poland and then in Vienna.

Riepel was appointed Kapellmeister at the court of the Prince of Thurn und Taxis in Regensburg in 1749. This was his first and only position, and he held it for over 30 years, during which time he elevated the court orchestra to a high standard; he was also known for his skill as a violinist.

In Regensburg Riepel wrote his theoretical treatises *Anfangsgründe zur musicalischen Setzkunst* and *Harmonisches Sylbenmass*. These gained him a reputation throughout Europe, but were only partially published in his lifetime. His concern in the *Anfangsgründe* with teaching a student how to compose lends the works a strong didactic flavour, strengthened by his colloquial style of writing, the many topical references and the Fuxian dialogue between master and pupil. Riepel's method is based largely upon the *ars combinatoria*, which deals with the number of arrangements (combinations and permutations) possible among a given number of factors (this method had been used earlier by Mersenne, Kircher, Prinz and Ziegler). A rubric in the *Grundregeln* table of contents explains the approach: 'The unique *ars permutatoria*, by which one can invent many more than 99 themes in one day, is at least 99 times more healthy for musical composition than the above-mentioned mathematical speculations' (i.e. measurements, ratios etc.). The minuet and symphony are used as basic formats; for Riepel the composition of a minuet was little different from that of an aria or symphony. The eight-bar section, with its component two- or four-bar phrases, is taken as a norm. Phrase syntax is examined closely, with many examples of irregular and extended structure. In both the minuet and symphony models, many alternative arrangements of melodic figures, cadences and harmonic layouts are given, each with specific comments on coherence and taste. Of particular interest are Riepel's key schemes in *Grundregeln*: (*i*) a circular system of keys, as in earlier 18th-century concertos and fugues, with charts and examples covering every possible arrangement of keys closely related to C (pp.111–27); and (*ii*) a tonic–dominant modulation leading to a mediant (or submediant)–tonic one, which later became standard in Classical music (pp.65ff).

Riepel represents a stylistic turning-point: his melodic material is typical of the earlier 18th century, with courtly minuets and Italian sinfonias, but his systematic treatment points to the structural clarity and symmetry of the later 18th century. His work received favourable comment from Hiller, Gerber, Schubart, Choron and Fétis, and had a strong influence on Koch, the most important theorist of the later 18th century; his pupils included J.C. Vogel, J.C. Schubarth, F.F. Cavallo, J.C. Kaffka, F.X. Pokorny, P.C. Steiglehner and Sebastian Prixner.

Riepel wrote the bulk of his compositions in Regensburg. Various instrumental and vocal works have survived, but an opera is, unfortunately, lost.

THEORETICAL WORKS

Edition: *Joseph Riepel: Sämtliche Schriften zur Musiktheorie*, ed. T. Emmerig (Vienna, 1996)

Anfangsgründe zur musicalischen Setzkunst: nicht zwar nach altmathematischer Einbildungs-Art der Zirkel-Harmonisten sondern durchgehends mit sichtbaren Exempeln abgefasset, i: *De rhythmopoeia, oder Von der Tactordnung* (Regensburg and Vienna, 1752); ii: *Grundregeln zur Tonordnung insgemein* (Frankfurt and Leipzig 1755); iii: *Gründliche Erklärung der Tonordnung insbesondere, zugleich aber für die mehresten Organisten insgemein* (Frankfurt and Leipzig 1757); iv: *Erläuterung der betrüglichen Tonordnung* (Augsburg, 1765); v: *Unentbehrliche Anmerkungen zum Contrapunct, über die durchgehend- verwechselt- und ausschweifenden Noten etc.* (Regensburg, 1768); vi: *Vom Contrapunct* (MS, *D-Bsb, Es, Rp*; *GB-Lbl*); vii–viii: *Bassschlüssel, das ist, Anleitung für Anfänger und Liebhaber der Setzkunst, die schöne Gedanken haben und zu Papier bringen, aber nur klagen, dass sie keinen Bass recht dazu zu setzen wissen* (Regensburg, 1786); ix: *Der Fugen-Betrachtung erster Teil* (MS, *D-Bsb, Es, Rp*; *GB-Lbl*); x: *Der Fugen-Betrachtung zweyter Teil* (MS, *D-Bsb, Es, Rp*; *GB-Lbl*)

Harmonisches Sylbenmass Dichtern melodischer Werke gewiedmet, und angehenden Singcomponisten zur Einsicht mit platten Beyspielen gesprächweise abgefasst, i: *Von dem Rezitativ* (Regensburg, 1776); ii: *Von Arien* (Regensburg, 1776); iii: (MS, *D-Bsb, Es, Rp*; *GB-Lbl*)

WORKS

thematic catalogue in Emmerig (1984)

VOCAL

Sacred: 2 missa solemnis; 6 masses; 3 requiem settings; 3 Passions; Miserere; Vespers; lit; 2 ants; TeD; 5 cants.; Super flumina Babylonis; other psalms; 4 Passion songs

Artaserse (op), lost

INSTRUMENTAL

Orch: 4 sinfonias 'pro Prozessione Solemni'; 14 other sinfonias, 1 ed. in The Symphony 1720–1840, ser. C, vii (New York, 1984); 3 vn concs. (Regensburg, 1756, Paris, *c*1767); 2 concs., vn, hpd, listed in Breitkopf catalogue, 1763, 1775; 5 vn concs., listed in Breitkopf catalogue, 1766, 1768; Hpd Conc.; Fl Conc.; Concerto pastorale, cl, bn; Tpt Conc., ed. in Eisensmith

Chbr: 3 divertimentos; Quodlibeticum; Trio; 3 sonatas, vn, kbd

LEONARD G. RATNER/THOMAS EMMERIG

Riepp, Karl Joseph (*b* Eldern, Swabia, 24 Jan 1710; *d* Dijon, 5 May 1775). French organ builder of German birth. He learned his trade under Georg Hofer (1680–1731) in the workshop of the Benedictine abbey of Ottobeuren, of which community his father was a sexton. In 1732 or 1734 he moved to Strasbourg to work with Merkel, and there discovered the instruments of Andreas Silbermann. He settled in Dijon in about 1735. Riepp was married in Dole in April 1741 and took French nationality in 1747. In addition to his organ-building activities, he bought several Burgundian vineyards, exported wine to Germany and imported wool in return.

Between 1736 and 1750 Karl Joseph worked in partnership with his brother Rupert (1711–50) in Dijon. Together they built or rebuilt organs, including those at Cîteaux abbey (1736–8), St Vincent abbey, Besançon (1737–9), the Ste Chapelle, Dijon (1738–40), Dijon Cathedral (1740–45), Cistercian convent, Dole (1745), and Autun Cathedral (1745–8). After 1750 Karl Joseph continued his building activities alone, working at Dole (1750–54), Beaune (1754–6), Lure and Besançon (1765–9). From 1756 to 1774 he built organs in Swabia, two at Ottobeuren (1756–66) and three at the Cistercian abbey at Salem (1768–74). During his time at Salem, Riepp worked with Johann Nepomuk Holzhey (1741–1809), influencing the latter's style considerably.

In France, Riepp's organs were held in high regard by other builders such as F.-H. Clicquot, J.-A. Silbermann and François Bédos de Celles, as well as among organists such as C.-B. Balbastre and J.-F. Tapray. Riepp's French instruments betray the influence of Andreas Silbermann, whilst those built in Swabia tend to synthesize French and German elements: the use of reeds and Tierce is French, whilst the inclusion of Gambes and 16′ pedals follows the German tradition.

Only the Riepp organs in Ottobeuren survive in a nearly original state. Most of the French instruments were either destroyed or modified during or after the Revolution; of these the Dole organ is the best preserved, in spite of transformations (reeds by François Callinet, 1787). The St Bénigne organ in Dijon, after the rebuilding of its mechanism in 1787 and restorations in 1953 and 1996, still contains about 2000 of Riepp's pipes.

Riepp's Dijon workshop was taken over by his nephew Joseph Rabiny (1732–1813) with François Callinet (1754–1820) in 1786.

PIERRE MARIE GUÉRITEY

Ries. German family of musicians.

(1) **Johann Ries** (*b* Bensheim am Rhein, 1723; *d* Cologne, 1784). Instrumentalist. He was appointed court trumpeter to the Elector of Cologne at Bonn on 2 May 1747 with a salary of 192 thaler, and as a violinist to the Hofkapelle on 5 March 1754.

(2) **Anna Maria Ries** (*b* Bonn, *c*1745; *d* after 1794). Singer, daughter of (1) Johann Ries. She was appointed soprano at the electoral court at Bonn on 27 April 1764. In 1774 she married Ferdinand Drewer, a violinist in the court orchestra, and they remained in Bonn until 1794, when the elector's establishment was dissolved by the French.

(3) **Franz (Anton) Ries** (*b* Bonn, 10 Nov 1755; *d* Godesberg, 1 Nov 1846). Violinist, son of (1) Johann Ries. He was a child prodigy on the violin, being taught by J.P. Salomon, and was able to take his father's place in the orchestra at the age of 11. In 1779 he visited Vienna, enjoying a great success as a solo violinist and quartet player. Rather than settle there, he chose to stay at Bonn on a poor salary. There he taught Beethoven and remained very close to the family, especially during the difficult years after the death of Beethoven's mother. He received an appointment from Elector Maximilian on 2 May 1779.

When the French dissolved the electoral court in 1794, Franz Anton remained in Bonn. He was promised a post in the court after the invasion, but when that came to nothing he was obliged to earn a meagre living from various minor positions and some violin teaching. He received the Order of the Red Eagle and an honorary doctorate from Bonn University. He was present at the unveiling of Beethoven's statue in 1845. He had five daughters and five sons. Three of his sons are noted below; his others were Jean Batist and Franz Joseph, the latter a piano maker in Vienna from about 1820.

(4) **Ferdinand Ries** (*b* Bonn, bap. 28 Nov 1784; *d* Frankfurt, 13 Jan 1838). Pianist, composer and copyist, eldest son of (3) Franz Ries. He was the most celebrated member of the family. He was taught the piano and the violin by his father and the cello by Bernhard Romberg from the age of five. Because of the dissolution of the electoral court in 1794 Ferdinand failed to receive a promised position in the orchestra. Instead he spent most of the next seven years at home studying with his father, apart from a fruitless nine-month period in Arnsberg about 1797 studying with a man to whom he ended up teaching the violin. In 1801 he studied in Munich with Peter Winter for a short time, earning money by copying music. With this he kept himself, paid his fees and saved enough to go to Vienna in October of that year, armed with a letter of introduction from Franz Anton. Beethoven received his old teacher's son well, and gave him much help.

The next three years were spent in Vienna studying with Beethoven and often acting as his secretary and copyist. Beethoven taught him the piano, but sent him to Albrechtsberger for composition. Beethoven also secured him an appointment as pianist to Count Browne in Baden in 1802, and with Prince Lichnowsky for the summer of 1805. Ferdinand made his début as Beethoven's pupil on 1 August 1804 at the Augarten. He performed Beethoven's C minor Concerto with his own cadenza, playing a most difficult passage against Beethoven's advice and, to his master's delight, succeeding. When he became liable for conscription into the French army in September 1805, being a citizen of Bonn, he returned to Koblenz by way of Prague, Dresden and Leipzig. Because he had lost an eye (in childhood, through smallpox), he was rejected, so he went on to Paris, where he lived in poor circumstances for two years. On 27 August 1808, described as 'musical

composer from Bonn', he arrived in Vienna, where a misunderstanding over the post of Kapellmeister to Jérôme Bonaparte, King of Westphalia, caused a temporary rift with Beethoven. He stayed in Vienna for nearly a year.

For four years from summer 1809, Ries seems to have been constantly on tour; first to Kassel, then to Hamburg, Copenhagen and Stockholm, where he was in September 1810. This was a lucrative period. In St Petersburg he renewed his acquaintance with Bernhard Romberg, and together they toured Russia extensively. By February 1813 he was back in Stockholm, where he was made a member of the Swedish Royal Academy of Music. About the end of April he arrived in London, where he stayed for 11 years. There he met Sir George Smart and his father's aging teacher J.P. Salomon, who introduced him to the Philharmonic Concerts. He made his first appearance there on 14 March 1814, and his works appeared frequently in the programme. He married, on 25 July 1814, 'an English lady of great merit and possessing many personal charms'; this was Harriet Mangean (1796–1863). The 'Memoir of Ferdinand Ries' in *The Harmonicon* expressed the high regard in which London audiences held him as a pianist:

> Mr. Ries is justly celebrated as one of the finest piano-performers of the present day. His hand is powerful, and his execution is certain, – often surprising. But his playing is most distinguished from that of all others by its romantic wildness .... He produces an effect upon those who enter his style, which can only be compared to that arising from the most unexpected combinations and transitions of the Aeolian harp.

Beethoven is reported to have made the most damaging remark about him ('he imitates me too much'), which, though probably apocryphal, is only partly fair.

By 1824 Ferdinand had made enough money to retire, and he left London for his native Rhineland, living for nearly three years in Godesberg before moving to Frankfurt. He did much for the Lower Rhine Music Festivals, composing several works and conducting for a number of years. He was appointed head of the town orchestra and the Singakademie of Aachen in 1834. He collaborated with F.G. Wegeler in *Biographische Notizen über Ludwig van Beethoven* (Koblenz, 1838/*R*, suppl. 1845/*R*; rev. 2/1906 by A.C. Kalischer; Eng. trans., 1987), one of the most important early biographies of Beethoven.

WORKS

WoO numbers from Hill (1977); printed works published mainly in Leipzig, Mainz and Bonn

PIANO SOLO

14 sonatas: 2 as op.1; 2 as op.5 'Sonatinas'; 2 as op.9; 2 as op.11; op.26 'L'infortunée'; op.45; op.114; op.141; op.176; WoO 11 (1805)

39 rondos: op.43 'Que veut-il dire?'; op.50, on a Russian sailor's song; op.54 no. 2; 2 as op.64; op.67 no.1, on Russian themes, no.2, on an Irish melody; op.78 no.2, with march; op.84 no.1, on Bishop's 'When the wind blows', no.2, no.3, on a Hibernian air, no.4, on 'The Emerald Isle'; op.85 no.2, on Irish themes; op.88 no.1, on Boieldieu's 'Gentille Annette', no.2, on Rossini's 'Una voce poco fa', no.3, on Mozart's 'Al bascia si faccia onore'

op.98 no.1, on Rossini's 'Di piacer mi balza il cor', no.2, on Mozart's 'Mon ami bouvons'; op.102 no.1, on 'O for ane & twenty, Tam', no.2, on 'O Kenmures on and awa', Willie', no.3, on 'There grows a bonnie briar bush'; op.104 no.1, on the Polacca from Rossini's Tancredi, no.2, on Bishop's 'As it fell upon a day', no.3, on Bishop's 'When in disgrace'; op.106 no.1, on 'When love was a child', no.2, no.3 'Bacchanale in the Form of a Rondo'; op.122 'élégant'

op.127 no.1, on 'Comin' thro' the rye', no.2, on Horsley's 'When shall we three meet again'; op.139; op.153 no.1, on Haydn's Mermaid Song, no.2, on the Barcarole from Auber's Masaniello, no.3, on the Market Chorus from Auber's La muette di Portici; op.158 no.1, no.2 'alla tedesca'; op.161; op.182 no.1, on 'Sehnsucht nach der Heimat', no.2, on 'Kühreihen der Oberländer'; op. 184 'alla zingaresca'

3 rondolettos: op.54 no.1; op.78 no.1; op.127 no.3 ('Rondino')

49 variation sets: op.15, on a Hungarian theme; op.33 no.1, on a theme by Méhul, no.2, on a Cossack song, no.3, on a theme by Beethoven; op.39, on a Russian theme; op.40 no.1, on a Cossack dance, no.2, on a Russian air, no.3, on a German song; op.46, on a theme by Méhul; op.51, on Mozart's 'Non più andrai'; op.56, on an air of Little Russia; op.65 no.1, on a theme by Bishop, no.2, on Braham's 'Said a smile', no.3 on Bishop's 'Stay, prithee'

op.66 no.1, on Mozart's 'Amanti costanti', no.2, on the French air 'Malbrouk', no.3, on Mazzinghi's ''Tis merry'; op.73 no.1, on a Russian air, no.2, on a Basque air; op.75, on a Rhenish song; op.82 no.1, on an air from Paer's Griselda, no.2, on a Venetian air, no.3, on a French air; op.96 no.1, on the March from Tancredi, no.2, on Bishop's 'Grindoff et Claudine', no.3, on Bishop's 'The Dashing White Sergeant', no.4, on Braham's 'Nelson'

op.101 no.1, on 'We're a noddin'', no.2, on 'O Logie, o Buchan', no.3, on 'O saw ye my father'; op.105 no.1, on 'La sentinelle', no.2, on 'The old highland laddie', no.3, on Bishop's 'When meteor lights', no.4, on a Moldavian air; op.118 no.1, on Blangini's 'Il faut partir', no.2, on Welsh's 'The night is rainy', no.3, on Shield's 'The Streamlet'; op.147 no.1, on 'Vive Henry IV', no.2, on a German air; op.149 no.1, on a Danish song, no.2, on a German song

op.159 no.1, on a chorus from Die Räuberbraut, no.2, on an Austrian air, no.3 'du vieux capitaine'; op.165 no.1, on C. Fischer's 'The Melting Snow', no.2, on a Rhenish peasant air; op.185 no.1, on a theme from Les Huguenots; WoO49, on the Tarantella romana (1833); WoO58, on Handel's Staffordshire Conservative Election Song (1835); WoO64, on a theme from Liska (1836); WoO91, on an Austrian song

15 fantasias: 2 as op.77, both on themes from Figaro; op.85 no.1, on 2 Irish airs, pf/hp; op.92 no.1, on Bishop's 'And has she then failed', no.2, on Bishop's 'Come live with me'; op.97 'à la mode'; op.109, after Schiller's Resignation; op.121, on themes from Rossini's Zelmira; op.131, on themes from Der Freischütz; op.134 no.1, on themes from Rossini's Semiramide, no.2, on 'The wealth of the cottage'; op.163 on 'La parisienne'; op.185 no.2, on themes from Les Huguenots; WoO87, ? for pf

22 waltzes: 8 as WoO4 (1800); 6 (with an écossaise), pf/small orch as WoO18 (1810); 5 as WoO21 (1811–13); 2 as WoO32 (1823); WoO33 (1823)

4 marches: op.53 no.3, pf/hp/military band; 2 as op.61, no.2 for pf/pf 4 hands; op.78 no.2, with rondo

Other pf: 6 Exercises, op.31; The Dream, op.49; 12 Trifles, op.58; 40 Preludes, op.60; 2 polonaises, op.84 no.2, op.158 no.3, from Die Räuberbraut; 2 Allegri di bravura, op.99; Allegro eroica, op.103; 3 divertimenti, opp.117, 130, 137 'Grand Military Divertimento'; 15 easy pieces, op.124; Die Räuberbraut, ballet music, arr. pf, op.168; Kölner Carnavalstanz, op.178; Prelude, WoO41 (1831); 3 untitled pieces, WoO47 (1833), WoO67 (1837), WoO90 (1837); Cotillon, WoO68, pf/? orch ad lib; 6 Studies, WoO78

PIANO FOUR HANDS

3 sonatas, op.6 'Sonatina', op.47, op.160

11 variation sets: op.14, on a Russian theme; op.108 no.1, on 'Flow on, thou shining river', no.2, on 'Those evening bells'; op.136, no.1, on 'Oft in the stilly night', no.2, on 'Hark, the vesper hymn is stealing'; op.148, no.1, on the March from Mayseder's Aline, no.2, on a Rhenish carnival air; op.155, no.1, on a German dance, no.2, on a German song, no.3, on an air from Die Räuberbraut; WoO28, on Rossini's 'Di tanti palpiti' (1820)

5 polonaises, opp.41, 93, 138, 140, 175

11 marches: 3 as op.4; 3 as op.12; 3 as op.22; op.53 no.1 'Grand Triumphal March', no.2 'The Return of the Troops', pf/military band/orch

PIANO AND ONE INSTRUMENT

For 2 pf: Grand Introduction and Rondo, op.135
For hp, pf or 2 pf: Rondo, op.57; Rondo and Mazurka, op.79
For vn, pf: 28 sonatas, 2 as op.3, 2 as op.8, op.10, 3 as op.16 [vn/fl], op.18, op.19, 3 as op.30, 3 as op.38, 2 as op.59 [vn/fl], op.69, op.71, 2 as op.81, op.83, 3 as op.86 [vn/fl], WoO5 (1800), WoO7 (1804); 2 variation sets, op.111, on a fandango, WoO3 (1799)
For vc, pf: 4 sonatas, opp.20, 21, 125 [all vc/vn], WoO2 (1799); Variations, on Russian airs, op.72 [vc/vn]; Rondo, on a Russian dance, op.113 no.1 [vc/vn]
For fl, pf: 5 sonatas, op.48, 2 as op.76, op.87, op.169 [fl/cl]; Divertimento, op.62; Rondo on 'Le garçon volage', op.85 no.2; Nocturne, op.89; Polonaise, op.119; 2 Fantasias, op.134, no.1 on themes from Armida, no.2 on themes from Mosè in Egitto; 2 Variations, op.152, no.1 on a Portuguese hymn, no.2 on Himmel's 'An Alexis'
Other works: Sonata, cl/vn, pf, op.29; Sonata, hn/vc, pf, op.34; Rondo, on Stansbury's 'She smiled and I could', hn/vc, pf, op.113 no.2

CHAMBER MUSIC WITH PIANO

6 trios: op.2, op.143, WoO86, with vn, vc; op.28, with cl/vn, vc; op.63, with fl, vc; op.95, with hp, pf 2
3 qts, opp.13, 17, 129, all with vn, va, vc
Quintet, op.74, with vn, va, vc, db; Variations and March, WoO77, with hp, 2 hn, db
3 sextets: op.100, with 2 vn, va, vc, db; op.142, with hp/pf 2, cl, hn, bn, db [also arr. pf, hp/pf 2, vn, va, vc]; WoO76, with vn, 2 va, vc, db
Septet, op.25, with cl, 2 hn, vn, vc, db; also arr. as pf qnt
Octet, op.128, with cl, hn, bn, bn, va, vc, db

CHAMBER MUSIC WITHOUT PIANO

3 trios: 2 as WoO70, for vn, va, vc; WoO82, for 2 vn, vc/db
26 str qts: 3 as op.70, 3 as op.126, 3 as op.150, 2 as op.166, 3 as WoO1 (1798), WoO6 (1803), WoO10 (1805), WoO34 (1825), WoO36 (1826), WoO37 (1827), WoO48 (1833), WoO71, WoO72, 3 as WoO73, WoO74
6 qts, fl, vn, va, vc: 3 as op.145, 3 as WoO35 (1826–30)
8 qnts: opp.37, 68, 167, 171, WoO75, for 2 vn, 2 va, vc; op.107, for fl, vn, 2 va, vc; op.183 'Souvenir d'Italie', WoO62 (1836), for 2 vn, va, 2 vc
Sextet, 2 vn, 2 va, 2 vc, WoO63 (1836), 2 nocturnes, fl, 2 cl, hn, 2 bn: WoO50 (1834), WoO60 (1836)

ORCHESTRAL

8 syms.: op.23, op.80, op.90, op.110, op.112, op.146, op.181, WoO30 (1822)
5 ovs.: op.94 'Don Carlos'; op.162 'Die Braut von Messina'; op.172, with triumphal march; WoO24 'bardique' (1815); WoO61 'L'apparition' (1836)
Vn Conc. (Conc. no.1), op.24; 8 pf concs. (numbered 2–9), op.42, op.55, op.115, op.120, op.123, op.132 'Farewell to London', op.151 'Salut au Rhin', op.177; Concertino, pf, orch, WoO88; 3 variation sets, pf, orch: op.52, on Swedish national airs, op.116, on 'Rule, Britannia', op.170 'brillantes'; 2 rondos, pf, orch, op.144 'brillant', WoO54 (1835); Polonaise, pf, orch, op.174; Conc., 2 hn, orch, WoO19 (1811)

VOCAL

Stage: Iphigenie auf Aulis, scena, S, orch, WoO17 (1810); Die Räuberbraut (op, 3, G. Döring, after C.W. Häser), op.156, Frankfurt, 1828, *D-Bsb**, vs (Leipzig, 1828); The Sorceress (grand romantic op, 2, E. Fitzball), op.164, London, 1831, vs (London, 1831), in Ger. as Liska, oder Die Hexe von Gyllensteen, Cologne, 1832, vs (Bonn, 1831); Die Nacht auf dem Libanon (romantische Oper, 3, C.M. Heigel), WoO51, 1834, excerpts Paris, 1837, *F-Pn**; Die Zigeunerin (melodrama, 2), 1835, unperf., *D-Mbs**
Secular choral, partsongs, duets: Der Morgen, cant., S, A, T, B, orch, op.27; 6 German Partsongs, 4 male vv, 1/2 pf, op.173; En ce beau jour de fête, 4 S, pf, WoO14 (1809); Zu deinem Namensfeste, 4 S, pf, WoO15 (1809); Bei Eröffnung der Tafellegen, 1v, male chorus, str qt, WoO16 (1810); 7 canons, WoO25 (1819), WoO26 (1820), WoO45 (1833), WoO46 (1833), 2 as WoO59 (1836), 1 as WoO83; 3 nocturnes, 2vv, pf, WoO42 'The gentle dew' (1832), WoO65 'Wahre Liebe' (1836), WoO66 'Weihnachten' (1836); Die Lebensfahrt, 1v, 3-part chorus, pf, WoO44 (1833); Dir theuerster bester Vater, 4 S, pf, WoO81
Songs, 1v, pf: 6 German Songs, op.7; 6 Songs (J.W. von Goethe), op.32; 6 German Songs, op.35; 6 German Songs, op.36; 4 English Songs, op.91; 6 German Songs, op.154; 4 Songs (Byron), op.179; 3 German Songs, op.180; Mein Mädchen, WoO8 (1804); Absence, absence à l'exil condamnée, WoO12 (1807); Das Lebewohl, WoO13 (1808); Das Schiffchent, WoO20 (1811); Die Sehensucht, WoO22 (1812); The struggling pangs, WoO27 (1820); Tis time, I feel, WoO29 (1821); Nous (Corinne), romance, WoO31 (1823); When shall we two now meet again?, WoO43 (1832); Guten Morgen viel Liebchen, WoO52 (1834); Romance pour le jour de fête de Mme E. Wergifosse, WoO55 (1835); Totenstill, WoO56 (1835); When shall we three meet again, WoO57 (1835); Sia luminosa il fine di viver mio, scena, WoO79; 6 German Songs, WoO84; Historisch (after Mary Queen of Scots), WoO85
Sacred: [3 pieces], op.44: Nun lasset uns den Leib begraben, S, male chorus, 2 hn, 2 bn, 2 va, vc/db, Das Fest der Maurer, T, male chorus, pf, Braasch's goldene Hochzeit, solo v, soprano chorus, pf; Der Sieg des Glaubens, orat, op.157; Die Könige in Israel, orat, op.186; Masonic C., T, male chorus, orch, WoO9 (1805); Requiem, 4vv, orch, WoO23 (1815); Tantum ergo, S, 4vv, org, WoO69

(5) (Pieter) Joseph Ries (*b* Bonn, 6 April 1791; *d* London, 6 April 1882). Amateur musician, second son of (3) Franz Ries. He devoted his little spare time to teaching and playing. As a businessman he worked for the East India Co. and later as a foreign correspondent in the Broadwood house. After his elder brother (4) Ferdinand Ries left London in 1824, Joseph acted for him in dealings with London publishers, and numerous letters survive from that period.

(6) (Pieter) Hubert Ries (*b* Bonn, 1 April 1802; *d* Berlin, 14 Sept 1886). Violinist and composer, youngest son of (3) Franz Ries. He studied the violin first with his father and afterwards with Spohr, receiving composition lessons from Moritz Hauptmann. He lived in Berlin from 1824, when he joined the Königstädtisches Theater orchestra, and became a member of the court orchestra in the following year. In 1835 he became director of the Berlin Philharmonic Society, and in 1836 was appointed leader. He had a distinguished career as a violinist, and was elected a fellow of the Royal Academy of Arts in 1839. He published two violin concertos, studies and duets for violin and some string quartets. But he was better known for his *Violin School* for beginners, which was published in an English edition in 1873.

(7) Louis Ries (*b* Berlin, 30 Jan 1830; *d* London, 3 Oct 1913). Violinist, eldest son of (6) Hubert Ries. He was taught by his father and by Vieuxtemps. In 1853 he settled in London, where he gained a reputation as a violinist and teacher. He was a member of the quartet of the Musical Union from 1855 to 1870, and also played second violin at the Monday Popular Concerts from their beginning in 1859 until his retirement in 1897.

(8) Adolph Ries (*b* Berlin, 20 Dec 1837; *d* April 1899). Pianist, second son of (6) Hubert Ries. He was taught the piano by Theodor Kullak and composition by Boehmer. He worked in London as a piano teacher and published some songs and piano music. His daughter Marie Gertrude Ries (1880–1974), a pupil of Clara Schumann, emigrated to Australia, where she was a distinguished pianist.

(9) Franz Ries (*b* Berlin, 7 April 1846; *d* Naumburg, 20 Jan 1932). Violinist and music publisher, youngest son of (6) Hubert Ries. He studied the violin with his father and with Massart and Vieuxtemps in Paris. In 1870 he appeared at the Crystal Palace, but a promising career as a violinist was cut short in 1873 by nervous trouble. This prompted him to enter the music trade, and on 1 July

1881 he and Hermann Erler (1844–1918) jointly founded the publishing house of Ries & Erler, of which his son Robert became proprietor in 1924. He wrote some orchestral and chamber music, and also edited works by Corelli, Schumann and others.

CECIL HILL

Ries & Erler. German firm of music publishers. It was founded in Berlin on 1 July 1881 by the violinist Franz Ries (*b* Berlin, 7 April 1846; *d* Naumburg, 20 June 1932) and Hermann Erler (*b* Radeberg, 3 June 1844; *d* Berlin, 13 Dec 1918). Ries, who was the nephew of Ferdinand Ries, started selling music in 1874 but in 1884 he sold his business (which also incorporated a concert management agency) and entered publishing; he had already made the first step in this direction in 1881, when he became associated with the publishing house that Erler had founded in Berlin in 1872. They acquired the rights to the compositions of Heinrich Hofmann; in 1882 they took over the publication of educational works (principally songs) from the firm of M. Schloss in Cologne and the following year took over Voigt of Kassel. They began to publish salon music, including pieces by Ries himself. After Erler's death Ries acquired the publishing rights to works by many composers, including Humperdinck, Pfitzner and Rezniček; he also published tutors by Carl Flesch, and the firm subsequently absorbed the R. Sulzer and Jatho houses.

When Ries retired in 1924 the business was taken over by his son Robert Ries (1889–1942), who extended the range of its publications, particularly of orchestral music. In 1927 he was elected to the governing body of the Musikverleger-Verein, and was its deputy chairman until 1929; also in 1927 he was elected to the governing body of the Verband Deutscher Musikverleger, of which he was president from 1930 to 1933. His particular interests were amateur and contemporary music, both of which he promoted vigorously. After his death the business was inherited by his daughter Waltraud Ries, who rebuilt the firm in 1948 after its wartime destruction; in 1968 her sister Ingrid Meurer-Ries took over as director. Its present publications consist mainly of symphonic and light orchestral music by Theodor Berger, Dressel, Frommel, Genzmer, Lothar, Zieritz and others, as well as solo instrumental, chamber and vocal music, and didactic and theoretical works. Younger composers represented include Heribert Breuer, Friedmann Graef and Gabriela Moyseowicz.

THOMAS M. LANGNER

Rieter-Biedermann, Jakob Melchior (*b* Winterthur, 14 May 1811; *d* Winterthur, 25 Jan 1876). Swiss music publisher. He was originally a part-owner of his father's spinning mill and engineering firm. In 1833 he studied engineering design in Paris, where he met Berlioz and Rossini; subsequently he was librarian and timpanist of the Musikkollegium Winterthur (1835–48). His enthusiasm for music led him to found a music shop and publishing firm (1848), which had issued 900 items by 1876. The firm's publications included works by Berlioz, Kirchner, Herzogenberg, Schumann and, after 1858, 22 works by Brahms, including opp.14, 15, 34, 39 and 45. Rieter-Biedermann's son-in-law Edmund Astor (1845–1918) directed the branch established in Leipzig (1862), which became the headquarters after the original office closed in 1884. Rieter-Biedermann also founded the *Leipziger Allgemeine musikalische Zeitung*, which the firm published from 1866 to 1882. In 1917 C.F. Peters bought the company.

HANS-MARTIN PLESSKE

Riethmüller, Albrecht (*b* Stuttgart, 21 Jan 1947). German musicologist. He began studying musicology (with German literature and philosophy as secondary subjects) in 1966 at Freiburg University, where he took the doctorate in 1974 with a dissertation on the theory of dialectics in aesthetics. After working at Freiburg as an academic assistant (1974–86), he was a visiting associate professor at the University of Illinois (1983) and visiting chair at Heidelberg (1984–5), and in 1984 he completed the *Habilitation* with a work on Busoni. He was appointed professor at Frankfurt University in 1986 and in 1992 he was named professor at the Freie Universität in Berlin. He became an editor for the journal *Archiv für Musikwissenschaft* in 1989 and for the series Spektrum der Musik and Berliner Musik Studien in 1993. Riethmüller's writings are both prolific and diverse: an expert on music from classical antiquity as well as music from the 18th to the

20th centuries, he has investigated theory, aesthetics, history of musical terminology and the political contexts of 20th-century music. He is particularly influenced by the philosophers of the Frankfurt School.

□

Rieti, Moses (ben Isaac) (*b* Rieti, 1388; *d* Rome, after 1460). Italian philosopher and poet. Known in his time as the 'Hebrew Dante', he composed, in verse, a large compendium of scientific and religious knowledge under the title *Miqdash me'at* ('The Lesser Sanctuary', 1412). The work survives in 15 manuscript sources and was published for the first time in Vienna in 1851 (see Goldenthal). In the first part, Rieti discusses Maimonides's 13 principles of faith and the sciences as they are surveyed by Aristotle (in his *Book of Categories*), Ibn Rushd, Ibn Sīnā, al-Fārābī and Maimonides, while in the second part, he describes the 'Celestial Court' (possibly after Dante's *Paradiso*). Music forms the subject of a single stanza. In accordance with al-Fārābī and Ibn Falaquera (*c*1225–95), Rieti considers music a mathematical science, with two divisions: practical and theoretical. Under the theoretical division, Rieti recognizes the basic principles: intervals, instruments, rhythmic modes and the composition of melodies to metric poetry (*piyyutim*).

DON HARRÁN

Rieti, Vittorio (*b* Alexandria, Egypt, 28 Jan 1898; *d* New York, 19 Feb 1994). American composer of Italian descent. He studied music with Frugatta in Milan (1912–17) as well as economics at the University of Milan, where he obtained a doctorate in 1917. After brief war service in the Italian army, he settled in Rome with his family and took up his composition studies again with Casella; he also received some tuition in orchestration from Respighi. In 1921 he met Berg, Alma Mahler and Franz Werfel in Vienna where he signed an exclusive, eight-year contract with Universal Edition. Schoenberg also showed great interest in his works, wishing to perform them in the concerts of the Society for Private Musical Performances. In the early 1920s he was associated with Massarani and Labroca in a group that called itself I Tre, in imitation of Les Six. His first international success came at the ISCM Festival in Prague in 1924 with his Concerto for wind and orchestra, conducted by Casella, who continued to befriend his younger colleague. From 1925 to 1940 Rieti divided his time between Rome and Paris, where he formed close ties with Stravinsky, Prokoviev, Hindemith, Falla, Weill and Les Six. He wrote ballet music for Diaghilev (*Barabau* being particularly successful) and much incidental music for the Parisian theatre of Louis Jouvet. He was also one of the founder-directors of the Paris group La Sérénade, dedicated to modern chamber music (1931–8). In 1940 he moved to the USA (he became a citizen in 1944). There his ballet music was choreographed by Balanchine, his orchestral music conducted by, among others, Toscanini and Mitropoulos. He continued to be productive until just before his death. As a teacher of composition, he was active at the Peabody Conservatory (1948–9), the Chicago Musical College

(1950–53), Queens College (1955–60) and the New York College of Music (1961–64).

Rieti's musical style has been fairly consistent throughout his long career. After early experiments with atonality, he evolved an idiom akin to neo-classicism, which remained his characteristic trait. He said in 1973: 'I maintain the same aesthetic assumptions I have always had; I have kept evolving in the sense that one keeps on perfecting the same ground'. His music has a natural, unaffected fluency, elegant charm, controlled feeling, sophisticated humour and impeccable technical mastery; his textures are clear and limpid, his orchestration transparent and sensitive. Casella's praise (see Cobbett) has lost none of its relevance; elsewhere he wrote: 'Rieti's oeuvre stands apart in its specific clarity, gaiety and sophistication of a kind only he possesses; yet it hides a good deal of melancholia'.

WORKS
(selective list)

STAGE

Ops: Orfeo tragedia (A. Poliziano), 1928, withdrawn; Teresa nel bosco (chbr op, 1, Rieti), 1933; Don Perlimplin (1, Rieti, after F. García Lorca), 1949; Viaggio d'Europa (radio op, 1, P. Masino), 1954; The Pet Shop (1, C. Nicolas), 1957; The Clock (2, Nicolas), 1959–60, unperf.; Maryam the Harlot (1, Nicolas), 1966, unperf.

Ballets: L'arca di Noé, 1923, only orch suite extant; Robinson et Vendredi, 1924, also orch suite; Barabau, 1925, also orch suite; Le bal, 1929; David triomphant, 1937; Hippolyte, 1937, also orch suite; The Night Shadow, 1941 [on themes of Bellini]; Waltz Academy, 1944 [after Second Avenue Waltzes, 2 pf]; The Mute Wife, 1944 [on themes of Paganini Camille, 1946 [on themes of Schubert]; Trionfo di Bacco e Arianna (ballet-cant.), 1946–7 [contains material from Orfeo tragedia]; Pasticcio, 1956 [from pf work Chess Serenade]; Native Dancer, 1959 [after Sym. no.5]; Conundrum, 1961; Capers Ballet, 1963 [from pf works Chess Serenade and New Waltzes]; A Sylvan Dream, 1965; Scenes Seen, 1975; Verdiana, 1983 [on themes of Verdi]; Indiana, 1984

BORIS SCHWARZ/F.C. RICCI

Rietsch [Löwy], **Heinrich** (*b* Falkenau an der Eger, 22 Sept 1860; *d* Prague, 12 Dec 1927). Austrian musicologist and composer. He studied law in Vienna and received the doctorate in law in 1883. At the same time he undertook music studies with Hanslick, Adler, Mandyczewski and Robert Fuchs, and in 1895 completed his *Habilitation* in musicology at Vienna. He was appointed reader at the German University of Prague in 1900, succeeding Guido Adler. In 1909 he became full professor and founded the institute of musicology, which he directed until his death.

Rietsch was greatly influenced by Adler's methods of style criticism. His principal areas of research were the music of the Baroque, the Viennese Classicists and the late 19th century; general music education; the aesthetics of music and the development of German monophonic song. In some of these areas, especially that of the German Minnesang, Rietsch made fundamental contributions with his editions. These and his writings show outstanding care, aesthetic sensitivity and concern for historical accuracy. Rietsch was also the composer of a short unpublished opera, *Walther von der Vogelweide*, orchestral and chamber music, lieder, choral pieces and works for piano.

BURKHARD KIPPENBERG

Rietz, Eduard (Theodor Ludwig) (*b* Berlin, 17 Oct 1802; *d* Berlin, 22 Jan 1832). German violinist and conductor. He studied the violin with his father Johann Christian Rietz (a violinist in the Berlin court orchestra, 1812–27) and with Rode (1813–20), and made his début in 1818. He joined the Berlin court orchestra in 1819 and became its leader, but personality clashes with Spontini led to his release in 1825. He founded the Berlin Philharmonic Society in 1826; though its orchestra was made up of amateurs, it was soon able to accompany the Singakademie in the performance of oratorios. Rietz was leader at Mendelssohn's historic performance of Bach's *St Matthew Passion* (1829), for which he and his brother JULIUS RIETZ had copied out the parts. At the beginning of a promising career as a conductor, Rietz died of tuberculosis. He is remembered now as the teacher and friend of Mendelssohn. Together with his younger brother he played quartets with Mendelssohn as early as 1820; Mendelssohn studied the violin with him and dedicated his D minor Concerto, the Violin Sonata op.4 and the Octet op.20 to him. Both Mendelssohn and Rietz were fascinated by the music of Bach and were associated with Carl Friedrich Zelter at the Singakademie, where Rietz frequently sang solo tenor parts. Mendelssohn's letters reveal his affection for Rietz and his admiration of his violin playing; when Rietz died, Mendelssohn dedicated the Andante of the Quintet op.18 to his friend's memory.

ALBERT MELL

Rietz, (August Wilhelm) Julius (*b* Berlin, 28 Dec 1812; *d* Dresden, 12 Sept 1877). German cellist, composer, conductor and editor, brother of EDUARD RIETZ. He studied the cello from the age of eight with Franz Schmidt, Bernhard Romberg and Moritz Ganz. In 1829 he joined the orchestra of the Königstadt theatre. Refusing Spontini's offer of a post in the Berlin court orchestra, he went to Düsseldorf in 1834 to assist Mendelssohn at the Opera; though nominally only assistant conductor he did most of the conducting. When Mendelssohn left Düsseldorf, Rietz became the city's musical director. During the next 12 years he established a reputation as a conductor and a composer; more than two dozen works of his were published, including the music for Goethe's Singspiel *Jery und Bately*, two symphonies, a cello concerto and several sets of lieder. He continued to play the cello in public, with Ferdinand Hiller and Ferdinand David among others. He assisted Mendelssohn at the Lower Rhine Festival of 1839, and was chief conductor at the festivals of 1845, 1856 and 1869.

In 1847 Rietz succeeded Stegmayr as conductor of the Leipzig Opera and the Singakademie. He became professor of composition at the conservatory and succeeded Gade as director of the Gewandhaus Orchestra. He was also the secretary of the Bach-Gesellschaft (1855–60), for which he edited the B minor Mass and the *St Matthew Passion*. He edited *Susanna* for the Deutsche Händel-Gesellschaft and prepared the scores of 14 Haydn symphonies for Breitkopf & Härtel. In 1859 he received an honorary doctorate from the University of Leipzig for his achievements as a composer, conductor and scholar. He succeeded Reissiger as musical director of the city of Dresden in 1860.

Rietz's own compositions embrace nearly all genres, though few are of lasting interest. Notable are some of his stage works, the Third Symphony op.31, the Oboe Concerto op.33, some overtures and piano pieces, in particular the Piano Sonata op.17, the Flute Sonata op.42 and some of his songs. In matters of form as well as instrumentation Rietz followed Mendelssohn, and he remained unaffected by the orchestral and musico-dramatic innovations of the school of Wagner and Liszt. In his last years Rietz was again active as an editor. He prepared the scores of a number of Mozart operas, which were later incorporated into the Mozart Gesamtausgabe, and supervised the publication of the Mendelssohn Gesamtausgabe, which was completed in the year of his death.

ALBERT MELL/MATTHIAS WIEGANDT

Rieu, Anselmo de. *See* REULX, ANSELMO DE.

Riff. In jazz, blues and popular music, a short melodic ostinato which may be repeated either intact or varied to accommodate an underlying harmonic pattern. The riff is thought to derive from the repetitive call-and-response patterns of West African music, and appeared prominently in black American music from the earliest times. It was an important element in New Orleans marching band music (where the word 'riff' apparently originated), and from there entered jazz, where by the mid-1920s it was firmly established in background ensemble playing and as the basis for solo improvisation. Riffs also appeared in the accompaniments of many early blues, being particularly suited to their repeating structure. The conflict between an unvaried riff pattern and the changing harmonies of the blues progression became one of the most distinctive features of the blues and its derivatives.

The riff came to the fore in the early 1930s in the Southwest tradition of orchestral jazz, where the influence

of rural blues musicians was notably strong. Among the innovations of these groups was the 'double' or 'compound' riff, in which the brass and reed sections played separate riffs in counterpoint. As exploited by Bennie Moten and, from 1936, by Count Basie's band, riffs of this sort came to dominate large-ensemble jazz, either as the accompaniment to solo improvisation or as self-sufficient sections within a score. An outstanding example of a compound riff occurs at the end of Basie's theme song *One o'Clock Jump*, where the trumpet, trombone and saxophone sections play contrasting riffs in three distinct rhythms. By the 1940s the riff had become a jazz cliché. However the big band riffs were translated directly into the horn sections of rhythm and blues and later rock and roll. A more primitive form of the riff, from the rural blues tradition, formed a fundamental part of the accompaniment in postwar urban blues; a notable example is the repeated five-note guitar riff in Muddy Waters's *I'm your Hoochie Coochie Man* (1953, Chess).

The blues-influenced rock bands of the late 1960s and 70s and subsequent heavy metal groups often used this kind of guitar-based riff; notable exponents were Led Zeppelin. In songs such as *Whole Lotta Love* and *Immigrant Song* the guitar and bass guitar repeat a simple riff that confirms the tonic throughout the verses. Longer, more complex riffs that are repeated in different keys are used in *Black Dog* and *Heartbreaker*. *Kashmir* is created entirely from a series of varied riffs and vamps, at times creating a dense, multi-layered texture. Simpler uses of riffs can be heard in the work of groups such as AC/DC, Iron Maiden and Metallica.

Short multi-layered riffs were also an integral part of funk and other forms of dance music. In much of the work of James Brown, the JBs, George Clinton and Sly and the Family Stone harmonic and melodic variation is suppressed as all the instruments contribute a variety of riffs and chordal vamps to create highly rhythmic textures. This approach was imported into the electronic dance music of the 1980s and 90s most notably in the psychedelic trance of groups including Astral Projection, Prana and Shakta. In tracks such as Astral Projection's *Enlightened Evolution* (from *Trust in Trance*, 1996, Transient) combinations of repeated riffs and patterns based on certain modes are used as the platform for wild timbral effects and rhythmic variation created by electronic synthesizers and digital effects.

J. BRADFORD ROBINSON/R

Rifkin, Joshua (*b* New York, 22 April 1944). American musicologist, pianist, conductor and composer. He studied with Persichetti at the Juilliard School of Music (BS 1964), with Reese at New York University (1964–6), at the University of Göttingen (1966–7) and with Lockwood, Mendel, Babbitt and Oster at Princeton University (MFA, 1969); he also worked with Stockhausen at the Darmstadt summer courses of 1961 and 1965. He held various positions with Nonesuch Records in New York (1964–75) and from 1970 to 1982 he was on the faculty of Brandeis University. He has also been a visiting faculty member at Harvard, New York University, Yale, Rutgers and Bard College. His principal areas of musicological research are Renaissance and Baroque music. He has advanced controversial theories about the performance of Bach's vocal music, particularly the B minor Mass, and has presented these theories in both scholarly settings (notably in a long-running debate between Andrew Parrott, Ton Koopman and Christoph Wolff and Rifkin in *Early Music* on the size of Bach's chorus) and in performance and on recordings. As a pianist Rifkin has contributed to the revival of interest in ragtime. His compositions include chamber music and songs.

PAULA MORGAN

Riga [Rīga]. Capital of Latvia. Riga's musical history developed against a background of influence from both East and West. Music in medieval Riga was cultivated in the Catholic churches and by the so-called *Stadtmusikanten*, initially migrants from Germany, but later also including Polish and Czech musicians. From 1552, after the Reformation, Lutheran hymns were introduced to Riga churches and schools. Latvia was conquered by Russia in the 18th century; however, the capital city's cultural life retained a strong German influence for the next 100 years. In the mid-18th century Riga became a stop on the way to St Petersburg for many Western European virtuosos. A large number of outstanding musicians visited Riga, including John Field (1805), Liszt (1842), Robert and Clara Schumann (1844), Berlioz (1847) and Anton Rubinstein (first in 1849); Bach's pupil J.G. Müthel worked there between 1753 and 1788. Wagner was there from 1837 to 1839, and although this was a largely unproductive period for him because of domestic strife, he began work on *Rienzi*, conducted at the theatre and established a concert series.

In the 18th and 19th centuries German organ builders installed excellent organs in many churches in Riga. The organ of the cathedral, installed by the Walcker company in 1884, was at that time the largest in Europe. The cathedral, converted into a concert hall in 1962, had a choir from 1240; the organ, with 125 stops and four manuals, attracts many virtuosos.

In 1782 O.H. von Vietinghoff founded the German Riga City Theatre, where many important operas were produced soon after their first performance: for example, *Die Entführung aus dem Serail* was given in 1785, *Fidelio* in 1818 and *Der Freischütz* in 1822. In 1913 Pāvuls Jurjāns founded another opera theatre at Riga, Latviešu Opera (Latvian Opera). In 1919 the theatre became the state-owned Latvian National Opera, and after World War II the State Opera and Ballet Theatre of the Latvian SSR; in 1990 it again became the Latvian National Opera.

During the 17th century public concert life was promoted by the collegium musicum and from 1760 for more than a century by the Musikalische Gesellschaft. In the 19th century Riga became the centre of Latvian musical development, then more strongly under Russian influence. Latvian concerts were under the supervision of the musical commission of the Latvian Society of Riga (1888–1913). Regular orchestral concerts took place in nearby resort towns from 1870 and have continued to this day. Concerts of orchestral Latvian music have been held since 1901. As the capital of the independent Latvian republic from 1919, Riga was the home of all the important Latvian musical institutions. The Latvian RSO, which has become the main orchestra, was founded in 1926, a year after broadcasting began in Riga. Choral music was sponsored by the Rīgas Latviešu Dziedāšanas Biedrība (Riga Latvian Singing Society) from 1879 to 1949. From 1941 concert life was monopolized by the State Philharmonia of the Latvian SSR. In Soviet Latvia professional choirs were established at the Latvian Radio (1940) and the Philharmonia (1942). From 1945 Riga's significance as a European musical centre declined because of the shift of Western cultural exchange away from Latvia to the rest of the USSR.

The impressive Schwarzhaupter Haus was used as a concert hall from the 18th century, but was destroyed in World War II, along with the Latvian Radio library with its many manuscripts of Latvian music. From 1946 the Lielā Ģilde ('Great guild') was used as the Philharmonia concert hall. Summer seasons have been held in the Dzintaru Koncertzāle (Amber Concert Hall) on the Bay of Riga (opened in 1960 with capacity of 2500). An open-air concert pavilion was built in 1955 for choir performances, with seating for 10,000 singers and an audience of 30,000. In the first building of the Riga City Theatre where Wagner worked, the Wagner Concert Hall was opened in 1988. The theatre of the Latvian National Opera, built in 1882, was reopened after restoration in 1995.

The first music school in Riga was begun in 1840 by P. Feigerl. In 1919 Jāzeps Vītols founded the Latvian Conservatory (from 1990 Jāzepa Vītola Lavijas Mūzikas Akadēmija), and a Folk Conservatory (from 1940 the Musical College) was opened in 1929. The Emīls Dārziņš' Music School, for school-age children, was founded in 1945. A Latvian composers' union (Skaņražu kopa, 1923–40) was founded by Vītols, and the Soviet Latvian Composers' Union was founded in 1944 by Melngailis. Since the restoration of Latvian independence in 1990, Riga has hosted numerous international music festivals.

JOACHIM BRAUN/ARNOLDS KLOTIŅŠ

Rigadon [rigadoon]. *See* RIGAUDON.

Rigatti, Giovanni Antonio (*b* ?Venice, *c*1613; *d* Venice, 24 Oct 1648). Italian composer and singer. He became a choirboy at S Marco, Venice, in September 1621 and later trained as a priest at the Patriarchal Seminary. From September 1635 until March 1637 he was *maestro di cappella* of Udine Cathedral; his reputation was already so high that he was awarded a salary twice that of his predecessor, Orindio Bartolini. In August 1639 he was appointed *maestro d'organo e musica alle figliole* at the Ospedale dei Mendicanti; by 1642 he had also started teaching at the Incurabili, apparently without the permission of the Mendicanti authorities, who appointed a commission to observe his movements and dismiss him if necessary. His teaching was thenceforward confined to the Incurabili, where his pupils included Francesco Lucio, one of whose psalm settings he included in his 1646 collection. In 1642 he was appointed chaplain to Gian Francesco Morosini, who became Patriarch of Venice in 1644 and a procurator of S Marco in 1645, and whose influence led to Rigatti's appointment as a *sottocanonico* of S Marco in July 1647.

The high esteem in which he was held at Udine while still in his early twenties is entirely consistent with his being, together with men such as Giovanni Rovetta and Gasparo Casati, one of the outstanding Italian composers of church music working in the 1630s and 40s. Nine of his eleven surviving collections are of church music: two books of solo motets, three of small-scale concertato motets (one including a *messa breve*) and no fewer than four of psalm settings (three including a mass each). Most of this music includes parts for obbligato instruments, usually violins, and much of it is adaptable, either to an intimate chamber-like medium with solo voices and perhaps violins, or to grander occasions by the addition of a ripieno chorus and sometimes extra instruments. The 1640 *Messa e salmi*, dedicated to the Emperor Ferdinand III, is the most impressive collection. It maintains a consistently high level of invention and rivals Monteverdi's

Selva morale of the same year in its comprehensive range of contents: one mass and several psalms in the grand concertato manner, psalms for smaller combinations of voices and instruments, and others marked 'da cappella' (denoting not the *stile antico* but the absence of soloists and the instrumental doubling of voices).

No matter how grand a texture he was writing for, Rigatti as a monodist was always capable of gracing his music with delightful, memorable melodies, vocal or instrumental (his violin ritornellos are often most attractive). This talent can be seen at its best in the second setting of *Nisi Dominus* (for SSB, two violins and continuo) in the 1640 volume. It is built almost entirely on a descending four-note ground bass (cf the love duet at the end of Monteverdi's *L'incoronazione di Poppea*). Its quite romantic expressiveness derives not only from the incredibly varied melodic writing over the anchoring bass, but also from the many tempo and dynamic changes specified by Rigatti himself and integral to his personal style – such markings are often found in his works. His church music is as inventive in other ways, for example in its coherent musical structures involving refrains, ritornellos and ground basses, in the occasional use of fugal exposition and in the often dramatic word-painting, which led him to introduce a 'toccata da guerra' in the *stile concitato* into the 'Fecit potentiam' verse of the *Magnificat* in the 1640 volume. His small-scale Compline setting of 1646, probably written for the Patriarchal household, contains some of his finest music, including a setting of the psalm *Cum invocarem* for alto and four strings, which is remarkable not only for its length and the virtuosity required of the singer, but also for the expressive word-setting and sense of structure.

Ground basses are found too in the secular monodies of 1641; this volume also includes three cantatas – two examples of the now increasingly old-fashioned strophic-bass cantata and one of the new kind of chamber cantata in several contrasting sections, to words from Guarini's *Il pastor fido*. The madrigals of 1636, many of which probably date from his late teens, are Monteverdian in manner and include luscious duets, a canzonetta and a piece using the romanesca bass. They demonstrate his melodic gift and talent for expressive word-setting, especially in the trio *Ecco che pur baciate*, and show clearly why even in his early twenties he was known in Udine as one of the finest musicians of the Veneto.

WORKS

all except anthologies published in Venice

SACRED

Primo parto de motetti, 2–4vv, con alcune cantilene, con suoi ripieni ad lib (1634)
Messa e salmi parte concertati, 3–8vv, 2 vn, other insts ad lib, e parte, 5vv (1640)
Messa e salmi ariosi, 3vv, concertati e parte con li ripieni ad lib (2/1643)
Motetti, 1v, bc (1643)
Salmi diversi di Compieta ... 1–4vv, parte con istromenti e parte senza, con tutte le antiphone dell'anno (1646)
Motetti, 1v, bc (org/hpd/theorbo/other inst), libro II (1647)
Motetti, 2–3vv, con una messa breve (1647)
Musiche diverse, 2vv, bc (1647)
Messa e salmi, 3vv, con 2 vn, 4 parti di ripieno ad lib, libro II (1648)
2 ps repr. in 1646[4]; 1 mass repr. in 1671[1]
12 motets in 1646[4], 1649[1], 1653[1], 1659[3], *S-Uu*, *F-Pn*; other motets in *RUS-KA*; 1 mass in *S-Uu*; 2 ps in *D-W*, *PL-WRu*

SECULAR

Musiche concertate cioe madrigali, 2–4vv, bc, libro I, op.2 (1636); 1 duet ed. in Whenham
Musiche diverse, 1v, bc (1641) [incl. 1 dialogue, 2vv]

JEROME ROCHE/ELIZABETH ROCHE

Rigaud, Louis de, Sieur de Fonlidon (*fl* *c*1623). French composer and lutenist. He was probably in the service of the Maréchale de Thémines, to whom he dedicated his collection of *airs*. The 14 *airs*, which are remarkable for their suppleness of style, were designed to please visitors to the Maréchale's salon, who are known to have delighted in pieces such as the 'Ballet de Madame' and in the solo lute introduction to one of the other *airs*. The collection includes six *airs* for the *Ballet de la Maréchale de Thémines*, which was danced by the Maréchale herself. (G. Durosoir: *L'air de cour en France (1571–1655)*, Liège, 1991)

MARGARET M. McGOWAN/GEORGIE DUROSOIR

Rigaudon [rigadon, rigadoon]. A French folkdance, court dance and instrumental form popular in France and England in the 17th and 18th centuries. As a folkdance it was traditionally associated with southern France, especially the provinces of Vavarais, Languedoc, Dauphiné and Provence, although the term is now used to refer to a wide variety of folkdances from several regions. It is not certain that any of the folk rigaudons were related to the court dance that gained popularity during the reign of Louis XIV. A letter of Mme de Sévigné to her daughter, dated 1673, remarked that 'Mme Santa Cruz triumphs in the Rigadon'. The popularity of the dance seems to have spread quickly from Paris and Versailles to England and Germany. The rigaudon was especially popular in England, where at least one 'Rigadoon Royal' (Little and Marsh, no.7260) was composed by the famous dancing-master Isaac for Queen Anne's birthday in 1711. It was popular as a social dance for individual couples at balls, as a virtuoso theatre dance and, in simplified form for several couples at once, as one of the many kinds of contredanse.

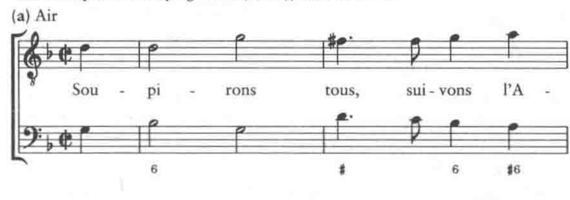
Like the bourrée, with which it was often compared (Mattheson, Quantz, Rousseau), the rigaudon was a 'gay' duple-metre dance in two or more strains characterized by four-bar phrases, usually with an upbeat. Apparently more than one type of rigaudon was known in England as several rigadoons in 6/8 metre appeared in George Bickham's *An Easy Introduction to Dancing* (1738). The duple rigaudon was used widely in French ballets and

operas, and occasionally somewhat stylized rigaudons were included in instrumental suites, usually after the sarabande movement along with one or more other 'popular' dances.

At least 36 choreographies with the title 'rigaudon' survive from the early 18th century, some by French choreographers but many by English; most are for social dancing, although a few were evidently for use in the theatre. The rigaudon was a courtship dance and was similar to the bourrée in that each dance represented a particular mixture of steps chosen from among many, including both the *pas de bourrée* and the *fleuret* (both characteristic of the BOURRÉE, involving a bend–rise–step–step combination). At least one step was peculiar to the rigaudon, the *pas de rigaudon*; this was a group of three movements (hop, step step, jump) done in place during three crotchets of music (Hilton, 226–7). Ex.1 shows the opening phrase of a popular early 18th-century court dance, the *Rigaudon de la paix* (Little and Marsh, no.7340), as it appeared in Feuillet's *Recüeil de dances* (1700). The *pas de rigaudon* is not shown here, but the second and fourth bars show the use of the *fleuret*; the combination of the rather restful *fleurets* in alternation with the activity of the first and third bars creates a rhythmic pattern of motion–repose–motion–repose for the phrase that was typical of the dance.

Ex.1 *Le rigaudon de la paix*, dance by Feuillet (Paris, 1700)

v = plié [bend]
∧ = élevé [rise]
I = plain step
J = jetté [leap]



The heyday of the rigaudon was somewhat later than that of the bourrée. None of Lully's stage works includes pieces called 'rigaudon', although two *airs* from the pastorale *Acis et Galatée* (1686) were so labelled elsewhere. Lully's successors favoured it: Campra included two rigaudons in his ballet *L'Europe galante* (1697), both simple binary structures. The four-bar phrases begin with a rather static harmony and agogic emphasis on the first two downbeats, with both harmonic and rhythmic activity accelerating to the ends of phrases. Campra's rigaudon pair follows a brief shepherd's *air* that shares the rhythm and form of the dance, and the scene is followed by an instrumental passepied. Ex.2 shows the opening strain of the *air* and that of the first rigaudon.

A similar rhythmic and harmonic phrase structure appears in the one rigaudon in Desmarets' opera *Circé* (1694). Rameau seems to have been particularly fond of the rigaudon, using it in nearly all his operas. In Act 3 of *Hippolyte et Aricie* (1733) a pair of rigaudons, the first played da capo, frame a sailor's *air* in praise of a safe landing; the *air* borrows the opening rhythm of the second rigaudon. Ex.3 shows the beginnings of both the rigaudon and the *air* based on it; the harmonic rhythm of this rigaudon is similar to that of Campra's, beginning with almost no motion and gradually quickening; but the melodic rhythm does not give the agogic emphasis usually accompanying this motion. In the ballet *Platée* (1744), two passepieds and two rigaudons, both da capo, are played during a dance representing the mingling of peasants and satyrs. Both dramatic uses of the rigaudon confirm Mattheson's judgment (in *Der vollkommene Capellmeister*, 1739) that the dance evoked a sense of sailing or of pastoral scenes.

Many instrumental rigaudons for harpsichord and ensemble show the characteristic harmonic and melodic rhythms and clear phrase structure of the theatrical dance. Their form was usually either that of successive unrelated strains or, more typically in the 18th century, a rounded binary structure. Ex.4, a rigadoon by Purcell from the

second part of *Musick's Hand-Maid*, shows the adoption of a melodic rhythm like that in the Rameau example

Ex.4 Purcell: *Musick's Hand-Maid*, pt 2, Rigadoon

above, lacking the characteristic upbeat and long notes at the beginnings of phrases but retaining the harmonic shape of the phrase. A more typical keyboard rigaudon, adopting the rhythmic pattern of the Campra example above, is shown in ex.5, from Gottlieb Muffat's *Componimento musicale* (1726). Other keyboard composers who

Ex.5 Muffat: *Componimento musicale* (1726)

favoured the rigaudon were Elisabeth Jacquet de la Guerre, Charles Daquin, J.C.F. Fischer, Johann Pachelbel, François Couperin and Rameau.

The rigaudon also found its way into Baroque orchestral and chamber music. J.J. Fux's *Concentus musicus* (1701) included two rigaudons, one linked with a trio bourrée that works out some rhythmic ideas introduced in the preceding rigaudon. The only significant difference between the rigaudon and the bourrée in this group is in the speed of harmonic change at the beginnings of phrases, for the rigaudon continues to have static openings accelerating to the ends of phrases. As a number of pieces called 'rigaudon' (see, for example, two in Muffat's *Componimento musicale*) give prominence to the crotchet–minim syncopation thought to be characteristic of the bourrée, and hence to be a distinguishing feature, the harmonic rhythm of rigaudon phrases may prove a useful distinction. Rigaudons were also included in instrumental suites by François Couperin (*4e concert royal*), Boismortier, Heudelinne, Lalande, Montéclair, J.C.F. Fischer, Telemann, Georg Böhm, J.C. Pez, Georg Muffat and Christoph Graupner, often, as in opera and ballet, followed by a passepied. Although the rigaudon gradually disappeared about the mid-18th century, a few later composers used it, including Grieg (Holberg Suite, 1884), Prokofiev, Saint-Saëns, MacDowell (*Air et rigaudon* for piano op.49 no.2) and Ravel (*Le tombeau de Couperin*, 1914–1917).

MEREDITH ELLIS LITTLE

Rigaut de Berbezilh (*fl* 1140–62). Troubadour. He evidently came from Barbezieux, in the Saintonge and Cognac region, north of Blaye. He was evidently a knight, probably the younger of two sons in a family of deputies to the Lord of Berbezilh, and seems to have been a distant cousin of Jaufre Rudel. A document dating from after 1157 indicates that Rigaut became a monk. His poetic output includes one planh and ten *cansos*. His poems contain beasts, birds, stars and other natural objects, and allusions to Ovid and the Perceval tale. The Perceval song, two of the bestiary songs and a traditional love *canso* survive with melodies, which are neumatic in texture with many leaps of 3rds, through-composed but with some varied repetition of phrases, generally staying within the range of an octave. A few of his songs achieved long-lasting fame, such as *Atressi cum l'orifans*, whose melody survives in three manuscripts, and whose text appears in a late 13th-century Italian *novellino*.

ELIZABETH AUBREY

Rigel [Riegel]. German, later French, family of musicians. Only (2) Anton Riegel continued to use the original spelling of the family name. (1) Henri-Joseph Rigel, who settled permanently in France in about 1768, and his sons, who were born there, seem always to have used the spelling Rigel, as do all extant documents and first editions of their works.

(1) Henri-Joseph Rigel (*b* Wertheim, 9 Feb 1741; *d* Paris, 2 May 1799). Conductor, teacher and composer. He was the son of Georg Caspar Riegel, an intendant (from about 1725 to his death in 1754) for Prince Löwenstein. After Georg's death his widow Maria Anna petitioned the prince for the support of her under-aged children, and it is probable that he furthered the musical education of her sons. In 1767 the name Riegel appeared for the first time in the Breitkopf Catalogue, with incipits for seven symphonies and one violin concerto. According to La Borde (*Essai sur la musique*, 1780), Rigel studied with Jommelli in Stuttgart, was sent by F.X. Richter to France 'pour faire l'éducation d'une jeune personne', and then settled in Paris in 1768. From this statement, it could be inferred that he studied in Mannheim with Richter. However, La Borde's date for Rigel's arrival in the French capital is inexact. The French press places him in Paris early in 1767 with the announcement of his op.1, *Six sonates pour clavecin*, obtainable 'chez l'auteur, rue S. Marc, maison de M. Dupin de Francueil' (*Annonces*, 9

April 1767). The dedicatee, Mlle Dupin de Francueil (later George Sand's aunt), is possibly the 'jeune personne' referred to by La Borde. Rigel was probably first employed, about 1764–5, outside Paris on her father's estates. In 1768 he established his own residence in Paris, and that is also the probable date of his marriage; it was in these quarters that his sons were born in 1769 and 1772.

Before 1780 Rigel published his own music, 'chez l'auteur', with his wife as engraver. He even published at least one work by another composer: *Pièces de clavecin, harpe ou pianoforte . . . par M. de Chabanon, mis au jour par Rigel, 1775*. After his arrival in Paris, Rigel established a distinguished reputation in the musical life of that city. In 1772 he served as a principal judge, along with Duni and F.-A. Philidor, of an important contest for the best symphony and *symphonie concertante*; the winners of the valuable first and second prizes were Cannabich and Eichner. During the 1770s Rigel wrote numerous instrumental works (sonatas, quartets, concertos and symphonies) that were performed in Parisian concert rooms. On 2 February 1774 a symphony by Rigel first appeared on a programme at the Concert Spirituel. Two oratorios by him written during this period, *La sortie d'Egypte* (1774) and *La déstruction de Jéricho* (1778), enjoyed an immense success; the former was performed at the Concert Spirituel no fewer than 27 times from 1775 to 1786, and was performed in Paris as late as 1822. In about 1780 Rigel turned his attention from instrumental and sacred vocal composition to the writing of large-scale stage works. After 1780 his wife is no longer mentioned, and within the next two years, his younger brother (2) Anton Riegel came to live with him and act as his publisher until Boyer took over the sale and publication of his works in 1784. Between 1778 and his death in 1799, Rigel composed all of his 14 operatic works. He worked with a variety of librettists, composing operas for most of the prominent Parisian theatres, including the Comédie-Italienne, Théâtre Feydeau, Théâtre de l'Ambigu-Comique and the Opéra. In 1783 (and later) he was officially listed among the ten 'compositeurs de Concert Spirituel'. According to the *projet* of 1783 for the Ecole Royale de Chant, Rigel was appointed *maître de solfège*. The same source states that he was previously associated with the Paris Opéra. After the Revolution, when the school was reorganized as the Conservatoire, he remained as a professor *première classe* of the piano, a position he held for the rest of his life. Also in 1783 (and in 1787–8) Rigel is listed as *chef d'orchestre* of the Concert Spirituel. In the early 1790s works by him appeared frequently on programmes at the Cirque du Palais-Royal and the Concert du Cirque National.

Henri-Joseph Rigel was one of the most respected musicians in Paris during the last quarter of the 18th century. His contemporaries praised the excellence of his teaching as well as the quality of his compositions. His oratorios and motets, all written for the Concert Spirituel, had remarkable records of performances. Although he composed 14 stage works (of which most of the music is lost), Rigel was less successful as an operatic composer; his talent was lyrical rather than dramatic. Of his most popular opera, *Rosanie* (1780), the editor of the *Mercure de France*, after reproaching the composer for interrupting the forward motion of his action with 'des airs à roulades', wrote the following: 'his style is pure; his workmanship is learned; his composition is full of ideas; his expression is true; his accompaniments well conceived, and his melodies of a fluent and graceful nature'. Rigel's principal contribution, however, was to instrumental music. His numerous works for the keyboard continued the tradition of the French piano school begun by Schobert. Except for the sonatas op.1 (1767), all his keyboard compositions are accompanied by a diversified assortment of instruments. Most are in two or three concise movements. Half of the *Six sonates* op.13 employ dance or dance-like movements: Scherzo, Allemande stirienne, Marcia maestoso à la polonese, etc. Despite their designation of both harpsichord and piano in the title, his works appear to have been conceived primarily for the piano, as evidenced by their wide range of dynamics and sonorities. The very nature of their settings, i.e. *Sonates de clavecin en quatuor* op.7, or *Second oeuvre de symphonies pour le clavecin ou piano-forte* op.17 (both with optional parts for two violins, two horns and a cello), indicates the composer's orchestral conception and treatment of the instrument. Similarly, half the solo sonatas show a strong influence of contemporary orchestral style: there are full, repeated chords in both hands at the opening of movements and important cadences, extended octave tremolos, and strongly contrasting second themes preceded by pauses. Rigel wrote more than 20 orchestral works, comprising symphonies, solo concertos, and an unusual *Concerto concertant* op.20 for keyboard and solo violin with orchestra. All are in three movements, except for the *Sinfonie pastorale* (op.21 no.4), which has an opening Andante preceding the usual fast–slow–fast movements. Frequent performances of this work were reported at the Concert Spirituel, Concert des Amateurs and the Concert de la Loge Olympique. The orchestral works are excellent examples of an internationalized style. The salient feature in Rigel's orchestral music, as pointed out by Sondheimer (1956, p.223), is its remarkable lyricism. Sondheimer distinguished two melodic types, the first of 'sweet grace and loveliness with every tone of touching affection [symbolizing] . . . feminine beauty. The second is in the minor and of a passionate and yearning disposition'. Rigel applied his lyrical gifts to many genres and styles with a great deal of success.

Chbr: 6 sonates, hpd, op.1 (1767); 6 quatuors dialogués, str qt, op.4 (*c*1770); Pièces de clavecin mêlées de préludes pour les commenceants, op.5 (*c*1770); Suite des pièces . . . mêlées de préludes, hpd, acc. vn ad lib, op.6 (*c*1771); Sonates de clavecin en quatuor, opt. acc. 2 vn, 2 hn, vc, op.7 (*c*1771); 6 sonates de clavecin en quatuor, op.8 (*c*1772); Sonates de clavecin en quatuor, op.9 (*c*1772); Second oeuvre de quatuors dialogués, str qt, op.10 (*c*1773?, 6 sonates, hpd, acc. vn ad lib, op.13 (1777), march from no.4 ed. in G. de Saint-Foix (1924); 3 duos, pf/hpd, op.14 (*c*1777) [also pubd as qts, 2 vn, va, pf]; 3 sonates en symphonies, hpd/pf, op.16 (1783); Second oeuvre de symphonies, hpd/pf, op.17 (1784); 3 sonates, hpd/pf, op. 18 (1784); other chbr and kbd pieces in 18th-century anthologies; various arrs.

(2) Anton Riegel [Antoine Rigel] (*b* Wertheim, ?*c*1745; *d* ?Mannheim, after 1807). Teacher and composer, brother of (1) Henri-Joseph Rigel. He appears to have travelled throughout Europe. His name is first mentioned in the Hummel Catalogue of 1771 with incipits of his six quartets op.1 for flute, violin, viola and bass (they were first advertised in January 1770). In the Breitkopf Catalogue of 1773 there is another listing for these quartets, as well as one for a flute concerto in C major, by a Riegel, probably Anton. He may have arrived in Paris as early as 1776, when his op.1 quartets were published there by Le Menu & Boyer. In 1782 he was living in Paris with his older brother, Henri-Joseph; the *Almanach musical* of 1783 lists Anton as a teacher of the piano and the flute. During this period he published some of his brother's works (opp.16 and 18) as well as at least one of his own (op.6), and took up residence at the Cul de sac de la Corderie. His Parisian publications, mainly accompanied keyboard works, ceased in 1787 with his op.7; he probably left the capital shortly thereafter. In the mid-1780s his works, including re-editions of Parisian prints, appeared in Offenbach, Amsterdam, Speyer, Mannheim and Heilbronn. At the end of the century he lived in Heilbronn, and after 1807 he was reported living in Mannheim. Anton Riegel enjoyed a modest if unfocussed career. He was a competent composer whose output consisted mainly of accompanied keyboard sonatas and chamber works.

WORKS

op.	
1	Six quatuor, fl, vn, va, b (The Hague, 1770)
2	Six sonate en trio, hpd/pf (Paris, 1773)
3	Tre quattri, hpd, 2 vn, vc (Mannheim, before 1779)
4	Six sonates, hpd, acc. vn (Paris, 1782)
5	Six sonates, hpd/pf, acc. vn (Speyer, before 1781)
6	Deux sonates en symphonie, kbd, acc. 2 vn, 2 hn, vc (Paris, 1785)
7	Trois sonates, hpd, vn obbl (Paris, 1787)
8	Deux caprices, hpd, acc. vn (Offenbach, 1790)
9	Trois sonates faciles, hpd, acc. vn (Offenbach, 1790)

Works without op. nos.: Symphonie à grand orchestre, E♭, *F-Pc*; Sym., D, 2 ob, 2 fl, 2 hn, 2 tpt, timp, org, str, *US-Wc*; Sym., C, *D-Rtt* [doubtful; probably by Henri-Joseph Rigel]; Fl Conc., cited in Breitkopf Catalogue of 1773; 6 trios, fl, vn, b, *KA*; Qt, d, fl, vn, va, vc, *B-Bc*

(3) Louis Rigel (*b* Paris, 1769; *d* Le Havre, 25 Feb 1811). Pianist, composer and teacher, son of (1) Henri-Joseph Rigel. He studied with his father and became an excellent pianist and teacher, as well as a fair performer on the violin. Louis was the first to publish piano arrangements (Paris, 1778; accompanied by two violins, a viola and a bass) of the six Paris Symphonies of Haydn. According to the title-page of these arrangements, he was a member of the Académie Royale de Musique (the Opéra). After the Revolution he settled in Le Havre, where he lived until his death. He left a number of unpublished works that his brother, Henri-Jean, proposed to publish but never did. His only other known publications are *romances* in *Feuilles de Terpsichore* (1786–7), and keyboard arrangements of trios by Pleyel and of various opera overtures.

(4) Henri-Jean Rigel (*b* Paris, 15 May 1770; *d* Abbeville, 16 Dec 1852). Pianist, teacher and composer, son of (1) Henri-Joseph Rigel. He first studied the piano and composition with his father, and then entered the Ecole Royale de Chant at its formation in 1784. In 1785 he became a *sous-maître de solfège* there. After his first year he received official praise from F.J. Gossec, the school's director, for his great service in training the young, rehearsing choruses, and accompanying at the piano for both the theatre and the singing classes. On 9 April 1787 Henri-Jean made his début as a composer at the Concert Spirituel with a performance of a 'nouvelle scène française', possibly one of his cantatas (text by Vacherot). *Judith* and *Le retour de Tobie* (same librettist) were performed later that year at the Concert Spirituel. In 1788, the name Rigel *fils* appeared five times on programmes at the Concert Spirituel with performances of his *scène*, a *symphonie*, and the Duo with words by Vacherot. Choron and Fayolle, who apparently knew Rigel personally, list *Gédéon, Judith* and *Le retour de Tobie* as having been performed at the Concert Spirituel between 1787 and 1791. On 29 March 1790 scenes from *Judith* and *Le retour de Tobie* were performed at the Cirque du Palais-Royal. None of these works was printed.

Rigel's first published work, *Trois sonates pour forte-piano* op.1, appeared in 1794. During the post-Revolutionary period, he also published *Ode contre les émigrés* and transcribed a number of Revolutionary hymns and overtures by Catel, Méhul and Gossec for piano (1794–5). When the Ecole Royale de Chant was reorganized into the Conservatoire in 1795, Henri-Jean was retained as 'professeur de 2e classe', remaining there until 1797. In 1798 he was appointed by Napoleon to take part in an expedition to Egypt. In Cairo he was made a member of the Egyptian Institute of Sciences and Arts and was appointed music director of the newly formed French Theatre, for which he wrote *Les deux meuniers* (1799), an *opéra comique* in one act to a text by C.L. Balzac. After his return to France in 1800, he became known as one of the best professors of the piano in his time. Napoleon awarded him the title 'pianiste de la musique particulière de l'Empereur et Roi'. His career as teacher and accompanist was long and distinguished; he was later one of the teachers of César Franck. In addition to his teaching and performing, he continued conducting: on 28 September 1814 'M. Rigel de la musique du roi' conducted a solemn concert 'en l'honneur de la paix' at the church of Belleville, Paris. His reputation as a composer rivalled that of his father. He wrote a large number of works in many genres, including operas, cantatas, smaller vocal pieces, orchestral works and numerous sonatas, concertos and potpourris for the piano. From 1816 he was active as a member of the Société Académique des Enfants d'Apollon, serving as its Commissaire de Musique (1820) and as president (1825); a number of his works appear on the society's programme, and he was instrumental in reviving several of his father's works as well. He married Mlle Duval de Sorcourt and established his residence in Abbeville, where he died at the age of 82.

Henri-Jean's works have often been confused with his father's (in Eitner, Sondheimer, Riemann in DTB, xxviii, Jg.xvi etc.). His publications reached op.50, but many appear to be lost, while works for which performances have been recorded in the contemporary press appear never to have been published. According to Choron and Fayolle's list, Rigel published the following works before 1811 (when their *Dictionnaire* appeared): three concertos, five sets of sonatas, nine fantasias or potpourris, a set of theme and variations dedicated to 'Dusseck', a Grand Duo for harp and piano dedicated to M. Naderman, three overtures for piano and large orchestra, three volumes (*cahiers*) of *romances*, several individual *romances* (among others, *Petits oiseaux*, which enjoyed much success), several *scènes italiennes* and a large piece for the panharmonicon, which was well received. He also composed many works that remain in manuscript, although he hoped to publish them. According to Choron and Fayolle, his compositions were esteemed for their good taste and 'regularité'.

WORKS

VOCAL

Les deux meuniers (oc, 1, C.-L. Balzac), Cairo, 1799

Le duel nocturne (oc, 1, C. de Longchamps), Paris, Feydeau, 23 Dec 1805

Scènes françaises: Gédéon, Judith, Le retour de Tobie: all Concert Spirituel, 1787–91; Cantata in honour of Le Sueur, Abbeville, 5 Aug 1846

Romances (pubd in Paris unless otherwise stated): Petits oiseaux (Balzac) (*c*1799); Recueil de 6 romances . . . déd. à Mme Bonaparte (?Paris, 1804), lost; 2me recueil de 3 nouvelles romances, op.18 (?Paris, 1805), lost; 3me recueil de 3 nouvelles romances, op.20 (?Paris, 1807), lost; La leçon de la rose (1807); Les souvenirs (1808), lost; La bergère inquiète (1808), lost; Je t'aimerai (1809), lost; Fleur de beauté (Mme de Coupigny) (1811), lost; Autrefois dans ces prés fleuris (1811), lost; Le fleuve paisible (1811), lost; Limpides eaux dont le miroir (1811), lost; Revenez habiter mon coeur, tranquille paix (1811), lost; L'amitié (1812); Le jeune Hortense (1812); Regrets de l'absence (1812); Au Zéphir (1813); Le bouquet (1814); L'indifférence (1815), lost; Le barde au tombeau de sa bien-aimée (1815), lost

Others, incl. Duo (Vacherot), Concert Spirituel, 1788; Ode contre les émigrés (Crassous) (Paris, 1794)

Works known only through perfs. at Société Académique des Enfants d'Apollon: Hymne au soleil (récit, chorus), 11 May 1820; Scène italienne, songs and choruses from an orat, 31 May 1821; Rondo (Bouilly), couplets, Jan 1823; Scène et rondeau italiens, 24 May 1824; Invocation à Apollon, 3 solo vv, chorus, orch, 4 May 1826; Grande scène italienne, 21 May 1846

INSTRUMENTAL

printed works published in Paris unless otherwise stated

Orch: Simphonie à 15, *D-DS*; 1er concerto, pf op.4 (*c*1795); 2me concerto, pf (1804); 3me concerto, pf op.12 (1804); 4me concerto, pf, op.28 (1813); Grande ouverture, D (n.d.); Ouverture à grand orchestre, Nov 1822, Ouverture pastorale (n.d.), 15 May 1828, Ouverture pour orchestre, 20 May 1830, L'héroïque, grande ouverture, 4 May 1845: all perf. at concerts of Société Académique des Enfants d'Apollon

Chbr: Sonates, pf, vn, op.7 (Paris and Offenbach, n.d.); Sonates, pf, vn, op.19 (Paris and Offenbach, n.d.); Partition du grand quintetto, 2 vn, va, vc, db/vc, op.49 (*c*1830); Quatuor, pf, vn, va, vc, op.50 (n.d.); Grand et brillant quintette, pf, vn, va, vc, db (n.d.); Trios, pf, hp, vn (n.d.); Divertimento, 2 hps (n.d.); Quintetto, 1826, Trio . . . sur l'air ancien 'Petits oiseaux', hp, pf, vn, Dec 1831, Quintetto, E♭, Dec 1839: all perf. at concerts of Société Académique des Enfants d'Apollon

Pf: 3 sonates, acc. vn ad lib [op.1] (1794); 3 sonates de différens genres, op.2 (*c*1795); 3 sonates, op.3 (n.d.); Nouveau mélange varié, op.16 (Paris and Zurich, n.d.); 2 grandes sonates, op.17 (n.d.); Pot-pourri varié . . . sur les airs d'Armide et Télémaque, pf, hp, op.35 (*c*1820); Rondo brillant, op.45 (n.d.), ?same as Rondeau, opt. acc. fl, 2 vn, va, b, db, op.45 (Leipzig, 1830); Grand morceau pattetico et brillant, 4 hands, op.48 (*c*1835); Duo, 4 hands (n.d.); Duo. 2 pf (n.d.); others, incl. rondos for 2 pf in *The Harmonicon* (1823–5); arrs. of works by Dalayrac, also of Revolutionary hymns and ov. by Méhul, Gossec etc, *c*1795

BARRY S. BROOK, RICHARD VIANO

Righetti [Giorgi, Giorgi-Righetti, Righetti-Giorgi], **Geltrude** (*b* Bologna, 1793; *d* Bologna, 1862). Italian contralto. She studied in Bologna and gave her first public performance there in 1814. She was invited by Duke

Sforza Cesarini to sing, at the express wish of Rossini, in the première of *Il barbiere di Siviglia* (1816, Teatro Argentina, Rome), though only very late and after another singer had declined. In 1817 she created the title role in *La Cenerentola* at the Teatro Valle in Rome. During her brief career, she was appreciated for her coloratura singing, her range extending from *f* to *b♭″*. She retired from the stage, probably for health reasons, in 1822. Her *Cenni d'una donna già cantante sopra il Maestro Rossini* (Bologna, 1823), a reply to an article by Stendhal published under a pseudonym in the *Revue mensuelle de Paris* (1822), gives an interesting account of the première of *Il barbiere di Siviglia*.

BRUNO CAGLI/R

Righi, Giovanni (*b* Carpi, 2 June 1577; *d* Carpi, 9 Aug 1613). Italian composer. A letter from Paolo Guaitoli to Angelo Catelani (printed in Gaspari) gives details of Righi's ecclesiastical career; he received the tonsure in December 1590, progressed slowly through minor and major orders and was finally ordained in April 1601. The Carpi Cathedral records show that he was *maestro di cappella* there on 10 June 1605, although according to Guaitoli's letter and the records he only held the post for a few days between 9 May and 27 June, and not for three years as Spinelli stated. It is evident from the dedication of his *Secondo libro* that he was then a canon and *maestro di cappella* at the collegiate church in Mirandola, a post which he still held in 1610 when his *Terzo libro* was published. On 9 January 1612 he was again elected *maestro di cappella* of Carpi Cathedral.

WORKS

SACRED

Psalmi omnes qui in Vesperis ... decantantur, 5vv (Venice, 1603)
Missa, motecta, psalmi, litaniae (Venice, 1606), inc.
Completorium romanum ... una cum litaniis, motectis et anthiphonis BVM, 8vv, bc (org) (Venice, 1610[8])

PIER PAOLO SCATTOLIN

Righi, Giuseppe [Gioseffo] **Maria** (*fl* 1694–1717). Italian composer. He set to music *La Bernarda*, a 'dramma rusticale per musica' by Tommaso Stanzani, performed at the Teatro Formagliari, Bologna, in Carnival 1694, and perhaps earlier at the church of S Paolo using marionettes. This work may be based on the prose 'commedia rusticale' of the same title by G.C. Allegri, in turn a translation into Bolognese dialect of the much adapted *La Tancia* by Michelangelo Buonarroti the younger. Righi also set to music Stanzani's *Il riposo d'Italia*, a 'trattenimento musicale', which was performed in Bologna in 1689. As well as an oratorio, *La pia contesa* (text by Vangini), given in 1707, Righi composed a *Regina coeli* for four voices (score in *I-Baf*) for his admission in 1707 (Schmidl gave 1702) to the Accademia Filarmonica, Bologna, of which he was elected *principe* in 1717.

THOMAS WALKER (with MARC VANSCHEEUWIJCK)

Righini, Pietro (*b* Bologna, 31 July 1907). Italian horn player and specialist in physical acoustics. He studied the horn at the Bologna Liceo Musicale (diploma 1924) and physics and acoustics in Rome and Turin (1937–8), holding appointments in theatre orchestras in Bologna (Teatro Comunale, 1924–8), Turin (Teatro Regio, 1928–9) and Naples (S Carlo, 1929–32) and with the Italian radio orchestra (1932–51). He was professor of the horn at Turin Conservatory (1933–73) and on the staff of the sound-recording unit of RAI-TV, Direzione Tecnica (1951–68, director from 1961) and a member (1968–70) of the Council of Europe committee for the standardization of pitch. In 1973 he was appointed to teach the history of modern music theory at the Cremona Scuola Universitaria di Filologia e Paleografia Musicale. Righini believes that the study of acoustics is indispensable to a modern musical education. His book *Il suono* (written in collaboration with his son) in particular has indicated the contribution acoustic studies should make, not only to such related spheres as architectural acoustics, but also to such specifically musical topics as transcription, orchestration and performance.

FERRUCCIO TAMMARO

Righini, Vincenzo (Maria) (*b* Bologna, 22 Jan 1756; *d* Bologna, 19 Aug 1812). Italian composer and singing teacher. According to Gerber he was trained as a singer in his native city and received instruction in composition from Martini, and according to Fétis he made his début as a tenor in Parma. His first confirmed appearances are in Florence in 1769 and Rome 1770. After joining Bustelli's opera company in Prague as a singer, he composed three *opere buffe* and parts of an *opera seria*, two of which were also produced outside Prague, *La vedova scaltra* in Brescia, Vienna, Brunswick and Eszterháza, and *Il convitato di pietra* in Vienna and Eszterháza. By 1777 Righini seems to have moved to Vienna, for on 18 December of that year he appeared as a soloist in a performance for the Tonkünstler-Societät of Salieri's *La passione di Gesù Cristo*. He established himself there as a singing teacher, counting among his pupils Maria Theresia Paradis, several apprentice singers from the court opera including Josepha Weber and perhaps Princess Elisabeth von Württemberg. His reputation as a singing teacher followed him to Mainz and later Berlin, where he published the *solfeggio* exercises that were reprinted throughout Europe. In Vienna Righini received two commissions for private operas, *Armida*, which was performed by the nobility in Prince Johann Adam Auersperg's theatre in 1782, and *Piramo e Tisbe*, which was performed in Prince Alois Liechtenstein's palace in 1784. Righini also composed two operas for the court theatre, *L'incontro inaspettato* and *Il demogorgone*, but neither was successful. He was nonetheless engaged in 1787 to substitute for Salieri as Kapellmeister of the court opera while Salieri was in Paris producing his opera *Tarare*. Two more works derive from Righini's Vienna period, the cantatas *La sorpresa amorosa* and *Il natal d'Apollo*, the latter written for the Tonkünstler-Societät.

Towards the end of 1787 Righini moved to Mainz, where on 1 July he had been appointed as Kapellmeister to the elector and archbishop Carl Friedrich Joseph von Erthal. Although his duties included composing church music, only the Mass in D minor can be unequivocally traced to this period; it was composed for the election of Emperor Leopold II in Frankfurt on 30 September 1790, and it may have been repeated at the election of Franz II two years later. According to Gottron, in 1788 Righini produced his *Armida* at Aschaffenburg, replacing those numbers in the Vienna version that had not been written by himself with music of his own composition. Between 1788 and 1790 Righini worked on the *azione teatrale Alcide al bivio* for the Elector of Trier. The composer wanted to modernize Metastasio's libretto by incorporating ensembles, but the Elector insisted on his setting the original text, merely shortened in the final scene.

In March 1793 Righini was appointed Kapellmeister to the Prussian court, thereby escaping the difficulties that had arisen for him after the French occupied Mainz the previous October. The appointment followed upon the successful performance of *Enea nel Lazio*, which had been commissioned by Friedrich Wilhelm II. Righini alternated with J.F. Reichardt (who warmly welcomed his appointment), and from 1795 with Reichardt's successor F.H. Himmel, in conducting the Hofkapelle in performances of serious operas as well as in court concerts. For the court opera he composed four *opere serie* and a *festa teatrale*; he also again revised his *Armida*. In addition, Righini directed the *opera buffa* company, which performed mainly in Potsdam, until it was disbanded in 1798. Its repertory was drawn from contemporary Italian and Viennese productions. For it Righini revived in 1794 and 1795 the two comic operas he had written for Vienna. Other compositions Righini composed for the court included occasional music for official functions and for the *Redouten* balls during Carnival, as well as the *Te Deum*, which was composed to celebrate the return of Friedrich Wilhelm III and his wife Luise from Königsberg in 1809. It was performed on 13 March 1810 in the palace at Berlin by almost 500 singers and instrumentalists. The united forces of court musicians and amateurs from the city's middle classes lent to this occasion an air of national homage.

Through the numerous songs, ariettas, romances and chamber duets that he began to write in Mainz, and through the arias and ensembles that were widely disseminated in piano reductions, Righini secured himself a place in salon and domestic music. Through his opera music his name was familiar to concert audiences in at least North and Central Germany. After the change of government in 1797, he began a series of concert tours, visiting Hamburg (1798 and 1799), Ludwigslust (1799) and Italy (1804–5 and 1812). Despite the closing of the Berlin court opera in 1807, Righini retained his post of court Kapellmeister. His last opera, *La selva incantata*, remained in the repertory of the royal drama company, as a 'romantic-heroic' opera, until 1816. Memory of Righini faded after 1820, even if a few compositions like the overture to *Tigrane*, the Mass in D minor and sacred parodies of some operatic excerpts were still occasionally performed.

Righini was mainly an opera composer, moving in the course of his career from *opera buffa* to *opera seria*. While little is known about his comic operas, his Berlin operas typify the late Metastasian opera in hybrid Italian-French style that were so much in favour at the Prussian court. The allegiance to Metastasian principles, subscribed to by the court poet Antonio Filistri de' Caramondani, rested on the still accepted view of court opera as representative opera, with its emphasis on ethical models and political allegory. This traditional dramaturgical structure, however, was enriched with elements taken from *tragédie lyrique* such as action-packed *introduzioni*, scene complexes and ballets. Through his use of contrasting tempos and sectionalization in arias and ensembles, and through his dramatic use of instrumentation, Righini followed the tendencies towards heightened drama characterizing *opera seria* of his time. His ability to combine cantabile melody with rich orchestration was admired by his contemporaries as exemplifying the perfect German-Italian hybrid style, whereas by the time of his death the dramaturgy of his operas was considered outmoded. Righini's sacred music reflects a variety of aesthetic and

stylistic trends current about 1800: the Viennese tradition of mass settings (Mass in D minor), the *a cappella* ideal (Requiem), and the religious, emotionally evocative concert piece (*Te Deum*). His more than 150 published songs show great variety as well, some of them pointing in the direction of the early Romantic art song.

WORKS

STAGE

La vedova scaltra (comedia per musica, 2, N. Porta after C. Goldoni), Prague, 1774, *H-Bn*

La bottegha del caffè, o sia Il maldicente (dg, 2, Porta), Prague, 1775, *Bn*

Il convitato di pietra, o sia Il dissoluto (dramma tragicomico, 3, Porta), Prague, 1776, *Bn*; as Das steinerne Gastmahl, oder Der Ruchlose, Vienna, 1777

Armida (dramma per musica, 2, after M. Coltellini), Vienna, Auersperg Palace, 23 July 1782, incl. music by Antonio Tozzi; rev. Aschaffenburg, ?1788; (A. Filistri de' Caramondani), Berlin, 1797, 1799; *D-Bsb*, *GB-Lbl*, vs (Bonn and Leipzig, *c*1805)

Piramo e Tisbe (op), Vienna, Liechtenstein Palace, 21 March 1784

L'incontro inaspettato (comedia per musica, 2, Porta), Vienna, Burg, 27 April 1785, *A-Wn*, *D-Bsb*, *H-Bn*; as Die unvermutete Zusammenkunft, Berlin, 1793

Il demogorgone, ovvero Il filosofo confuso (dg, 2, L. Da Ponte), Vienna, Burg, 12 July 1786, *D-Bsb* (inc.), *F-Pn*

Alcide al bivio (azione teatrale, 1, Metastasio), Koblenz, 6 May 1790; rev. as cant., Vienna, 1804; *A-Wgm*, *I-Bc**

Enea nel Lazio (dramma eroi-tragico, 3, Filistri), Berlin, 7 Jan 1793, *A-Wgm*, *D-Bsb** (inc.), *Bsb*, *Dl*, *GB-Lbl*, *H-PH*, vs (Leipzig, n.d.)

Il trionfo d'Arianna (Dramma, 3, Filistri), Berlin, 28 Dec 1793, *D-Bsb*, *Dl*, *Hs*

Atalanta e Meleagro (festa teatrale, 1, Filistri), Berlin, 15 Feb 1797, *Bsb*, *Hs*, *MEIr*

Tigrane (dramma eroi-tragico, 3, Filistri), 1795, perf. Berlin, 3 Feb 1800, *Bsb**, *Bsb*, vs (Leipzig, 1809)

Minerva belebt die Statuen des Dädalus (pantomime), Berlin, 1802; arr. pf (Leipzig, 1802)

La selva incantata e Gerusalemme liberata, ossia Armida al campo de'franchi (dramma, 3, Filistri after Tasso: *Gerusalemme liberata*), Berlin, 24 Jan 1803, *Bsb*, *Dl*, *SWl*, *GB-Lbl*, excerpts in vs (Leipzig, *c*1805); as Der Zauberwald, Berlin, 1811

Music in: La Merope (tragedia per musica), Prague, 1776; *CZ-BER* (inc.); Vasco di Gama (op), Berlin, 1792

OTHER WORKS

Cants. and occasional works: La sorpresa amorosa (cant.), 3vv, orch, Vienna, 1780; Il natal d'Apollo (cant.), vv, orch, Vienna, 1789, *A-Wgm*, *Wn* (2 copies), *D-Bsb*, *Mbs*, perf. as op (Filistri), Berlin, 1794; Cantate avec choeurs et danses russes, vv, pf, Berlin, 1801, vs (Leipzig, 1802); Approchons, prenons, courage, divertissement, S, S, B, pf, for birthday of the Princess Royal, *Bsb*; Beauté, graces, amour, jeunesse (cant.), excerpts in vs (Breslau, n.d.)

Sacred: Mass, d ('Krönungsmesse', Missa solemnis), S, A, T, B, 4vv, orch, Frankfurt, 30 Sept 1790 (Berlin, 1815), *A-Wn**, *Wn* (5 copies), *CH-E*, *CZ-Bm*, *KU*, *Pk*, *D-Bsb*, *BAUd*, *BNms*, *D-Dl*, *D-GÖs*, *LEm*, *D-MZmi*, *NL-At*; Requiem, 4vv, *A-Wgm*, *D-Bsb**, *Bsb* (Berlin, 1810; Wiesbaden, 1978); TeD, S, A, T, B, 4vv, orch, Berlin, 13 March 1810, *A-Wgm*, *D-BNms*, *I-Bc**; others

Inst: sym., D, before 1790, *D-Rtt*; fl conc., G, before 1790, *BFb*, *DK-Kk*; Partita, E♭, 2 ob, 2 cl, 2 hn, 2 bn, also as Serenata, 2 cl, 2 hn, 2 bn (Leipzig, *c*1800), and Sonata VI, vc, pf (Leipzig, n.d.)

Ascribed: Ob conc., ed. Heussner (Vienna, 1988)

Pedagogical: Excercices pour se perfectionner dans l'art du chant (Paris, n.d.; Ger. trans., n.d. as Übungen um sich in der Kunst des Gesanges zu vervollkommen, op.10)

Miscellaneous: numerous songs, ariettas, partsongs, pf pieces, many pubd

CHRISTOPH HENZEL

Righteous Brothers, the. American pop vocal duo. Its members were Bill Medley (*b* Santa Ana, CA, 19 Sept 1940) and Bobby Hatfield (*b* Beaver Dam, WI, 10 April 1940). Guided by the record producer Phil Spector, they brought melodramatic harmonies to a series of popular ballads in the 1960s, achieving million-selling recordings in the process. Although white, they achieved a credible soul music sound through Hatfield's mellifluous tenor and Medley's expressive bass baritone. The duo had performed in Los Angeles clubs before Spector recorded them with *You've lost that lovin' feelin'* (1964), a song he had written with Cynthia Weil and Barry Mann. The arrangement, including a harpsichord playing in unison with electric and acoustic pianos, was a prime example of what Spector called his 'little symphonies for the kids'. The record was a major hit and Spector used the same formula for them on the subsequent hits *Just Once in my Life* (Gerry Goffin and Carole King, 1965) and the revivals of the 1955 film theme *Unchained Melody* (Hy Zaret and Alex North, 1965) and *Ebb Tide* (Robert Maxwell and Carl Sigman, 1965). Hatfield and Medley had one further hit without Spector, Mann and Weil's *You're my soul and inspiration* (1966), before they dissolved their partnership in 1968. They reunited in 1974 to record the tribute song *Rock and Roll Heaven* and performed together on an occasional basis in the 1980s. Medley also sang the Grammy-winning duet with Jennifer Warnes, *I've had the time of my life* (1987) which featured in the film *Dirty Dancing*.

DAVE LAING

Rigler [Riegler], **Franz Paul** [Franz Xaver, François Sav., František Pavol] (*b* 1747/8; *d* Vienna, 17 Oct 1796). Teacher, writer on music, keyboard player and composer. He was probably Austrian by birth, but around 1775 moved to Pressburg (now Bratislava) and until 1791 was the music professor at the Hauptnazionalschule, mainly a training institution for teachers and Kantors. In this central position Rigler exerted considerable influence on the musical life of what was then northern Hungary. He was a performing keyboard artist until about 1785, when he developed a mental illness. Many music encyclopedias, beginning with Gerber (1792), mention him as one of the best keyboard players of his time. As a composer he showed early promise which was unfulfilled.

Rigler's most important work is the *Anleitung zum Gesange, und dem Klaviere*, a compendium of information in virtually all areas of music: singing, keyboard playing, harmony, counterpoint, form and ornamentation. As he was one of the few theorists who worked in the sphere of the Viennese Classical masters his writings may reflect theories that influenced them, and are therefore an important source of late 18th-century tendencies in music theory and education, as well as a source for evaluating the relationship between the Viennese and the Hungarian and Slovak music cultures. Apart from the *Anleitung zum Gesange* Rigler left one smaller didactic work, several keyboard sonatas, character-pieces, rondos and songs.

WORKS

Hpd/pf: 2 sonate, pt 1 (Vienna, ?1778); 2 sonate, op.1 bk 2 (Vienna, ?1782); 2 sonates (Vienna, ?1784); 3 rondos, op.6 (Vienna, ?1790); 18 pieces diverses petites et grandes (Bratislava, n.d.); 2 sonates, bk 1, pt 3 (Vienna, n.d.), doubtful

Vocal: 12 Oden und Lieder (Vienna, ?1782), lost

PEDAGOGICAL WORKS

Anleitung zum Klavier für musikalischen Lehrstunden, i (Vienna, 1779, 2/1791; repr. 1791 as Anleitung zum Klavier für musikalischen Privatlehrstunden) [appx with 24 cadenzas, 6 kbd pieces]

Anleitung zum Gesange, und dem Klaviere oder die Orgel zu spielen, nebst den ersten Gründen zur Komposition (Budapest, 1798) [appxs: 33 church songs, 31 works of various composers, 4 org sonatas, 4 org fugues as samples, 25 practice pieces, 6 cadenzas]

LOUIS MUNKACHY

Rigo (It.). *See* STAFF.

Rigo de Bergis, Cornelius (*fl* early 16th century). Netherlandish composer. His name may be a pseudonym. 'De Bergis' could refer to Bergen op Zoom as birthplace or place of employment; if the latter, he was perhaps the priest Cornelise uuten Hage (Wegman, no.17) who was a singer there in 1483–4 and 1504–8. Newton's hypothesis that he should be identified with both Cornelius Heyns and the Antwerp singer now known as Cornelio di Lorenzo is without foundation. Rigo is known by two three-voice works, both of which appear in a Habsburg-Burgundian chansonnier (*I-Fc* Basevi 2439, *c*1505–8) as well as later northern sources. His work *Myn hert hefft altyt verlanghen* (ed. H. Mönkemeyer, *Hieronymous Formschneyder: Trium vocum carmina*, Celle, 1985) is closely based on La Rue's widely disseminated Flemish song, cleverly compressing the original four voices into three. Less successful is his song motet *Cum audisset Job* (ed. in SMd, v, 1967), which entails an awkward stringing together of melodic clichés over a quasi-ostinato bass.

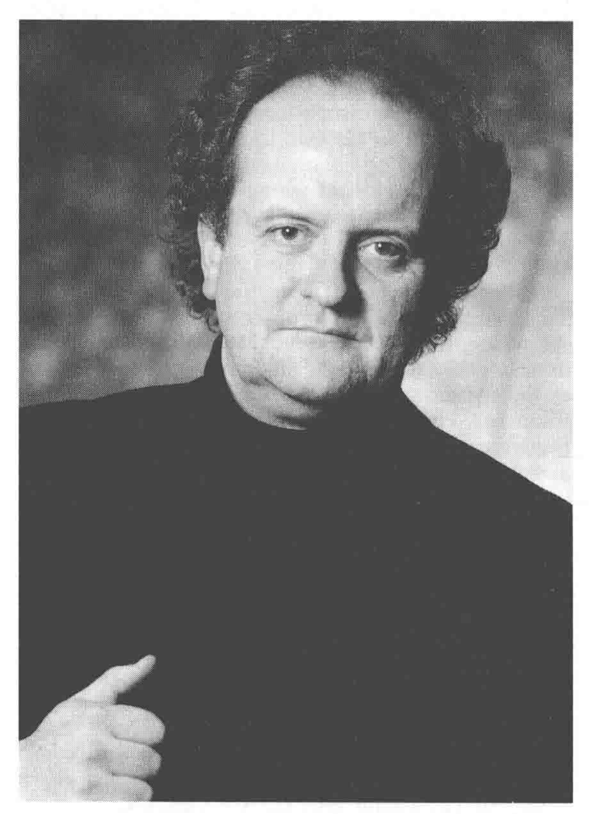
HONEY MECONI

Rihm, Wolfgang (*b* Karlsruhe, 13 March 1952). German composer. Among the most influential of European composers born in the decade after World War II, he was a leading figure in the reorientation of German music in the 1970s increasingly away from exclusively structuralist concerns towards expressive immediacy and historical allusion. Highly prolific in vocal and instrumental composition, he has also created some of the most powerful and distinctive stage works of the late 20th century.

1. Life and creative development. 2. Dramatic works.



1. LIFE AND CREATIVE DEVELOPMENT. In 1968, while still at grammar school, Rihm began to study composition with Eugen Werner Welte at the Karlsruhe Musikhochschule. After a period with Stockhausen in Cologne (1972–3), he went to Freiburg (1973–6), where he studied composition with Klaus Huber and musicology at the University with Eggebrecht. He also received advice during this period from Fortner and Humphrey Searle. He attended the Darmstadt Summer School for the first time in 1970, and became one of the regular course teachers in 1978. He taught at the Karlsruhe Musikhochschule 1973–8, and was made professor of composition there in 1985. In addition to his teaching activities he has made his mark with numerous lectures, essays and studies on musical topics.

In recent years a large number of juvenilia of many kinds, not previously published or performed and predating Rihm's official op.1, have gradually come to light. They show the youthful composer assimilating the elements of his craft and weighing up the various stylistic influences and techniques that he encountered: Bartók and Webern, dodecaphony, pointillism, serialism and the use of microintervals. His reputation was already growing by 1974: his professionalism, the richness of his language and the formal variety and versatility of his works quickly placed him at the forefront of his generation of composers. These were the composers who, during the 1970s, effected a paradigm shift in German musical culture, replacing their predecessors' essentially intellectual and structuralist conception of art with one that gave freer rein to emotion and adopted a more flexible approach to structure. Models for this new aesthetic were to be found in the late- and post-Romanticism of the 19th century and in the period of radical change in the first decade of the 20th. Traces of this trend can be observed in Rihm's music in the new emergence of such 'historical' phenomena as motivic-thematic working, and in undisguised references to the stylistic ambience of Bruckner and Mahler. But Rihm has remained consistently opposed to expressive nostalgia and aesthetic simplification. From the first, he aimed towards a symbiosis of expressive immediacy and intellectual and linguistic complexity, of directly comprehensible utterance and aesthetic risk-taking. Characteristic compositions of this phase are the violin concerto *Lichtzwang* (1975–6) and the orchestral pieces *Morphonie* (1972), *Dis-Kontur* (1974) and *Sub-Kontur* (1974–5). These are works that make big expressive and expressionistic gestures, expansive in their exploration of harmony, dynamics and other aspects of sound, dominated by massive accumulations of energy which clash and explode, against an antithetical background of wholly inward, restrained processes in the extreme *piano* dynamic region. As in other major works of the 1970s such as the ambitious Third Symphony (1976–7) and the five *Abgesangsszenen* (1979–81), which amount to a kind of vocal

symphony, the general character is narrative, the language and sound world suggesting continuity with the Austro-German orchestral tradition.

Rihm possesses an encyclopedic knowledge of the musical repertory, which has enabled him to assimilate diverse influences and transform them in his own personal ways. They usually rematerialize as allusive references rather than concrete shapes, although direct quotation is not unknown. Rihm's preferred 'ancestors', apart from Bruckner and Mahler, include Beethoven, Schubert, Schumann and Brahms, the Schoenberg of the freely atonal works, Berg and Webern, Janáček and Varèse. There is little trace of Stravinsky in Rihm's world and none whatsoever of Hindemith, of postserial sound masses, of Ligeti's micropolyphony, or of the repetition processes of American minimalism. Neither 'schools' such as the neobaroque or the neoclassical nor the cerebral adventures of total serialism have any place in Rihm's antidogmatic, freedom-orientated way of thinking. In the early 1970s, on the other hand, he did adopt and develop some of the innovations of his teachers Stockhausen and Huber in certain aspects of sound, form and language. In the mid-80s, Nono, a close friend, began to have a strong influence on Rihm. Elements of Nono's late style are reflected in various ways: the composer's view of himself as 'pathless wanderer', a predilection for the very highest registers in solo soprano parts, a lapidary concision of musical language and the effect of 'spatialization' in connection with an extreme fragmentation of musical material.

Rihm thinks of music as 'a systolic motion in time, a contracting and relaxing, breathing', and perceives in it a phenomenon 'that lies beneath curves, tensile curves,

Wolfgang Rihm

growth and decline, coming and going, duration, form. Equally volatility, collapse and injury'. Rihm's conclusion, that it is 'not what is systematically derived but what arrives unexpectedly [that] gives life to art', illustrates his rejection of any systematic means of precomposition, and as well as the climate of unrestraint, openness and freedom from which Rihm's music issues, where tying things down means the death of invention. As a result his creative development has not followed a linear, consecutive course, in which each new step appears to be the logical consequence of what went before it. Its trajectory is more of a meander, which takes off in unexpected directions, opening up unforeseen perspectives of language, colour and form. Rihm's musical language is one of multiple possibilities, permanently open and in flux. Each work rejects codifying predispositions, and form is in every case the function of the chosen idea, whether musical or conceptual.

In spite of this freedom, certain overriding fundamentals have crystallized over the years. The first period, coinciding more or less with the 1970s, is characterized by impetuosity, and expressive immediacy with patent references to Romanticism and the early 20th century. His ideal is one of free expression and frank emotionalism, a spontaneous and subjective approach, in which composition acts as a mirror of the personality, with its massive shows of strength on the one hand, its inwardness and vulnerability on the other. The work of art receives its legitimation from the forces of the will, the compulsion towards expression, and from the persuasive power and validity of its formulation. These features have remained fundamental to Rihm's work. But during the 1980s the more luxuriant, lush and expansive traits gradually subsided. Certain constants – the overwhelming, almost bruitist eruptions of sound, the extreme dynamic contrasts, the simultaneous use of the highest and lowest registers with nothing in the middle – but some significant changes appeared in the vocabulary itself. Textures became increasingly economical, the treatment of harmony and timbre more refined and focussed; the theme- and motive-like elements were replaced by laconic musical gestures, sign-like ciphers or logograms, juxtaposed in apparent isolation yet creating large-scale connections when viewed overall. This new kind of musical utterance, consisting, as it were, no longer of whole words but of syllables and phonemes, invested each individual event with new significance, resulting in more finely nuanced differentiations, not only between sounds, but within them, through subtle changes of tone-colour. At the same time the tendency, always present in Rihm's music towards a plastic, tactile approach to sound became more explicit, almost to the point of being physically experienced by the listener. The paradigmatic example of this evolving process is found in the cycle of chamber works called *Chiffre* (1982–8). The most extreme consequences of the development, with its concentration on individual moments and points of sound, appeared at the end of the 1980s with the two orchestral outer movements of the three-part *Klangbeschreibung* (1982–7) and with *Kein Firmament* for chamber orchestra (1988). These provided the most uncompromising manifestations of Rihm's aesthetics of splits, rifts and fissures, the origins of which go back to his first period, but which now received renewed stimulus from Nono's influence.

A new fluidity and mobility can be detected in Rihm's music from the early 1990s. In general, the processes outlined above serve as 'main currents', but with other streams running concurrently alongside them. For example, while some of the compositions of the 1980s are of the narrative, romantic type, the greater fluidity of the idiom of the 90s is interspersed with experiences gathered in the 'sound point' phase. Even in these later works there are moments of romanticism, where the recklessness of musical language and gesture characteristic of the earlier works is reined in. The simultaneous juxtaposition of dissimilar elements is a lifelong rule of Rihm's manner of production.

Rihm has always accepted the traditional concept of the musical work as a closed, complete entity, formulated once and for all, and with it the idea of fixed form. He has given this work-concept a personal nuance in recent years, however, by exploring ways of proliferating a central, germinal idea. In practice this means that a composition, once formulated, can be illuminated from several different aspects, in the process becoming the matrix for new works. The process combines arrangement, variation, paraphrase and troping – even contrafactum – with new material. One such matrix is – *Et nunc II* for wind and percussion (1993). Returning to the material for the first time, Rihm grafted a solo piano part onto it, producing a kind of *Konzertstück* for piano, wind and percussion, entitled *Sphere* (1992–4). In later reworkings the same matrix, – *Et nunc II*, used in part or in its entirety, served as the basis for a group of orchestral studies (*Vers une symphonie fleuve*), studies for a future work that as yet exists only as a seed. In a sense they provide a concrete demonstration of Rihm's characteristic belief that the work is identical with the search for the work.

Rihm has turned many times to such traditional, 'historical' media as the string quartet, string trio and piano trio. In the orchestral arena he initially stuck quite closely to the Classical-Romantic orchestra with augmented percussion section, but increasingly since the late 1970s has created individual formations according to the particular sound conception behind each work. Often ensembles are divided into spatially dispersed groups, another practice that received additional stimulus from Nono. Rihm is conservative in his treatment of sound material. His demands of instruments scarcely exceed those of the Second Viennese School or Bartók. The decision not to explore or explode the material is deliberate, and in no way compromises his quest for the extraordinary: Rihm is convinced that it is possible 'to find and invent the unusual far more blatantly within the usual'.

Gifted with exceptional energy and productive facility, Rihm has contributed at least one work to practically every recognized genre of art-music except confessional liturgical music. Within an output of such breadth it is to be expected that certain focal points will form within it, certain recurrent preoccupations, some centring on a particular genre, such as the string quartet, some on a concept, such as the cycle of pieces called *Chiffre* and its successors. A number of the focal points in Rihm's oeuvre constitute responses to certain outstanding writers and thinkers: the most obvious example is Nietzsche, whose late poems Rihm has set to music in a variety of ways, but others are Celan, Rimbaud, the German playwright Heiner Müller and Antonin Artaud. Artaud's inspiration has been especially intense and has had a powerful influence on Rihm's dramatic imagination.

2. Dramatic works. The stage works form the nodal points in Rihm's oeuvre. They reflect a consistent development from relatively conventional operatic beginnings towards a quasi-abstract music theatre without text or predetermined plot. The first chamber opera *Faust und Yorick* (1976) finds inspiration in Busoni and in Rihm's own ideal of a 'fabulous and cryptic entertainment'; it unfolds as a sequence of short scenes, recitatives, ariosos and dubbed-on spoken scenes. Its supple musical language is full of stylistic and tonal allusions and all in all offers a mixture of playful and absurd elements, a divertissement oscillating between seriousness and satire. The second chamber opera, *Jakob Lenz* (1977–8), has become one of the most frequently performed of 20th-century musical stage works in the German-speaking world. Its text is a dramatization of Georg Büchner's novella about the descent of the German poet Jakob Michael Reinhold Lenz into madness. The overall form of the work is rondo-like, with interludes between the 13 sharply characterized scenes. It makes virtuosic use of 11 players, and the vocal spectrum extends from various kinds of speech through Sprechgesang and syllabic *recitativo* to elaborate melisma and coloratura. The harmonic language ranges from atonality, through extended tonality to moments of pure tonality: the overall effect is of a syncretism close to that of Berg's *Wozzeck*.

In his two chamber operas Rihm used librettos in the traditional sense. With his next three works for the stage, which he does not designate operas, he himself took principal charge of the construction of the text and the dramaturgy as a whole. For *Die Hamletmaschine* he adapted a text by Heiner Müller. The result, a series of scenes based around the characters of Hamlet and Ophelia, but incorporating a wide range of additional references and associations, realizes the vision of a total theatre, operating with elements of opera, oratorio, melodrama, spoken theatre, narration and reportage. Correspondingly, the music provides anything from functional background, acting merely as a foil for the drama, to the full panoply of large-scale vocal-orchestral writing in dramatic-symphonic mode. The work incorporates the full range of Rihm's stylistic devices of the mid-1980s. It includes the borrowings (in this case from Handel) and the expressionistically agitated musical gestures from Rihm's early period as well as the more compressed language of isolated signals characteristic of the *Chiffre* cycle. It makes violent use of percussion, while the writing for the voices displays, at its extremes, both linear cantabile style and melodies that look like the zigzags of a fever chart, with a Nono-like preference for the very top of the soprano range. Overall the work gives the effect of overprinted layers of expression.

The turn towards a more concise language undertaken in *Die Hamletmaschine* was continued in *Oedipus* (1986–7). Rihm took his material from texts by Sophocles (in Hölderlin's translation), Nietzsche and Heiner Müller, assembled in such a way as to allow action, reflection and commentary to interlock in a total of 21 sections. The wordsetting puts the delivery of the text in the foreground: the declamation of the principal characters' parts, which entail wide leaps across the pitch-range, is predominantly syllabic. For his orchestra Rihm chose woodwind and

brass, two harps, piano and a large percussion contingent; the only string instruments are two violins which do not enter until the last quarter of the work, at the moment of Oedipus's blinding. The choric element is represented in two ways: by 16 male-voice 'elders' onstage and by a mixed singing and speaking chorus on tape, whose interjections reach the auditorium by loudspeaker. The orchestra's function is primarily to underline and support the words and actions of the *dramatis personae*: it rarely acquires a significance independent of the text. Its treatment reflects a strong preference for the very highest and lowest registers and for abrupt dynamic contrasts, a possible link to the aesthetic of Nono's *Prometeo*; it is homophonic, chordal and block-like, fragmenting in places into a splintered texture of 'sound points'. There are cluster-like concentrations in the harmonic writing, and frequent eruptive outbursts from the percussion reinforce the apocalyptic character of the score as a whole, in which the musical discourse is broken up by numerous general pauses.

Three of Rihm's stage works are the fruit of an engagement, now well into its second decade, with the ideas and imagery of the world of the French theatrical visionary Antonin Artaud. The first stage in this preoccupation was the full-length ballet *Tutuguri* (1980–2), whose rhythmic vehemence gives it a position in Rihm's oeuvre comparable to that of *The Rite of Spring* in Stravinsky's. The second stage was the music theatre piece *Die Eroberung von Mexico* (1987–91), based on Artaud's scenario of the same title and his conception of 'Seraphim Theatre'. It is a quasi-epic drama, made up of individual stations rather than continuous action and linear narrative. The events, which can be interpreted as the confrontation of two principles, centre on the encounter of the Aztec king Montezuma and the Spanish conqueror Cortez and the underlying confrontation of opposed principles and world-views. Rihm gives the part of Montezuma to a soprano and that of Cortez to a baritone, and both are extended and supplemented by two additional voices: Montezuma's by a high soprano and a contralto in the orchestra pit and Cortez's by two speakers, whose interjections range from normal speech to outlandish vocal effects. A third vocal medium is provided by singing, speaking and whispering choruses on tape, treated in a variety of ways, to suggestive and sometimes disturbing effect. The stylistic range of the music is wide, embracing pure fifths, triads, polychords, references to Renaissance music on the one hand and bruitist vidence on the other. The work juxtaposes interiorized drama and oratorio-like stasis, and a new melodic awareness reveals itself in the vocal parts of the two main characters, with melodic arcs spanning the entire range of the voices, dramatically articulated in Cortez's case, lyrical in Montezuma's. Movement in the highest soprano register becomes the pre-eminent stylistic means in Montezuma's sphere, in Cortez's world speech and singing are ranked more or less equally. The orchestra, divided into three spatially dispersed groups, is used at times with chamber-music-like economy, at times massive eruptions, to provide emphasis and colouring, rather than any underlying symphonic continuity. Again, the large percussion section provides strong accents, but for all its incisive and eruptive qualities there are long stretches when it has more of ritual and atmospheric suggestion about it than excess.

Artaud's text on 'Seraphim Theatre' was for Rihm the starting-point for a group of works in which he is trying to 'encircle' the Artaud phenomenon and consider it from all sides musically. Rihm regards the project, which has also given rise to a number of separate instrumental works, as 'work in progress', like the orchestral pieces of *Vers une symphonie fleuve*. At its heart is *Séraphin*, an experimental project for an imaginary music theatre without text or predetermined plot, the true form of which is supposed to take shape in the mind of the listener-spectator. *Séraphin*, for two baritones, three mezzo-sopranos, three contraltos and ten instrumentalists, exists in two 'states', identical but for the fact that the second involves the repetition, several times in some cases, of sections of the first with variations in the scoring. The music is of a primeval, animal and aggressive stamp, but also exhibits lyrical concentration in the second main section. The vocal parts make non-semantic use of vowels and consonants, breaths and guttural sounds.

Two oratorio-like works represent significant stages in Rihm's oeuvre: *Dies* (1984) on texts by various authors on the subject of the end of the world, and *Andere Schatten* (1985) on words by Jean Paul. Both use their extensive vocal and instrumental forces to create an apocalyptic vision.

WORKS

published works only

STAGE

Faust und Yorick (Kammeroper no.1, 1, M. Fusten and F. Haas, after J. Tardieu), 1976, Mannheim, National, 29 April 1977

Jakob Lenz (Kammeroper no.2, 1, M. Fröhling, after G. Büchner: *Lenz*), 1977–8, Hamburg, Staats, 8 March 1979

Die Hamletmaschine (Musiktheater, 5 pts, Rihm, after H. Müller), 1983–6, Mannheim, National, 30 March 1987

Oedipus (Musiktheater, Rihm, after Sophocles [trans. F. Hölderlin], F. Nietzsche and Müller), 1986–7, Berlin, Deutsche, 4 Oct 1987 [see also ORCHESTRAL: Splitter]

Die Eroberung von Mexico (Musiktheater, 4 pts, Rihm, after A. Artaud), 1987–91, Hamburg, Staats, 9 Feb 1992

JOSEF HÄUSLER

Říhovský, Vojtěch [Adalbert] (*b* Dub na Moravě, Moravia, 21 April 1871; *d* Prague, 15 Sept 1950). Czech composer. Between 1887 and 1892 he studied in Prague at the Organ School, the Jan Ludvík Lukes Singing Institute and the Arnošt Černý Music Institute. He then assisted the choir in his home town (where his father was teacher and choirmaster from 1892 to 1902), and directed the choirs in Chrudim (1902–14) and at St Ludmila, Prague-Vinohrady (1914–36). His activities also included performing (viola, violin and piano), directing the choir at the archbishop's seminary, acting as adviser to the Prague music publishing house of Mojmír Urbánek (from 1902) and contributing to the Prague periodicals *Dalibor* (which in 1920 he edited with Jaromír Borecký) and *Cyril*. His short compositions were printed as supplements to the journals *Hudební květy* and *Česká hudba*. He also played a part in the Cecilian Movement, which aimed at a revival of Catholic church music.

For the most part Říhovský composed sacred music, producing almost 300 pieces in this field. The style is basically Romantic; the melodic invention and the refined polyphony do not depart from the norms established for liturgical music. His Christmas carols and organ compositions show the effect on his work of folksong, mainly in a stylized manner (e.g. the *Praktický varhaník*, or 'Practical Organist', *Vánoční preludia*, 'Christmas Prelude', for organ). In the sphere of secular music he wrote principally short vocal and instrumental pieces. Even in these he remained within the bounds of late Romanticism, and his style, affected by commercial demand, is sometimes eclectic. His educational works were important in their time.

WORKS
(*selective list*)

Sacred vocal: Cyrilmetodějská mše [Cyril and Methodius Mass], op.2; Missa loretta, op.3; Missa jubilaei solemnis, op.33; Missa pastoralis, op.48; Missa Sanctae Ludmilae, op.68; Missa Beatae Mariae de Lourdes, op.92; 31 other masses, 5 requiems, 50 graduals, 50 offertories, 11 litanies, 7 Te Deum, 120 Pange lingua etc.

Secular vocal: 5 Pieces, op.10, female chorus; 3 Lyric Songs, op.30, chorus; Balada o starém hradě [Ballad of the Old Castle], op.37, male chorus

Chbr: Pohádka [Fairy Tale], op.51, pf trio

Pf: Pieces, op.6; Prosté motivy [Simple Motifs], op.23; Taneční motivy [Dance Motifs], op.52; Po různých stezkách [On Diverse Paths], op.60

Org: Praktický varhaník [Practical Organist], op.26; Vánoční preludia [Christmas Prelude], op.69; Kniha preludií [Book of Preludes], opp.81, 122

Educational: Malý Paganini [Young Paganini], vn, op.8; Album pro mládež [Albums for the Young], opp.22, 28, pf; Nálady [Moods], op.39, 4 vn; Sonatinas, op.50, pf; Studies, op.73, pf; Concertino, op.87, vn

Principal publishers: Česká hudba, Promberger (Olomouc), Mojmír Urbánek (Prague)

OLDŘICH PUKL

Rihtman, Cvjetko (*b* Rijeka, 4 May 1902; *d* Sarajevo, 1 Sept 1989). Bosnian musicologist and composer of Croatian birth. He studied music theory and composition at the conservatories in Leipzig and Prague under Křička and Metod Doležil, and composition and musicology at the Schola Cantorum in Paris under d'Indy and Gastoué. For a time he worked as an organist and choirmaster in Paris. Returning to Yugoslavia he worked as a choirmaster in Sarajevo and taught at a teacher-training college. From 1946 to 1947 he was the director of the Sarajevo Opera, and in 1947 he founded the Institute for Folklore Studies at the Regional Museum of Bosnia and Hercegovina and became its first director. From 1955 to 1974 he was professor of ethnomusicology at the Academy of Music in Sarajevo. He was a member of the Bosnian and Hercegovinian Academy of Arts and Sciences.

Rihtman was active as a conductor, teacher, administrator and above all researcher into the folk music of Bosnia and Hercegovina. During his numerous field trips he recorded more than 7000 folksongs and built an impressive collection of tape recordings and transcriptions at the musicology department of the Academy of Music in Sarajevo. He was the first to undertake systematic research into the unique tradition of folk polyphony in Bosnia and wrote authoritatively and extensively on this subject. He was largely responsible for the introduction of modern techniques of transcription, classification and description into Yugoslav ethnomusicology. His compositions have been strongly influenced by folk idiom. Further biographical information is included in the Festschrift *Zbornik radova u čast akademika Cvjetka Rihtmana* ('A Collection of Studies in Honour of Academician Rihtman'), ed. B. Čović (Sarajevo, 1986).

BOJAN BUJIC

Riisager, Knudåge (*b* Port Kunda, Estonia, 6 March 1897; *d* Copenhagen, 26 Dec 1974). Danish composer. Born of Danish parents abroad, he completed his school education in Denmark in 1915 and studied political science at the University of Copenhagen, graduating in 1921. He worked in the civil service until 1950, and was assistant secretary in the Ministry of Finance from 1939. His administrative abilities and training also benefited Danish and international musical life: he was, for example, chairman of the Society of Danish Composers (1937–62), president of the Nordisk Komponistråd (1950–52), director of the Copenhagen Conservatory (1956–67) and president of the Society of European Conservatory Directors (1963–6). From 1957 he was a member of the adjudicating panel in composition at the Paris Conservatoire. In 1972 he was awarded an honorary doctorate at the University of Seattle, and the same year became an honorary citizen of the state of Washington.

As a composer Riisager was the most internationally orientated of Danish composers of his generation. Even in his first works he distinguished himself with his stylistic alternative to the predominantly national modernism of the Nielsen tradition of the years after 1920, although his music bears no trace of stylistic schism. He was taught theory and composition by Otto Malling and Peder Gram, and the violin by Peder Møller. His years of study in Paris (1921–3) were decisive for his development as a composer: he studied with Roussel and Le Flem, and came into contact with Les Six, French neo-classicism and the music of Stravinsky. In 1932 he stayed in Leipzig as a student of Grabner.

Riisager became the most prominent representative of the French-orientated trend in Danish music of the interwar years; his Trumpet Concertino op.29 (1933) is a major example of Danish neo-classicism. The main characteristics of his music became clarity and accessibility of form, transparent tonal structure in chamber music and, especially, virtuoso orchestration. His music often develops from small, marked rhythmic and melodic themes on a polytonal basis, and an orchestral work like *Qarrtsiluni* op.36 (1938), subsequently rewritten for a ballet, contains traces of both Stravinsky's and Ravel's knowing naivety. Yet in spite of his Gallic sympathies, the hyper-diatonic foundation of his harmonic language, and the sharp, brittle edge of his orchestral writing belong in the Scandinavian tradition of Berwald and Nielsen. There is a Nordic temperament behind *Qarrtsiluni* (a title taken from the Inuit word for the silence of the polar night) which accounts for the brutal elementalism of the work's opening.

Riisager's international reputation rests particularly on the music he wrote for ballets by Harald Lander and Birgit Cullberg, of which *Etude*, based on Czerny's music, has been the most successful. In some works from his later years, such as the Violin Concerto op.54, the *Canto dell'infinito* op.61 and the *Stabat mater* op.62, there is a lyrical and grave expression otherwise rare in his music.

WORKS
(*selective list*)

DRAMATIC

Opera: Susanna (1, M. Lorentzen), op.49, Copenhagen, Royal, 1950
Ballets: Benzin (E. Jørgen-Jensen), op.17, Copenhagen, Royal, 1930; Slaraffenland (H. Lander), op.33, Copenhagen, Royal, 1942 [after orch work]; Qarrtsiluni (Lander), op.36, Copenhagen, Royal, 1942 [after orch work]; Tolv med posten (B. Ralov), op.37, Copenhagen, Royal, 1942; Fugl Fønix (Lander), op.44, Copenhagen, Royal, 1946; Etude (Etudes) (Lander), Copenhagen, Royal, 1948; Månerenen (B. Cullberg), op.57, Copenhagen, Royal, 1957; Fruen fra havet (Cullberg), op.59, New York, Metropolitan, 1960; Galla-variationer (F. Flindt), Copenhagen, Royal, 1967; Svinedrengen (Flindt), Danish television, 1969
Incid music: Darduse (J.V. Jensen), op.32, Copenhagen, Royal, 1937, arr. orch suite; Mascarade (L. Holberg), Copenhagen, Royal, 1954
Film scores

ORCHESTRAL

Erasmus Montanus, ov., op.1, 1920; Suite dionysiaque, op.6, chbr orch, 1924; Sym. no.1, op.8, 1925; Variationer over et thema af Mezangeau, op.12, 1926; Sym. no.2, op.14, 1927; Fastelavn, ov., op.20, 1929–30; Comoedie, ov., op.21, 1929–30; Conc. for Orch, op.24, 1931; Concertino, op.29, tpt, str, 1933; I anledning af, 1934; Primavera, ov., op.31, 1934; Sym. no.3, op.30, 1935; Slaraffenland, op.33, 1936; Partita, op.35, 1937; 3 danske peblingeviser, 1937
Qarrtsiluni, op.36, 1938; Sym. no.4 (Sinfonia gaia), op.38, 1940; Bellman-variationer, op.45, 1945; Sinfonietta, op.46, 1947; Chaconne, op.50, 1948; Archæopteryx, op.51, 1948; Sym. no.5 (Sinfonia serena), op.52, timp, str, 1949–50; Vn Conc., op.54, 1950–51; Pro fistulis et fidibus, op.56, 1952; Burlesk ouverture, op.60, 1964

OTHER WORKS

Choral orch: Dansk salme, op.41, 1942; Canto dell'infinito, op.61, 1964; Stabat mater, op.62, 1966
Other vocal works: unacc. choral pieces, songs with orch and pf
Str qts: 1918, 1920, 1922, 1925–6, 1932, 1942–3
Other chbr: Wind Qnt, 1921; Sinfonietta, op.7, 8 wind insts, 1924; Divertimento, op.9, str qt, wind qnt, 1925; Musik, wind qnt, op.16, 1927; Concertino, op.28a, 5 vn, pf, 1933; many other pieces
Pf: 4 épigrammes, 1921; Sonata, op.22, 1931

Principal publisher: Hansen

NIELS MARTIN JENSEN/DANIEL GRIMLEY

Rijavec, Andrej (*b* Belgrade, 4 March 1937). Slovene musicologist. He graduated in English and German from the University of Ljubljana and in musicology from the Ljubljana Academy of Music (1962), and took the doctorate (1964) with a dissertation on Slovenian music during the Reformation. He started teaching at the musicology department of Ljubljana University in 1962, becoming senior lecturer (1970) and professor (1975–7). He was a fellow of the Humboldt Foundation (1971–2), working with H.-P. Reinecke in Berlin and H.H. Eggebrecht in Freiburg. He was editor of *Muzikološki zbornik* (1981–97), and was the first president of the Slovenian Musicological Society (1992–6). His broad range of research interests encompasses Slovenian music of the late Renaissance and Baroque, as well as of the modern period, general issues of the social history of music and compositional theory. A lively speaker, aware of the historical, linguistic and literary components of musicology, he has been a particularly assiduous student of new tendencies in Slovenian music.

BOJAN BUJIC

Rijnvos, Richard (*b* Tilburg, 16 Dec 1964). Dutch composer and conductor. He studied at the Royal Conservatory in The Hague with van Vlijmen and Ferneyhough, and at the Musikhochschule in Freiburg with Emanuel Nunes. Encounters with Morton Feldman and particularly with John Cage influenced his compositional development profoundly, as did the work of Samuel Beckett, Italo Calvino and Joseph Beuys. Rijnvos's music, austere yet highly sensitive to fine timbres, is a balancing act between numerical logic and musical intuition. The composer conceives each of his works as an abstract sound structure. Pitch, interval and duration are pre-determined by a choice of numbers of which the composer then scrutinizes all the proportional relationships to generate the general form down to the minutest detail, until, as it were, a self-evident matrix emerges. This matrix is the composition, although, as the composer says, 'the ear is the final judge, music has to sound good. In my choice of register and instrumentation there is no system. Timbre is the permanent variable parameter'. By means of this method, each of Rijnvos's works is totally distinct from any other; they show wide variety in content and effect even if, as is the case with *Radio I*, *Sarabande et double* and *Gigue et double*, the musical material initially is identical. Rijnvos writes most of his chamber music for the members of the Ives Ensemble, of which he is one of the founders.

WORKS
(selective list)

Dramatic: Radio I (radio play, 2 scenes, S. Beckett), 3 spkrs, ens, 1990–91

FRANS VAN ROSSUM

Rijspoort, [van Belle], **Jan** (*b* ?Bailleul, Belgium; *fl* early 17th century). Flemish composer. He is known from a collection of four- and five-part *Moraele spreeckwoorden*, which exists in an incomplete copy (Plantin-Moretus Museum, Antwerp; damaged tenor part only). From the quotation in De Jager (*Taalkundig magazijn*, iii, 1840, p.88), the missing title can be completed as follows: *Moraele spreeckwoorden op musyck gestelt door Jan Rijspoort*; the work was published in Antwerp in 1617 and reprinted by the same firm with a basso continuo part in 1631. The volume contains 31 songs for four voices and 19 for five; the texts based on moral proverbs and popular sayings are uniformly written in five-verse stanzas, but are of little or no poetic value. This is the only edition entirely devoted to Flemish texts published in Antwerp by Phalèse and his heirs.

The *Supplementum duodecimum thesauri bibliothecarii librariae bellerianae* (Douai, 1621) and the index to the music library of King João IV of Portugal (*JoãoIL*) add 'van Belle' to the name of the composer. This led to the assumption that Jan Rijspoort was identifiable with Jan Belle of Leuven, author of a *Musices encomion* (Maastricht, 1552, lost) and a group of songs published in 1572. In fact, Rijspoort came from Belle (now Bailleul), a small village north of Tournai. Bergmans mentioned that according to the record office in Ypres, a family Rijspoort was listed from 1575 to 1625 both in Bailleul and in Ypres.

R.B. LENAERTS/HENRI VANHULST

Riley, Dennis (*b* Los Angeles, 28 May 1943). American composer. He studied at the universities of Colorado (BM 1965), Illinois (MM 1968) and Iowa (PhD in composition 1973), his principal teachers being Crumb, Thomas Frederickson, Ben Johnston, Hervig and Donald Jenni. Under the auspices of the Ford Foundation-MENC programme, he served as composer-in-residence in Rockford, Illinois (1965–7), and later taught at California State University, Fresno (1971–4), and Columbia University (1974–8). Among his many awards are a Fromm Foundation commission, a Guggenheim fellowship and two NEA grants.

Riley's earlier music is often explained with reference to Webern: it is economically conceived, has a sure sense of proportion, and packs much invention into a short span of time. His style is outgoing, flowing and above all, lyrical; it is often based on rhythmic cells and groups of notes that are expanded and developed. This technique suggests a sophisticated use of serial operations. Later instrumental works like *Apparitions* (1984) portray the composer's gift for melodic invention and seamless use of instrumental colours, as well as a more delicate and subtle musical style. The same technique may be found in vocal works such as *Five poems of Marilyn Hacker* (1986), where his apt writing for the voice (although intervalically and rhythmically challenging) resonates fully with the temperament of the poetry. (*GroveO*, J.P. Cassaro)

Principal publisher: C.F. Peters

JAMES P. CASSARO

Riley, Terry (Mitchell) (*b* Colfax, CA, 24 June 1935). American composer and performer. He studied the piano with Duane Hampton and theory with Ralph Wadsworth at Shasta College (1954–5), composition with Wendell Otey at San Francisco State University (BA 1957) and the piano with Adolf Baller at the San Francisco Conservatory (1955–7). Later he took the MA in composition with Seymour Shifrin and William Denny at the University of California, Berkeley (1959–61), while privately studying composition with Robert Erickson and ragtime piano with Wally Rose. More profound was the influence of the Kirana vocal master Pandit Pran Nath, Riley's teacher from 1970 until the latter's death in 1996. A virtuoso keyboard player, Riley supported himself as a composer until the late 1960s mostly by playing in piano bars. Following this he taught Indian classical music at Mills College (1971–81), California Institute of the Arts (1995), the Nairopa Institute (1995) and, from 1993, at the Christi Sabri School of Indian Classical Music in New Delhi. He was composer-in-residence at the Atlantic Center for the Arts in 1992 and at Arcosanti in 1996.

His undergraduate compositions, while not strictly serial, show the influence of Stockhausen. However, in early 1959 at Berkeley he met La Monte Young and was rapidly affected by Young's long-tone style, composing the String Quartet (1960), which approximates tonality in its sustained consonances, and the String Trio (1961), in which the repetition of short phrases was for the first time introduced into notated minimalism. Together Riley and Young provided the sonic backdrop for the dance works of Ann Halbrin, supporting her experiments in

movement with a Cage-inspired music of cans scraped against glass. Riley also composed the accompaniment for Halprin's *The Three-Legged Stool*, which he later revised as a concert piece, renamed *Mescalin Mix*. It was the first work in which he focussed on echo effects, and it paved the way for his use of the new technology of tape – Riley was a founding member of the San Francisco Tape Music Center – in such compositions as *Concert* for two pianos and five tape recorders (first performed by himself and Young); freely explorative, the *Concert* includes tape-loops of the keyboards, *musique concrète* materials, such as explosions, screams and laughter, as well as echo sonorities.

Unable to win any prizes or grants to study in Europe, Riley went there, nevertheless, in 1962. He lived briefly in Spain and then for almost two years in Paris, composing little, playing in bars and air force officers' clubs and serving as a driver and accompanist for carnival-like variety shows. He attended the Darmstadt summer courses, hearing Stockhausen lecture on *Gruppen*, and visited Helsinki, where he collaborated on *Helsinki Street Piece* with Finnish artists and the director Ken Dewey, whom he had met in San Francisco. Subsequently he produced, at the ORTF, music for Dewey's *The Gift* (given its première at the Théâtre des Nations Festival) which consisted of a rendition of Miles Davis's *So What* specially recorded by the Chet Baker quartet and then subjected to a 'time-lag accumulator'. This technique – the first time it had been used – involved stretching the tape across a series of both play and record heads, resulting in the build-up of a progressively rich and multi-layered texture.

Following the assassination of President Kennedy and the ensuing closure of the officers' clubs in Europe, Riley was forced to return to San Francisco, where he wrote *In C*, his best-known work. The score consists of 53 phrases, or modules, each player freely repeating each phrase as many times as desired before proceeding to the next. As a consequence, unpredictable layerings of the same and successive motifs occur, creating elaborate canonic textures and polyrhythms. For any number of melody instruments, the work has since been realized in versions which include solo piano, marimba ensemble and full symphony orchestra. Although Riley has always been the first to acknowledge Young as a precursor, *In C* defined the minimalist style of modular repetition and was the first work to bring minimalism into mainstream culture, aided by Alfred Frankenstein's highly favourable review in the *San Francisco Chronicle* of the première at the Tape Music Center (8 November 1964), and four years later through its Columbia recording. Steve Reich, along with Jon Gibson, Oliveros and Subotnick, was among the players in the first performance of *In C*.

Riley moved to New York the following summer, remaining until 1969. He sang with Young's Theatre of Eternal Music during 1965–6, and was a solo performer at the Intermedia '68 Festival, at the Electric Circus, a psychedelic club in the East Village, and at all-night concerts in New York, Philadelphia, Albany and Buffalo. His broad musical background has been particularly evident in his extended keyboard improvisations, including the use of ragtime syncopations, non-Western modes and cyclic processes. At the beginning of the 1970s he introduced partly improvised elements into compositions such as *A Rainbow in the Curved Air* and *Poppy Nogood and the Phantom Band* (an elaboration of the earlier *Dorian Reeds*, which he had recorded for the Warhol-affiliated label Mass Art). He then largely abandoned notated composition altogether, preferring to devote himself to the study and teaching of Indian music, with frequent solo performing tours in Europe.

Towards the end of his time at Mills College he met David Harrington, leader of the Kronos Quartet, then resident at the college, who persuaded him to compose for the group. But even in his return to formal composition his music has tended to retain an improvisational air in its rhapsodic structure and eclectic allusiveness. Riley has since written 13 works for string quartet, most notably the two-and-a-half-hour *Salome Dances for Peace*. While maintaining his musical syncretism in his leadership of the improvising performance group Khayal (1989–93), Riley also produced a two-disc set of just intonation compositions of a hauntingly understated lyricism, *The Harp of New Albion* (Celestial Harmonies, CEL 18 and 19, 1986), and turned to orchestral composition with the *Jade Palace*, a Carnegie Hall centenary commission, and *June Buddhas* – based on Kerouac's *Mexico City Blues* – for the Koussevitzky Foundation. A second work for Kronos, a concerto for string quartet and orchestra entitled *The Sands*, followed, begun on the eve of the Gulf War. Shortly thereafter he developed a fascination with the Swiss schizophrenic poet Adolf Woelfli, which has led to *Four Woelfli Portraits* for septet, a multimedia chamber opera *The Saint Adolf Ring*, in which Riley performed as keyboard player, singer and actor, and a series of seven projected books of piano pieces inspired by Woelfli's drawing *The Heaven Ladder*.

WORKS

DRAMATIC

The Gift (incid music, dir. K. Dewey), 1963; Les yeux fermés (film score, dir. J. Santoni), 1972; No Man's Land (film score, dir. A. Tanner), 1984; The Saint Adolf Ring (multimedia chbr op, after A. Woelfli), 1992

ORCHESTRAL

Jade Palace, large orch, synth, 1990 [orig. Jade Palace Orchestral Dances]; June Buddhas (J. Kerouac: *Mexico City Blues*), chorus, orch, 1991; The Sands, str qt, orch, 1991

CHAMBER

Trio, Vn, cl, pf, 1957; 2 Pf Pieces, 1959; Spectra, 3 wind, 3 str, 1959; Str Qt, 1960; Str Trio, 1961; Autumn Leaves, pf, t sax, rec, 1964; Mythic Birds Waltz, str qt, 1983; The Travelling Machine, 1v, pf, s sax, drums, 1983; Cadenza on the Night Plain, str qt, 1984; Salome Dances for Peace, 5 str qts, 1985–7; Chanting the Light of Foresight, sax qt, 1987; The Crow's Rosary, str qt, synth, 1988; Reading the Signs, 1v, pf, s sax, b, 1990; Shades of White, 1v, pf, s sax, b, 1990; 4 Woelfli Portraits, vn, vc, cl, fl, sax, 2 pf, 2 perc, 1992; El Hombre, str qt, pf, 1993; Ritmos and Melos, vn, pf, perc, 1993; Chorus 193 (J. Kerouac: *Mexico City Blues*), S, S, A, T, B, B, 1993; Zamorra, 2 gui, 1995; The Heaven Ladder, pf 4 hands, 1996–; Cantos desiertos, fl, gui, 1996; Cinco de mayo, pf 4 hands, 1997; 3 Requiem Qts, 1997 [with sound collage in 2nd movt of no.3]

SOLO INSTRUMENTAL

Coulé, pf, 1964; Reed Streams, reed org, 1965; The Harp of New Albion, pf, 1986; Ebony Horns, pf, 1991; Ascención, gui, 1993; Piedad, gui, 1995; Barabbas, gui, 1995

PARTLY IMPROVISED WORKS

Kbd Studies, 1963; In C, unspecified insts, 1964; Tread on the Trail, unspecified insts, 1964–5; Dorian Reeds, s sax, hmn, tape, 1965; Olson III, vv, insts, 1967; Poppy Nogood and the Phantom Band, s sax, elec kbd, tape delay, 1967 [from Dorian Reeds]; A Rainbow in the Curved Air, elec kbd, dumbak, tambourines, 1968; Persian Surgery Dervishes, elec kbd, 1971; Happy Ending, pf, elec kbds, s sax, tape delay, 1972 [from film score Les yeux fermés]; Journey

from the Death of a Friend, pf, elec kbds, 1972 [from film score Les yeux fermés]; Descending Moonshine Dervishes, elec kbd, *c*1975; Shri Camel, elec org, tape delay, 1976; Do you Know how it Sounds? (Riley), 1v, pf, tablā, 1983

WORKS WITH SYNTHESIZER

Chorale of the Blessed Day (Bengali trad.), (1v, 2 synth)/(1v, pf, sitar), 1980; Eastern Man (Riley), 1v, 2 synth, 1980; Embroidery (Riley), (1v, 2 synth)/(1v, pf, synth, sitar, tablā, s sax), 1980; Song from the Old Country (Riley), 1v, pf, sitar, tablā, str qt, synth, 1980; G-Song, str qt, 1980 [orig. for elec kbd, s sax]; Remember This O Mind, 1v, synth, 1981; Sunrise of the Planetary Dream Collector (Riley), str qt, 1981 [orig. for elec kbd, 1973]

The Ethereal Time Shadow (Ramprasad, trans.), 1v, 2 synth, 1982; Offering to Chief Crazy Horse (Riley), 1v, 2 synth, 1982; Rites of the Imitators (Riley), 1v, 2 synth, 1982; The Medicine Wheel (Riley), 1v, pf, sitar, tablā, synth, 1983; Song of the Emerald Runner (Riley), 1v, pf, str qt, sitar, tablā, synth, 1983; The Room of Remembrance, synth, pf, vib, mar, sax, 1987; Cactus Rosary, synth, 2 perc, tpt, b cl, b, nar, elecs, 1990

ELECTRO-ACOUSTIC

Concert, 2 pf, 5 tape recorders, 1960; Earpiece, 2 pf, tape, 1960; I Can't Stop, She Moves, Mescalin Mix, tape collages, 1962–3; Music for the Gift, tape-looped jazz qt, 1963; In A Flat or is it B Flat?, t sax, tape, 1964; Shoe Shine, Bird of Paradise, tape collage, 1964 [from J. Walker: *Shotgun*]; You're No Good, tape collage of rhythm and blues ens, synth, 1967; Autodreamographical Tales, nar, insts, 1997

Recorded interviews in *US-NHoh*

EDWARD STRICKLAND

Rilke, (René) Rainer (Karl Wilhelm Johann Josef) Maria (*b* Prague, 4 Dec 1875; *d* Valmont, nr Montreux, 29 Dec 1926). Austrian poet and novelist. After military academies at St Pölten and Mährisch-Weisskirchen (now Hranice) he attended the universities of Prague and Munich but did not complete his studies. He was 19 when his first collection of poems was published, bringing him into contact with some of the leading artistic figures of the day. His affair with Nietzsche's mistress resulted in two visits to Russia, as well as exposure to Nietzschean philosophy and Freudian psychoanalysis. His restless nature led him to spend time in an artistic colony, where he married the sculptor Clara Westhoff. He travelled widely in Europe, and in Paris was briefly Rodin's secretary.

As a teenager Rilke had met Brahms, and later became acquainted with Busoni; in his last years the violinist Alma Moodie delighted him with her playing of Bach's solo sonatas and partitas. He professed himself uninterested, however, in musical settings of his lyrics, believing that their innate musicality needed no further embellishment. He made an exception with Krenek, to whom he sent the lyric trilogy *O Lacrymosa* ('intended for music') in 1923; it became Krenek's op.48 (1926).

The best-known and most important of Rilke's numerous collections of verse are *Buch der Bilder* (1902), *Das Stunden-Buch* (1905), *Neue Gedichte* (1907–8), *Duineser Elegien* (1923) and *Die Sonette an Orpheus* (1923); he also translated poetry from several languages. Among the many settings of Rilke's verse the most notable are Hindemith's *Das Marienleben* op.27 (1922–3) and various further settings, Milhaud's *Quatrains valaisans* (1939), Schoenberg's 'Alle welche dich suchen' from *Vier Lieder* op.22 for voice and orchestra (1913–16) and Webern's *Zwei Lieder* op.8 (1925).

PETER BRANSCOMBE

Rilling, Helmuth (*b* Stuttgart, 29 May 1933). German conductor, chorus master and organist. He studied the organ with Karl Gerock, composition with Johann Nepomuk David and choral conducting with Hans Grischkat at the Stuttgart Musikhochschule (1952–5). He continued his organ studies with Fernando Germani in Rome, and studied conducting with Bernstein in New York. He founded his first choir, the Gächinger Kantorei, in 1954, and his modern-instrument orchestra, the Bach-Collegium, Stuttgart, in 1965. In 1957 he was appointed organist and choirmaster at the Gedächtniskirche, Stuttgart, and, in 1969, on his appointment as professor at the Frankfurt Musikhochschule, succeeded Kurt Thomas as director of the Frankfurter Kantorei. He made his London début as a conductor in 1972, and in that year began his complete recorded cycle of Bach's sacred cantatas with the Frankfurter Kantorei, the Gächinger Kantorei and the Stuttgart Figuralchor. In articles, and in his concerts and recordings, he has questioned the historically informed approach to Bach performance, preferring a more traditional style of interpretation, which he believes both clarifies and strengthens the meaning of the music for the contemporary listener. He has toured throughout the world with his regular ensembles, performing major choral works from Bach and Handel to Verdi and Reger, and *a cappella* choral works of different periods. In 1988 he gave the première of the *Messa per Rossini*, written by 13 Italian composers (including Verdi), but never previously performed.

NICHOLAS ANDERSON

RILM. *See* RÉPERTOIRE INTERNATIONAL DE LITTÉRATURE MUSICALE.

Rimbault, Edward (Francis) (*b* London, 13 June 1816; *d* London, 26 Sept 1876). English musicologist. The son of a London organist, Stephen F. Rimbault (1773–1837), he received his first instruction in music from his father and then became a pupil of Samuel Wesley. At the age of 16 he was appointed organist of the Swiss Church, Soho. As a young man he directed his attention to the study of music history and literature, and in 1838 delivered a series of lectures on the history of music in England. In 1840 he took an active part in the formation of the Musical Antiquarian and Percy societies; he became secretary of both and edited several works for them, and in 1841 was made editor of the music publications of the Motett Society. In 1842 he was elected Fellow of the Society of Antiquaries and a member of the Swedish Royal Academy of Music, was awarded a doctorate by Göttingen University and was offered (but declined) the chair of music at Harvard University. He joined the committee of the Handel Society in 1844, and edited three of the society's volumes. He was extremely active for the rest of his life as a lecturer and in collecting, editing and writing about early music, particularly English; but he still found time for composing and was organist of various London churches. He left an immense music library, which was sold by Sotheby's in July 1877, and included the Mulliner Book, the Sambrooke Manuscript and John Gamble's Commonplace Book. Not all his possessions were acquired by conventional means: in the early 1840s he helped himself to various items from the library of Christ Church, Oxford, which he subsequently sold to the British Museum.

Rimbault was a pioneer in English musicology, and his achievement should be measured not by the accuracy of his editions (for naturally they have been superseded several times over) but by the educational effect of his discoveries and revivals on the Victorian public: his work first gave the ordinary musician some awareness of the riches of England's musical past. Duckles calls him a 'transitional figure' between those who edited early music for the pleasure of amateurs and those who did so to share knowledge among specialists. He produced editions of the early settings of the Anglican liturgy, of Thomas East's Whole Book of Psalms and of countless early anthems and motets, which were eagerly seized on by church choirs in need of more inspiring material than the contemporary cathedral music. He also arranged many operas and other works, wrote many elementary books and articles for periodicals. The long list of his works in Brown and Stratton is by no means complete. He was also the founder and co-editor of *The Choir and Musical Record* (1863–78). His compositions, including an operetta *The Fair Maid of Islington* (1838), incidental music for *The Castle Spectre* (1839) and the cantata *Country Life* (published posthumously), are of slight importance.

W.H. HUSK/NICHOLAS TEMPERLEY

Rimmer, John (Francis) (*b* Auckland, 5 Feb 1939). New Zealand composer. His initial training in composition was with Tremain at the University of Auckland, where he also did postgraduate work in musicology. An interest in electro-acoustic music in the mid-1960s led him to study in Toronto under Weinzweig and Gustav Ciamaga. In 1974 he joined the staff of the University of Auckland, founding the electro-acoustic music studio there. His compositions include instrumental, vocal, theatrical and electro-acoustic works, with some emphasis on pieces mixing instrumental or vocal forces with electro-acoustic sounds, as in the *Composition* series of ten such works. A powerful influence of the natural environment can be found in much of his work, including the 'modelling' of specific natural events, such as the build-up and dissipation

of energy in a breaking wave in his Viola Concerto, *Seaswell*, for trumpet and tape, *Your Piano is my Forte* for piano and orchestra, and the electro-acoustic *Fleeting Images*. A more general concern for intricacy of texture and detail in instrumental sounds can be heard in his early *At the Appointed Time* (1973), which successfully blends time-space notation with strictly metred writing, as well as *The Ring of Fire* for 16 instruments, *Gossamer* for 12 solo strings and his Symphony 'The Feeling of Sound'. Most recently his electro-acoustic music has been invigorated through his work with granular synthesis techniques, as in *Beyond the Saying* and *Crow* for oboe and tape. He was awarded a personal chair in music at the University of Auckland in 1995.

WORKS
(*selective list*)

Op: Galileo (chbr op, 3, W. Ihimaera), 1998, Auckland, U. of Auckland, 8 April 1999

Music Theatre: The Juggler, 1976; Sir Gawain and the Green Knight, 1981

Orch: Sym., 1968; December Nights, chbr orch, 1970; Explorations-Discoveries, hn, orch, 1971; At the Appointed Time, 1973; The Horns of a Dilemma, 2 hn, orch, 1974, Va Conc., 1980; Meeting Place, 1984; Sym. 'The Feeling of Sound', 1989; Cloud Fanfares, 1990; Your Piano is my Forte, pf, chbr orch, 1991; Memories, youth orch, 1998

Vocal: O Magnum Mysterium, SATB, 1967; Pukeko (I. Wedde), Mez, chbr ens, 1972; Visions 1, 2 choirs, S, Bar, elec sounds, 1975; Narcissus (Wedde), S, ens, 1979; The Record of Music, SATB, 1989

Chbr and solo inst: Mobiles, hpd, 1972; Soliloquy, hp, 1972; Epitaphium, vn, 1975; Where Sea Meets Sky 2, ens, 1975; The Ring of Fire, ens, 1976; Sonata a 5, brass qnt, 1982; De Aestibus Rerum, ens, 1983; Fantasia, org, 1983; Gossamer, 12 str, 1984; Clouds Over Pirongia, perc qt, 1984; With the Current, ens, 1986; Omarama, vn, tpt, pf, 1987; The Revelation of Increasing Complexity, b cl, mar, 1989; Millennia, brass ens, 1991, arr. brass band, 1991; Mahurangi, va, 1992; Bowed Insights, str qt, 1993; The Ripple Effect, ens, 1995; A Dialogue of Opposites, vc, 1997

Pf: Beyond, 1978; For the Kokako, 1978; Centrifuges, 1987; Preludes of Light, 1987; Flashes of Iridescence, 1995

Brass Band: Iconoclasm, 1971

El-ac: Composition 1, hn, tape; 1968; Composition 2, wind qnt, tape, 1969; Composition 5, perc, tape, 1971; Composition 4, fl, tape, 1972; Composition 6, pf, tape, 1972; Composition 3, hp, tape, 1973; Composition 7, bn, tape, 1973; Composition 8, vn, tape, 1974; Homage to Paganini, tape, 1976; White Island, tape, 1974; Where Sea Meets Sky 1, tape, 1975; Composition 9, S, tape, 1976; Colder Far Than Snow, tape, 1977; Composition 10, db, tape, 1977; Soundweb, trbn, elec sounds, 1978; Seaswell, tpt, tape, 1979; Poi, tape, 1979; Tides, hn, tape, 1981; Marathon, vc, tape delay, 1982; De Motu Naturae, tape, 1985; Projections at Dawn, cl, tape, 1985; Fleeting Images, tape, 1985; Beyond the Saying, tape, 1990; A Vocalise for Einstein, tape, 1991; Crow, ob, tape, 1991; La Voce di Galileo, tape, 1995; Pacific Soundscapes with Dancing, tape, 1995

Incid music: A Midsummer Night's Dream, 1980

Principal publishers: Catena Press, Waiteata Press

JOHN YOUNG

Rimonte [Ruimonte, Ruymonte], **Pedro** (*b* Saragossa, *c*16 April 1565; *d* 30 Nov 1627). Spanish composer. He probably studied with Melchor Robledo at La Seo Cathedral, Zaragoza, before travelling to Brussels, probably in the company of Archduke Albert, Governor of the Low Countries, and his wife, the Infanta Isabella. By 1601 he was master of their chapel and chamber music. He held these positions until at least 1611, when he took part in the mourning ceremonies for Marguerite of Austria, Queen of Spain. In 1614 he received a gift of 1500 Flemish pounds to return to Spain, and Diego Pontac said in his autobiography that in that year he was taught by Rimonte at Zaragoza. A document cited by Vander Straeten (ii, p.10), apparently from 1618, again names Rimonte as master of chamber music at Brussels, a position he still held in 1622.

Of Rimonte's six masses, two paraphrase chant melodies while the other four are based on motets, two by Palestrina and two by Francisco Guerrero (i). They are predominantly imitative in style, similar to works of the mid-16th century, but occasionally, significant words are emphasized homophonically. The Agnus Dei sections tend to employ canons and the works are unusual for the number of notated sharps, sometimes resulting in mild cross relations. The madrigals in *El Parnaso español* are competently composed, often charming pieces in an old-fashioned style reminiscent of the period 1550–60. They are mainly imitative, with a little word-painting and occasional chromaticisms. The villancicos are sharply distinguished by their refrain forms, use of 6/4 time and lively, intricate rhythms often including hemiola.

WORKS

Missae sex, 4–6vv (Antwerp, 1614), inc., 5 masses, 1 Requiem mass; ed. P. Calahorra (Zaragoza, 1982)

Cantiones sacrae, . . . et Hieremiae Prophetae Lamentaciones, 4–7vv (Antwerp, 1607), inc., 12 motets, 1 set of Lamentations

El Parnaso español de madrigales y villancicos, 4–6vv (Antwerp, 1614), 9 madrigals, 8 villancicos (16 on Spanish texts, 1 on Italian); ed. P. Calahorra (Zaragoza, 1980)

Motet: Sancta Maria, succurre miseris, 8vv, *E-Zvp*, ed. P. Calahorra, *Obras de los maestros de las capillas de música de Zaragoza en los siglos XV, XVI y XVII* (Zaragoza, 1984), 83–9

Rimsky-Korsakov. Russian family of musicians.

(1) Nikolay Andreyevich Rimsky-Korsakov (*b* Tikhvin, 6/18 Mar 1844; *d* Lyubensk, nr Luga [now Pskov district], 8/21 June 1908). Composer and teacher.

1. Life, 1844–70. 2. 1871–80. 3. 1881–93 4. 1894–1908. 5. Operas: (i) Historical drama (ii) Gogol operas (iii) Epics (iv) Fairy tales (v) Stylistic experiments. 6. Orchestral and other works. 7. Rimsky-Korsakov and Russian musical nationalism.

1. LIFE, 1844–70. Rimsky-Korsakov was born into a family of landless nobility in the small provincial town of Tikhvin. His education and upbringing were guided at least as much by his brother Voin (22 years Nikolay's senior) as by his parents. It was, for example, Voin who determined that the young Nikolay was to embark on a naval career (Voin was himself a distinguished naval officer and later became the director of the Naval College in St Petersburg). Nikolay received his primary education at home, displaying great abilities in practically every subject. From as early as five he also started tinkering on the piano, imitating the popular tunes his father played by ear, and soon began private piano lessons. Although he produced his earliest compositions at the age of ten, Rimsky-Korsakov later remembered that at this stage he had not yet developed a true passion for music, and that literature used to make a much stronger impression on him. In 1856 he duly entered the Naval College, his progress carefully monitored by his brother. From his early years he held the military values of honour and duty in high esteem, and grew into an independent, responsible and reserved person who, it seems, hardly ever strayed even as a youth. From the variety of entertainments St Petersburg offered, he chose opera, and productions of Donizetti's *Lucia*, Glinka's *A Life for the Tsar* and Meyerbeer's *Robert le diable* in particular encouraged his growing interest in music. Another strong influence was his new teacher, Fyodor Kanille, who introduced him to Bach, Beethoven and Schumann, and who was able to affirm that '*Ruslan* was really the best opera in the world, and Glinka the greatest genius'. At first Voin did not object to his brother's musical activities and even hired a room with a piano for him, thinking that proficiency at the piano might prove a useful social skill for the rather shy and retiring Nikolay. But by the time Nikolay was 17, Voin decided that music should not continue to occupy so much of his brother's energies, and brought the piano lessons to a halt; but Kanille, reluctant to part with such an eager student, began to give Nikolay lessons in theory and composition instead.

1861 was a pivotal year in Rimsky-Korsakov's musical career, for it was then that a new acquaintance, Mily Balakirev, volunteered to become his informal music tutor; Balakirev also introduced him to the critic Vladimir Stasov as well as to the budding composers Modest Musorgsky and César Cui. Thus Rimsky-Korsakov soon joined that unique workshop where Russian musical nationalism was effectively brought to life. His musical talents were readily apparent, but he had as yet little grounding in theory and his pianistic skills were unfinished; nevertheless, Balakirev bizarrely, but characteristically, set Rimsky-Korsakov the initial test of composing an entire symphony – the rudiments he was to learn along the way, with painstaking guidance from Balakirev. But his musical ambitions had to be set aside before he could complete the task (the first movement and part of the finale had been drafted), for in 1862 the man-o'-war *Almaz* left Russia for a three-year tour of duty; midshipman Rimsky-Korsakov's services were required. At first his pressing desire to continue work on the symphony overcame the boredom of peacetime naval service and the distractions of his fellow seamen, whose company he did not relish. The slow movement of the symphony was soon completed, and Rimsky-Korsakov even saw fit to draw up plans for two further symphonies (never realized). He purchased scores at every port of call, as well as a piano on which to play them (Beethoven's symphonies and quartets, Schumann's quartets, and Mendelssohn's music to *A Midsummer Night's Dream*), and filled his free hours back on board ship by studying Berlioz's treatise on orchestration. The tour also widened his horizons in other respects: he saw London, the Niagara Falls and Rio de Janeiro, and also found time to familiarize himself with the works of Homer, Shakespeare, Schiller and Goethe. The lack of external musical stimulus eventually had its effect, and after two years of service, Rimsky-Korsakov confessed in a letter to Balakirev that he had neglected his musical studies over the previous months.

After the return to St Petersburg, in May 1865, Rimsky-Korsakov's onshore duties were sufficiently light – two or three hours of clerical work a day – that he was able to rekindle his energies for composition: the missing Scherzo was written, the remainder brought to completion and scored, so that the symphony was ready for its première on the 19/31 December 1865, given by the orchestra of Balakirev's Free School of Music, conducted by Balakirev himself (a date celebrated by Rimsky-Korsakov and his colleagues as the first public appearance of a true Russian symphony). From the correspondence between pupil and teacher, we know that some details of the score came directly from Balakirev, whose teaching habits always far exceeded the mere correction of the work presented to him; just how much more we owe to him is, however, impossible to establish. Later, Rimsky-Korsakov produced a more polished version of the First Symphony, transposed from the original E♭ minor to E minor.

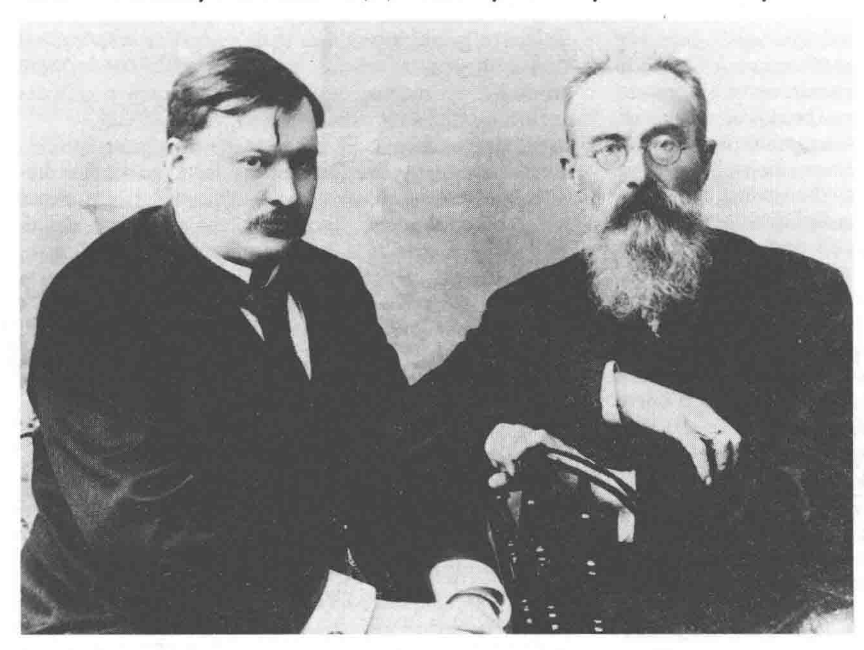
By 1867 Rimsky-Korsakov had also composed several songs and his Overture on Three Russian Themes, a faithful copy of Balakirev's work of the same name. He also followed Glinka and Dargomïzhsky in using non-Russian folk material for his Fantasia on Serbian Themes. This work received its first performance together with Balakirev's Overture on Czech Themes at a concert given for the delegates of the Slavonic Congress of 1867 – perhaps the apex of Pan-Slavism. As it happens, this was the occasion on which Stasov first coined the jocular name 'Moguchaya kuchka' (usually rendered as 'The Mighty Handful' or 'The Five') for the five leading nationalist composers.

The late 1860s saw the closest interaction between the members of the group: they regularly met for musical evenings and detailed discussion of selected passages; similar discussions also dominated their correspondence. Their search for novel means of expression bore much fruit in these years, for example in Borodin's free use of diatonic dissonance, or in Musorgsky's naturalistic speech rhythms; these new idioms immediately became shared property and laid the foundation of what became The Five's collective style. Rimsky-Korsakov's first

contributions to the formation of this style were his orchestral works *Sadko* and the Symphony no.2 ('Antar'), in which he began to develop the characteristic chromatic 'fantastic style' of his later operas. The public success of these two works marked a turning point in Rimsky-Korsakov's compositional career: he came to be cited in reviews as the most talented of the group, and was thereafter styled by critics as a 'symphonist', in spite of the overwhelming weight of the 15 operas which later consumed most of his energies as a composer.

In spring 1868 he began composing his first opera, *Pskovityanka* ('The Maid of Pskov'). This historical drama was born in the midst of vigorous debates among the members of The Five about the future of Russian opera; Cui's *William Ratcliff* and Musorgsky's *Boris Godunov* also emerged from these discussions. During work on the opera, Rimsky-Korsakov was especially close to Musorgsky (they even shared quarters at some stage), and sought to emulate his friend. This work, however, was interrupted by the attempt to complete the late Dargomïzhsky's opera *The Stone Guest*; The Five viewed this work, an essay in continuous recitative, as the cornerstone of the new operatic style, and so they could hardly allow it to perish along with its composer. Cui was asked to complete what little remained to be drafted and Rimsky-Korsakov, whose gift for orchestration had already been noticed, was to supply the full score – work which delayed the completion of his own *The Maid of Pskov* until 1871. This charitable deed successfully brought *The Stone Guest* to the stage, but even then Rimsky-Korsakov was evidently dissatisfied, for he reorchestrated the opera twice (in 1892 and 1902), lavishing as much time upon it as he did upon his own youthful creations. Much as he grumbled about the opera late in life (he called it 'a pointless and talentless experiment'), his boundless sense of duty made him perfect its score to his own standards.

2. 1871–80. Another turning point in Rimsky-Korsakov's career was his acceptance of a professorial post at the St Petersburg Conservatory, a step he took in spite of The Five's fierce anti-conservatory approach to music. Not surprisingly, this damaged his relations with the other members of the group; Balakirev in particular, it would seem, never fully forgave him. Borodin alone welcomed his move towards professionalism:



> 'Rarely can a musician have been so lucky as he: he stepped out onto the musical stage when there was a demand for Russian musicians; he immediately had the brilliant success that is now permanently assured; he hasn't made enemies in any musical coterie – all of them recognized his virtues unanimously; and now he has a post that guarantees his financial security, and more than any other position [such as his previous employment in the navy] meets his spiritual and musical requirements ... Not everyone is so lucky!'

With a secure income and growing prestige as a composer (*The Maid of Pskov* was accepted by the Mariinsky Opera), the time was right for Rimsky-Korsakov to become a family man. In June 1872 he married Nadezhda Purgol'd (see§2 below), an accomplished amateur pianist who also tried her hand at composition. Apart from bearing him six children, she became Rimsky-Korsakov's lifelong assistant, preparing four-hand piano arrangements of his works, which she played with her husband. She was also a most demanding critic of her husband's works, and her influence on him in musical matters was noticeable enough for Balakirev and Stasov to grumble at times that Nadezhda was leading Rimsky-Korsakov astray, but their accusations were grounded on nothing more than their own prejudices against mixing an artistic vocation with marriage.

'Having undeservedly become a Conservatory professor, I soon became one of its best students', wrote Rimsky-Korsakov in his *Chronicle*, recalling his days of ignorance with embarrassment. Back then, the very first classes made him realize that Balakirev's tuition, excellent in practical terms, left him helpless in the simplest matters of music theory. But the extent of Rimsky-Korsakov's self-improvement far exceeded the requirements of competent teaching; it became a quest for perfection. For example, he was assigned to rehearse the student orchestra, and so had to acquire the skill of conducting along the way. The direct experience of orchestral textures from the podium, as well as the necessity of making suitable arrangements for the student orchestral concerts led to his enduring interest in the art of orchestration. In 1873, the Navy created the post of Inspector of Naval Bands for Rimsky-Korsakov, and this too served as a useful stimulus, for he now learned to play all kinds of wind instruments in order to advance his knowledge of orchestration further. The score of his Third Symphony reflected Rimsky-Korsakov's hands-on experience of the orchestra; he was by now confident enough to make his conducting début with this work, in 1874.

The next stage of Rimsky-Korsakov's self-education proved to be a radical review of the very basics of compositional technique. Setting his own compositions aside for a time, Rimsky-Korsakov designed a strict study plan: first, contrapuntal exercises, then fugues and chorales, next *a cappella* choruses, and finally, a cantata. Apart from the cantata *Aleksandr Nevsky*, which remained an unrealized project, the programme was duly fulfilled over a period of three years (1874–6). The technical drill brought with it technical facility, but the aesthetic value of the resulting compositions is debatable: the first fruits of his learning, the String Quartet in F major, was unanimously greeted as a failure by the other members of The Five, and even Tchaikovsky, who sincerely admired Rimsky-Korsakov's new professionalism, was ambivalent: he discerned both 'a perfect clarity of texture' and 'a dryness approaching indigestibility'.

But there was no going back; moreover, Rimsky-Korsakov felt the necessity to revise everything written before 1874, even the most highly acclaimed works. In spite of his recognized flair for orchestration in his earlier scores, Rimsky-Korsakov believed that he only acquired true mastery in the 1870s (although his later encounter with Wagner's music caused him to revise his ideas again); it was for this reason that he returned in later life to reorchestrate earlier works, both his own and those of others. He would also remove many of the more pungent harmonic ideas of his earlier works, some admittedly gauche, but others quite striking. This process of perfecting earlier works would continue throughout his life: it seems that Rimsky-Korsakov was constantly reassessing his whole output, reluctant to leave behind anything incomplete, unused or unsatisfactory by the standards he acquired in his conservatory years. It is hardly surprising then that many works exist in two versions, or sometimes more, as in the case of *The Maid of Pskov* and *Antar*. Such tidying-up usually occupied Rimsky-Korsakov's

1. Nikolay Rimsky-Korsakov (right) with Aleksandr Konstantinovich Glazunov

weeks or months when inspiration for new projects was slow to come.

From 1877 to 1878, Rimsky-Korsakov and Balakirev undertook the editing of Glinka's operatic scores. This kind of project was unprecedented in Russian music history, and the rules of scholarly musical editing had to be devised along the way. Balakirev tended to 'correct' Glinka ruthlessly, while Rimsky-Korsakov was in favour of a more conservative approach; in the end Balakirev had to agree with him. In time, Rimsky-Korsakov became chief curator, collector and restorer of the Russian 'imaginary museum of musical works' (to borrow a phrase of Liszt's). He required a constant flow of scores from his friends in order to promote new Russian music in concerts held at the Conservatory as well as in Balakirev's Free School of Music, where Rimsky-Korsakov worked from 1874 to 1881; the late arrival of scores often clashed with rehearsal deadlines. In order to meet one such imminent deadline, for a performance of Borodin's *Polovtsian Dances*, Rimsky-Korsakov, Lyadov and Borodin 'divided up [the score] ... writing in pencil rather than ink, for speed ... Borodin covered the sheets with liquid gelatine, in order to prevent pencil from rubbing off; in order to get them dry sooner, he hung them on a string like washing in my study. In this way, a number was prepared and sent off to the copyist ... The final chorus I practically orchestrated on my own, for Lyadov failed to turn up' (Rimsky-Korsakov, *Chronicle*).

Another non-compositional task which occupied him at that time (1875–6) was the compilation of two folksong collections: 40 Russian songs were transcribed by Rimsky-Korsakov from performances by one Tyorty Filippov, and 100 other songs were supplied by friends and servants or in some cases merely taken from earlier collections. None of the songs were transcribed in the field, and all performances were monophonic versions of music that was also customarily performed in heterophonic/polyphonic versions – at this stage, the members of The Five knew little of this characteristic feature of Russian folksong. Rimsky-Korsakov then harmonized these songs according to the principles which Balakirev had adopted for his own collection: any non-diatonic details were smoothed out, and leading notes avoided or flattened in the harmony – by doing so, The Five imagined they were stripping away Western accretions and drawing out the authentic harmonic implications of the material (they were, of course, entirely misguided). This project played a very important role in Rimsky-Korsakov's creative development; by working on it he equipped himself with a large amount of musical material ready for quotation, or to serve as a model for folk-style passages.

Two operas flowed from all the preparatory work of these years: *Mayskaya noch'* ('May Night', 1878–9) and *Snegurochka* ('The Snow Maiden', 1880–81). *May Night* was compared unfavourably with the earlier *Maid of Pskov* and found much less striking and original. *The Snow Maiden*, on the contrary, in the splendid Mariinsky production of 1882, won the composer one of his greatest public successes. Rimsky-Korsakov remembered the time of its creation as full of inspiration, one of the happiest periods of his life. The story, a 'spring tale' by Aleksandr Ostrovsky – a play in verse laced with artful imitations of folksong texts – had already caught the attention of Tchaikovsky, who had supplied it with incidental music; Rimsky-Korsakov worked intensively on his own version, and completed the vocal score after two and a half months during the summer of 1880. He and his wife usually rented a country home every summer, but this time the situation was especially lucky. For the first time in his life the composer found himself in a 'true Russian village'. Beautiful surroundings, archaic place-names, berries, flowers and birds – everything was 'in harmony with my pantheistic mood at the time, and with my fascination in the *Snow Maiden* plot', he recalled in his *Chronicle*.

3. 1881–93. The success of *The Snow Maiden* and his own satisfaction in the work made Rimsky-Korsakov feel that he had said everything there, and no longer knew how to proceed further. By 1885 he was expressing his discomfort thus: 'In my musical convictions and views there appeared such hesitations and contradictions, that I cannot sort all this out ... The end of music in general is

near'. Nevertheless, Rimsky-Korsakov was too stable and methodical in his habits to act out a romantic artistic crisis; he never stopped working, shifting his attention to the task of revising his own earlier works (in this period, the String Quartet was turned into a Sinfonietta, and the First Symphony was thoroughly reworked).

After Musorgsky's death in 1881, Rimsky-Korsakov immediately collected all his friend's manuscripts and began preparing them for publication. The weightiest part of the task was the completion and orchestration of Musorgsky's last opera, *Khovanshchina* (eventually produced in 1886). 'It seems to me that even my name is Modest Petrovich, and not Nikolay Andreyevich, and that it was me who composed *Khovanshchina* and even *Boris*. And concerning *Khovanshchina*, there is a grain of truth in this', wrote Rimsky-Korsakov. We can say the same of Musorgsky's orchestral piece, *Night on Bald Mountain*, of which he left no definitive version; Rimsky-Korsakov almost created a new work from Musorgsky's drafts.

When we turn to Borodin's *Prince Igor*, we encounter a similar story. Rimsky-Korsakov started working on Borodin's sketches and drafts when Borodin was still alive and well, hoping that his own efforts would prompt his friend to return to his neglected opera. Far from taking offence at this officiousness, Borodin was in fact delighted at this unexpected turn; and so with Borodin's approval, Rimsky-Korsakov converted sketches into a vocal score by cutting several bars here, adding a few there, transposing some passages, correcting part-writing and completing recitatives. Vladimir Stasov described Borodin as 'galvanized' and 'revived' by his friend's activity, and already believed that looking forward to the première of *Prince Igor* would take place within the coming year. Unfortunately, Borodin's enthusiasm was short-lived, and Rimsky-Korsakov had to give up the task for want of time; but this state of affairs was not permanent, and after Borodin's death, the rest of the vocal score was eventually brought to completion by Glazunov and the whole orchestrated by Rimsky-Korsakov.

In 1883 Rimsky-Korsakov became Balakirev's deputy at the Court Kapella. His duties led him to explore Russian church music for the first time. During their formative years, The Five had displayed no interest in Russian Orthodoxy and did not venture to explore the nationalist potential of its music, perhaps under the influence of Stasov, their ideologue, who was a staunch atheist. Even Balakirev, who became an ardent believer, produced little church music himself – perhaps the restrictions of writing for male *a cappella* choir did not attract him. Rimsky-Korsakov's sacred output from this period was more enterprising: in his arrangements of the old *znamenniy* chants that were coming into vogue, he explored the possibilities of strict diatonicism and departed from the customary four-part texture, anticipating the ideas of the so-called New Trend in church music (espoused by Kastal′sky, Rachmaninoff and others).

Another task Rimsky-Korsakov set himself as a distraction from his compositional crisis was the writing of a harmony textbook, which he began after reading Tchaikovsky's manual and finding it unsatisfactory. In the end it was Rimsky-Korsakov's volume, rather than Tchaikovsky's, that became the foundation for harmony teaching in Russia. His method was based on the gradual introduction of chords in the context of detailed instruction on part-writing. Only when the students mastered all possible progressions using the primary triads, were they allowed to move on to more colourful harmonies. Figured-bass exercises were banished altogether, so that students would have to choose chords themselves from the very beginning. This method, Rimsky-Korsakov claimed, prevented them from bringing into the classroom harmonizations full of 'correct nonsense'. Tchaikovsky did not concur: he found his colleague's method too pedantic and resented what he saw as the spoon-feeding of students.

By this stage Rimsky-Korsakov had raised a generation of students, the most gifted of them being Anatoly Lyadov (although Rimsky-Korsakov expelled him from the Conservatory for laziness) and Glazunov (celebrated already at the age of 16 when his First Symphony was performed). However, the gradual academicization of the Russian school for which Rimsky-Korsakov was largely responsible led to the emergence of production-line 'Russian style' pieces, polished and correct, but lacking originality. His students were dominant in the 'Belyayev circle', formed around the rich merchant and patron of the arts, Mitrofan Belyayev. Rimsky-Korsakov, who became the artistic leader of the new group, could not help reflecting on the contrast between the rebellious character of the former 'Balakirev circle' and the prosperous complacency of Belyayev's. But the benefits of the new situation were considerable: Belyayev set up the new Russian Symphony Concerts which Rimsky-Korsakov regularly conducted, and even a publishing house (M.P. Belaieff, Leipzig) for promoting the music of the circle.

Without any new operatic project in sight, Rimsky-Korsakov occupied himself with instrumental music. He wrote the Piano Concerto, which subjected a Russian folk theme to Lisztian transformations, then three works recycling old Glinkian ideas: the Fantasia on Two Russian Themes for violin and orchestra, the Little Russian Fantasia and the *Spanish Capriccio*. The last of these is the most inspired, another showcase for Rimsky-Korsakov's brilliant orchestration. Together with the *Sheherezade* and *Svetlïy prazdnik* ('Russian Easter Festival' overture) (both 1888) Rimsky-Korsakov considered the *Spanish Capriccio* to contain the finest examples of orchestral virtuosity he had been able to produce before he came under the influence of Wagner. Proud as he was of the dazzling effects he had created for these pieces, Rimsky-Korsakov did not take them very seriously; he could hardly have imagined that they would later bring him international celebrity. But the European craze for Russian music had not yet arrived; indeed, Rimsky-Korsakov's appearance as a conductor at the Paris Exposition of 1889 passed almost unnoticed, and his Brussels concerts of 1890 won him only local renown.

During the season of 1888–9 Rimsky-Korsakov finally received the new musical stimulus he had long desired, in the shape of Wagner's *Ring*, which was mounted for the first time in St Petersburg by a Prague company under the direction of Carl Muck. Together with Glazunov, he sat through every rehearsal, following the score. It was first Wagner's orchestration that struck them, but soon all other aspects of the music made their impression; the music of both men was irreversibly altered. Rimsky-Korsakov now saw the Wagnerian potential in the libretto *Mlada* (whose plot was drawn from Slav mythology), which he had already encountered, in 1872, when he, Cui, Musorgsky, Borodin and the ballet composer Ludwig

Minkus all embarked on the collective composition of the opera – a project which was abandoned at an early stage. Now Rimsky-Korsakov decided to compose a new opera of his own devising, based on the same libretto. Since the old-fashioned genre of opera-ballet was hardly a suitable platform for Wagnerian music drama, the Wagnerian influence in *Mlada* is limited to the scoring. This was certainly Rimsky-Korsakov's new beginning in orchestration, but in every other respect *Mlada* seemed to be a summation of the past achievements. Rimsky-Korsakov's sense of arriving at some final destination was now even stronger than it had been after *The Snow Maiden*. As he wrote in May 1890 to Kruglikov:

> After the completion of *Mlada*, I have nothing left to write. I have done all I could with my limited talent. Before composing *Mlada*, some themes were still left untouched; now there is nothing. I have everything that suits me: mermaids, wood-goblins, Russian pastoral, *khorovod* dances, rituals, transformations, oriental music, nights, evenings, sunrises, little birds, stars, clouds, floods, storms, deluges, evil spirits, pagan gods, horrible monsters, hunts, entrances, dances, priests, idolatry, the musical development of Russian and other Slavonic elements, and so on. *Mlada* has filled in all the gaps.

Once again Rimsky-Korsakov felt he had reached a creative impasse, and, as before, he turned to the task of completing and polishing earlier compositions, whether his own or his colleagues'. The most notable project of these years was the editing of Musorgsky's *Boris Godunov*. While it is undoubtedly true that Rimsky-Korsakov's selfless work brought *Khovanshchina* to the stage, *Boris Godunov* was quite another matter: it already existed in two complete versions, the later version having been performed in 1874, when it proved a great success. This did not cause Rimsky-Korsakov to shrink from the task, and by 1893 he had completed his own abridged version of *Boris*, with extensive changes to harmony and orchestration. We should not imagine that the recomposition of an established work by another hand (as opposed to the completion of unfinished works) was more readily accepted then than it would be today, and Rimsky-Korsakov's version caused immediate unease. Stasov disapproved vehemently, and Rimsky-Korsakov's proposal that it might be performed at the Mariinsky Theatre was rejected unequivocally. Rimsky-Korsakov defended himself by pointing out that he had never sought to displace Musorgsky's original(s), but merely to provide an alternative which should be judged on its own merits. 'Did I burn the old Boris?', he asked of his critics. Rimsky-Korsakov, in his recomposition, had not only addressed the issues of dramatic pacing and orchestration but also sought to remove or reshape passages which he now considered 'musically impossible' (such as the scene with the Chiming Clock in Act 2), so far had he departed from the ethos of experimentation and freedom that had characterized The Five's activities in the 1860s. Rimsky-Korsakov saw himself stripping away the infelicities which marred Musorgsky's score, where today, of course, we see only the removal of Musorgsky's most striking inventions. Nevertheless, the new *Boris* displays all the consummate craftsmanship and highly polished orchestration that characterize Rimsky-Korsakov's mature output. We might also consider, before rushing to condemn, that this version has an important historical niche of its own, for this is the version of *Boris* used in the acclaimed Paris production of 1909 that first established Musorgsky's reputation in the West – it cannot have seemed at all anodyne to Parisian audiences at the time, considering the reception it won.

In Rimsky-Korsakov's personal life, the years 1890–92 brought him much distress: his mother and two of his children died, his wife suffered a serious illness, and his own health began to decline; in the midst of this, his work at the Kapella was permanently troubled by friction with Balakirev. Any remaining ties of affection between the two former friends were broken, and this encouraged Rimsky-Korsakov to detach himself more completely from his own past. He finally left the Kapella in 1894, and for some time even contemplated moving to Moscow.

4. 1894–1908. The last 15 years of Rimsky-Korsakov's life were the most prolific – one opera followed another at an unprecedented rate. This wave of inspiration began with *Noch' pered rozhdestvom* ('Christmas Eve'), based on the Gogol story that Tchaikovsky had used before him; Rimsky-Korsakov mentioned that he felt he was free to use the same plot only after Tchaikovsky's death in 1893. While still working upon *Christmas Eve*, he also

2. *Closing scene of Act 4 of Rimsky-Korsakov's 'Mlada', Mariinsky Theatre, St Petersburg, 1889: design by Mikhail Il'yich Bocharov*

began drafting *Sadko*, his next opera, which drew its plot and some of its melodic details from Russian epic songs. While there were no obvious departures in these works, Rimsky-Korsakov set himself a fresh challenge in each of his next two operas. *Motsart i Sal′yeri* ('Mozart and Salieri') was a successful attempt to write in a highly expressive declamatory idiom, while *Tsarskaya nevesta* ('The Tsar's Bride') ran counter to Stasov's contempt for long, smooth melodic lines, as did the 48 songs written in the same period.

Rimsky-Korsakov's compositional energies were further fuelled by his increasing fame and material success. *Sadko* was performed by a private company in Moscow (after rejection by the Imperial Theatre), a company directed and financed by Savva Mamontov, the second industrialist who proved a Maecenas to Rimsky-Korsakov. The 1897 première of *Sadko* initiated a long and fruitful collaboration that in the end made Rimsky-Korsakov in our eyes at least as much a man of the Russian 'Silver Age' as he was a representative of the *narodnik* 1860s. Through the Mamontov Opera, the composer came into contact with the outstanding bass Fyodor Chaliapin (whose greatest roles were Rimsky-Korsakov's Ivan the Terrible and Salieri, and Musorgsky's Boris) and the soprano Nadezhda Zabela (fig.3), wife of the painter Vrubel′ (who played the Sea Princess Volkhova in *Sadko*, the Snow Maiden, and Marfa in *The Tsar's Bride*). Mamontov keenly followed new developments in painting, and was able to enlist four of the most eminent artists – Vrubel′, Malyutin, Korovin and Golovin – to design the sets and costumes for his productions. The early modernist styles adopted by these artists placed Rimsky-Korsakov's music in a new artistic context, and to a certain extent influenced his own conceptions. In time, however, Mamontov devoted so much of his energy to the visual aspects of his productions that Rimsky-Korsakov felt he was neglecting the music; a series of bitter disputes ensued. Nevertheless, the 1898 St Petersburg tour of the company turned into an unprecedented festival of Rimsky-Korsakov's music: four of his operas were produced in one season (*Sadko*, *The Maid of Pskov*, *May Night* and *The Snow Maiden*) and all were well attended in spite of serious competition from the production of the *Ring* given by St Petersburg's German Opera company. This festival confirmed that Rimsky-Korsakov was now a composer well-loved and respected by his public.

Rimsky-Korsakov's persistence in operatic composition was eventually rewarded by the emergence of an ideal librettist, Vladimir Bel′sky, who was delighted by Rimsky-Korsakov's music, in tune with contemporary trends and able to produce consummate literary pastiches – his imitations of Pushkin, contemporaries witnessed, even fooled the Pushkinologists. Thanks to Bel′sky, Rimsky-Korsakov set two of Pushkin's folk-style tales, *Skazka o Tsare Saltane* ('The Tale of Tsar Saltan', 1899–1900) and *Zolotoy petushok* ('The Golden Cockerel', 1906–7). The conception of *Skazaniye o nevidmom grade Kitezhe* ('The Legend of the Invisible City of Kitezh', 1903–4) also owes much to Bel′sky, who managed to transform the folk legend into a 'liturgical opera', a very topical idea for the God-seeking Russian intelligentsia of the time, but an unexpected turn for the eternal atheist Rimsky-Korsakov.

'In every new work of mine I am trying to do something that is new for me,' wrote Rimsky-Korsakov in 1902. 'On the one hand, I am pushed on by the thought that in this way [my music] will retain freshness and interest, but at the same time I am prompted by my pride to think that many facets, devices, moods and styles, if not all, should be within my reach. I would not like to shut myself within the limits set by Stasov, César [Cui], Balakirev and others.' *Kashchey bessmertnïy* ('Kashchey the Immortal'), *Serviliya* and *Pan Voyevoda* all provide clear evidence of these indefatigable stylistic searches. *Kashchey* can be seen as a conservative's reply to modernism: it arrives at many of the complex harmonies of modernism, but always by following impeccably orthodox procedures in part-writing and the construction of underlying progressions. *Serviliya* and *Pan Voyevoda* were not so concerned with the future, but recreated, respectively, Italianate and Chopinesque styles from earlier in the century. *Kashchey* was much more resonant with the preferences of both critics and public at the time and was welcomed more wholeheartedly, while the two more backward-looking won only the polite approval of any *succès d'estime*.

3. Nadezhda Zabela as Volkhova, the Sea Princess, a role she created in the original production of Rimsky-Korsakov's 'Sadko', Solodovnikov Theatre, Moscow, 1897/8: portrait by Mikhail Vrubel′

The events of 1905, the First Russian Revolution, unexpectedly turned the liberal Rimsky-Korsakov into a 'bright red', as he himself put it. His show of solidarity with the rioting students was by no means without risk, as he must have known, and he was duly removed from his professorial post at the same time as over 100 students were expelled. These events underlined his importance as a public figure, since he was offered overwhelming support both within and without the Conservatory. Glazunov,

Lyadov and 300 students left the Conservatory voluntarily, and owing to the widespread press coverage, Rimsky-Korsakov began receiving letters of support (and even small donations) from peasants who had never heard a note of his music. If anything, he was rather embarrassed by his newly acquired fame as a revolutionary, and had no desire to exploit the dramatic potential of his predicament further. After the first performance of *Kashchey* in a private theatre turned into a political demonstration, Rimsky-Korsakov avoided attending many performances. The political upheaval showed once again how far the former members of Balakirev's musical circle had drifted away from each other: while Stasov remained on the left and readily sang Rimsky-Korsakov's praises, Balakirev and Cui found his solidarity with 'vandals and hooligans' offensive. Eventually Rimsky-Korsakov was invited back to the Conservatory in December 1905, under its new director, Glazunov.

During the revolutionary months, Rimsky-Korsakov could not find sufficient peace of mind to compose, and instead spent the summer writing his *Letopis' moyey muzïkal'noy zhizni* ('Chronicle of my musical life'), a detailed and entertaining book that is still valued highly by scholars of the period, as well as by the general public. He also worked on his orchestration manual, constantly beset by doubts about its usefulness, for by this stage he realized that other composers had developed new orchestral styles which were just as effective, but very different from his own; he could only witness to his own craft. Whatever the value of this manual for student composers at the time, it serves today as a perfect exposition of Rimsky-Korsakov's own methods.

On 28 April 1907 Rimsky-Korsakov left for Paris to conduct Diaghilev's Russian Concerts. These performances inaugurated the astonishing success of Russian music in Europe. Rimsky-Korsakov's personal success was also quite significant: *Sadko* was to be produced the following year at the Opéra, and *The Snow Maiden* in the Opéra-Comique. In Paris, the composer also had an opportunity to hear the more recent music of leading European composers. He hissed unabashedly at the performance of *Salome*, while after *Pelléas et Mélisande* he made a curious remark to Diaghilev: 'Do not make me listen to all these horrors, or I shall end up liking them!' The inevitable comparisons between these operas and his own sharpened his perception of his own place on the musical arena. At the end of his life, when his rebellion against the ideology and style of The Five had subsided, he admitted that he was a 'convinced kuchkist' and belonged to an era which the music of Debussy, d'Indy, Richard Strauss and Reger had left behind. At the same time, he confessed that his own operas, *Kashchey* and *The Golden Cockerel*, were written 'almost exclusively' for the purpose of competing with Western composers.

Rimsky-Korsakov was able to see on stage all but his last opera, *The Golden Cockerel*, which ran into trouble with the highly cautious Russian censors, delaying the first production until 1909. The composer had died the previous year, leaving no unfinished works behind. He was buried in the grounds of the Aleksandr-Nevsky monastery in St Petersburg, next to Glinka, Musorgsky, Borodin and Stasov.

5. Operas. Although he owes much of his international fame to his orchestral works, Rimsky-Korsakov was an operatic composer above all. When he began his musical career, only a handful of Russian operas existed, and performances depended entirely on the judgment of the Imperial Theatres' Directorate (the Mariinsky in St Petersburg and the Bol'shoy in Moscow). By contrast, at the end of his life, Russian operatic culture was flourishing, and a number of private opera companies competed freely and vigorously with the Imperial Theatres. Since the practice of commissioning operas hardly existed in Russia, Rimsky-Korsakov enjoyed complete creative freedom where all but political censorship was concerned. Of his 15 operas all but the last were produced during his lifetime, and several had become well established in the repertory of the Russian companies. Outside Russia, performances remain relatively infrequent, with the exception of *The Golden Cockerel*, which was promoted by Diaghilev, who produced it as an opera-ballet in Paris in 1914 (as a result, even English speakers generally thought of it as *Le coq d'or*).

The 15 operas are grouped below by stylistic category, rather than by chronological period, since the various generic types Rimsky-Korsakov adopted or developed still recur many years later. Without arriving at any ultimate set of preferences, he alternated between fairy tale and drama, through-composed and number operas, recitative-based and lyrical operas, dense leitmotivic constructions and more relaxed, thematically profligate operas. The following categories should provide a useful point of reference, although other plausible divisions are of course possible: (i) historical drama: *The Maid of Pskov*; (ii) Gogol operas: *May Night* and *Christmas Eve*; (iii) Epics: *The Snow Maiden*, *Mlada*, *Sadko* and *Kitezh*; (iv) Fairytales: *Saltan*, *Kashchey* and *The Golden Cockerel*; (v) Stylistic experiments: *Mozart and Salieri*, *The Tsar's Bride*, *Serviliya* and *Pan Voyevoda*.

(i) Historical drama. Rimsky-Korsakov's first opera, *The Maid of Pskov*, stands alone in its category. Even its one-time prologue, *Boyarïnya Vera Sheloga* ('The Noblewoman Vera Sheloga'), a spillover from the first revision that was reworked as a separate one-act opera in the 1890s, manifests a very different approach. *The Maid of Pskov* is the only Rimsky-Korsakov opera to embody many of the radical ideas that emerged from within The Five's musical laboratory; the result proved uncongenial to the composer's mature sensibilities. *The Maid of Pskov* was shaped by The Five's notions of musical progress, by nationalistic considerations and by realist operatic aesthetics, all of which were most successfully explored by Musorgsky in *Boris Godunov*. Rimsky-Korsakov made a point, in *The Maid of Pskov*, of avoiding operatic convention: the four acts are divided into through-composed scenes, largely without any underlying number structure; choral and recitativo textures dominate. The kuchkist preference for an uninterrupted flow of music (and drama) was stimulated by Dargomïzhsky's *The Stone Guest* rather than by Wagner, whose works were still little known in Russia at this time.

The chorus of Russian people (*narod*) assumes a leading role in *The Maid*; indeed the whole of Act 2 is taken up by one of the earliest and most impressive crowd scenes in Russian opera. Rimsky-Korsakov, following the example of Serov and Musorgsky, uses choral recitative to individualize different groups of people, then conjoins these separate choral strands in a great dramatic climax. The innovative impulse also affects harmony: the first version of the opera is a compendium of The Five's

4. Final scene (the invisible city with the prophet-birds Sirin and Alkonost, centre right) of Rimsky-Korsakov's 'The Legend of the Invisible City of Kitezh and the Maiden Fevroniya', Mariinsky Theatre, St Petersburg, 7/20 February 1907: design by Apollinary Vasnetsov

experimental harmonic techniques of the 1860s and 70s. Harmonic functions are attenuated or disappear, and in their place, the burden of integration is placed upon pedal notes; a kind of large-scale pedal technique emerges in the linking of 3rd-related and other more distant keys by means of emphasizing a common note throughout. Admittedly, many passages are merely gauche rather than strikingly innovative; the composer's later grounding in conventional music theory allowed him to rewrite such passages for the better.

(ii) Gogol operas. The two operas based on stories of Nikolay Gogol deserve separate treatment, since their literary sources inspired Rimsky-Korsakov to produce a combination of lyricism, comedy and fantasy that is not found in his other operas. *May Night* (1878–9) turns its back on Stasovian aesthetics, perhaps revealing Rimsky-Korsakov's artistic individuality for the first time. His primary operatic model is now Glinka, rather than Musorgsky, and so closed numbers co-exist with larger through-composed scenes. 'Realistic' declamation is relegated to the comic characters, while the principal roles are endowed with more lyrical parts, and in general a more conventional Romantic means of expression. *Christmas Eve*, written nearly 20 years later, approaches its Gogol story in a very similar way; in order to provide himself with an opportunity to display his strengths – the fantastic, and the depiction of rituals – Rimsky-Korsakov allows himself greater freedom in adapting the plot. The supernatural made its first appearance in *May Night*, but in *Christmas Eve* its portrayal is musically separated from the depiction of the real world by the use of formal, non-diatonic chord progressions, often chains of triads standing in 3rd relations. In both operas, the use of folksong is tied to the particular season; but in *Christmas Eve* Rimsky-Korsakov greatly expanded the sphere of ritual by adding to the plot the pagan cult of Kolyada, that allowed him to indulge in painting seasonal festivities.

(iii) Epics. Stasov's term 'epic opera' picks out those slow-paced narrative-based Russian works which eschew dramatic tension in favour of a series of elaborate, contrasting tableaux; Glinka's *Ruslan* was the prototype for all such operas. This category includes the most monumental of Rimsky-Korsakov's works, which Russian commentators consider the core of his output, the repository of all the composer's deepest ideas. All of these operas deal with mythical subjects, but the disparities between their literary sources led to corresponding differences between the resulting musical settings. *The Snow Maiden* inherited from Ostrovsky a certain playfulness, although this quality was undermined by the dutiful insertion of epic choruses. *Sadko*, drawn directly from sung folk epics (*bïlinï*), retains the consistent seriousness of its unmediated mythological source. *Mlada* was handicapped by its adherence to the opera-ballet tradition, which was largely defunct at the time of composition (1890). *Kitezh* is coloured by the religious mysticism so typical of the Russian 'Silver Age'.

Aside from the defining characteristics of the epic opera, various devices recur in Rimsky-Korsakov's examples of genre. We find bardic songs on a number of occasions with the harp or piano called upon to imitate the traditional *gusli* accompaniment. Again *Ruslan* provides the prototype in the bard Bayan, who is most clearly evoked in the analogous parts of Nezhata in *Sadko* and Lumir in *Mlada*. Massive crowd scenes (in which the bards characteristically appear) are also features of the epic operas; examples are to be found in *Mlada*, Act 2, the fourth tableau of *Sadko* or the first scene of *Kitezh*, Act 2. Typically, they consist of multi-layered complex constructions united by a certain ritornello theme, looking back to grand opera as much as they prefigure Stravinsky's *Petrushka*. Another ubiquitous type is the solemn chorus in irregular metre attempting to accommodate folk-inspired metres. Where Glinka used 5/4, Rimsky-Korsakov confidently adopts larger groupings: 8/4 (3+3+2) in *Mlada*, and 11/4 in *The Snow Maiden* and *Sadko*.

Rimsky-Korsakov's favoured oriental and fantastic styles are used prominently within the frameworks of the epic operas. Oriental colouring appears, for example, in Mizgir''s arioso (*The Snow Maiden*) and in the Song of the Indian Guest (*Sadko*) as an invocation of a remote and beautiful world, or, by contrast, to represent a fierce hostile power (the Tatars) in *Kitezh*. The fantastic style appropriately dominates the underwater scenes of *Sadko*, and the forest transformation scenes of *The Snow Maiden*.

5. Autograph score from Act 3 of Rimsky-Korsakov's 'The Golden Cockerel', composed 1906–7 (RUS-SPsc)

Intense human drama also makes an unexpected appearance in this group of operas, carefully handled, in order not to shatter the epic frame. Perhaps the most memorable instance of this is in the development of the Snow Maiden's character, as she yearns for love and finally melts away with passion, only for her sufferings to be subordinated to the epic, when Tsar Berendey reminds his people that spring could enter only through the Snow Maiden's death. Or again, we have the development of Grishka in *Kitezh*, who begins as a profane drunk, descends further into wickedness until he betrays his people to the enemy, accusing another of the crime; his conscience is pricked into repentance, but without a god to turn to, he finds refuge only in madness; again, however, this development is not allowed to overshadow the larger epic design, and Grishka is allowed to run off stage and out of the story.

(iv) Fairy tales. These operas – *The Tale of Tsar Saltan*, *Kashchey the Immortal* and *The Golden Cockerel* – are painted from a deliberately restricted expressive palette, in contrast to the all-embracing character of the epic operas. In each case Rimsky-Korsakov finds a way to distance the action from the audience by creating a closed, magical world: he employs framing devices like the repetition of the trumpet flourish in Saltan and the Astrologer's music in the *Cockerel*; there is the distinctively eerie sound world of *Kashchey*, where all the harmonies revolve around the diminished 7th chord (key centres at the distance of a minor 3rd, octatonicism, etc.); and there are the parodistic exaggerations of the *Cockerel*, which completely erase the possibility of any psychological development for the main characters. The composer Grechaninov wrote to Rimsky-Korsakov, praising his fairy tale manner: 'No-one had previously managed to maintain a fairy tale flavour consistently throughout an opera, where everything – desires, feelings, actions – is expressed as if in half-tints, where there is nothing "real"'. Grechaninov singled out a passage from *Saltan*, where the Tsarina Militrisa is about to be floated off to sea in a barrel: 'What a temptation for a composer to write heart-rending music, yet you make her sing about the rushing waves, as if before a somewhat unpleasant sea journey'. This is an apt observation of Rimsky-Korsakov's anti-Romanticism, which harmonized so well with decorative trends in painting and with the new choreography of Diaghilev's Saisons Russes; eventually, Stravinsky and Prokofiev were also to come under its profound influence.

(v) Stylistic experiments. In each of *Mozart and Salieri*, *The Tsar's Bride*, *Serviliya* and *Pan Voyevoda*, Rimsky-Korsakov set himself a new stylistic challenge. Written between 1897 and 1903, they provide evidence (attested in his letters) of Rimsky-Korsakov's growing frustrations with the 'Russian style' and with Stasovian aesthetics in general. In *Mozart and Salieri*, Rimsky-Korsakov moved beyond historical or mythological Slav lands for the first time; apart from quotations from Mozart and one clear pastiche section, the general style includes various neo-classical turns of phrase.

In *The Tsar's Bride*, Rimsky-Korsakov discovered a talent for sustained lyrical writing which he had banished from earlier operas, in obedience to Stasov. While the literary source is very close to that of *The Maid of Pskov* (it was written by the same author, and set in the same historical period), the operatic treatment of the plot could not be more different. In Tchaikovskian fashion, the historical and social aspects are sacrificed to the personal drama. Passionate lyricism poured into conventional forms are also reminiscent of Tchaikovsky; for the first time, Rimsky-Korsakov was prepared to include large ensemble numbers (typical of Tchaikovsky), and even adopted that characteristic feature of *Yevgeny Onegin*, the echoing of each lyrical vocal phrase in the orchestra.

Serviliya and *Pan Voyevoda* went even further in subverting Rimsky-Korsakov's image as the leader of the Russian nationalist school. The very plot of *Serviliya*, based on Mey's drama from Roman history and perfectly fitted for grand opera, was itself an emphatic rejection of Stasov and nationalism, but the music of the resulting opera took every opportunity to exacerbate the offence, since Rimsky-Korsakov decided that an Italianate style would serve as suitable local colour for the ancient Roman setting. Perhaps we might not agree that the choice was so apt, but the adoption of the Italian style introduced a more profound problem, for it was not merely another national or exotic colouring on a par with the Spanish or oriental styles much used elsewhere in Russian music. On the contrary, the Italian style had the status of an operatic default, as much for Russian as for Western operagoers; Stasov and the Russian School had hitherto regarded Italian opera as the chief enemy of their own project, and they had recognized that Italianisms, belonging to the default style, could never be heard as exotic colouring. Rimsky-Korsakov appeared to have forgotten this (so it would seem from his correspondence on the matter), but he was most probably grasping at any excuse for his sudden indulgence in all those sweet sins from which he had formerly abstained: the appoggiaturas, chromatic passing notes and duets in parallel 6ths. *Pan Voyevoda* is a homage to Chopin, whose style was once rejected by The Five as feminine and sentimental; in accordance with his model's predilections, Rimsky-Korsakov constructs his opera from berceuses, nocturnes, mazurkas and polonaises and recreates Chopin's style with substantial success.

6. Orchestral and other works. Rimsky-Korsakov's orchestral works are largely programmatic, the more so if we take him seriously when he says, 'To me even a folk theme has a programme of sorts'. The two chief influences upon his orchestral music were Balakirev, unsurprisingly (especially his First Symphony, the Overture on Three Russian Themes, the Czech Overture and *Tamara*), and Liszt (the symphonic poems). All Rimsky-Korsakov's works based on folk themes, Russian or otherwise, owe much to Balakirev's gestures and formal procedures. His oriental style evolved from *Tamara*; even some of his most characteristic oriental passages, such as the recurring solo violin sections of *Sheherezade*, are drawn from that source. Liszt's influence, on the other hand, was responsible for the development of his fantastic style, a fact of which he made no secret. When asked by his biographer, Yastrebtsev, how to account for the enormous differences between his First Symphony (1865) and his orchestral fantasia *Sadko* (1867) the composer replied with disarming frankness: 'When I wrote the symphony, we [the composers of Balakirev's circle] knew only Beethoven, Schumann and some Glinka; by the time I began working on *Sadko* and *Antar*, I was profoundly inspired by the beauty of Liszt's *Mephisto Waltz*'. Liszt's harmonic experimentation inspired both Rimsky-Korsakov's use of the octatonic scale and 3rd-related triads, both features of *Sadko*, *Antar*, *Skazka* ('Legend') and many of the operas.

The difference between these earlier pieces and the most popular works of the 1880s (the *Spanish Capriccio*, *Sheherezade* and the *Easter Festival* overture) lies not so much in the material, or even in its development, as in orchestration that replaced the sparer textures of Glinka and Balakirev with a new luxuriance. The principle of highlighting 'primary hues', individual timbres, remained in place (suffice it to recall the prominence of the bassoon in the second movement of *Sheherezade*, or the trombone solo in the *Easter Festival* overture), but behind the seemingly effortless transparency of sound there was now a sophisticated armoury of orchestral effects, some discovered in the scores of other composers, but many freshly invented by Rimsky-Korsakov himself. He confessed that the striking use of *pianissimo* trombones to support the *forte* strings in the first movement of *Sheherezade* was drawn from Wagner, but the orchestral imitation of bells (for example, in the *Easter Festival* overture) was his own invention; we find just such bell effects in Musorgsky and Borodin too, but in each case we know that the passages concerned were scored by Rimsky-Korsakov, who saw no reason to restrict the appearance of his most felicitous ideas to his own scores. The influence of Rimsky-Korsakov's orchestral style, in its turn, seeped into the lingua franca of European music after Debussy and Ravel mined *Sheherezade* for new orchestral idioms (one passage from its second movement appears, hardly disguised, in both *La Mer* and *Daphnis et Chloé*).

The discipline of non-programmatic symphonic writing did not inspire Rimsky-Korsakov to the same degree; his First Symphony is too slender and derivative, and in the Third Symphony and the Sinfonietta, a series of variations on trivial material leads to tedium. The music for piano or chamber ensemble likewise adds little to our estimation of the composer. His songs are another matter: while they do not boast the overt lyricism of Tchaikovsky or Rachmaninoff, a number of them, such as *Redeyet oblakov letuchaya gryada* ('The Clouds begin to Scatter') from op.42 or *Na nivï zholtïye* ('Silence Descends on the Golden Cornfields') from op.39, certainly possess a delicate beauty, and these have deservedly entered the standard repertory of Russian singers.

7. Rimsky-Korsakov and Russian musical nationalism. In histories of Western music, Rimsky-Korsakov's output is customarily discussed under the rubric of nationalism. Indeed, it is no exaggeration to call Rimsky-Korsakov the main architect of the 'Russian style' in music, a style which is instantly recognizable to a worldwide public today. The sheer volume of his heritage consolidated the common idioms of The Five by dint of constant repetition; his completion and editing of his colleagues' works established the concert repertory of Russian music; his professorial toil ensured the continuity of the style into the following generation; he was also the first and most important exporter of the style to Western Europe.

At the outset of Rimsky-Korsakov's musical career, he worked within the aesthetic framework outlined by Stasov and Balakirev. Their vision of the Russian national style had two main components: the positive side was the development of the folk heritage, while the negative was the creation of a new style through the avoidance of all that seemed most characteristically Western. Stasov also harboured a far-reaching concept of the essential difference of Russian music from that of Western Europe, a difference supposedly based on the origins of Russian music in the Greek modes, origins which could be heard, he thought, in everything from the cries of street hawkers through to Glinka; Western music, on the other hand,

lacked such ancient and noble underpinnings. Rimsky-Korsakov developed his own musical talents in the midst of this nationalist theorizing and rhetoric, but it never set the limits on his thinking, and in later life he abandoned all its major doctrines.

Rimsky-Korsakov's contribution to the assimilation of folk heritage is, without doubt, enormous. He significally expanded the range of folk genres employed by art music, placing emphasis on the more archaic *bïlinï* and calendar songs that brought him in touch with pagan beliefs. Unlike other composers, he often attempted to re-create the appropriate context for the quoted folksongs by representing a seasonal or wedding ritual. The sun cult held a special fascination for him, and it features in *May Night*, *The Snow Maiden*, *Mlada* and *Christmas Eve*. One should not, of course, overestimate the ethnographical accuracy of such representations or indeed the folksong transcriptions, since Rimsky-Korsakov never carried out any field work. In compositional terms, Russian folksongs served him primarily as a source of melodic material. His harmonizations of them had little to do with the real folk polyphony, though in some cases he sought to represent the general idea of *podgoloski* (literally 'undervoices', more or less independent parts that twine round the main melody in Russian folksongs). Where possible, he would try to minimize his interference with a folk melody, stating it without accompaniment, or against a pedal tone. In other cases he adopted Balakirev-style harmonizations that incorporated modal inflections, without leaving major and minor tonalities altogether. There are other folk-inspired traits to be found, such as irregular phrasing and certain patterns of repetition in his small-scale structures. On a larger scale, Rimsky-Korsakov extensively uses the changing-background variation technique established by Glinka as a possible treatment for folk-style material, but by no means excluded other forms as inappropriate.

Regarding the creation of an idiom that would eschew the features regarded as most Western, Rimsky-Korsakov contributed less; *The Maid of Pskov*, in its first version, is perhaps the closest the composer came to realizing such a project, for there he strives to avoid any familiar modulation patterns or closing gestures. The revised version of the same opera demonstrates Rimsky-Korsakov's loss of faith in these nationalist pretensions, and he inserts many of the devices he earlier avoided in order to achieve a much smoother (and conventional) musical flow. In later years, the composer thoroughly demystified the concept of musical nationalism by exposing its mechanism:

> In my opinion, a distinctively 'Russian music' does not exist. Both harmony and melody are pan-European. Russian songs introduce into counterpoint a few new technical devices, but to create a new, unique kind of music – this they cannot do. Russian traits – and national traits in general – are not acquired by writing according to specific rules, but rather by removing from the common language of music those devices which are inappropriate to a Russian style ... Thus, for example, I would not use this turn of phrase [ex.1] if I were writing in

Ex.1

> a Russian style, as it would be inappropriate; but aside from this, I would compose freely. To obtain the Russian style I would avoid some devices, for a Spanish style I would avoid others, and for a German style, still others.

The process of creating Russian national music is, he tells us, no different from the process required for mastery of any other local colour. Nationalist claims for a distinctive Russian music that would constitute an alternative to European music are also effectively punctured by Rimsky-Korsakov. He no longer sees folksong in Russian music as a limitless resource; indeed, he thinks that the possibilities it offered had already been exhausted by the turn of the century.

It is ironic that the same Rimsky-Korsakov who so frankly articulated his scepticism about musical nationality is now remembered and celebrated outside his homeland precisely for his exotic Russianness. Although such popular perception is unlikely to change in the near future, it is to be hoped that in time a more balanced portrait of the composer will emerge, that of a master whose output is an integral part of European culture.

WORKS

(2) Nadezhda Nikolayevna Rimskaya-Korsakova [née Purgol'd] (*b* St Petersburg, 19/31 Oct 1848; *d* Petrograd, 11/24 May 1919). Pianist, composer and writer, wife of (1) Nikolay Andreyevich Rimsky-Korsakov. She began to learn the piano at the age of nine. Beginning in the 1850s she participated in musical events in her parents' home with their neighbour, Dargomïzhsky, and in the 1860s and 70s, with her vocalist sister Aleksandra (later Molas), in soirées sponsored by the Balakirev circle. Under Dargomïzhsky's tutelage, she learnt how to reduce orchestral scores. During the period 1868–71 she acted as the 'dear orchestra' for readings of Dargomïzhsky's *The Stone Guest*, Musorgsky's *Marriage* and *Boris Godunov*, Cui's *William Ratcliff* and Rimsky-Korsakov's *The Maid of Pskov*. In the mid-1860s she studied at the St Petersburg Conservatory with Gerke (piano), N.I. Zaremba (theory) and, later, Rimsky-Korsakov (composition, orchestration). Although she gradually gave up composition after her marriage to Rimsky-Korsakov in 1872, she had a considerable influence on the creation of his first three operas. She travelled with her husband, attended rehearsals and proofread and arranged compositions by him and others. Her last years were dedicated to issuing her husband's posthumous literary and musical legacy, maintaining standards for performance of his works (particularly where Diaghilev was concerned) and preparing material for a museum in his name. Rimskaya-Korsakova's compositions, all apparently unpublished, include an orchestral piece *Zakoldovannoye mesto* ('An Enchanted Place'; 1872), an opera *Midsummer Night* in piano-vocal score, piano pieces and songs.

(3) Andrey Nikolayevich Rimsky-Korsakov (*b* St Petersburg, 17 Oct 1878; *d* Leningrad, 23 May 1940). Musicologist, son of (1) N.A. Rimsky-Korsakov, and husband of the composer Yuliya Veysberg (1880–1942). His interest in music was encouraged from childhood and he played the cello in the family string quartet. He had to abandon his studies at St Petersburg University after participating in student protests, and in 1900 went abroad to study philosophy in Strasbourg and Heidelberg. On his return to St Petersburg he taught logic and the history of philosophy for a number of years in Gymnasiums. He adopted music as a career in 1912 when he became music correspondent of the newspaper *Russkaya molva*, and contributed to *Severnïye zapiski* and other publications. In 1915 he became editor of the new magazine *Muzïkal'nïy sovremennik* (1915–17), the first publication of its kind in Russia, covering not only concert life but also aspects of the history and theory of music. He contributed numerous articles, including studies on Musorgsky, Skryabin and Taneyev to the journal as well as polemical essays to its supplement *Khronika*, which concentrated on current musical events. He also prepared three issues of the journal *Muzïkal'naya letopis'* (1922–5), the successor to *Muzïkal'nïy sovremennik* which had ceased publication in 1917.

From 1918 until the end of his life Rimsky-Korsakov worked in the Saltïkov-Shchedrin Public Library in Leningrad as head of its music department. There he continued Stasov's work in cataloguing the library's vast

collection of music manuscripts, and in 1938 produced a definitive guide to the collection. He also gave classes in music history at Leningrad University (1921–4) and was a member of the department of music history and theory at the Institute of Historical Studies (1923–8). He worked assiduously on behalf of his father's music, and helped set up the museum in Rimsky-Korsakov's St Petersburg flat. He wrote a five-volume study on his father's life and works (1933–46), and edited the third, fourth and fifth editions of his *Letopis' moyey muzïkal'noy zhizni* ('Chronicle of my Musical Life'); in the last years of his life he did much of the preparatory work for the publication of the correspondence between Rimsky-Korsakov and Tchaikovsky. Together with Maximilian Steinberg, he edited the first published volume (the collected songs, vol.xlv, Moscow, 1946) of the collected edition of Rimsky-Korsakov's works, and he also edited Glinka's memoirs and the collected letters of Musorgsky.

(4) Georgy Mikhaylovich Rimsky-Korsakov (*b* St Petersburg, 13/26 Dec 1901; *d* Leningrad [now St Petersburg], 10 Sept 1965). Composer and musicologist, nephew of (1) N.A. Rimsky-Korsakov. He studied under M.A. Steinberg, Sokolov, Lyapunov and Nikolayev at the Petrograd/Leningrad Conservatory until 1927. In the following year he took his *kandidat* degree at the Leningrad Institute of Theatre and Music, supervised by Finagin and Asaf'yev. He taught from 1927 at the Leningrad Conservatory, where he was Asaf'yev's assistant up to 1929; courses that he directed included acoustics, score reading and orchestration. During the period 1929–32 he also worked at the Lenfilm film studio as a sound engineer. In 1923 he founded a Petrograd society for quarter-tone music, and he made public appearances in concerts and lectures as the director of an ensemble for music of this type (1925–32). His compositions make use of a quarter-tone harmonium and the Emiriton, an electronic keyboard instrument constructed by A.A. Ivanov, A.V. Rimsky-Korsakov, V.L. Kreytser and V.P. Dzerzhkovich.

Rinaldi, Andrea (*b* Francofonte, Sicily; *fl* 1627–44). Italian composer. He was a priest living under the protection of the noble family Bonanno and Colonna, whose two branches resided respectively at Caltagirone and Syracuse, while some members were knights of Malta. He was *maestro di cappella* of Mdina Cathedral, Malta (1627–31), of the city of Syracuse (1633–4) and of the city of Caltagirone (1634–5, and April–December 1638). On 5 August 1644 he acted as *maestro di cappella* for the feast of the Madonna della Neve in Francofonte. His *Il primo libro de motetti a due, tre e quattro voci* (Palermo, 1634) was discovered in the cathedral archives at Mdina in 1979. The texts are taken from the *Psalms*, the *Song of Songs*, the Gospels, *Acts* and *Revelations*. Others are paraliturgical hymns. The voices (two sopranos, mezzo soprano, two altos, two tenors and two basses) are combined in various ways. The style is somewhat rigid and harmonically predictable, with alternating duple and triple metres, limited chromaticism and the occasional madrigalism.

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Rinaldi, Susana (*b* Buenos Aires, 25 Dec 1935). Argentine tango singer. She studied classical singing at the Conservatorio Nacional de Música before training as an actress at Buenos Aires's principal drama school, the Escuela de Arte Dramático. In the mid-1960s an invitation to record from the Madrigal label drew her back to singing, and a series of popular television appearances in 1967 established her as perhaps the outstanding contemporary woman singer in the tango genre. With her remarkably controlled alto voice, exquisite diction and dramatic expressiveness, she was the first to perform the seemingly impossible task of providing genuinely fresh versions of Carlos Gardel classics like *Melodía de arrabal* and *Cuesta abajo*. The first of her several LPs appeared in 1967. She was acclaimed at Buenos Aires's celebrated Michelangelo nightclub (1969) and at the Olympia in Paris (1977) on the first of many successful trips abroad.

SIMON COLLIER

Rinaldo dall'Arpa (*b* late 16th century; *d* 2 Aug 1603). Italian harpist, singer and composer. He was a highly esteemed member of Gesualdo's retinue of musicians. He accompanied him to Ferrara in 1594: a letter from a courtier to Alfonso II, Duke of Ferrara, stated that Gesualdo 'hopes that Rinaldo will be able to join in the singing from time to time'. A letter written by the custodian of instruments at the court of Ferrara in December 1598 mentions that a 'Rainaldo detto la arppa' had taken a new harp to Rome and never returned it. Rinaldo dall'Arpa is probably the composer of two keyboard pieces (in *GB-Lbl* Add.30491, ed. in CEKM, xxiv, 1967).

ROLAND JACKSON

Rinaldo di [da] **Capua** (*b* Capua or Naples, *c*1705; *d* ?Rome, *c*1780). Italian composer, possibly the father of Marcello Bernardini. Burney (1771) described him as:

> an old and excellent Neapolitan composer. He is the natural son of a person of very high rank in that country, and at first only studied music as an accomplishment; but being left by his father with only a small fortune, which was soon dissipated, he was forced to make it his profession. He was but seventeen when he composed his first opera at Vienna.

Burney's description of Rinaldo as 'old' in 1771 and his string of operatic successes beginning in 1737 suggest a birthdate around 1710. Presumably, the epithet 'di Capua' indicates that Rinaldo was born in the town of this name 30 km north of Naples. Probably he studied privately; his name does not appear on the rolls of the Neapolitan conservatories.

Rinaldo made his career in Rome, where he presented his first known opera, *Ciro riconosciuto*, in 1737. The satirical opera *La commedia in commedia* was so outstanding a success at the Teatro Valle the following year that it was repeated in Florence (1741), London (1748), Venice (1749) and Munich (1749), and various versions of it were staged under other titles elsewhere. His most celebrated *opera seria* was *Vologeso, re de' Parti*, first performed in 1739. *La libertà nociva* (1740) enhanced his reputation as a composer of comic opera and, like *La commedia*, was repeated in various European cities. On 18 March 1740 Rinaldo set out for Lisbon, where he had a contract for 1000 scudi per annum; he composed three *opere serie* there but was back in Rome by 1742. Eustachio Bambini's company of Italian *bouffons* performed *La donna superba* (an abridged setting of *La commedia in commedia*) in Paris in 1752 and *La zingara* in 1753. The latter was extraordinarily successful; there were innumerable revivals and it played an important part in the Querelle des Bouffons. Rinaldo's last *opera seria*, *Adriano in Siria*, was performed in 1758. From then on he wrote only comic operas, and those infrequently. According to Dent, the last of them, *La Giocondina* (1778), was performed posthumously.

Rinaldo experienced 'various vicissitudes of fortune; sometimes in vogue, sometimes neglected'. Burney (1789) also said: he 'was living, or rather starving in 1770 at Rome'. In his last years, 'the accumulated produce of his pen, had by a graceless son been sold for waste paper' (Burney, 1771).

About 40 stage works have been identified as by Rinaldo, of which two are doubtful. The problem of cataloguing is complicated by his tendency to present reworkings of his operas under new titles and by confusion with Marcello di Capua (Bernardini). Apart from a few dozen separate arias, the music of only six operas survives. In *Gli impostori* (1751) two of the 19 arias are in *ABA* form and ten in da capo form. The style is typical of Rinaldo, ranging from farcical caricature to lyrical and sentimental expression. The words are set to nimble figures and the declamation is clearly articulated. Accompanied recitative is rare, but the ensembles are expertly composed. The score reveals Rinaldo's favourite texture – three parts, generally for strings: the first violin doubles the vocal line, sometimes varying it; the second violin either doubles the first or follows it at a 3rd or 6th (it is rarely independent); the bass, doubled by the viola (which rarely has an independent part), provides an accompaniment, often in fast repeated notes. Of the 15 numbers in *La zingara*, six are reworkings from *Il cavalier Mignatta* (1751). After the performances by Bambini's *buffa* company in Paris in 1753, *La zingara* was translated into French as *La bohémienne* and adapted as an *opéra comique* by Favart in 1755. He cut out four numbers and added six others by various composers. *La bohémienne* is therefore a pasticcio (the aria 'Examinez sa grâce' is set to a motif from the celebrated 'Tre giorni son che Nina', which has been attributed at various times to Pergolesi, Rinaldo and Ciampi; the true composer remains unknown). A further version, arranged by Bambini, was performed in Pesaro in 1755. The rapid action of *La zingara* is carried along by the exceptionally felicitous inventiveness of the music; in the second intermezzo, the simple *buffo* style in which the work begins is expanded to embrace arias in *seria* style, a chorus and wind instruments. Of Rinaldo's cantatas, only two are known, *La natività* (1753) and the allegorical, festive Cantata *a 5*; they each have a sinfonia and 11 numbers and resemble the operas in style.

The separate arias, which come mainly from *opere serie*, reaffirm Rinaldo's qualities – an architectonic

expansiveness of form, a variety of style related to the expressive needs of the situation, a desire for contrast (especially between the two parts of da capo arias), and occasional bursts of virtuoso coloratura. Burney described the aria 'Ombra che pallida' from *Vologeso* as an 'example of the perfection to which dramatic music was brought in Italy'. Rinaldo's vocation as a dramatist is evident also in his boast that he was 'among the first who introduced long "ritornellos", or symphonies, into the recitatives of strong passion and distress, which express or imitate what it would be ridiculous for the voice to attempt'.

His qualities as an instrumental composer are revealed in his sinfonias, or *ouvertures*, in which he contributed to the development of the Classical symphony-sonata. The first movement departs from the old binary form of the Baroque period and tends towards bithematic structure, with signs of a 'subsidiary thematic group', and tripartite structure, with a sizable central development section. The second movement, formerly a short, unpretentious section, becomes a bipartite song form, and the third movement is normally a jig in binary form. Rinaldo's ability to compose solid, complex forms contradicts Burney's final judgment; although considering him 'a composer of great genius and fire', Burney seems also to have echoed the opinion of La Borde: 'The science of this composer is not equal to his genius'.

WORKS

STAGE

first performed in Rome, music lost, unless otherwise stated

CLAUDIO GALLICO

Rincik (i). Small 15-string zither of Sunda, West Java, also known as *kacapi rincik* (*see also* KACAPI (i)).

Rincik (ii). High-pitched double row GONG-CHIME used in *gamelan saléndro* and *pélog* of West Java.

Rincik (iii). Small Balinese cymbals, consisting of one upturned pair (or three to five overlapping cymbals mounted on a base) and a striking pair which the player holds (*see* INDONESIA, §II, 1, Table 2).

Rinck, Johann Christian Heinrich (*b* Elgersburg, Thuringia, 18 Feb 1770; *d* Darmstadt, 7 Aug 1846). German organist and composer. He studied first with Abicht, J.A. Junghanss and H.C. Kirchner, but received his most important musical training in Erfurt from J.C. Kittel, a former pupil

of Bach, from 1786 to 1789. In 1790 he became municipal organist of Giessen. He moved to Darmstadt in 1805 as organist, Kantor and teacher at the music school, and he was also a member of Grand Duke Ludwig's Hofkapelle. In Darmstadt he met such figures as Abbé Vogler and Gottfried Weber. He became court organist in 1813. Rinck was celebrated as a teacher throughout Germany, and because of him Darmstadt became a centre for aspiring organists. Among his pupils were Charles Hallé, F.C. Kühmstedt, Joseph Mainzer, C.A. and W. Mangold and C.F. Pohl. Rinck was also regarded as an authority abroad, although he seldom left Darmstadt. He was awarded an honorary doctorate from Giessen in 1840.

Rinck's compositions are mainly for the organ. They include many collections of chorale preludes as well as instructive works such as the *Praktische Orgelschule* op.55, the *Vorschule für angehende Organisten* op.82 and the seven-volume *Der Choralfreund oder Studien für Choralspielen* opp.101–27. Rinck was influential in the development of the chorale prelude in the early 19th century, and his *Theoretisch-Praktische Anleitung zum Orgelspielen* op.124 was translated into French, English and Italian during his lifetime. His prime concern was to write in a manner suitable for liturgical use, and the moderation of his artistic methods was esteemed by his contemporaries. Rinck also wrote instructional works, waltzes and variations for the piano, two masses, motets, and much unpublished instrumental music, probably written for the musicians of the Darmstadt Hofkapelle, which lies between the Classical and the Biedermeier style.

Rinck had close connections with the publishers Schott in Mainz, which issued his main organ works and which owned the journal *Cäcilia*, to which he contributed music criticism; he also prepared the piano score of Beethoven's *Missa solemnis* for Schott. In the middle of the 19th century Rinck's library, which contained important 18th-century manuscripts as well as his own compositions, was sold to America and given to Yale University (microfilm in *D-DS*).

URSULA KRAMER

Rinckart [Rinckhard, Rinckhardt], **Martin** (*b* Eilenburg, nr Leipzig, 23 or 24 April 1586; *d* Eilenburg, 8 Dec 1649). German poet and composer. He went to the Thomasschule, Leipzig, and sang in its choir under Sethus Calvisius, rising to the position of prefect. From 1602 he also studied at the University of Leipzig where he took the bachelor's degree in 1609. In 1610 he became Kantor at the Nikolaikirche, Eisleben, and thus also a teacher at the grammar school there. In 1611 he was appointed deacon at the Annenkirche, Eisleben, and in 1613 priest at nearby Erdeborn. He was crowned Poet Laureate in 1615 and took the master's degree in 1616. Finally in 1617 he returned as archdeacon to Eilenburg, where he worked selflessly until his death, at times under very difficult conditions resulting from the Thirty Years War. He was particularly admired for his rehabilitation of the Eilenburg Kantoreigesellschaft, which had completely fallen into decline.

He was highly regarded in his own day for his numerous literary works, among which seven Lutheran dramas are specially notable (see Liebsch's important, if one-sided, reassessment). Nowadays he is remembered only for *Nun danket alle Gott*, which is among the most popular Protestant hymns. Based closely on *Ecclesiasticus* i.22–4, it originated in 1630 as a Tischlied (not to be confused with Rinckart's *Nun dancket alle Gott, dem Herren Zebaoth*, published in 1630). It is possible that Crüger's famous melody for it, first published in his *Praxis pietatis melica* (1647), derives to some extent from a melody by Rinckart himself. According to Eitner he published two motets, in 1645 and 1648. He published a sacred parody of *Il trionfo di Dori* (RISM 1592[11]) as *Triumphi de Dorothea . . . das ist Geistliches musicalisches Triumph-Cräntzlein* (1619[16]), which was apparently based on the expanded edition and translation, *Musicalisches Streit-kränzlein* (1612–13), by Johann Lyttich, who was briefly his successor at the Nikolaikirche.

WORKS

Triumphi de Dorothea . . . das ist Geistliches musicalisches Triumph-Cräntzlein, 1619[16]
Monetarius seditiosus . . . Der Müntzerische Bawren-Krieg [Lutheran play, incl. 2 'Berckreyen', 4vv] (Leipzig, 1625)

WALTER BLANKENBURG/DOROTHEA SCHRÖDER

Rinforzando (It.: 'strengthening', 'reinforcing'; gerund of *rinforzare*). A dynamic and expression mark, sometimes abbreviated as *R*, *rinf.*, *rf* or *rfz*. It implies a more sudden increase in volume than *crescendo*, and is often applied only to a short phrase or group of notes. In the 18th

century, and particularly in the work of the Mannheim composers, it was used for a very short crescendo; and occasionally it was applied to a single note demanding an accent less extreme than is required by *sforzando* or *sforzato*. But consistency of usage is not easy to find: in the *Meistersinger* prelude Wagner has a *rinforzando* stretching over two bars.

See also TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Ringbom, Nils-Eric (*b* Turku, 27 Dec 1907; *d* Helsinki, 13 Feb 1988). Finnish composer and critic. He studied at the Åbo Akademi (1927–8, 1930–33, MA 1933) and at Helsinki University (1928–30, DMus 1955), his principal teachers being O. Andersson (theory and musicology) and Leo Funtek (violin and instrumentation). After playing the violin in the Turku PO (1927–8, 1930–32), he served as assistant manager (1938–42) and managing director (1942–70) of the Helsinki PO. He was also artistic director of the Sibelius Festival (1951–60), chairman of the Finnish section of the ISCM (1955–9) and chairman of the Helsinki Festival (1966–70). He also served as music critic of the *Svenska pressen* (1933–44) and the *Nya pressen* (1945–70). His quite distinctive music makes moderate use of new techniques. The Wind Sextet was the first Finnish work performed at an ISCM Festival (1952).

ERIK WAHLSTRÖM/ERKKI SALMENHAARA

Ringeissen, Bernard (*b* Paris, 15 May 1934). French pianist. He studied with Georges de Lausnay at the Paris Conservatoire, receiving a *premier prix* in 1951, and subsequently with Marguerite Long and Jacques Février. In 1954 he won first prize in the Geneva Competition, and the following year won second prize in the Marguerite Long-Jacques Thibaud Competition and fourth prize in the Chopin Competition in Warsaw. He has performed throughout Europe, North and South America, Russia and East Asia, and in 1975 gave the first performance of Marcel Landowski's Second Concerto, conducted by Igor Markevitch. His recordings include the complete piano works of Saint-Saëns and Stravinsky, the major works of Alkan and (with Noël Lee) Debussy's music for two pianos and piano duet.

CHARLES TIMBRELL

Ringer, Alexander L(othar) (*b* Berlin, 3 Feb 1921). American musicologist of Dutch origin. He was educated in Berlin and Amsterdam, where his teachers included Henk Badings, Felix de Nobel, Marius Flothuis and K.P. Bernet Kempers. During World War II he worked with Willy Rosen's cabaret company and taught music education in the Belsen concentration camp, 1943–4. After emigrating to the USA he took the MA in 1949 from the New School for Social Research in New York and the PhD in 1955 from Columbia University, where he studied with Paul Henry Lang, Erich Hertzmann and William Mitchell. In 1948 he began teaching at the City College of New York. He held positions at Columbia University (lecturer, 1951–2), Hebrew Union School of Sacred Music (instructor, 1950–52), the University of Pennsylvania (assistant professor, 1952–5), the University of California, Berkeley (assistant professor, 1955–6) and the University of Oklahoma (associate professor, 1956–8). He then joined the faculty of the University of Illinois, where he was made professor in 1963 and acted as chair of the department for many years. He was also visiting professor at the Hebrew University of Jerusalem (1962–3; 1966–7), Heidelberg Universität und Hochschule für Jüdische Studien (1983–4) and Tel-Aviv University (1984). He was a founder and honorary member of the International Kodály Society, a member of the editorial board of *Musica judaica* and is general editor (together with Nuria Schoenberg-Nono, Ivan Vojtěch and Horst Weber) of the collected edition of Schoenberg's writings.

Ringer has a wide range of musicological interests, including the music of the French Revolution, 19th-century music, Schoenberg, and contemporary American composers such as George Rochberg, Leon Kirchner and Harrison Kerr. Other subjects which concern him are Dutch, Middle Eastern and Hebrew music, the aesthetics, politics and sociology of music, music in education and the history of Jewish musicians.

PAULA MORGAN

Ring modulator. An electronic device used in both recorded and live electronic music. It is a standard item in electronic music studios, and can appear as a free-standing unit connected to other electronic apparatus, or as a module within a synthesizer. Existing in both analog and digital forms, the ring modulator takes its name from the characteristic ring formation of four diodes in its analog circuit (see illustration).

There are broadly two classes of instruments in an electronic music studio: sound generators and sound modifiers. The ring modulator is a sound modifier. It modifies the frequency components of a given sound (henceforward the 'signal'), according to definite laws, in relation to those of a second source, or 'carrier'. So a ring modulator has two inputs, the signal input and the carrier input, and one output. The modulator will function only if both inputs are present, and optimally when they are balanced, i.e. present at the same amplitude. The output consists of the sum and difference frequencies of those at the inputs. For example, if sine waves (i.e. pure tones) of frequencies 1000 Hz and 400 Hz are present at the inputs, the output will consist of the two frequencies 1400 Hz and 600 Hz. In practice, it matters little which input is regarded as the signal and which the carrier, since it is only the modulation products that matter. These products are called 'sidebands'.

In the above example, where sine waves were the input signals, only two frequencies were contained in the output. If one of the inputs is changed to a more complex

Basic ring bridge circuit of a ring modulator

form, such as a square wave, then each of the harmonic partials contained within that input is modulated, and so the output is much more complex. Each harmonic generates a sideband not related to the harmonic series. This applies, of course, to any more complex sound at either of the inputs. Each instantaneous frequency component at one input is modulated with each instantaneous frequency component at the other input. With a varying input such as that often obtained in live electronic music from an instrumental source, the aural result is not precisely predictable.

Ring modulators may be used in studios to create new and complex sound mixtures, or to effect various transformations upon material. For example, a musical signal may be modulated with a low-frequency sine wave (say 5 Hz), to produce a strange amplitude-modulation effect. Related to this is the use of a pulse or any other very short carrier input to 'gate' the signal input. Another characteristic result of the ring modulator is the creation of multiple glissandos when one of the input signals is varied in frequency. It should be noted that, as in the 5 Hz example, the input signals need not be within the audio range. As long as at least some of the sidebands lie within it there will, of course, be an audible result. The device known as the 'frequency shifter' or 'Klangumwandler' exploits this. A double ring-modulation process heterodynes the signal into a higher frequency range and back again, isolating the upper or lower sideband. The signal is shifted in frequency by the amount of the frequency of the carrier, the direction of the shift depending on which sideband has been isolated.

Several works by Stockhausen can be cited as exemplifying the use of the ring modulator. In *Mixtur* (1964) the sounds of four groups of instrumentalists are picked up by microphones and fed into the signal inputs of four ring modulators. The carrier input of each is a full-range sine-wave oscillator operated by separate musicians. The frequencies of the carrier sine waves are varied throughout the composition, and the modulated sounds, amplified and reproduced through four loudspeakers, blend with

the live orchestral sound. In *Mantra* (1969–70) the sounds of two pianos are presented to the signal inputs of two ring modulators, the carrier inputs again being sine waves. Ring-modulation techniques are applied to recorded materials in the tape compositions *Telemusik* (1966) and *Hymnen* (1966–7).

Other composers to have used ring modulation in conjunction with acoustic instruments include Ichiyanagi (*Appearance*, 1967), Ivan Tcherepnin (*Rings*, 1967), Smalley (*Transformation I*, 1968–9; *Pulses*, 1969; *Monody*, 1971–2), Cristóbal Halffter (*Noche activa del espiritu*, 1973), Kelemen (*Mirabilia*, 1975) and Stahmer (*Kristallgitter*, 1992). Subotnick's 'ghost box', which he began to use in 1977, altered ring modulation, frequency and amplification to vary the sounds of a live performer. Known colloquially as the 'fuzz box', the ring modulator has also been extensively and imaginatively employed in 'electric jazz' and in pop music.

RICHARD ORTON/R

Rinoldi, Antonio (*b* Milan; *fl* 1st half of the 17th century). Italian composer and organist. The title-pages of his two publications of 1627 – his only known music – show that he was organist of the collegiate church at S Martino in Rio, near Reggio nell'Emilia. He is reported to have been organist at Tivoli Cathedral between 1646 and 1651. His publications are *Il primo libro de madrigali concertati a due, tre, et quattro voci* op.1 (Venice, 1627), which is incomplete, and *Il primo libro de motetti concertati a due, tre, quattro, e cinque voci* op.2 (Venice, 1627). The motets show that he was a capable composer in both the monodic and concertato styles.

COLIN TIMMS

Rinuccini, Cino (*b* Florence, ?*c*1350; *d* Florence, 1417). Italian poet and writer. He came from a wealthy family linked to that of Antonio degli Alberti. His *canzoniere* includes many works, although only one ballata, *Con gli occhi assai*, has been preserved in a musical setting, by Francesco Landini. A close relationship between the two men is also suggested by the fact that Rinuccini praised Landini in his *Risponsiva alla Invettiva di Messer Antonio Lusco* of 1397 (see R. Witt, *Renaissance Quarterly*, xxiii/2, 1970, pp.133–49). (Rinuccini's poetry is ed. G. Balbi, Florence, 1995.)

W. THOMAS MARROCCO/GIANLUCA D'AGOSTINO

Rinuccini, Ottavio (*b* Florence, 20 Jan 1562; *d* Florence, 28 March 1621). Italian poet, courtier and the first librettist. He came from a noble Florentine family prominent in cultural and diplomatic circles since the 13th century. His education was presumably that of a courtier – some classical training and enough exposure to the arts to have made him a lively participant in court entertainments in Florence, for which he began writing verses as early as 1579 (*Maschere d'Amazzoni*). The court chronicler Bastiano de' Rossi called him 'a very fine connoisseur' of music, and G.B. Doni suggested that Monteverdi relied on him greatly while setting his libretto for *Arianna*.

Already a member of the Accademia Fiorentina, Rinuccini in 1586 joined another Florentine academy, the Alterati, whose members were particularly interested in dramatic theory and music; he took the name 'Il Sonnacchioso' ('the somnolent one'). There is no evidence to affirm Rinuccini's connection with Giovanni de' Bardi's Camerata, but Bardi (like other musical humanists such as Girolamo Mei and Jacopo Corsi) was also a member of the Accademia degli Alterati and collaborated with Rinuccini on the 1589 *intermedi*, which he produced for the wedding celebrations of the Grand Duke Ferdinando I. Of the six *intermedi*, which are loosely unified by their dramatization of the marvellous powers of ancient music, Rinuccini was alone responsible for the text of three (nos.2, 3 and 6) and wrote the greater part of two more (nos.1 and 5), to which Bardi also contributed some verses. The third *intermedio*, which depicts the battle between Apollo and the dragon, later served Rinuccini as the basis for the opening scene of his first operatic text, *Dafne*, which he claimed to have written 'solely to test the power of music'. Thus Apollo, god of both music and the sun, by virtue of his power in vanquishing the irrational forces represented by the python, was his first aesthetic spokesman.

During the 1590s Rinuccini was associated with Corsi, who collaborated with Jacopo Peri in setting *Dafne* to music in the newly invented recitative style. First performed at Corsi's home in 1598 and repeated in the following two years, *Dafne* was the first drama to be sung in its entirety 'in the manner of the ancients'. The innovations claimed by Rinuccini and Peri in their prefaces to *Euridice* (1600) inspired the rival claims of Cavalieri and Caccini, neither of whom, however, had written recitative as such before 1600.

In creating the new genre of opera libretto, Rinuccini adopted many conventions from the major lyric poets of his day: Tasso, Guarini and Chiabrera. His originality lay in developing a consistent and unique verse style fashioned for a musical setting that was designed to imitate the accents of speech. This style, a compromise between the blank verse typical of spoken tragedy and the uniform metres and close rhymes of traditional lyric forms, consists of an irregular mixture of freely rhyming seven- and eleven-syllable lines able to promote the rhythmic and melodic continuity suited to narrative passages without precluding the more intense lyricism appropriate for dramatically affective passages. Rinuccini's verse has also been praised for its expressive devices, which include assonance, anaphora, and other types of word and sound repetition capable of conveying emotionally charged sentiments in the Petrarchist manner. Moreover, by adopting Ovidian plots, which themselves reflect the power of art, and through the Prologue and happy ending of *Euridice*, Rinuccini established a link between the new art form and the tragicomic genre, defended by Guarini as suitable for the purging of melancholy, rather than of pity and fear, as with the ancients. Thus Rinuccini's librettos must not be seen as unsuccessful imitations of classical tragedy but as highly appropriate vehicles through which 'modern' music might prove its power to move. That he called his next libretto, *Arianna* (1608, set

by Monteverdi), a 'tragedia' is more a reflection of its pathetic subject than a generic distinction, for it too follows Ovid and resorts at the end to a 'deus ex machina', with Ariadne being transported to the heavens.

Rinuccini's association with Monteverdi in Mantua also resulted in the *Ballo delle Ingrate* (1608), which reflects the influence of the French court ballet and his periodic sojourns in France between 1600 and 1604 as one of Maria de' Medici's courtiers. Also in 1608 *Dafne* was revived in a new setting by Marco da Gagliano, whose Mantuan-based Accademia degli Elevati Rinuccini had joined. However, his last libretto, *Narciso*, dating from about the same period, did not find a willing composer, and he subsequently wrote only a few minor works in the pastoral vein and some sacred verses in addition to sonnets, canzoni and madrigals (including *Zefiro torna* and *Lamento della ninfa*, famous in Monteverdi's settings). His decline as a librettist was due perhaps more than anything else to the gradual shift of operatic activity before his death away from Florence and Mantua to Rome.

The texts of Rinuccini's principal works intended for musical setting appear in Solerti (1904–5, vol.ii).

BARBARA R. HANNING

Rio de Janeiro. City in Brazil. It is the chief port and former capital of Brazil. After it became the capital in 1763 Rio de Janeiro developed as a major centre of musical activities. Brazilian musicians of the 19th and 20th centuries sought to further their careers there. It was the seat of the Portuguese royal family from 1808 to 1821, of the Brazilian Empire from 1822 to 1889, and the administrative centre of the federal government until 1960. Important names associated with it include José Maurício Nunes Garcia, Marcos Portugal, Sigismund Neukomm, Francisco Manuel da Silva, Antônio Carlos Gomes, Alberto Nepomuceno, Villa-Lobos, Francisco Mignone and Claudio Santoro; distinguished visitors at various times included Sigismund Thalberg, Louis Moreau Gottschalk, Théodore Ritter, Enrico Tamberlick, Sarasate, Toscanini, Milhaud, Richard Strauss and Stravinsky. From the 1930s the city has been on the South American itinerary of the major orchestras, chamber ensembles, opera companies, virtuosos and new music groups of the Western world. The library resources (National Library, library of the Escola de Música da Universidade Federal do Rio de Janeiro, Rio Cathedral Library) are considered some of the best on the continent. Since the late 1960s the city has become one of the main centres (together with São Paulo) of the national music industry, with headquarters of both national and multinational recording companies. In addition, since the 1920s Rio de Janeiro has been the main locus of a thriving urban popular music scene, not only with its famous Carnival samba schools' parades and contests but with numerous festivals of popular music that have attracted well-known national and international figures.

1. CHURCH MUSIC. Garcia was *mestre de capela* of the cathedral from 1798. With the arrival of the Portuguese royal court in 1808 the church of the Carmelites became the cathedral and royal chapel, to which Garcia was appointed *mestre de capela*. Marcos Portugal also held the post after his arrival (1811). Between 1810 and 1820 the chapel became one of the most remarkable centres of church music in South America, with a choir of about 50 singers, including some Italian castratos, and a large instrumental ensemble called 'magnificent' by European visitors. After Brazil became independent the chapel continued to exist as the imperial chapel. Francisco

Manuel da Silva, one of its most dynamic members, was also secretary of the Real Irmandade de Santa Cecília, a celebrated association of professional musicians. In the 20th century establishments of sacred music lost their earlier importance, although composers continued to cultivate church music. The Franciscan friar Pedro Sinzig promoted the study of church music by editing the periodical *Música sacra* (Petrópolis) in the 1940s.

2. OPERA. The earliest known lyric theatre, Ópera Velha (1767–70) was directed by a Father Ventura; some of the ballad operas of the local playwright Antonio José da Silva (1705–39), nicknamed 'O Judeu', were produced here. The next theatre, Ópera Nova, opened in about 1776 under the direction of Manuel Luiz Ferreira. The presence of the royal family greatly stimulated opera and theatre life. The Teatro Régio, founded by Prince João VI, presented the first production in Rio (1811) of Portugal's *opera buffa L'oro non compra amore*. The Real Teatro de S João, founded in 1813, renamed the Imperial Teatro de S Pedro de Alcântara in 1824, produced mostly Italian operas, Rossini dominating the repertory until 1832, and Bellini and Donizetti after 1844. Opera companies usually included Italian artists living in Brazil, such as the celebrated prima donna Augusta Candiani, or visiting European singers, such as Rosine Stoltz and Enrico Tamberlick. A Verdi opera (*Ernani*) was first given in 1846, only two years after its première. The Teatro Provisório, renamed Teatro Lírico Fluminense in 1854, presented the most important seasons in the city until the end of the 19th century. Another theatre, the Teatro Ginásio Dramático, opened in 1855. Francisco Manuel da Silva, the author of the Brazilian national anthem, attempted to stimulate the use of the vernacular in the operatic repertory. In 1857, under the auspices of Emperor Pedro II, the Imperial Academia de Música e Ópera Nacional was created with that aim and the additional goal of producing at least once a year a new opera by a Brazilian composer. In 1860 the Academia was replaced by a new organization called the Ópera Lírica Nacional which immediately produced the first opera on a local subject written by a Brazilian-born composer: Elías Álvares Lobo's *A noite de São João*. Operettas were generally presented at the Teatro Fénix Dramática. Since its inauguration in 1909 the Teatro Municipal has been the chief venue for opera as well as other musical activities. Since the 1960s the new Sala Cecília Meireles has been an important concert venue, but operas have also been produced there, including Monteverdi's *Orfeo* in 1998.

3. CONCERT LIFE. Regular concert life emerged in Rio during the second half of the 19th century. Concert societies and clubs founded at that time included the Clube Mozart (1867), the Clube Beethoven (1882), the Sociedade de Concertos Clássicos (1883) and the Sociedade de Concertos Populares (1896). Most concerts took place in the existing theatres; concert halls as such were not built until the 1960s when the Sala Cecília Meireles opened, although smaller halls, such as the Salão Leopoldo Miguez at the Escola de Música, were in use much earlier. Several orchestras and orchestral associations were founded early in the 20th century. The Sociedade de Concertos Sinfônicos do Rio de Janeiro (1912) had its own orchestra under the direction of Francisco Braga until 1932. Walter Burle Marx founded the short-lived Orquestra Filarmônica do Rio de Janeiro in 1931, and in the same year Villa-Lobos created his own orchestra which lasted until 1935, when the Orquestra do Teatro Municipal (1934), subsidized by the city government, became available to him. The best organized orchestra, the Orquestra Sinfônica Brasileira (Brazil SO), was founded in 1940 by José Siqueira. More recently the broadcasting station of the Ministry of Education and Culture (MEC) established its own Orquestra Sinfônica Nacional and its own chamber orchestra and choir. Among the city's numerous choral groups the most important are the Associação de Canto Coral (at first known as Côro Feminino 'Pro Música') under the direction of Cleofe Person de Mattos, and the choir of the Instituto Israelita Brasileiro de Cultura e Educação, directed by Henrique Morelenbaum. The choir of the Teatro Municipal performed mainly opera selections and oratorios. Earlier choral societies included the Orfeão Carlos Gomes and the Côro Barroso Neto, both organized by the composer Barroso Neto. The Roberto de Regina Ensemble, established in the 1960s, specializes in medieval and Renaissance music. Among the several chamber ensembles that became active in the 1960s, the Rio de Janeiro Quartet, the Villa-Lobos Quintet and the quartet of the Escola de Música are particularly well known.

Concert promoting organizations have included the Associação Brasileira de Música (1930), the Cultura Artística do Rio de Janeiro (1933), the Associação Brasileira de Concertos (1947), the ABC-Pró Arte and the Associação Brasileira de Arte (ABRARTE). The Museu Villa-Lobos, founded by the Ministry of Education in 1960, has promoted numerous concerts and festivals of Villa-Lobos's music. The Fundação Nacional de Arte (FUNARTE) has been active since the 1970s in organizing music festivals of various types and in sponsoring the publications of books, records and CDs on many aspects of the music of Brazil. Between 1975 and 1997 the Bienal de Música Brasileira Contemporânea, organized by the Instituto Brasileiro de Arte of the Ministry of Culture, presented 20 festivals introducing new works by Brazilian composers.

4. FESTIVALS, BROADCASTING. In the late 1950s Rio de Janeiro became a centre of national and international music festivals and contests, of which the most important have been the International Piano Contest (1958), the International Music Festival (1963), the International Singing Contests (from 1963), the International Music Festival of MEC Radio (1969), the Music Festival of Guanabara (the first was in 1969), the Villa-Lobos Festival (from 1966) with the International Competition of Villa-Lobos's String Quartets (1966), the International Guitar Competition (1971), the Instrumental Ensembles Competition (1972) and the International Piano Competition (1974).

The major broadcasting station, the Radio Ministério da Educação (PRA-2), has an extensive art-music programme, and counts among its personnel some of the best musicians in the country. The Radio Jornal do Brasil has also broadcast an uninterrupted classical music programme since the 1980s.

5. EDUCATION, PROFESSIONAL ORGANIZATIONS. The first official educational institution in Rio was the Conservatório Imperial de Música, founded in 1847 (active by 1848) by Francisco Manuel da Silva. Renamed the Instituto Nacional de Música by the republican

government in 1890, it was incorporated into the Federal University of Rio de Janeiro in 1931, and became the Escola Nacional de Música at the founding of the University of Brazil (1937). In the late 1960s it became known as the Escola de Música da Universidade Federal do Rio de Janeiro. The directors of the school since 1890 have included some of the best-known music teachers of the country. In 1936 the composer Lorenzo Fernândez founded the Conservatório Brasileiro de Música (officially recognized by the federal government in 1944). The Conservatório do Distrito Federal ceased to function in the early 1960s. The Instituto Villa-Lobos within the Arts Institute of the University of Rio de Janeiro (UNIRIO) developed one of the most successful postgraduate programmes in Brazilian music in the 1980s. During the same decade there developed a number of small private studios for the production of electro-acoustic music, the best known being the Estúdio da Glória, maintained by the composer Tim Rescala, and that of the composer Vania Dantas Leite. Among the numerous private establishments the Academia de Música Lorenzo Fernândez, founded in 1953, has trained distinguished performing musicians.

The Academia Brasileira de Música was created by Villa-Lobos in Rio in July 1945. Its original 50 members were reduced to 40, of which 30 are composers and ten are musicologists, music critics and performers, in addition to an unspecified number of foreign corresponding members. The only professional union, Ordem dos Músicos do Brasil (1960), has had its headquarters in Rio de Janeiro. In the 1970s the federal council founded a Serviço de Documentação Musical for the dissemination of Brazilian new music.

GERARD BÉHAGUE

Ríos, Alvaro de los (*d* Madrid, 23 June 1623). Spanish composer and musician. On 10 February 1607 he entered the service of Queen Margarita, wife of Felipe III as a *músico de cámara* – a title synonymous with *cantor*, a singer who accompanied himself on an instrument (nearly always a guitar). In Ríos's case, however, there is evidence only of his work as a composer. On the death of Queen Margarita in 1611 he remained in the post, serving the prince (the future King Felipe IV) and his younger siblings. In 1616 Princess Elisabeth de Bourbon arrived in Madrid, and Ríos was taken on by her, again as a chamber musician, continuing in her service after 1621 (when her husband Felipe IV succeeded to the throne) until his death. He was praised by the court poet Antonio Hurtado de Mendoza and by Tirso de Molina, who paid tribute to him and Juan Blas de Castro as the composers of the music for his comedy *El vergonzoso en palacio*.

Ríos's extant works – five romances, two folias and a Novena, for two to three voices – are included in the cancionero compiled by Claudio de la Sablonara in 1624–5 (*D-Mbs*, *E-Mn*; ed. J. Aroca, Madrid, 1918; ed. J. Etzion, London, 1996). They belong to the vocal chamber repertory popular at the Madrid court. Homophony and imitative counterpoint alternate, and there are frequent hemiolas in triple time and dissonant passing notes.

LUIS ROBLEDO

Riotte, Philipp Jakob (*b* St Wendel, Saar, 16 Aug 1776; *d* Vienna, 20 Aug 1856). German composer and conductor. He was a pupil of Anton André at Offenbach and in 1804 he appeared as pianist and composer at a concert in Frankfurt. In 1805 or 1806 he became music director at Gotha (so styled on the title-page of keyboard sonatas published by André in 1806 and 1807), and was subsequently at Danzig and Magdeburg. At the Erfurt Congress in 1808 he directed the French opera performances. He then went to Vienna where he worked at the court opera and then as music director at the Theater an der Wien (1818–21 and 1824–6).

Although Riotte enjoyed success in his lifetime in every musical form then in favour, he was best known for his stage works and keyboard pieces (his contribution to Diabelli's *Vaterländischer Künstlerverein* is one of the longest); but the only score to outlive its composer was that written in 1827 for Raimund's *Moisasurs Zauberspruch*: only the songs survive (they were republished twice in the 1920s), but they are still sometimes used in performances of the play. Others of Riotte's Singspiels and stage scores (some 50 were given in the five principal Viennese theatres between 1809 and 1840) that were particularly successful in their day include the Horschelt pantomimes *Der Berggeist* (1818; 76 performances), *Elisene, Prinzessin von Bulgarien* (1819), *Die Wildschützen* (1820) and *Die Zaubernelke* (1821, the score partly by Gallenberg), all given in the Theater an der Wien; the Fenzl pantomime *Die Doppelgestalten* (1834) for the Leopoldstadt Theatre; the Singspiel *Das Grenzstädtchen* (text by Kotzebue) given in the court theatres in April 1809, soon after Riotte's arrival in Vienna; a comic melodrama *Azondar* (*Azondai*) given in the Theater an der Wien in 1819; the operas *Euphemie von Avagora* (Kärntnertor Theatre, 1823) and *Nurredin, Prinz von Persien* (Theater an der Wien, 1825) and the Singspiel

Eine Prise Tobak (Kärntnertor Theatre and Josefstadt Theatre, 1825).

Riotte also supplied music for many farces and plays; among his parody scores are *Staberl als Freischütz* (in collaboration with Röth), which had some 60 performances between 1826 and 1856, *Die geschwätzige Stumme von Nussdorf* (1830) and *Der Postillon von Stadl-Enzersdorf* (1840). He also wrote some large-scale orchestral works, a mass, chamber works and many piano pieces, including the once-popular 'characteristic tone painting' *Die Schlacht bei Leipzig*. In November 1852, after a long silence, he appeared before the Viennese public again and for the last time with the cantata *Der Sieg des Kreuzes*, which was favourably received. A large collection of his works in manuscript is held by the Gesellschaft der Musikfreunde, Vienna.

PETER BRANSCOMBE

Ripa (da Mantova), Alberto da [Rippe, Albert de] (*b* Mantua, *c*1500; *d* Paris, 1551). Italian lutenist and composer. Nothing is known of his early training, although we can assume that his formative musical experiences occurred at the Este court in Mantua where a culture of lute playing thrived; performers there included Tromboncino and Cara. Few details of Ripa's activities prior to his appointment at the French court in 1528 or 1529 are known. He was probably in the service of Ercole Gonzaga, Cardinal of Mantua during the mid-1520s, since he is mentioned in Pietro Aretino's comedy *Il Marescalco*, written in 1526–7 during the author's sojourn in Mantua. Aretino's correspondence with and about Ripa, which lasted until 1538, reveals the unusually high esteem in which the lutenist was held.

By 1528 Ripa had joined the court of François I of France at the considerable annual salary of 600 *livres tournois* (double that of the other court lutenists), a sum augmented by occasional large gifts of land, money, wheat and wine. At court his official titles included *valet de chambre du roi* (1532), *capitaine de Montils-sous-Blois* (1534) and *seigneur* of the town of Carroys-en-Brie. He performed at the highest levels of noble and royal society in Europe: on 12 February 1529 he performed for Henry VIII in England and in 1538 he played for a meeting in Nice between François I and Pope Paul III (who was accompanied by his own lutenist, Francesco da Milano). During his lifetime Ripa's musical skill was praised by the Florentine Cosimo Bartoli as well as in verses by Clément Marot, Bonaventure des Périers, Gabriel Simeoni and Pontus de Tyard; after his death he was commemorated with laudatory epitaphs penned by J.-P. des Mesmes, Mellin de Saint-Gelais, Pierre Ronsard and J.-A. de Baïf.

Ripa's output comprises 26 fantasias, 59 intabulations (respectively 46 chansons, 3 madrigals, and 10 motets) and 10 dances, all for six-course lute, along with two fantasias for four-course Renaissance guitar. Only three pieces were published in his lifetime; the remainder were printed posthumously between 1552 and 1562 by the firms of Le Roy & Ballard and by Michel Fezandat. Ripa's former student Guillaume Morlaye, who edited the works for the Fezandat prints, suggested that the publications were faithful to the composer's intentions. Over half of the motet intabulations are arrangements of French works (three by Sermisy, two by Conseil and one by Mouton) which had been published by Attaingnant and which were probably part of the repertory of the French chapel royal. Ripa set only two works by Josquin, but they are among his longest and most expressive intabulations. In general, these are skilful arrangements, characterized by liberal decorations in the lower voices while remaining faithful to the original part-writing. The secular intabulations are dominated by French chansons, especially pieces by Sandrin; Italian madrigals are almost entirely absent. They range from faithful, homophonic arrangements to discursive glosses that are brilliant examples of Renaissance embellishment.

Ripa's most personal and expressive works are his fantasias, some of which are based on borrowed motifs and subjects from contemporary madrigals and chansons. Indeed, the dense textures, the spacing of the voices and Ripa's emphasis on sonority in these works (which can be deduced by the fingering for the left hand) reveal most of all the influence of vocal music, and many of his fantasias are thus similar in style to the intabulations. Good performances, on a properly strung instrument, reveal a grandiose symmetry and a feel for overall sonority and architecture which avoids the clichés common to the output of most of the lutenists active in France during the period, perhaps with the exception of Paladino. The ten dances by Ripa which survive should be regarded as blueprints for performance, rather than as finished, prescriptive products.

Ripa ranks as one of the most celebrated instrumental virtuosos of the 16th century. His music represents a leap forward in the evolution of lute technique and his works are among the most technically challenging in the entire lute repertory.

WORKS

Edition: *Albert de Rippe: Oeuvres*, ed. J.-M. Vaccaro, CM, *Corpus des luthistes français* (1972–5)

PUBLISHED IN PARIS BY FEZANDAT

Premier livre de tabulature de leut, contenant plusieurs chansons et fantasies (1552[36])

Second livre de tabulature de leut, contenant plusieurs chansons, motetz et fantasies (1554[34])

Troisiesme livre de tabulature de leut, contenant plusieurs chansons, motetz et fantasies (1554[35])

Quatriesme livre de tabulature de leut, contenant plusieurs chansons, motetz et fantasies (1554[36])

Cinquiesme livre de tabulature de leut, contenant plusieurs chansons, fantasies, motetz, pavanes et gaillardes (1555[36])

Sixiesme livre de tabulature de leut, contenant plusieurs chansons, fantasies, motetz, pavanes et gaillardes (1558)

PUBLISHED IN PARIS BY LE ROY & Ballard

Premier livre de tabelature de luth contenant plusieurs fantasies (1562[25])

Second livre de tabelature de luth contenant plusieurs chansons (1562[26])

Tiers livre de tabelature de luth contenant plusieurs chansons (1562[27])

Quart livre de tabelature de luth contenant plusieurs fantasies, chansons, & pavanes (1553[36])

Cinquiesme livre de tabelature de luth contenant plusieurs motetz, & fantasies (1562[28])
2 fantasias attrib. 'Albert', 1552[33]

VICTOR ANAND COELHO

Ripa (y Blanque), Antonio (*b* Tarazona, bap. 27 Dec 1721; *d* Seville, 3 Nov 1795). Spanish composer. He was a choirboy in Tarazona Cathedral. After graduating from the diocesan seminary and being ordained priest he studied the organ at Zaragoza (1745) and on 4 February 1746 was appointed *maestro de capilla* at Tarazona Cathedral, succeeding Juan de Sayas. He later became *maestro de capilla* at Cuenca Cathedral (1753–8), the Descalzas Reales convent in Madrid (1758–68) and Seville Cathedral (1768–89). In the 1770s his reputation was such that even as far away as Mexico City he was considered the leading Spanish composer of his epoch. He was elected a member of the Accademia Filarmonica di Bologna on 11 November 1786.

As listed in the *Gazeta de Madrid* of November 1797 and confirmed in an advertisement in the *Diario de Madrid* of 21 February 1798, Ripa left for sale at his death a vast repertory of 12 orchestrally accompanied masses, 39 vesper psalms, ten *Miserere* settings, 11 Lamentations, five sets of responsories, 140 villancicos and 344 other works. Guatemala, Lima, Mexico City and Santiago de Chile cathedrals shared enthusiasm for his orchestrally accompanied polychoral music, Lima alone buying 32 villancicos and six Latin works, all of which are extant. One of his masses and a setting of the *Stabat mater*, both for eight voices, have been edited bv Eslava y Elizondo in Lira sacro-hispana (*Siglo XVIII*, ii/1, Madrid, 1869); the mass has also been edited by F.J. Cabañas Alamán (Madrid, 1991). A six-verse (1, 2, 5, 10, 11, 12) *Magnificat* for three voices, violins, organ and continuo extant at Santiago de Chile Cathedral, is printed in Claro. Other works by him are at the Barcelona Biblioteca Central, Cuenca and Seville cathedrals, El Escorial and the monastery of Montserrat. Though Ripa was especially happy in *negros* (*Estupenda Negreria* at Lima) and in local-colour gypsy villancicos, he came close to Haydn in the brilliance and profundity of his Latin music.

ROBERT STEVENSON

Ripere [Ripert], Jean-Jacques. *See* RIPPERT, JEAN-JACQUES.

Ripieno (i) (It.: 'filled'). A term used to denote the tutti (or 'concerto grosso') in an orchestra performing music of the Baroque period, particularly the concerto repertory, in distinction to the solo group (the 'concertino'); it is more rarely applied to vocal music (as to the boys' choir in the first chorus of Bach's *St Matthew Passion*). The direction 'senza ripieni' requires all players except those at the leading desks to be silent; it is commonly found in Handel's extended vocal works. The term 'ripienista' designates an orchestral player who is not a leader or soloist. 'Ripieno' occurs in various corrupt forms ('ripiano', 'repiano') in band repertories, to denote players (particularly clarinettists and cornet players in military bands) not at the leading desk. *See* CONCERTO.

□

Ripieno (ii) (It.). *See under* ORGAN STOP. *See also* FULL ORGAN and PLEIN JEU.

Ripin, Edwin M. (*b* New York, 21 April 1930; *d* New York, 12 Nov 1975). American organologist. He studied at Williams College (BA 1952) and held editorial positions with various publishing firms (from 1956) before becoming a senior editor at Random House (1966–70). In 1970 he was appointed to the staff of the Metropolitan Museum of Art in New York, where he was assistant curator of musical instruments (1971–3). He taught at SUNY, at Purchase (1973–4) and from 1974 until his death he was a member of the graduate faculty in the music department of New York University. Ripin's main interest was the study of instruments, particularly their restoration and relationship with the music written for them. His chief studies were of stringed keyboard instruments, musical iconography, instrument forgery and the development of new techniques in analysing instruments. At the time of his death he was working on a large-scale book on the history of keyboard instruments.

PAULA MORGAN

Ripollés, Vicente (*b* Castellón de la Plana, 20 Nov 1867; *d* Rocafort, Valencia, 19 March 1943). Spanish composer. He studied solfège and the violin while a choirboy in his native town and then attended the Tortosa Seminary, where he was responsible for the chapel music. His best religious works were composed after studies with Giner in Valencia. Successively appointed *maestro de capilla* of Tortosa Cathedral (1893), the Real Colegio del Corpus Christi, Valencia (1895), and Seville Cathedral, he wrote much church music, including a mass for seven voices and strings. His works were published by Musical Emporium and by the Institut d'Estudis Catalans.

Rippe, Albert de. *See* RIPA, ALBERTO DA.

Rippert [Ripert, Ripere], **Jean-Jacques** (*fl* Paris, *c*1668–1724). French woodwind instrument maker. Court documents from a dispute brought before the Parc Civil, Chatelet de Paris on 21 January 1716, establish that Rippert and his wife, Michelle Maremaire, and children resided at rue St. Honoré l'enclos de Quinze-Vingts from 1668 until 1703, in which year they moved to rue Columbier, Faubourg St. Germain, and describe him as a 'bourgeois de Paris', indicating that by 1716 he was more or less retired. A document of 1696 refers to him as 'Jean-Jacques Ripert master maker of woodwind instruments' and a 'maker of flutes'. There is evidence that he was highly regarded by his contemporaries in Sauveur (1704), which names Rippert and Jean Hotteterre (ii) as 'the most able woodwind makers in Paris'. Surviving instruments bearing the mark of RIPPERT and a sign of a dolphin attest to Rippert's mastery and specialization in flute making. Cited in Young are thirty of his instruments, which include 22 recorders (2 descant, 9 treble, 5 tenor, 6 bass), 4 transverse flutes and 3 oboes. A letter dated London 24 January 1711 by the French oboist, Louis Rousselet, living in Westminster, addressed to Julien Bernier, flautist at the Paris Opéra, proves that Rippert also made bassoons, although none survive, and that they were being played in London at the Royal Opera and were sought by leading players in Paris and London. The German traveller, von Uffenbach, noted in his diary in 1715 that he visited Rippert, who he called old and grouchy, for the purpose of having transverse flutes made for him, and observed that they were in demand in cities as distant as Frankfurt.

On 26 June 1722 Rippert secured a royal privilege for publishing flute works. A collection of flute pieces published in the same year entitled, 'Brunettes ou petits airs à II. dessus, à l'usgae de ceux qui veulent apprendre à jouer le flûte-traversière par Mr. R*' is assumed to be by Rippert. Further books of pieces for two flutes by the same composer came out during the next few years, and since the titles of those that are extant correspond with the works listed under the name of 'Ripere' or 'Ripert' in various music catalogues, it seems likely that this composer was also Rippert.

TULA GIANNINI

Ripresa (It.). (1) A repeat or repetition in a general sense, including the repetition of an opera or play.

(2) The refrain of the 14th-century ballata and the poetic and musical forms that adopted the ballata scheme, such as the *lauda* (*see* LAUDA) and the FROTTOLA, §2. It is linked, both metrically and musically, to the last section of the strophe, the *volta*, and was originally repeated after each strophe. 14th-century theorists regarded the *ripresa* as the element that characterizes the ballata and distinguishes it from other poetic forms. Different types of ballata are defined by the number and length of the lines composing the *ripresa* (*see* BALLATA).

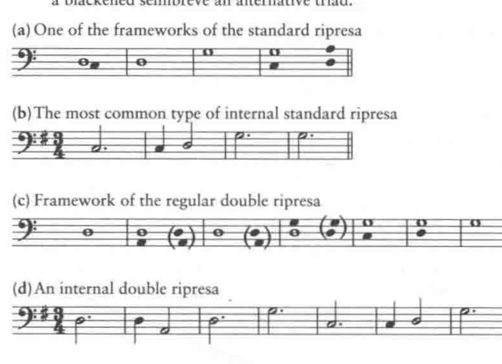
The choreographic function of the *ripresa* is illustrated by Giovanni del Virgilio, a contemporary of Dante. In the third *Eclogue* of his *Diaffonus* (1315–16) he described the performance of a ballata sung and danced in a square in Bologna. The refrain (*recantus*) is sung by a soloist, and is immediately repeated by the choir. At the end of each strophe (presumably performed by the soloist) the whole choir resumes the *ripresa*. Dante (*De vulgari eloquentia*, 1305) called the ballata refrain *responsorium*. The term, which belongs to the liturgical repertory, may refer to the practice of alternating choir and soloist described by Giovanni del Virgilio. It may be also connected to the Provençal *respos* (answer), from which the term *responsum*, used by Francesco da Barberino (commentary to his *Documenti d'amore*, *c*1296–1312) and by the anonymous author of *Capitulum de vocis applicatis verbis* (first half of the 14th century), seems to be derived. The word *represa* appears for the first time in Antonio da Tempo's *Summa artis rithmici dictaminis* (1332), where it is introduced as the equivalent of the

Latin *repilogatio* ('ballata quaelibet dividitur in quatuor partes, silicet quia prima pars est repilogatio quae vulgariter appelatur *represa*'). Subsequent vernacular adaptations of da Tempo's treatise propose different translations of *repilogatio*: *resposa* (Gidino da Sommacampagna, *c*1380); *repilogatione* (Francesco Bartella, 1447); and *replication* or *replicatione* (*I-PAVu* 441, second half of the 15th century, and *US-NYcub* Plimpton 180, end of the 15th century). Such variants probably reflect changes in the use and function of the *ripresa* (Gallo, 1980). With the transformation of the ballata from a dance-song of popular origins to a poetic form, often monostrophic, cultivated by Petrarch, Cino da Pistoia and by the followers of the *stil novo*, the *ripresa* lost its choreographic function. However, the original performing practice probably survived in popular musical contexts, and this, in turn, might have influenced the musical settings of ballatas of higher literary quality. Traces of the old distinction between choral and solo sections may still be found in a group of ballatas in *I-Fc* Basevi 2440 (*c*1515–20), where the text is fully written out in all voices in the *ripresa* but appears in only the discant in the strophes.

In Renaissance poetic theory the term *ripresa*, along with the other components of the ballata, was applied to the analysis of the frottola because of their clear structural analogies (see, for example, Antonio Minturno, *L'arte poetica*, 1564).

(3) In 15th-century dance treatises the term denotes a dance step. Domenico da Piacenza, the author of the earliest of these treatises, included the *ripresa* among the 'natural steps', which are distinguished from the 'accidental' ones by being related to the natural movements of the human body (*De arte saltandi et choreas ducendi*, after 1416). Domenico gave no information on how a *ripresa* is to be performed, and mentioned only that it lasts one *tempo*, like the *dopio* and the *reverentia*. The dance manuals of Antonio Cornazano (*Libro dell'arte del danzare*, 1465) and Guglielmo Ebreo da Pesaro (*De pratica seu arte tripudii*, 1463; ed. B. Sparti, Oxford, 1993), who both declared themselves disciples of Domenico, add no significant detail. It may be deduced from choreographies in Guglielmo's treatise, however, that the *ripresa* was a sideways step, frequently used to 'change the direction of the dance, or to bring one dancer round to face his partner, or to come beside his partner and facing in the same direction' (Daye, 1987). Special types of *ripresa*, whose meanings are not always clear, are the *ripresa in gal(l)one*, the *ripresa portoghalese* and the *ripresa ghaloppata*.

The term reappears in late 16th- and early 17th-century Italian dance manuals, apparently signifying a more elaborate dance-step. Fabritio Caroso described two types, the *grave* and the *minima* (*Il ballarino*, 1581). The first occupies a *battuta perfetta* while the second is to be performed within the time of a *battuta minima*. Cesare Negri followed Caroso's division (*Nuova inventione di balli*, 1604), but his choreographies seem to include *riprese* of the value of two perfect bars (Jones, 1986). Negri's manual also contemplates two other variants: the *ripresa in sottopiede* and the *ripresa minuita*.



(4) In the 16th and 17th centuries the term was applied to small instrumental units that appear, sometimes paired or in groups, before, after or between repetitions of the main music for a song or dance. The word first appears in G.A. Casteliono's *Intabolatura de leuto de diversi autori* (1536), and unmarked examples occur even earlier, in Attaingnant's *Dixhuit basses dances* (1530) and *Quatorze gaillardes* (1531), and possibly in Dalza's *Intabulatura de lauto, libro quarto* (1508). The name changed to 'ritornello' in Caroso's *Il ballarino* (1581), but both terms were used during the first half of the 17th century (during which time 'ritornello' began to be used also in a different sense to refer to an entire instrumental section alternating with other music).

The main music of a dance or song was based on certain fixed progressions of root position triads (*see* GROUND, §1). The chordal scheme could be varied by activating the bass or upper voices melodically or by adding new chords that related to one of the framework chords as dominant or subdominant–dominant to tonic. A *ripresa* is structurally a repeat or return of the final tonic chord of a main scheme, with this chord varied by the same technique of variation used in the scheme, but applied independently, so that the music is melodically and harmonically different from the main piece. Internal *riprese* (those between repetitions of the main chordal scheme) usually appear in pairs; concluding *riprese* (at the end of a dance or a pair of dances) consist of longer chains of as many as 20 or 30 phrases. Most occupy the time of two framework chords from the main scheme (the 'standard' type); others are twice as long ('double').

The semibreves in ex.1*a* show one of the basic harmonic frameworks of the standard *ripresa* (other distributions of the two framework chords also occur). Alternative triads may be added to the framework as shown, resulting in a number of different progressions, the most common being that in ex.1*b*. Similarly, ex.1*c* shows the usual framework and some alternative chords for the double *ripresa*, ex.1*d* a specific internal example and ex.1*e* a concluding one in which the opening phrase is repeated a variable number of times. Most *riprese* are in triple metre, with each of the four structural chords occupying a single three-beat unit. Hemiola, however, is not uncommon, and duple metre is possible. During the 16th century most

Ex.1 Riprese

All the notes are roots of major triads, except the semibreves in bars 5–8 and the blackened one in bar 5 of f, which may be major or minor, In a, c, and f, a semibreve represents a framework chord, a blackened semibreve an alternative triad.

triads used in *riprese* were major, since chordal schemes for both modes ordinarily end with a major tonic chord or one without a 3rd. In the following century, however, pieces in the mode *per B molle* may end with a *ripresa* in which the bass line of ex.1*b* supports the progression subdominant (minor)–dominant–tonic (major or minor). Ex.1*f* shows a rare type of double *ripresa* based on the central chordal idea of the mode *per B molle*.

Riprese occur in music for lute, bandora, vihuela, cittern, stringed keyboard instruments, ensembles and guitar. The internal standard type is often attached to the French *gaillarde*, to the Italian saltarello or gagliarda paired with a passamezzo, to the ROMANESCA, the FOLIA and the *aria per cantare*. The usual type of internal double *ripresa* is found with the *passamezzo moderno* (the earliest example is by Hans Neusidler, 1540; ed. in DTÖ, xxxvii, Jg.xviii/2, 1911, p.40), the English 'quadran' pavan on the same chordal scheme (by Byrd, Bull, Morley and others) and dances paired with them. Concluding double *riprese* occur in works by Mainerio (1578), Facoli (1588), G.M. Radino (1592) and Picchi (1621). The double *B molle ripresa* appears occasionally with the romanesca, as in Frescobaldi's *partite* of 1615 and 1637.

A sense of ostinato is sometimes established by repeating the opening half of ex.1*e*. Ostinato is more extensive, however, in the chains of standard *riprese* that conclude the saltarello or gagliarda paired with a passamezzo or pavana. There are also several independent sets of *riprese* (by Balletti, 1554), *reprinse* (Michael Praetorius, 1612) and ritornellos (Castaldi, 1620). The characteristic procedure is to alternate from one harmonic formula to another within a single chain of *riprese*. Successive phrases may therefore differ markedly from one another. The ostinato, then, is rhythmic, in the sense that a short, four-bar phrase length is repeated; it may be harmonic if the composer wished to repeat one particular progression for several phrases, or used different formulae that all began or ended with the same chord; it may also be melodic, especially in the 17th century, if a composer chose to use the same bass line for successive phrases. The special sense of ostinato that characterizes this technique, however, comes from the random recurrence of formulae that were derived by the principles of construction prevailing in the Renaissance dance style and were selected by the composer from phrase to phrase according to his wishes. In this context, *see* PASSACAGLIA and CHACONNE.

GIUSEPPE GERBINO (2, 3), RICHARD HUDSON (4)

Riqq [rikk]. Small, circular frame drum with jingles, of the Arab countries (*see* DRUM §I, 2(vi)). It is used in Egypt, Iraq, Lebanon, Palestine, Sudan and Syria; in Libya, where it is rare, it is called *mriqq*. It is between 20 and 25 cm in diameter and is now effectively a man's instrument. Descended from the *duff* (*see* DAFF), like the ṬĀR, the *riqq* acquired its name in the 19th century so that it could be differentiated.

Essentially an instrument of music for the connoisseur, the *riqq*, which is also called *daff al-zinjāri* in Iraq, is played in *takht* ensembles (Egypt, Syria) or *shālghī* ensembles (Iraq) where it has a particularly clearcut role, going beyond the simple rhythmic requirements of the *duff*, *ṭār* or *mazhar*, and exploding in a burst of imaginative freedom to colour the orchestra with gleaming sounds: this is quite unlike the role of the *duff*. In Sudan, where it seems to have been introduced recently, the *riqq* is also related to worship, as in upper Egypt.

The instrument is carefully made. Its delicate frame is covered on both the inner and outer sides with inlay (mother-of-pearl, ivory or precious wood, like apricot or lemon) and has ten pairs of small cymbals (about 4 cm in diameter), grouped in two slits, each having five pairs. The skin of a fish is glued on and tightened over the frame, which is about 6 cm deep. In Egypt the *riqq* is usually 20 cm wide; in Iraq it is slightly larger.

Traditionally, frame drums have been used to support the voices of singers, who manipulate them themselves; but the player of the *riqq*, like that of the *doira* of Uzbekistan, plays without singing. While the *duff* and the *mazhar* are held relatively still, at chest or face height, with the player seated, the *riqq*, because of the use of different tone-colours, may be violently shaken above the head, then roughly lowered to the knee, and played vertically as well as horizontally. The player alternates between striking the membrane and shaking the jingles, and his need for freedom of movement necessitates that he stand up. Students of the instrument are required to master the technical problems imposed by the timbre of the membrane and the jingles, both separately and in combination; aside from developing a virtuoso technique

they also need to learn the many rhythmic cycles and the techniques of modifying them through creative invention.

CHRISTIAN POCHÉ

Riquier, Guiraut (*b* Narbonne, *c*1230; *d c*1300). Troubadour. He is usually considered the last of the troubadours. Although he is not mentioned in contemporary documents, and no Provençal *vida* exists for him, his life and career can be reconstructed in some detail through his poems and references to persons mentioned in them. In some sources, each of his 89 poems is assigned an exact date; these range from 1254 to 1292 and often specify a particular day.

A brief notice preceding his works in one source describes him as 'Guiraut Riquier de Narbona', suggesting that he was born in that city (near the Spanish border). This assumption is confirmed by numerous references in his works to Amalric IV, Viscount of Narbonne (1239–70), including *Ples de tristor*, a planh on the occasion of Amalric's death. After Amalric's death, Guiraut entered the service of Alfonso el Sabio, King of Castile, a fact supported by references in the poems, and also by a remarkable letter addressed to the king in 1274 in which Guiraut pleaded for an improvement in the lot of the troubadour and the *jongleur*. In 1279 he left Alfonso's court probably to enter the service of Henry II, Count of Rodez (1275–1302). Although he seems to have travelled after 1279, and was probably in Narbonne at least part of the time, Guiraut probably died in or around Rodez some time in the last decade of the 13th century.

The work of Guiraut Riquier is an invaluable document of the final flourishing of courtly song. No fewer than 48 of his 89 poems survive with their melodies, more than twice the number preserved for any other troubadour, and they do not include a single contrafactum. They are found together in only one manuscript (*F-Pn* fr.22543, ff.204–11*v*); this is the closest to a 'complete edition' by a troubadour. Mention of Guiraut's compiling his own songs is made in the manuscript *F-Pn* fr.856, which refers to a songbook written in Guiraut's own hand ('libre escrig per la sua main'). Rubrics accompanying each melody in *F-Pn* fr.22543 (including the only troubadour canon) confirm Guiraut as an 'anthologist' of his own works (see Bossy). In this respect, he is a precursor to Adam de la Halle and Guillaume de Machaut.

The majority of Guiraut's melodies use formal repetition. Bar form is the most common (29 melodies), but there is considerable formal variety within the general type. A small number are through-composed (*Ab lo temps*, *Anc non aigui*, *De far chanson*, *De midons*, *En tot*, *Los bes* and *Ops m'agra*), but the remainder employ forms with repetition, often reminiscent of the lai (e.g. *Amors, pus* and *Voluntiers faria*); three are labelled *retroenchas* (*No cugei*, *Pos astres* and *Si chans*). Even the through-composed melodies exhibit repetition through motives (such as *Ab lo temps* and *En tot*) or half-phrases (*De far chanson* and *De midons*). Guiraut's songs are also clearly labelled in the sources as to type; 25 of those with music are called *cansos*, and 20 are labelled *vers*. The majority of the *vers* are set to music in some kind of bar form (17); the greater number of *cansos* (15) are either through-composed or set as some variety of lai-strophe.

ROBERT FALCK/JOHN D. HAINES

Risack, Rosa Negri. *See* NEGRI, MARIA ROSA.

Risinger, Karel (*b* Prague, 18 June 1920). Czech musicologist and composer. He began studying musicology and aesthetics at Prague University in 1939, continuing after the German occupation and taking the doctorate under Hutter in 1947 with a dissertation on the music-theory bases of intonation. In composition he was at first a private pupil of Řídký; later he studied at the Prague Conservatory (1941–7) with Křička and in Hába's microtonal department (1945–7). After teaching at the academy's music department and the music faculty of Prague University he joined the Institute of Musicology (later the Institute of the Theory and History of Art) of the Czechoslovak Academy of Sciences (1962), where he directed the department of theory (to 1971). From 1972 to 1980 he taught at the Institute of the Theory and History of Art. He gained the CSc in 1958 with a work on functional theory in contemporary tonal music, completed his *Habilitation* at the academy in 1966 with a study of leading personalities of modern Czech music theory and took the DSc in 1970 with a dissertation on the hierarchy of musical entities in contemporary European music.

Risinger concentrated on composition up to the early 1960s, writing a number of works for various combinations including large-scale vocal, instrumental and dramatic works (see *ČSHS* for list of compositions). But severe self-criticism and a deepening interest in music theory led him away from composition. As a musicologist he has consistently directed his attention to theories of composition in 20th-century music; he has formulated a generalizing and systematic view of the evolution of contemporary composition from traditional melodic and harmonic approaches to a micro-interval system and 12-note technique.

JOSEF BEK

Risler, Edouard (*b* Baden-Baden, 23 Feb 1873; *d* Paris, 21 July 1929). French pianist, teacher and conductor of Alsatian and German descent. He entered the Paris Conservatoire in the preparatory piano class of Emile Decombes, and subsequently studied there with Diémer, winning a *premier prix* in 1889. Following further instruction in music theory, he went to Germany and had lessons from the Liszt pupils Bernhard von Stavenhagen, Klindworth and, most significantly, D'Albert. Risler spent two summers as a stage manager and singing coach at Bayreuth. His international career dated from 1894, when he gave two recitals in London. Although championing the piano music of his contemporaries (he is the dedicatee of the Dukas Piano Sonata), Risler became renowned as a Beethoven player, giving his first cycle of the complete sonatas in Paris in 1905. His one-composer recitals also included performances of both books of Bach's '48', as well as a Chopin series. Risler made a piano version of Richard Strauss's *Till Eulenspiegel* and he also performed the Liszt transcription of Berlioz's *Symphonie fantastique*. He taught for some years at the Paris Conservatoire, numbering Jacques Février, Pierre Luboschutz and Marcel Gaveau among his pupils.

Although Risler made acoustic discs for Pathé around 1917, these are relatively primitive, demonstrating little beyond his extreme accuracy and concern with style. Revered by his colleagues, he achieved a status as an interpreter of Beethoven that has remained unmatched by any other French pianist.

JAMES METHUEN-CAMPBELL

RISM. *See* RÉPERTOIRE INTERNATIONAL DES SOURCES MUSICALES.

Risoluto (It.: 'dissolved', 'faded away', or 'resolved', 'decided'). Resolved, decisive. The term appears in scores around 1800 as a tempo designation. But Beethoven preferred to use it as a qualification: his Piano Variations in D op.76 and the fugue of his Hammerklavier Sonata both begin *allegro risoluto*. Later it was used as an expression mark and was particularly favoured by Elgar and Bartók.

See also TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Rispetto (It.). A stanzaic form of Italian poetry set by composers of the frottola and 16th-century madrigal, also known as STRAMBOTTO and OTTAVA RIMA. The name *rispetto* derives from the content: the poet pays his 'respects' to his beloved lady. Poliziano and Lorenzo de' Medici wrote series of *rispetti*, with each stanza consisting of eight lines that scan as iambic hendecasyllables. *See* FROTTOLA.

DON HARRÁN

Rispoli, Salvatore (*b* Naples, ?*c*1736–45; *d* Naples, 1812). Italian composer and teacher. He studied at the S Onofrio conservatory, Naples, under Cotumacci and Insanguine. In the 1770s he composed settings of some of Saverio Mattei's psalm translations, including, for the birth of the hereditary prince in 1777, Mattei's arrangement of Psalm lxxi as a cantata, *I voti di Davide per Salomone*. Mattei, in a note published in the 1770s in an edition of his psalms, praised Rispoli as 'a young man of rare ability and taste who joins to a solid study of old music all the brilliance of the modern' (Mattei's reference to Rispoli as a young man suggests that Fétis's birthdate for him, 1745, is closer to the true one than that given by Gerber, 1736). In 1781 Rispoli composed the music for Mattei's cantata on the death of Empress Maria Theresa; in the preface to the libretto Mattei repeated his praise of Rispoli (still calling him a young man) and added that through the 'happy disgrace' of not having had the opportunity to compose for the opera house he had avoided its corrupting influence. During the period 1782–7, however, Rispoli did have five operas, comic, serious and sacred, performed at Milan, Turin and the secondary theatres of Naples, but he never achieved the honour of being asked to compose for S Carlo. On 1 January 1793 he became *secondo maestro* at the S Onofrio conservatory, and on the death of Insanguine in 1795 he and Furno became joint *primi maestri*. In 1797, when the S Onofrio and Loreto conservatories merged, he was pensioned.

WORKS

STAGE

Il trionfo de' pupilli oppressi (commedia, P. Mililotti), Naples, Fiorentini, 20 Jan 1782

JAMES L. JACKMAN/LUISELLA MOLINA

Risposta [riposta] (It.: 'reply'). In FUGUE, the ANSWER, as opposed to the subject. The term gained currency in the writings on fugue of Italian theorists in the Baroque period; the term for the subject is *proposta*.

Risse, Carl (*b* Dresden, *c*1810; *d* after 1845). German bass. His first engagement was at Leipzig, where he took part in the première of Marschner's *Der Templer und die Jüdin* (1829). Moving to the Dresden Hofoper, he sang there for many years, creating three Wagner roles, Cecco del Vecchio in *Rienzi* (1842), Daland in *Der fliegende Holländer* (1843) and Reinmar von Zweter in *Tannhäuser* (1845). His repertory included Mozart (Osmin and Sarastro) and Meyerbeer (Marcel in *Les Huguenots* and Bertram in *Robert le diable*).

ELIZABETH FORBES

Risset, Jean-Claude (*b* Le Puy, 13 March 1938). French composer and researcher of computer music. After studying mathematics, physics (Ecole Normale Supérieure, Paris, 1957–61) and music (composition with André Jolivet, 1961–4), Risset began investigating the computer synthesis of sound (composing sound rather than with sound) as a means of bridging the gap between the perceived lack of control offered by *musique concrète* techniques and the elementary sounds of electronic music at that time. He began work at Bell Laboratories (1964–5, 1967–9) with Max Mathews, investigating the creation of 'instrument-like' timbres and met Varèse, John Pierce, James Tenney, Vladimir Ussachevsky and Richard Moore. The Computer Suite from *Music for Little Boy* (1968) was his first piece of pure computer music, written using the Music V program. Techniques used in his research were subsequently employed in *Mutations I* (1969), and were collectively gathered to form the *Sound Catalogue* (Risset, 1969). These 'recipes' of his syntheses including the imitation of instruments, pitch paradoxes and the synthesis of sound textures have served as a foundation for computer music study.

Returning to France in 1969 he held a post at the Centre National de la Recherche Scientifique (1969–72, then from 1985 as director of research), Université d'Aix–Marseille (1972–5, 1979–85). At the request of Boulez, he became head of the computer department at IRCAM (1975–9). The works *Inharmonique* (1977), *Moments Newtoniens* (1977) and *Mirages* (1978) were realized here. These works used the computer (running an altered version of the Music V program) to fashion a controlled relationship between live instruments and synthetic sounds (or manipulations of recorded sound). Pitch and rhythmic paradoxes were employed in *Moments Newtoniens*. In *Contours* (1983), the focus was upon perception of melodic structure based on shapes independent of intervals.

Complex, computer-controlled exploration of instruments and their simulation in works such as *Dialogues* (1975) allows not only for an extension of the natural sounding instrument but for new, virtual relationships to be initiated. These are perhaps more accentuated in the works with voice such as *Inharmonique* and *Invisibles* (1994), influenced by Calvino's *Le città invisibili*, as the most personal and impersonal musical instruments are contrasted. By utilizing pitch as a meeting point between real and unreal performer, Risset could explore the timbre space set up by their relationship. This space had been previously explored in *Sud* (1985) where the sounds of nature contrasted with pure synthesis. Techniques for

imbuing the characteristics of one sound onto another through filtering, modulation and hybridization were used to create musical relationships as opposed to wild sound images. The sound of the sea, birds, wood, metal as well as gestures played on the piano or synthesized by computer formed the basic material from which grew a proliferation of new sounds. A pitch set (G–B–E–F♯–G♯) presented first with synthetic sounds was later used to colour natural elements using resonant filters.

The influence of timbre composition upon global structuring processes is evident throughout Risset's computer music and logically extends to his instrumental works. Paradoxical techniques used first in *Little Boy* find parallels in *Dérives* (1985–7), *Phases* for orchestra (1988, a work influenced by recent research into fractal geometries) and *Duet for One Pianist: 8 Sketches* (1989, realized at MIT, where Risset was composer-in-residence). This work, for Disklavier and computer, uses the computer to transform and react to data according to predefined relations indicated by the movement headings (Double, Mirror, Extensions, Fractals, Stretch, Resonances, Up Down and Metronome).

Risset has written extensively on his work, considering it 'very important to communicate mutually one's experiments and experiences on sound synthesis, processing and musical elaboration, so that one can take advantage of the efforts of others and make the exploration of computer music a rich cooperative venture, even though the musical work remains in the end the responsibility of the individual composer'.

ADRIAN MOORE

Rist, Johann (*b* Ottensen, nr Hamburg, 8 March 1607; *d* Wedel, 31 Aug 1667). German poet and composer. He studied theology, poetry, law and other subjects at the universities of Rinteln and Rostock and perhaps also in Leipzig and Holland. He worked briefly as a private tutor at Heide, Holstein, and in 1635 became pastor at Wedel, a position he held for the rest of his life. He was given the title of Poet Laureate in 1644 and was ennobled in 1653. He was admitted to the society known as the Fruchtbringende Gesellschaft, with the pseudonym 'Der Rüstige', in 1647, and he founded his own poets' academy, the Elbschwanenorden, in 1660.

Rist was a friend of many musicians, including Schütz and Christoph Bernhard (who wrote a motet for his funeral), and he worked closely with many minor Hamburg composers. Many of his poems were set to music in both sacred and secular collections edited by himself and others; he wrote the music of some of the songs but mostly relied on the talents of composers such as Hammerschmidt, Michael Jacobi, Martin Köler, Peter Meier, Heinrich Pape, the elder Johann Schop and Selle. The secular poems treat typical pastoral subjects, and some are translations from Dutch, French or Italian. The sacred poems, many of them biblical translations or adaptations, were composed both for practical use in services and in teaching and for devotional use in the home. All the poems follow Opitz's reforms: they are usually strophic, with clear rhymes and regular metres. They are set syllabically, often with little rhythmic variety, for one voice with an unfigured (perhaps sung) bass accompaniment. In a few of his plays and ballets Rist included songs set to his own music or that of his Hamburg friends; they are important precursors of the works of the Hamburg school of opera composers.

JOHN H. BARON

Ristenpart, Karl (*b* Kiel, 26 Jan 1900; *d* Lisbon, 24 Dec 1967). German conductor. After completing his studies at the Sternsches Konservatorium in Berlin he took over the directorship of the Berlin Oratorio Choir, and then founded a chamber orchestra which gave concerts for many years in the town hall in Berlin-Zehlendorf. In 1946 he established the RIAS Chamber Orchestra with which he made many studio recordings, including the complete sacred and secular cantatas of Bach. In 1953 he moved to Saarbrücken where he directed the Saar Radio Chamber Orchestra which quickly gained a wide reputation. The stylistic authority, clarity of texture and rhythmic energy of his interpretations, which were mainly devoted to German Baroque music, won admiration in Europe and further afield. Among his recordings are suites and concertos by Telemann, Bach's Brandenburg Concertos and Orchestral Suites.

HANS CHRISTOPH WORBS/NICHOLAS ANDERSON

Ristić, Milan (*b* Belgrade, 18/31 Aug 1908; *d* Belgrade, 20 Dec 1982). Serbian composer. He studied privately in Paris with Gabriel Piérson (1927–9) and then at the Belgrade Music School with Milojević and Slavenski (composition), and Brezovšek (piano); in 1939 he attended Hába's microtonal classes at the Prague Conservatory. In the next year he was appointed to the staff of Belgrade Radio, where he occasionally worked as a piano accompanist. He was elected to corresponding (1961) and full (1974) membership of the Serbian Academy of Art and Sciences.

In his first works, such as the Sinfonietta, the Symphony no.1 and the Violin Concerto, he was a follower of Schoenbergian atonal expressionism, and the teachings of Hába; he made use of quarter-tones in the first two quartets, the sonatas for violin solo and the Suite for four trombones, which was performed at the 1939 ISCM Festival. There followed a phase of partially tonal works, composed before 1950, and then the adoption of a neo-classical style. From the Third Symphony onwards – a work that uses dodecaphony but not strictly – Ristić discarded bithematicism and sought to unify his works using single musical ideas. In the Fourth Symphony, for example, this takes the form of a 9th chord, while the fifth and sixth symphonies concentrate on developing motivic cells. Some instrumental groups in the symphonies are given concerto-like roles, while his concertos, on the other hand, display symphonic character and masterful orchestration.

STANA DURIC-KLAJN/ROKSANDA PEJOVIĆ

Ristori, Giovanni Alberto (*b* ?Bologna, 1692; *d* Dresden, 7 Feb 1753). Italian composer. He was the son of Tommaso Ristori, a versatile musician and actor, and the director of a travelling company of Italian comedians which, shortly before Giovanni's birth, was in the service of the Saxon elector Johann Georg III at Dresden. Neither the place nor the exact date of Giovanni's birth is documented, but his birthplace is variously given as Bologna (in *La BordeE* and *GerberL*), Vienna, by a Saxon passport of 1715, and Venice, in a score of his cantata *Verdi colli* (in *GB-Lbl*). His first opera, *Pallade trionfante in Arcadia*, had its première at the Teatro degli Obizzi, Padua, in the summer of 1713, and in November his *Orlando furioso* was given in the Teatro S Angelo, Venice; both were revived in Venice the following year when, in addition, his *Euristeo* was performed in Venice and Bologna and his *Pigmalione* in Rovigo.

In December 1715 Tommaso Ristori and his Italian comedians were engaged by the elector Friedrich August I (also August II, King of Poland) at the Saxon court. Giovanni and his wife Maria accompanied his parents to Dresden, but he held no official position there until 1717 when he was appointed composer to the Italian comic theatre managed by his father; at the same time he became director of the *cappella polacca* with a salary of 600 thalers. The *cappella*, which accompanied August II on his journeys to Poland, consisted of a dozen musicians including J.J. Quantz, first employed as an oboist, and the violinist Franz Benda. Although Lotti was the resident opera composer at Dresden between 1717 and 1719, Ristori had *Cleonice*, his first opera for the court, staged on 15 August 1718. But Italian opera was severely

curtailed soon afterwards, and Ristori and his father were among the few Italians not released from service in 1720. During the following years Ristori, who, together with Heinichen and Zelenka, was responsible for the church services at the Saxon court, composed masses, motets, litanies and other liturgical pieces. His *Litanie di S Francesco Xaverio* were performed in 1721 or 1722 and his oratorio *La deposizione della croce* probably had its first performance in 1727 (see Hochstein). There is also evidence of an opera performance in Prague in the autumn of 1723 (see Scherl), and about the same time a revival of *Cleonice* was staged at Verona. His comic opera *Calandro* is sometimes called the first Italian *opera buffa* written in Germany. It was followed in 1727 by another Italian comedy, *Un pazzo ne fà cento, ovvero Don Chisciotte*. When *Calandro* was revived in Carnival 1728, the Prussian crown prince and future Frederick the Great attended a performance and requested a copy of the score.

Ristori spent some of 1731–2 in Russia with his father's troupe at the invitation of the newly crowned Empress Anna Ivanovna. A serenata by him was performed in Moscow during the summer of 1731, and the revival of *Calandro* on 11 December is generally accounted the first performance of an Italian opera in Russia. After a short visit to St Petersburg in early 1732, the company went to Warsaw, where August II was residing. Ristori's psalm *Lauda Jerusalem* was given there in October 1732.

Most of the Italian comedians at Dresden were dismissed when August II died in 1733; he was succeeded by his only legitimate son, Friedrich August II, who was also King of Poland as August III. At this time Ristori was temporarily demoted to the rank of chamber organist with a reduced salary of 450 thalers, but by 1745 it had increased to 1200 thalers. With the retirement of Tommaso Ristori, aged 75, improvised Italian comedy at the Dresden court came to an end, and serious opera, directed by Hasse the new Kapellmeister, dominated the Saxon stage. Besides Hasse, Giovanni Ristori regularly distinguished himself with new compositions, writing cantatas for birthdays and name days, a *Stabat mater* (1736) and several *Duetti per la Quadragesima*, as well as works for the stage, including the coronation opera *Le fate*, performed on 10 August 1736, and *Arianna* for the elector's birthday on 7 October 1736. Other works were written for use at the Warsaw court.

Ristori probably did not supervise the première of his pasticcio *Didone abbandonata* at Covent Garden, London, on 13 April 1737, but he directed rehearsals and performances of his *Temistocle* and *Adriano in Siria* at S Carlo, Naples, in 1738 and 1739; he must have accompanied the Saxon princess Maria Amalia there following her marriage to Charles III, King of the Two Sicilies, in May 1738. By 1744 he had returned to Dresden, where, in that year, he composed three masses, including the *Messa per il Santissimo Natale di N.S.* in D; the quality of these and other choral works was acknowledged with his appointment as court *Kirchenkomponist* in 1746. Ristori also set several cantata texts by the Bavarian princess Maria Antonia soon after her marriage to the Saxon crown prince Friedrich Christian in 1747. In 1750 August III again rewarded Ristori for his many years of service and outstanding music by naming him vice-Kapellmeister under Hasse. His last work, a Mass in C, is dated 1752. When he died the following year his widow was given a pension of 400 thalers and was paid for Ristori's collection of his own scores, some of which were lost in the bombardment of Dresden in 1760 and many others during World War II. A revival of *Arianna* at the Dresden court in 1756 is the last known performance of a theatrical work by Ristori in the 18th century.

The loss of so much of Ristori's music means that his work remains undervalued and that an accurate evaluation of his musical style is hardly possible. However, surviving sources reveal notable competence in all the genres of his day except instrumental music, of which he wrote little. His best works are his chamber cantatas and his large sacred pieces, which contain contrapuntal complexities beyond those of Hasse's works of the 1740s. But he did not match Hasse for breadth or melodic beauty. Only in his intermezzos does Ristori seem to equal his more famous colleague.

The early 18th-century priest Cosimo Ristori who composed oratorios for Florence is not known to have been related to Giovanni. His oratorios include *La fede trionfante di S Cresci* (1719), *L'incoronazione di Ester* (1720), and *David, ovvero L'innocenza difesa* (1721).

WORKS

Based on Mengelberg; many sources mentioned by him are lost since World War II.

OPERAS, ORATORIOS

drammi per musica, unless otherwise stated

SVEN HANSELL/WOLFGANG HOCHSTEIN

Ristorini [Restorini], **Antonio Maria** (*b* Bologna or Florence; *fl* 1690–1732). Italian tenor. He was the husband of Rosa Ungarelli, with whom he enjoyed an international reputation as an interpreter of comic intermezzos. He began as a singer of *opera seria*: between 1690 and 1710 he appeared in 18 productions in Florence and Venice, including Albinoni's *Griselda* and *Astarto* and works by Gasparini; he also sang in Reggio (1698), Naples (1706) and Parma (1714). His partnership with Ungarelli dates from at least 1716, when they appear to have made their début at Turin in *Vespetta e Pimpinone*. Three years later, in Venice, they gave the first performance of the revised version of Orlandini's *Il marito giocatore e la moglie bacchettona* (as Serpilla and Bacocco), the most popular intermezzo of the period. Both works were taken to Munich in autumn 1722 and, with others, to Brussels in autumn and winter 1728–9. In 1725, at Pistoia, G.C. Rossi-Melocchi recorded in his diary that they 'succeeded like a wonder of nature unrivalled since the foundation of [the city]' (Troy, 53); in Paris the *Mercure de France* reported in summer 1729 that *Il marito giocatore* 'was much applauded by reason of a precise and lively performance, in spite of its slight similarity to our customary [French] operas' (ibid., 56). Their last known appearance was in *Le bourgeois gentilhomme* (as Larinda and Vanesio) at Florence in 1732.

There were a number of other singers by the name of Ristorini in the 18th century. Giuseppe Ristorini, a tenor from Bologna, flourished in the second quarter of the century, appearing in *opere serie* in Florence and Venice between 1724 and 1744. Luigi Ristorini sang in central and northern Italy during the period 1742–50. The *tenore buffo* Giambattista Ristorini was active from at least 1750, when he performed in Stuttgart, to 1789, when he left the imperial court of St Petersburg. From 1758 to 1764 he appeared regularly at the Teatro S Moisè, Venice, and he also sang in Parma, Warsaw, Modena and Copenhagen before going to Russia in 1780. Caterina Ristorini's career extended from at least 1757 to 1785. She is known to have appeared at Venice (until 1764), London (1770–73) and Pisa (1775 and 1785). In London she sang in both comic and serious operas, taking the title role in Niccolò Piccinni's *La buona figliuola* with great success.

COLIN TIMMS

Ritardando (It.: 'holding back', 'becoming slower'; gerund of *ritardare*). *See* RALLENTANDO. The form *tardando* also occasionally appears. Joseph Czerny (*Clavierschule*, 1825) gave a long list of contexts in which he considered *ritardando* admissible or appropriate and it is clear that in most of these he assumed an almost immediate return to the original tempo. The word tended to remain even where most Italian tempo marks had been rejected: see, for instance, Wagner's use of *etwas ritardierend* in Act 2 of *Lohengrin*.

See also TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Ritchie, Anthony (Damian) (*b* Christchurch, 18 Sept 1960). New Zealand composer. Born into a musical family, his talents developed early and he had several works performed while still at school. He studied at Canterbury University and then spent 1983 in Hungary, undertaking research on Bartók and studying composition with Bozay at the Liszt Academy. On returning to New Zealand he became a lecturer in music at Canterbury University (1985–7), worked as a composer in schools (1987), held the Mozart Fellowship at Otago University (1988–9), and was composer-in-residence with the Dunedin Sinfonia (1993–4). Since 1994 he has been a freelance composer and conductor.

Ritchie writes prolifically, in a wide variety of forms. His music is strongly influenced by Eastern European composers but he has also shown an interest in minimalism and in sound worlds as diverse as Maori chant and Indonesian gamelan. He regards communication with the audience as essential and believes in being practically involved with the musical life of the community. His own direct and purposeful style is unashamedly eclectic, and his compositions are noted for their immediacy and their often exuberant sense of rhythm.

WORKS

(*selective list*)

Stage: Star Fire (op.2, S. Hoar), op.71, 1995, unperf.; The Eagle has Landed (op., 1, Hoar), 1996, Wellington, Bats Theatre, 23 May 1997

Orch: Concertino, op.8, pf, str, 1981; Autumn Conc., op.16, pf, orch, 1985; Beginnings, op.25, 1987; The Hanging Bulb, op.37, 1989; Te Hau-a-Kaiaua [The Winds of Kaiaua], op.38, 1988–9; Fl Conc., op.57, 1993; Symphony 'Boum', op.60, 1993; The Tuatara Dances, op.62, 1994; Va Conc., op.65, 1994–5; A Bugle Will Do, op.68, 1995; Gui Conc., 1997

Vocal: She is Singing for Peace (P. White), op.24, unacc. choir, 1987; To Face the Night Alone (White and others), op.43, Bar, chorus, orch, 1990; Berlin Fragments (C. McQueen), op.53, song cycle, S, pf, 1992; Then I Understood (L. Ranger), op.75, song cycle, choir, orch, 1995–96; From the Southern Marches, song cycle, S, Mez, T, B, choir, orch, 1997

Brass band: Shintaro San, op.19, 1986: Down in the Brunner Mine, op.69, 1995

Chbr and solo inst: A Folk Lament, op.15, org, 1984; Little Qt, op.26, fl, cl, va, pf, 1987; Rhapsody, gui, op.32, 1988; Music for Tristan, op.34, pf, 1988; Pas de deux, op.52a, 2 gui, 1992

ADRIENNE SIMPSON

Ritchie, Stanley (John) (*b* Yenda, NSW, 21 April 1935). Australian violinist. He studied with Florent Hoogstoel at the Sydney Conservatorium, Jean Fournier and Sándor Végh in Paris (1958–9) and Joseph Fuchs at Yale University (1959–60). His other teachers included Oscar Shumsky and Samuel Kissell. He was leader of the New York City Opera Orchestra (1963–5), associate leader of the Metropolitan Opera Orchestra (1965–70), a member of the New York Chamber Soloists (1970–73), a founder of Aston Magna (1974) and first violinist of the Philadelphia String Quartet (1975–81). In 1971 Ritchie took up the Baroque violin and began to concentrate increasingly on period-instrument performance of Baroque and Classical repertory. He has toured Europe, North and South America and Australia. Ritchie and his wife, the harpsichordist and fortepianist Elisabeth Wright, have appeared as the Duo Geminiani since 1974. He has given lectures and masterclasses at institutions in the USA, Australia, New Zealand, Canada and Europe, and in 1982 became professor of violin and director of the Baroque orchestra at Indiana University. Combining a brilliant technique and a discerning sense of style, Ritchie has an extensive repertory and has made numerous recordings of solo and chamber works. He plays a Jacob Stainer violin of *c*1670, restored to its original condition.

HOWARD SCHOTT

Ritenuto (It.: 'held back'; past participle of *ritenere*, 'to detain', 'withhold'). An instruction normally implying a more sudden and extreme slowing down than by the terms RALLENTANDO and *ritardando*. Strictly, however, it is a firm change to a slower tempo, which is then maintained: bars 280–315 of the overture to *Die Fledermaus* (by Johann Strauss (ii)) have the tempo mark *tempo ritenuto*. *Ritenente*, the present participle, suggests something more gradual.

□

Ritornello (It.; Fr. *ritournelle*). A diminutive of the word *ritorno*, meaning 'return'. In Italian musical terminology a ritornello can mean a simple repeat, as indicated, for example, by a repeat sign. The earliest use of the word as a technical term occurs in folk poetry, where it denotes a form made up of three-line stanzas, the first and third of which rhyme; an alternative term is *stornello*. In the 14th-century madrigal a ritornello was a final couplet set to its own music following a matching pair of stanzas; the typical rhyme scheme is *aab aab cc* or *aaab aaab cc*.

In the 15th and 16th centuries the term was dormant, but it re-emerged with the rise of instrumentally accompanied monody around 1600. It now came to denote an instrumental prelude, interlude or postlude (or any combination of these) for a vocal movement, most often an aria (employing this term in its broadest sense) organized in strophes. The classic description for this sort of ritornello appears in the third volume of Michael Praetorius's *Syntagma musicum* of 1618, where the author

notes that ritornellos are used in dramatic music (citing Claudio Monteverdi's *Orfeo* of 1607), vocal chamber music (as in the same composer's *Scherzi musicali* published in 1607) and church music (as in his hymn *Ave maris stella* in the Vespers of 1610). Later in the same volume Praetorius suggested that refrains involving the full ensemble, not just instruments, should also become known as ritornellos, but that proposal was abortive.

One general characteristic of these ritornellos is that they are clearly separated from the vocal sections with which they alternate. This was very convenient in dramatic music, where ritornellos could accompany dancing, the entries and exits of characters or scenic transformations. Both ritornello and strophe are tonally closed units which are self-contained thematically, the musical relationship between the two not being predetermined. At one extreme lie the ritornellos that are note-for-note the same as the strophes; at the other, those written in a contrasting metre that have no obvious connection beyond a common tonality. Most ritornellos, however, paraphrase the material of the strophes in some way, borrowing certain of their elements. Good examples of this technique occur in the ritornellos of the *Neue Arien* of Adam Krieger written in the mid-17th century.

These 'detached' ritornellos were joined around that time by another kind that can be termed 'integrated'. Here, the ritornellos occur within the framework of a single movement (or strophe) into which they are seamlessly woven. As before, the ritornello forms a prelude and postlude, but for the first time the opportunity arises to introduce it also in foreign keys, reinforcing by repetition the intermediate cadences made by the voice. The aria 'Gradita povertà' from Francesco Cavalli's opera *Gli amori d'Apollo e di Dafne* (1640, Venice) has been identified as an early example of this type (Dubowy). True, its intermediate ritornello in the dominant has the character of an echoed cadential phrase, but the structure of the aria of the late 17th century can already be glimpsed in embryo.

The parallel emergence, towards the 1680s, of the 'church aria' in the form ritornello–vocal period 1–ritornello–vocal period 2–ritornello and the da capo aria (the same stated twice over and enclosing a third vocal section) provided the opportunity for ritornellos to become a fixed component of vocal music in many genres. Unlike their detached counterparts, integrated ritornellos tend not to be the same (allowing for transposition) on each appearance. They are frequently pared down or modified in some way. In certain arias written just before 1700 by such composers as Alessandro Scarlatti, detached and integrated ritornellos appear in tandem; the former, entrusted to a string orchestra, precede, follow or frame the movement, while the continuo supplies the latter on its own.

Soon after 1700 ritornello technique was transferred to the concerto. From the start, homophonic fast movements in concertos employed motto-themes to introduce successive periods. A logical extension of this practice was to model the structure on the church aria, using episodes for the soloist as the equivalent of vocal periods. The number of episodes, and thus of foreign keys visited, could be increased at will, making this 'ritornello form' almost indefinitely expandable. Although examples of primitive ritornello form exist in concertos by Giuseppe Torelli (op.6, 1698; op.8, 1709) and Henricus Albicastro (op.7, *c*1705), the fully developed structure is encountered first in Antonio Vivaldi's concertos written towards the end of the same decade, and most notably in those published in his op.3 (1711). This is the model described by J.J. Quantz in his *Versuch* (1752). A few slow movements also employ the same form, miniaturizing the ritornello or reducing it to a simple frame. Later Vivaldi concertos, like those of his younger contemporaries Locatelli and Tartini, often turn the opening ritornello into a virtual piece in itself, featuring extensive thematic contrast and modulation to related keys (the tonal plan may prefigure that of the movement as a whole). Such ritornellos, expanded still further, constitute for the classical concerto of Mozart's era what, in an effort to assimilate the structure to sonata form, has become known as the 'preliminary' exposition. With the first movement of Beethoven's Third Piano Concerto (1803), the decisive move towards textbook sonata form was made. Thereafter ritornello form quickly disappeared as a general constructive principle, although it was occasionally revived in the 20th century in homage to the Baroque.

MICHAEL TALBOT

Ritorni, Count **Carlo** (*b* Finale, Modena, 6 June 1786; *d* Reggio nell'Emilia, 27 March 1860). Italian writer. He spent most of his life in Reggio nell'Emilia, where he held various civic and administrative posts, including that of mayor from 1856. A devotee of literature, architecture and music, he chronicled the cultural life of the city, notably in the volumes of *Annali del teatro della città di Reggio dal 1807 al 1839* (Bologna, 1826–39), and published an important study of the choreography of Salvatore Viganò (1838). His discussions of all types of opera in two works – *Consigli sull'arte di dirigere gli spettacoli* (Bologna, 1825) and especially his *Ammaestramenti alla composizione d'ogni poema e d'ogni opera appartenente alla musica* (Milan, 1841) – surpass in their detail and coherence the comments of other 19th-century writers and composers. In the *Ammaestramenti*, Ritorni methodically criticized contemporary serious opera and anticipated later stylistic developments in his extensive programme for its reform. A new genre presenting only elevated, heroic subjects – *melotragedia* (for which Bellini's *Norma* served as an archetype) – would improve on contemporary practice by incorporating more continuous organization (even acts consisting of single scenes), by adopting more flexible musical and poetic forms, by expanding the role of the orchestra and by striving towards a closer fusion of musical and textual meaning. Though often muddied by inconsistencies, biases and obscure formulations, Ritorni's writings serve present-day scholars by confirming awareness during the 19th century of practices evident in operatic scores, by giving a contemporary rationale for Ottocento stylistic developments and by providing an invaluable glimpse of attitudes

towards Rossinian opera in the era of Bellini and Donizetti.

SCOTT L. BALTHAZAR

Rïtsareva, Marina. *See* RITZAREV, MARINA.

Ritschel. German family of musicians of Austrian origin. They were active at the courts of Mannheim and Munich.

(1) Georg Wenzel Ritschel (*b c*1680; *d* Schwetzingen, 10 July 1757). Double bass player and violinist. With his brother (2) Franz Ritschel he accompanied the household of Duke Carl Philipp from Innsbruck via Heidelberg (1718) to Mannheim (1720) when the duke became Elector Palatine in 1716. Ritschel was admitted as a supernumerary member of the court orchestra in 1713, and from the first known Mannheim court calendar in 1723 to that of 1757 is recorded as a double bass player. The registration of his death in 1757 gives him as being 'in his late 70s'.

(2) (Ignaz) Franz (Joseph) Ritschel (*d* Schwetzingen, 4 July 1763). Organist, brother of (1) Georg Wenzel Ritschel. He is listed in the Mannheim court calendar as second organist in 1734 and 1736, and from 1744 at the latest he was first organist, with a salary of 750 gulden. His salary of 900 gulden in 1759 was higher than that of any other instrumentalist in the Mannheim Kapelle. In 1737 he married Maria Rosina Fränzl, the sister of the Mannheim violinist Ignaz Fränzl. He may have been the composer of a keyboard piece included in the collection *Six Easy Lessons ... Book I* (London, *c*1765) and of a concerto for organ, flute and strings (in *CH-E*), both attributed only to 'Ritschel', with no first name given (see (4) Georg Ritschel).

(3) Johannes (Michael Ignaz) Ritschel (*b* Mannheim, bap. 29 July 1739; *d* Mannheim, 25 March 1766). Violinist and composer, son of (2) Franz Ritschel. From 1756 until 1763 he is listed as a violinist in the Mannheim orchestra. The elector Carl Theodor encouraged his talent and on 8 October 1757 awarded him a three-year scholarship to Italy 'for his better perfection in music'. At the beginning of 1758 he began his studies with Padre Martini in Bologna, completing various counterpoint studies in 1758–9 and at least two concerted sacred works in 1760. Three letters from his father (now in *I-Bc*) bear witness to the respect the teacher had for his pupil. In the spring of 1761 Ritschel was in Rome, and on 15 April wrote to Martini criticizing the local style of church music as superficial and 'Neapolitan'. All the same, later that year he went to Naples as a pupil of Gennaro Manna, and on 2 March 1762 wrote enthusiastically to Martini about two new operas by J.C. Bach, whom he probably met in Naples. In 1763, at the age of 24, Ritschel was promoted to the position of 'Protector Electoralis chori musici' (Vice-Kapellmeister) in Mannheim. His gratitude to the elector was expressed in the dedication to Carl Theodor of the oratorio *Gioas re di Giuda* (1763), his first composition after his return to Mannheim. Leopold Mozart, visiting Schwetzingen with his children in the summer of that year, mentioned 'Mr Ritschel, Vice-Kapellmeister' as one of the most notable personalities in musical life at the electoral court, and in a letter of 11 December 1777 to his son, referred to Ritschel's studies with Padre Martini. But by that time Ritschel had been dead for more than ten years and his place taken by G.J. Vogler.

Considering the brief period between his return from Italy and his early death at the age of 26, Ritschel must be reckoned among the most prolific and gifted of the second generation of Mannheim composers. His output, consisting mainly of sacred music, includes the oratorio *Gioas*, six masses and numerous other church works. In addition, a flute concerto, an oboe concerto and a symphony (in *D-Rtt*) in which the composer is identified only by surname may tentatively be ascribed to him. Stylistically his sacred music stands between the restraint of Padre Martini and the more operatic Neapolitan manner. Eduard Schmitt remarked that 'the large-scale psalm settings and masses place Ritschel ... on a par with Holzbauer and Richter'.

WORKS

Thematic catalogue of the sacred works in DTB, new ser., ii (1982)

Gioas re di Giuda, orat, Good Friday, 1763, Mannheim, *D-Dl*
4 masses, 4vv, orch: 1, 14 May 1763, Mannheim, Jesuitenkirche*, *Dl*; 3; *Dl*; 1 lost; Messa breve, 8vv, *Dl*
Other sacred: Nunc, 4vv, str, org, 23 Jan 1760; Cr, 4vv, 2 hn, str, bc, 27 May 1760, *I-Bc**; Miserere, 4vv, orch, 1764; Miserere, 4vv, orch, 1766; TeD, 4vv, orch; Dixit Dominus (Ps cx), 4vv, orch; Invitatorio della Resuretione, 4vv, orch; 8 motets, 1v, orch, *D-Dl*; Salve Regina, 4vv, str, org, lost
Orch: ?Sym., ?concs. for fl, ob, *Rtt* (attribution uncertain: only surname given)
Other works: Exercises, 2vv, 21 April 1758; 9 fugues a 4, 1759, *I-Bc**

(4) Georg (Wenzel) Ritschel (*b* Mannheim, bap. 15 Sept 1744; *d* Munich, 1 July 1805). Violinist and composer, son of (2) Franz Ritschel. He was a violinist in the Mannheim orchestra from 1760 until 1778, when he went with the court on its removal to Munich. He was still a member of the orchestra in 1803, serving as principal second violin.

Ritschel composed six quintets for flute and strings, published in Paris in about 1780, and ballet music for Munich (now lost). In addition, two harpsichord concertos (in *D-Mbs*) attributed merely to 'Ritschel' have traditionally been ascribed to him, though his father (2) Franz, who was a leading keyboardist at Mannheim, and his brother (3) Johannes must also be considered possible composers of these works.

Ritter. German family of musicians.

(1) Georg Wenzel Ritter (*b* Mannheim, 7 April 1748; *d* Berlin, 16 June 1808). Bassoonist and composer. He was a member of the Mannheim orchestra from 1764 (1761 according to Lipowsky) to 1778, and in 1774 visited London, where he made several concert appearances. After the removal of the court to Munich, he served as second bassoonist until September 1788; from 1778 he was also one of the select group of chamber musicians there. Mozart made his acquaintance during his stay in Mannheim in 1777 and met him again in Paris, where in April 1778 he wrote for him the bassoon part of the Sinfonia concertante KAnh.9/297*B* (letter of 5 April 1778). From October 1788 Ritter was a member of the court orchestra in Berlin.

The *Musikalische Real-Zeitung* ('Beförderung', 24 Sept 1788) described Ritter as one of the greatest virtuosos of his instrument, and particularly stressed the exceptional salary of 1600 thalers paid to him in Berlin. The Paris publisher Bailleux issued two bassoon concertos and six quartets for bassoon and strings op.1 by Ritter; he also composed a bassoon duet (*D-SWl*). His portrait was engraved in 1805 by F.W. Bollinger (examples in *A-Wn* and *D-Cv*).

(2) Peter Ritter (*b* Mannheim, 2 July 1763; *d* Mannheim, 1 Aug 1846). Cellist and composer, nephew of (1) Georg Wenzel Ritter. He studied the cello with Innozenz Danzi and composition with G.J. Vogler. In 1776 he made his first concert tour, while the performance of his first symphony occurred in 1779, and Vogler arranged for a string quartet to be published in his *Betrachtungen der Mannheimer Tonschule* (Mainz, Jg.iii) the following year. When the court removed to Munich in 1778, Ritter joined the Mannheim opera orchestra, and he became principal cellist in 1784. He also began composing for the theatre: his first Singspiel was produced in 1788. Adept at piecing together performances during the impoverished years of French invasion, he was appointed Konzertmeister in 1801 and on 3 November 1803 Kapellmeister of the orchestra (now under the control of the Grand Duchy of Baden) under the director of music Ignaz Fränzl. It was Ritter's duty to direct the operas, which at first he conducted from his raised cello desk. Until his retirement in 1823 he carried out his duties at the Nationaltheater in Mannheim, interrupted only by a few concert tours. A tireless supporter of the musical life of the city, he became chairman of the newly founded Mannheim Society of Arts in 1833. He was married to Katharina Baumann, the Mannheim actress admired by Schiller.

The most successful of Ritter's stage works was the Singspiel *Der Zitherschläger*, which was praised by Weber on its first performance in Mannheim on 1 April 1810: 'an original German opera . . . which certainly need not yield to any French work of its kind'. Ritter's Singspiel *Die lustigen Weiber von Windsor* was apparently the first musical setting of the Shakespearean subject. His song *Grosser Gott wir loben dich* of 1792 is still one of the most popular of German hymns. His instrumental works reflect his activities as a cellist. In 1788 he dedicated six string quartets to King Friedrich Wilhelm II of Prussia, for whom he played in 1785; other chamber works were published in Mannheim and Paris. Ritter's instrumental writing reveals a fascination with contrasting timbres; his chamber works call for such rare instruments as the viola d'amore and viola da gamba. Five of his cello concertos employ scordatura, and contemporary reviews remark that he was known for performing the slow movements of the concertos with the cello muted.

WORKS

STAGE

first performed in Mannheim unless otherwise stated

Der Eremit auf Formentera (comic op, 2, A. von Kotzebue), National, 14 Dec 1788, *D-Bhm*
Der Sklavenhändler (Spl, 2, C.F. Schwan), National, 11 April 1790 (Mannheim, n.d.)
Die Weihe (prol, G. Römer), 1792, *DS*
Die lustigen Weiber von Windsor (Spl, 3, Römer, after W. Shakespeare), National, 4 Nov 1794
Dilara, oder Die schwarze Zauberin (Spl, 2, C. Gozzi), 1798
Die lustigen Musikanten (incid music, C. Brentano), Frankfurt, 1803, *US-Wc* (inc.)
Das neue Jahr in Famagusta (Spl, 2, Brentano), 1804
Salomons Urteil (op, 3, L.C. Caigniez), 1808, *D-DS*
Das Fest im Olymp (prol), 1808
Marie von Montalban (op, 2, K. Reger), Frankfurt, 1810
Der Zitherschläger (Spl, 1, C.L. Seidel), Mannheim, 1810 (Bonn, n.d.), *Mbs*, *S-St*
Alexander in Indien (op, 2, P. Metastasio), 1811
Das Tal von Barzelonetta, oder Die beiden Eremiten (Spl, 1), 1811, *B-Bc*, *D-Mbs*, *Mo*
Feodore (Spl, 1, Kotzebue), 1811, *DS*
Das Kind des Herkules (pantomime, 1), 1812
Alfred (op, 3, Kotzebue), 1820
Der Mandarin, oder Die gefoppten Chinesen (Spl, 1), Karlsruhe, 1821 (Mannheim, n.d.), *Mbs*
Hoang-Puff, oder Das dreifache Horoskop (Spl, 1), 1822
Bianca (op, 2, Grimm), 1825
Der Talisman (Spl, 1, trans. from Fr.), 1825
Das Grubenlicht (op, 2, L. Beck), 1833
Die Alpenhirtin, mentioned in *EitnerQ*
Die Sternenkönigin in Maidlinger Walde (romantisch-kommisches Volksmärchen, 3, A. Berigen), Hamburg, n. d.
Vergönnen Sie mir (quodlibet)

Doubtful: Die Geisterburg (Spl, 2, F. Hochkirch), 1799; Der Sturm, oder Die bezauberte Insel (Spl, 2, J.W. Döring, after Shakespeare: *The Tempest*), 1799

MSS in *US-Wc*

(3) Heinrich Ritter (*b c*1758; *d* after 1805). Violinist, brother of (2) Peter Ritter. He was described by Gerber as a 'splendid virtuoso and soloist on the violin'. Vogler mentioned a concert given by the two brothers Peter and Heinrich in 1779. From 1793 Heinrich was Konzertmeister with Carl Wendling in Mannheim.

Other members of the Ritter family were also musicians. Heinrich Adam Ritter (*d c*1777) was a bassoonist in Mannheim from 1747 to 1772, and Georg Wilhelm Ritter (*b* Bayreuth, 30 April 1721) an oboist and violinist there from 1756 to 1802. The two violinists Jakob Ritter (Mannheim 1759–83) and Friedrich Ludwig Ritter (Mannheim 1772–98/9) were also in the service of the Elector Palatine Carl Theodor. Carl Ritter, the son of (2) Peter Ritter, had a successful career as a singer and from 1839 was producer at the Nationaltheater in Mannheim.

Ritter, Alexander [Sascha] (*b* Narva, Estonia, 27 June 1833; *d* Munich, 12 April 1896). German composer and violinist. After his father's death the family moved in 1841 to Dresden, where Alexander entered the Gymnasium and became a violin pupil of Franz Schubert, the second Konzertmeister of the court orchestra. He and his older brother Karl became friends with Bülow and began a long association with Liszt and with Wagner, who became acquainted with the family shortly before he fled from Dresden in 1849. In subsequent years Ritter's mother Julie not only corresponded frequently with Wagner but also gave him regular financial support. Karl was for some time Wagner's protégé as a young, ultimately unsuccessful conductor in Zürich. Between 1849 and 1851 Ritter studied with Ferdinand David at the Leipzig Conservatory; on returning to Dresden he occasionally played in the court orchestra but devoted most of his time to composing. On 12 September 1854 he married the talented actress Franziska Wagner, a niece of the composer, and that year he accepted Liszt's invitation to become second Konzertmeister in the Weimar orchestra. Two years later he went to Stettin as Konzertmeister and music director of the Stadttheater, leaving after two years to return to Dresden and in autumn 1860 moving to Schwerin where his wife was engaged as an actress. In 1863 both he and his wife were engaged by the Stadttheater in Würzburg, where they remained for the next 19 years. As an attempt to bolster his seriously depleted financial resources Ritter opened a music shop in 1875; seven years later he was able to leave Würzburg with his family when he received Bülow's invitation to take the post of second Konzertmeister in the Meiningen Hofkapelle.

In Meiningen Ritter met the young Richard Strauss, whom he strongly influenced, encouraging him to abandon the conservative compositional style of his early years. Strauss credited Ritter with introducing him to the music of Wagner, Liszt and Berlioz, and the writings of Schopenhauer, and urging him to write symphonic poems; when Strauss was engaged in 1886 as third conductor for the Munich Hofoper he persuaded Ritter also to settle there. In 1890 Strauss conducted the successful première in Weimar of Ritter's *Wem die Krone?* (Munich, 1891) on a double bill with an earlier opera, *Der faule Hans* (1885, Munich; published in Leipzig in 1886), both set to his own texts. Ritter's poem *Tod und Verklärung*, a development of Strauss's scenario, was published with the score of the symphonic poem. As Wagner's nephew by marriage, Ritter frequently joined the Bayreuth circle, even playing more than once in the festival orchestra. Besides the two operas, his compositions include some 60 lieder, several tone poems, choral works, a string quartet and a piano quintet.

GEORGE J. BUELOW

Ritter, Christian (*b* probably 1645–50; *d* after 1717). German composer and organist. The earliest source of information about him is a manuscript copy of a work that is clearly an autograph and bears both the date 1666 and the description of him as 'chamber organist at Hall. [i.e. Halle]'. To have held such a post he must have been about 20 years old. The pattern of his later life seems to indicate that he came from the group of Dresden musicians headed by Schütz and Christoph Bernhard. His presence at Halle is confirmed by documents only from 1672, when he was a court musician; later he also became court organist. From 1681 he is listed as organist at the Swedish court at Stockholm and he was soon appointed vice-Kapellmeister as well; that he wrote music for the funeral of the Swedish minister J.A. Rehnskiöld, who died on 12 October 1680, suggests that he arrived in Stockholm before 1681. He soon left, however, to take up a position at Dresden as vice-Kapellmeister and court organist in 1683. From 1688 to 1699 he was again working in Stockholm, where he is described variously as vice-Kapellmeister and musician. In fact he was probably in charge of the Hofkapelle, the position of Kapellmeister being held first, until 1690, by Gustaf Düben (i) and then nominally after his death by his son Gustaf (ii). There is no mention of his being in Stockholm after 1699. He was in Hamburg in 1704 according to what is probably an autograph composition of that date. He participated, through a letter published by Mattheson in 1725, in a controversy that Mattheson initiated in 1717. In it he called himself 'emeritus', but Mattheson referred to him as 'acting Kapellmeister to the King of Sweden'. Whatever his status he was clearly still alive in 1717 and from what Mattheson said could have been so in 1725 too.

The manuscript sources of Ritter's surviving works are concentrated in north Germany and especially in the Düben Collection (at *S-Uu*). Although they certainly do not account for his total output, the preponderance of vocal works may well have been a feature of it, for he was first and foremost a Kapellmeister and worked only temporarily as an organist. One of the two keyboard suites, that in C minor, is a lamento similar to those of Froberger; the Sonatina in D minor is, despite its title, somewhat in the style of the north German organ toccata, though the contrasts within it are not so great. The vocal works embrace a wide range of forms – sacred concerto, concertato motet and the early type of cantata – and the forces for which they are scored are very varied too. Only a few have mixed biblical and free texts, and there is still a preference for arioso and song-like solo movements rather than for recitatives and da capo arias. They show that Ritter was not only a sensitive composer with a

flexible approach to form but one who, through expressive power and the use of rich sonorities, achieved a distinctive voice. By thus breaking away from the traditions of the Schütz school he made an individual contribution to Protestant church music before Bach.

Marx (1987) proposed Ritter as the author of the *St John Passion* previously attributed to Handel – a hypothesis that needs to be tested by closer comparison with Ritter's authenticated vocal works.

WORKS

17 vocal works, 1–5vv, 3–7 insts, bc, *S-Uu*, incl. Wie lieblich sind deine Wohnungen, ed. E. Selén (Kassel, 1967)

FRIEDHELM KRUMMACHER

Ritter, Hermann (*b* Wismar, Mecklenburg, 16 Sept 1849; *d* Würzburg, 25 Jan 1926). German viola player. He studied music at the Hochschule in Berlin and art and history at Heidelberg University. The history of musical instruments attracted him, and profiting by some practical hints in A. Bagatella's *Regole perla costruzione di violini* (Padua, 1786), he devoted some time to constructing a large viola. This new instrument was an exact enlargement of a violin based on the same acoustical properties (the normal viola being a compromise). For this *viola alta*, as he called it, he claimed improved resonance and a more brilliant tone. The history of the viola shows that there have always been two schools of thought, one favouring the more popular smaller viola with its slightly veiled tone and characteristic nasal quality, and the other favouring the larger model (*see* TERTIS, LIONEL). Ritter's *viola alta* was exhibited in 1876; Wagner was interested and asked Ritter to cooperate at the Bayreuth Festival. By 1889 five of Ritter's pupils were in the Bayreuth orchestra playing the *viola alta*. Ritter toured extensively throughout Europe writing and arranging a great deal of music for his instrument. In 1879 he was appointed professor of the viola and history of music at the music school in Würzburg. In 1905 he founded the Ritter Quartet. The Grand Duke of Mecklenburg appointed him court chamber virtuoso, and Ludwig II of Bavaria made him court professor. His book, *Die Geschichte der Viola alta* (Leipzig, 1876/*R*), traces the history of the instrument, which subsequently lost favour, possibly because of its unwieldy size; it is no longer played.

WATSON FORBES

Ritter, Johann Christoph (*b* 1715; *d* Clausthal, 25 Jan 1767). German organist and composer. A pupil of J.S. Bach, Ritter was from 1744 until his death the organist of the Marktkirche in Clausthal, an important mining centre in the Harz mountains with a lively and independent cultural life. A complete copy of Bach's *Clavier-übung*, i–ii (BWV 825–30, 971, 831), which he prepared around 1740, was long thought to be the only extant copy of these works dating from before Bach's death; however, it seems to depend on the printed version of 1731 and obviously contains some writing errors (see Jones). Another copy of the same works, known in Bach scholarship as P215, is also in Ritter's hand, but it was not written until after 1755. Barthold Fritz, the Brunswick builder of keyboard instruments, frequently mentioned him in his treatise on keyboard tuning as the consignee of clavichords 'for commission', and Ritter's numerous petitions to the Clausthal council regarding the disrepair of the organ show a comprehensive knowledge of and great experience in organ building. His only extant compositions are a set of *Drey Sonaten, denen Liebhabern des Claviers verfertiget ... erster Theil* (1751), dedicated to the superintendent of mines, G.P. von Bülow, and published by Haffner of Nuremberg. These works, always interesting and full of good ideas, represent a historically important stage in the development of the early pre-Classical keyboard sonata.

ERWIN R. JACOBI/DOROTHEA SCHRÖDER

Ritter, Johann Nikolaus (*b* 26 March 1702; *d* Erlangen, 28 Feb 1782). German organ builder. He was apprenticed to Christian Müller of Amsterdam. He was working for J.G. Schröter in about 1730 (in Erfurt), and from about 1732 for Gottfried Silbermann in Freiburg, where he met J.J. Graichen (1701–60). In 1736 he and Graichen worked for T.H.G. Trost on the construction of the organ in the Schlosskirche at Altenburg. In 1739 they both settled at

Hof, and two years later were appointed official organ builders and instrument makers at the court of the Prince of Brandenburg-Culmbach. They remained in partnership until Graichen's death. Organ cases of theirs survive at Berg bei Hof (1744; two manuals, 16 stops), Trebgast (1748–9; two manuals, 19 stops) and Baiersdorf (1755; one manual, 13 stops). Ritter's organ at the parish church (until 1922 the French Reformed Church), Erlangen (1764; one manual, 15 stops), survives intact. Ritter was the most important organ builder of his time in east Franconia. Like Schröter, he could convey an impression of grandeur even with his small organs, by a judicious choice of specification; but unlike him, he favoured Silbermann's wide-scaled 2⅔′, 1⅗′ and 1′ stops, with rather fewer foundation stops. In one-manual organs he often designed the quint and tierce ranks to draw in two halves, bass and treble. In contrast to Silbermann's practice, he tuned his organs to equal temperament (following the example of J.A.J. Ludwig). The Silbermann tradition in Franconia, founded by Ritter and Graichen, was carried on by Ritter's best pupil Friedrich Heidenreich (1741–1819) and his son Eberhard Friedrich (*c*1770–1830).

HANS KLOTZ

Ritter, Sascha. *See* RITTER, ALEXANDER.

Ritter-Ciampi, Gabrielle (*b* Paris, 2 Nov 1886; *d* Paimpol, 18 July 1974). French soprano. Her mother (Cécile Ritter-Ciampi) was a principal soprano at the Opéra, her father (Ezio Ciampi) an Italian tenor and later her teacher, while her uncle was the pianist Theodore Ritter. She herself trained first as a pianist and gave some public performances at the age of 16. She then turned to singing and made her début in 1917 as Violetta. She joined the Opéra-Comique two years later, appearing there first as Mozart's Countess Almaviva and as Philine in *Mignon*. She remained with the company for many years, singing Konstanze in their first production of *Die Entführung aus dem Serail* (1937) and creating the leading role of Irène in Reynaldo Hahn's *Le oui des jeunes filles* (1949). She also appeared at the Opéra, at La Scala, in Berlin and at Salzburg in 1932. She was Monte Carlo's first Marschallin in *Der Rosenkavalier* (1926), admired for 'the perfection of her vocal art and a nobility of bearing'; she also sang there all three main soprano roles in *Les contes d'Hoffmann*. Her impressive versatility, technique and intelligence are evident in many recordings, which also preserve her brightly defined voice and responsive style.

J.B. STEANE

Rittler [Ridler], **Philipp Jakob** (*b c*1637; *d* Olomouc, bur. 16 Feb 1690). German composer and violinist, active in Austria and the Czech lands. He was active in various capacities at the Jesuit college in Opava about 1660. It seems that he knew Vejvanovský and possibly also Biber. He was a priest and was court chaplain to Prince Johann Seyfried von Eggenberg in Graz between 1669 and 1673. In 1675 he appeared at the court of the Bishop of Olomouc, Karl Liechtenstein-Castelcorno, at Kroměříž with the title of chaplain. In 1679 he became honorary vicar of the Olomouc Chapter and at the same time was employed as cathedral conductor and owned, among other instruments, five violins (one made by Jacob Stainer). Evidently he was already composing when at Opava. Various music inventories, especially that of 1695 from Kremsier (now Kroměříž), give details of 74 compositions by Rittler (only those in *CZ-KRa* survive). Of his surviving works, those up to 1675 are mostly instrumental; after 1675 he devoted himself mainly to church music. With a few exceptions his sonatas were intended for church use. He must have been an accomplished violinist, judging from the technically very demanding solo passages in his works: some aspects of these suggest that he had mastered scordatura technique. During his lifetime his works were widely known, as is proved by records in music inventories at Český Krumlov, Slaný, Tovačov and Seitenstetten.

WORKS

all works in CZ-KRa

MASSES

Missa Nativitatis, 7 solo vv, 7vv chorus, 2 vn, 3 va, vle, 2 tpt, 4 trbn, org, after 1670

Harmonia genethliaca, 6 solo vv, 6vv chorus, 2 vn, 3 va, vle, 2 tpt, 4 trbn, org, ?1674

Missa Carolina, 6 solo vv, 6vv chorus, 2 vn, 4 va, vle, 2 tpt, 3 trbn, bc, 1675; another copy entitled Missa S Spiritus, 5 Solo vv, 5vv chorus, 2 vn, 3 va, vle, 2 tpt, 3 trbn, org, 1677 (also a further copy, 1677, anon.)

Missa dominus tecum, 6 solo vv, 6vv chorus, 2 vn, 5 va, vle, 2 tpt, 4 trbn, org, 1675

Missa Nativitatis, 7 solo vv, 7 vv chorus, 2 vn, 3 va, vle, 2 tpt, 4 trbn, org, 1675–80

Requiem claudiae imperatricis, 5 solo vv, 5vv chorus, 4 va, vle, 4 trbn, org, 1676; ed. J. Sehnal and J. Vičar (Olomouc, 1998)

OTHER SACRED VOCAL

Puer natus, 5vv, 2 vn, 3 va, vle, 6 tpt, trbn, timp, org, after 1670

Te Deum laudamus, 6 solo vv, 6vv chorus, 2 vn, 3 va, vle, 2 tpt, org, after 1676

Cum complerentur dies, 6 solo vv, 6vv chorus, 2 vn, 3 va, vle, 4 trbn, org, 1677

Isti sunt triumphatores, 5 solo vv, 5vv chorus, 2 vn, 2 va, vle, 3 trbn, org, after 1677

Stella coeli extirpavit, 5vv, 2 vn, 2 va, org, 1679

Alma, 2 S, B, bc, before 1680

Ave regina, 4vv, 2 vn, org, *c*1680

O quam suavis est, 5vv, 2 vn, 2 va, org, *c*1680

Prudentes virgines, 4 solo vv, 4vv chorus, 2 vn, 2 va, vle, org, *c*1680

Ecce sacerdos magnus, 5vv, 2 vn, 2 va, vle, org, after 1680

Qui sunt isti, 5 solo vv, 5vv chorus, 2 vn, 2 va, vle, org, after 1680

Salve regina, A, 2 vn, 2 va, org, after 1680

Justus germinabit, 5 solo vv, 5vv chorus, 2 vn, 2 va, vle, org, *c*1685

Salve regina, 4 solo vv, 4vv chorus, 2 vn, vle, 3 trbn, org, *c*1685

INSTRUMENTAL

Ritual (from Lat. *rituale*). In the Western Church, a manual with prayers and rubrics used by a priest in the adminstration of the sacraments. *See* LITURGY AND LITURGICAL BOOKS, §II, 4(vi).

Ritzarev [Rïtsareva], **Marina (Grigoriyevna)** (*b* Leningrad, 16 April 1946). Israeli musicologist of Russian origin. She was educated at the Leningrad State Conservatory (now the St Petersburg Rimsky-Korsakov State Conservatory) under Sergey Slonimsky (MA 1969, PhD 1973, with a dissertation on the choral works of Bortnyans'ky). She also wrote a second doctorate dissertation at the Kiev State Conservatory on the Russian choral concerto (1989). She began her career teaching at the Novgorod Music College (1969–71), after which she moved to Moscow and worked at the Central State Public Library (1972–5), the Central Museum of Musical Culture (1975–83) and the Centre for Musical Information at the Composers Union of the USSR as assistant director (1983–7). After emigrating to Israel in 1990, she joined Bar-Ilan University as a researcher (1992) and in 1997 began working in the Archive for Israeli Music, Tel-Aviv University. Her main research field is 18th-century Russian music, in which she has written biographies of Berezovs'ky and Bortnyans'ky, has made pioneering studies in the genre of choral concerto and has revised the generic map of 18th-century Russian music, opposing the operocentric official picture. She has contributed to Soviet music studies with a monograph on Sergey Slonimsky and articles on other contemporary Russian-Soviet composers and has researched Israeli music, focussing on the impact of Russian nationalist tradition, and music in immigration societies.

LYUDMILA RAPATSKAYA

Riuwental, Neidhart von. *See* NEIDHART VON REUENTAL.

Rivafrecha [Ribafrecha, Rivaflecha], **Martín de** (*b* *c*1479; *d* Palencia, 24 June 1528). Spanish composer. At the time of his appointment as *cantor* and master of the choirboys at Palencia Cathedral (5 December 1503) he was already a clergyman in the diocese of S Domingo de la Calzada. In 1511 he was admonished for not properly clothing and feeding the six choirboys in his charge. He was awarded a lucrative chaplaincy on 6 December 1518. However, on 28 September 1521 García de Basurto was named to replace him. Rivafrecha resumed his former post as *maestro de capilla* at Palencia Cathedral on 27 January 1525 but was so inept that on 30 March that year Diego de Castillo was appointed to replace him. After his death, and despite his inconsistent career, the Palencia Cathedral chapter paid him homage as 'unique in both practical and theoretical music, extremely learned, ingenious and wise', and honoured him with interment in the cathedral's Capilla de la Santa Cruz. Cristóbal de Villalón in *Ingeniosa comparación* (Valladolid, 1539) ranked him second only to Francisco de Peñalosa among Spanish composers of their time.

Rivafrecha's four-voice motets *Quam pulchra es*, *Anima mea liquefacta est* and *Vox dilecti mei* set texts from the *Song of Solomon*. In *Anima mea liquefacta est* fermata chords end successively on tonic, dominant and subdominant chords while the amorous text is illustrated in *Vox dilecti mei* with interweaving phrases that succeed the opening duos. In his *Salve regina* chant alternates with polyphony. On 30 December 1526 the cathedral chapter

permitted Rivafrecha to collect the 21,000 maravedís bequeathed by Bishop Juan de Funseca to endow Saturday singing of the *Salve* in Palencia Cathedral; Rivafrecha's *Salve regina* may well be his last extant composition.

WORKS

Anima mea liquefacta est, 4vv, *E-Sc* 5–5-20 (probably by Rivafrecha); ed. M. Imrie (London, 1978)
Benedicamus Domino, 4vv, *TZ* 4
Quam pulchra es, 4vv, *Bbc* 454
Salve regina, 4vv, *Sc*, ed. in Elústiza and Castrillo Hernández
Vox dilecti mei, 4vv, *Sc*, ed. M. Imrie (London, 1978)

ROBERT STEVENSON

Rivander, Paul (*b* Lössnitz, nr Meissen, *c*1570; *d* after 1621). German composer. According to his own account he was a student of the liberal arts. From 1613 to 1615 he was a musician in the Brandenburg Hofkapelle at Ansbach. Before that he was probably in Austria, since in the preface to the second part of his *Prati musici* (1613) he stated that the lost first part was published in Austria. It is possible that he went to Ansbach in the retinue of the Austrian Emperor Matthias, who was crowned at Frankfurt in 1612. From 1615 on he lived at Nuremberg. His four extant volumes of songs and dances (1613–21) illuminate the transition at that period from the polyphonic ensemble song to the Baroque continuo song, which had already been heralded by increasingly prevalent homophonic textures. The last collection at least was intended for students. In the preface to the second part of the *Prati musici* – in which he announced a subsequent third part that, like the first, is unknown – he showed that he was an intelligent musician who consciously adopted simple, up-to-date textures determined by the text, which could as a result be clearly heard. He also pointed out that the melody of a song ought not to be determined by the expressive content of the first verse of the poem alone. In the pieces without words he showed comparable precision by using a system of signs invented by himself to indicate loud and soft passages. Small individual details of melody, rhythm and phrasing and certain expressive contrasts testify to his efforts to find a language of his own.

WORKS

Prati musici ander Theil, darinnen newe weltliche Gesäng ... benebens etlichen Paduanen, Intraden, Courrenten und Täntzen, 3–5, 8vv, viols/other insts (Ansbach, 1613); 3 ed. in Vetter, ii

LINI HÜBSCH-PFLEGER

Rivani, Antonio [Ciccolino, Ciecolino] (*b* Pistoia, bap. 24 May 1629; *d* Florence, 1686). Italian soprano castrato. He was one of four sons born to Alessandro Rivani and Maria Lucrezia Del Siena; a brother, Giulio (*b* 6 March 1614), was a priest and castrato singer at Pistoia Cathedral and, from 1644, *maestro di cappella* at S Stefano dei Cavalieri in Pisa. In 1638 Rivani took part in Michelangelo Rossi's opera *Erminia sul Giordano*. In 1639 he joined the *cappella* of Pistoia Cathedral, then under the direction of Pompeo Manzini. He was chosen, along with several of the Melani brothers, for specialized training as a castrato singer by Felice Cancellieri, a patrician priest who had spent 20 years as a singer in the service of the Habsburgs in Vienna. He remained in Pistoia throughout the 1640s, and then entered the service of Cardinal Gian Carlo de'Medici, probably on the recommendation of one of the Cancellieri family, a chamberlain at the Medici court. Rivani was lent out for singing engagements; he was in Rome in 1655, and between 1657 and 1663 sang in several operas, most of them by Jacopo Melani, at the Teatro della Pergola in Florence. His crowning appearance was as the young hero, Illo, in *Ercole in Tebe*. In *Amor vuol inganno* (the subtitle of *La vedova*) he performed alongside his sister-in-law Lucia Rivani and Paolo Rivani, possibly a nephew.

In 1660 Rivano was in Paris, where he was engaged by Francesco Buti for court entertainments. He fell gravely ill in September that year, but recovered in time to appear again at the Teatro della Pergola. He returned to Paris for several more court productions, including the *Ballet de l'Impatience* and Cavalli's *Ercole amante* (1662), in which he played Giunone. He then entered the service of Queen Christina of Sweden with a handsome salary, and acquired a large country estate near Pistoia. The queen lent him to the court of Carlo Emanuele II in Turin for a lengthy period, but he lingered beyond his allowed stay so that several official requests had to be made for his return. He took up service with Queen Christina again in 1669 and later sang in various Italian cities, including Bologna (1673) and Mantua (1682), and also in England. His funeral, in S Stefano, Florence, was attended by all the musicians of the city.

JEAN GRUNDY FANELLI

Rivé-King [née Rivé], **Julie** (*b* Cincinnati, 31 Oct 1854; *d* Indianapolis, IN, 24 July 1937). American pianist. From 1870 to 1872 she studied in New York with S.B. Mills and briefly with William Mason, and in 1873 went to Europe to work with Reinecke in Leipzig and Liszt in Weimar. After her début in Leipzig in 1873 she began a performing career managed by Frank H. King, and in 1877 they married. Her career was more successful than that of many male American pianists during the last quarter of the 19th century. Devoted to educating the musical public, Rivé-King played recitals throughout the USA and Canada and her extensive solo repertory included

over 300 works by more than 75 composers, many of them American. She performed with orchestras in New York, Boston, Philadelphia, Baltimore, Pittsburg, Chicago, Cincinnati and San Francisco, and was the featured soloist on tours with orchestras led by Theodore Thomas in 1883 and Anton Seidl in 1897. Piano companies including Steinway, Chickering, Decker Brothers and Weber sponsored numerous tours. She taught at the Bush Conservatory in Chicago (1908–37).

To enhance her reputation, King persuaded her to publish his own works under her name, although she helped him with 'the passage work' in the most popular piece, *Bubbling Spring*. During her lifetime six companies published compositions by King but bearing Rivé-King's name.

WORKS

all for piano; published in St Louis unless otherwise stated

Gems of Scotland (1878); Hand in Hand (1878); On Blooming Meadows (1878); Pensées dansantes (1878); Bubbling Spring (1879); Impromptu (New York, 1879); Impromptu Mazurka (Boston, 1879); March of the Goblins (1879); Mazurka des grâces (1879); Polonaise héroïque (1879); Popular Sketches (1879); Coeur de lion March (Chicago and New York, 1880); La scintilla (Cincinnati, 1907)

M. LESLIE PETTEYS

Rivera, Chita [Rivero, Dolores Conchita Figueroa del] (*b* Washington DC, 23 Jan 1933). American actress, singer and dancer. She began her ballet training at the age of 11 and studied at the American School of Ballet. She was in several Broadway shows in chorus roles before being cast as Anita in *West Side Story* (1957), the role which established her career. Other Broadway credits include *Bye Bye Birdie* (1960), *Chicago*(1975), *The Rink* (1984), *Kiss of the Spider Woman* (1993) and *Chita and All that Jazz* (1998). She has received numerous accolades for her work, including Tony awards for *The Rink* and *Kiss of the Spider Woman*, the Drama Desk award for *The Rink*, and the top honour at the 1996 Helen Hayes awards for contributions to theatre. She is somewhat unique for her generation in that she has created her roles both on Broadway and in the West End. Her film credits include *Sweet Charity* (1969) and *Pippin*(1981). Although capable of belting, she does not limit herself to one particular vocal technique, but uses her voice to bring added dimension to a character. Possessing a voice with a wide dynamic and timbral range, Rivera's talent and charisma as both a singer and a dancer have allowed her to enjoy a successful and diverse stage career for over 40 years.

WILLIAM A. EVERETT, LEE SNOOK

Rivero, Edmundo (*b* Avellaneda, Buenos Aires, 8 June 1911; *d* Buenos Aires, 18 Jan 1986). Argentine tango singer, guitarist and songwriter. He worked initially on the radio and in film, later joining the bands of Julio De Caro, Horacio Salgán (1944) and, most notably, Aníbal Troilo (1947), with which he recorded the classic version of Homero Manzi and Aníbal Troilo's *Sur*. After 1950 he worked as a solo artist, with a guitar accompaniment or backed by a variety of tango groups. In 1965 he performed in Washington and New York, and later toured Latin America and Japan. His Buenos Aires nightclub El Viejo Almacén, established in 1969, was one of the recognized strongholds of the tango at a time when its popularity was in decline. In a field dominated by tenors and baritones, Rivero was the first successful bass tango singer. His instinctive grasp of the tango rhythm was complemented by a deliberate phrasing reminiscent of folk music, in which Rivero took a lifelong interest. He also became one of the leading experts on *lunfardo*, the distinctive urban vocabulary of Buenos Aires. His autobiography was published as *Una luz de almacén* (Buenos Aires, 1982).

SIMON COLLIER

Riverside. American record company. It was established in New York in 1953 by Bill Grauer (jr) and Orrin Keepnews. Initially it issued famous early jazz recordings drawn principally from the catalogues of Paramount, but also derived material from Champion, Circle, Gennett, Hot Record Society, QRS and others. From 1954 the company became increasingly important for its recordings of modern jazz. Among the musicians best represented were Thelonious Monk, Bill Evans, Cannonball Adderley and Wes Montgomery (1959–63). Riverside established the subsidiary labels Judson (late 1950s) and Jazzland (1960). The company also undertook new recordings of older styles of jazz; many were issued in the series Living Legends, recorded in New Orleans and Chicago in the early 1960s. It went bankrupt in 1964. In 1972 the Riverside catalogue was acquired by Fantasy (ii), which subsequently reissued items from it on its Milestone and Original Jazz Classics labels.

BARRY KERNFELD

Rivier, Jean (*b* Villemomble, Seine, 21 July 1896; *d* Paris, 6 Nov 1987). French composer. He received cello and piano lessons as a child, and subsequently gained a philosophy baccalauréat. His health was damaged by mustard gas while he was serving in World War I. He attended the Paris Conservatoire (1922–6), studying counterpoint with Georges Caussade, history with Maurice Emmanuel and harmony, privately, with Jean Gallon, and winning the *premier prix* in counterpoint and fugue. His String Quartet (1924) was his first public success, and this was consolidated in 1928 with performances of *Chant funèbre* and *Danse du Tchad* at the Pasdeloup and Lamoureux concerts. He became a prominent interwar composer, taking a leading role in the Groupe du Triton, particularly from 1936 to 1940. From 1948 to 1966 he was professor of composition at the Conservatoire, a position he shared with Milhaud until 1962.

River's works reveal a rhythmic drive and intensity. *Chant funèbre* is evocative, with effective use of percussion and repetitive ostinato patterns. Rhythmic incisiveness and a deliberate exoticism are notable in *Danse du Tchad* and *Le voyage d'Urien*, both Gide-inspired works. Rivier was attracted to other contemporary writers, such as

Valéry and Apollinaire, and to early poets, including Ronsard and Du Bellay.

Rivier makes prominent use of superimposed 2nds, 7ths and tritones, the latter notably in the *Adagio* and the Symphony no.1 in D. Open 4ths and 5ths are prominent, for instance, in the Concertino for viola and orchestra. Rivier's preferred composers – Prokofiev, Stravinsky and Honegger – reveal his stylistic and aesthetic orientation. Musical construction was important to Rivier and his works adhere to traditional forms. His very late works reveal a shift from orchestral textures and large-scale choral-orchestral pieces, such as the Requiem (1953), *Christus Rex* (1966) and *Dolor* (1973), to solo and chamber music.

BARBARA L. KELLY

Rivière & Hawkes. *See* BOOSEY & HAWKES.

Rivilis, Pavel Borisovich (*b* Kamenets-Podol'sk, Ukraine, 25 May 1936). Moldovan composer. He studied composition at the Kishinev Conservatory (1954–9) with Gurov, Leyb and Zagorsky and then taught at the Slobodzey Music School (1959–60). He then worked as an editor at the music publishers Cartea Moldoveneasca (1960–64), as senior consultant of the Moldovan Composers' Union (1965–74), as a member of the repertory and editorial committee of the Moldovan Ministry of Culture (1974–90) and in 1991 he was appointed assistant professor of theory and composition at the state conservatory. He has received a number of official prizes and awards. Rivilis has been influenced by Stravinsky, and, like him, has demonstrated that composition can be innovative while taking models from Baroque and ancient folk sources. The opposition of contrasting elements plays a significant expressive and structural role: on the one hand there is a clear predilection for *ostinati* while, on the other, rhythmic, textural and timbral elements are subjected to minute variation.

Rivoli [Riwoli], **Paulina** (*b* Vilnius, 22 July 1823 or 1817; *d* Warsaw, 12 Oct 1881). Polish soprano. Born into a family of itinerant actors, she studied at the opera school of the Wielki Theatre in Warsaw; she made her début there on 17 June 1837 in *L'italiana in Algeri*. She performed with much success in *Les Huguenots*, *La Juive* and in operas by Weber, Auber, Cimarosa and Moniuszko. She was in Italy in 1851, and in 1858 sang the title role in the Warsaw première of Moniuszko's *Halka*. Her lyrical voice was noted for its beauty of timbre. She retired in 1860.

Rizzi, Bernardino (*b* Cherso, Istria, 27 May 1891; *d* Rivoltella del Garda, Brescia, 23 Jan 1968). Italian composer. After studying philosophy in Kraków (1910–11) he joined the conventual Franciscan order. He studied theology in Rome and at the papal seminary in Padua, from which he graduated in 1916. He then attended the Pontificia Scuola Superiore di Musica Sacra in Rome (1917–19), gaining a diploma in Gregorian chant, before studying composition at the Pollini Institute, Padua. In 1922 he returned to Kraków, where he founded two choirs, the Chorus Caecilianus and the Cecyliański Choir, with whom he gave numerous concerts in Poland and abroad. He was professor of composition at the Kraków Music Institute and of composition and orchestration at the Żeleński School of Music. He settled again in Italy in 1934, and in 1940, after holding various church posts in Treviso and elsewhere, he became choirmaster of the Cappella ai Frari, Venice, remaining there until his retirement in 1964. His works are mostly sacred in inspiration, and make use of the harmonic principles outlined in his book *Pancordismo: nuovi sviluppi della sistema tonale* (Padua, 1954). (*DEUMM*)

□

Rizzi, Carlo (*b* Milan, 19 July 1960). Italian conductor. He studied at the Milan Conservatory, with Vladimir Delman in Bologna and with Franco Ferrara at the Accademia Musicale Chigiana, Siena. Making his début in 1982 at the Milan Angelicum with Donizetti's *L'ajo nell'imbarrazzo*, he quickly built a reputation in various Italian theatres, and made his British début in 1988 at the Buxton Festival with Donizetti's *Torquato Tasso*. He followed this with *Tosca* for Opera North and a much-praised *La Cenerentola* at Covent Garden, both in 1990. In that year he made his WNO début with *Il barbiere di Siviglia*; two years later he became the company's music director. His American début was at the Metropolitan in 1994 with *Il barbiere di Siviglia*. Rizzi has conducted concerts with major orchestras in Britain and elsewhere, but his reputation rests mainly on stylish, rhythmically pointed performances of Italian opera, including Rossini's *L'inganno felice* at Pesaro (1994) and *Il viaggio a Reims* at Covent Garden (1992). Among his recordings are *Un ballo in maschera*, *Rigoletto*, *Faust* (a notably fresh and subtle reading), lesser-known operas such as Donizetti's *Il furioso nell'isola di San Domingo*, Piccinni's *La pescatrice* and Rossini's *Ciro in Babilonia*, a disc of Rossini's unpublished tenor arias, sung by Ernesto Palacio, and orchestral works by Respighi, Schubert, Liszt and Debussy.

NOËL GOODWIN

Rizzio [Riccio], **David** (*b* c1525; *d* Edinburgh, 9 March 1566). Italian musician. He is more important for his involvement in politics than for any musical achievement. From Piedmont he went to Scotland in 1561 in the service of the ambassador of Savoy, and there joined the court as

bass singer and *valet de chambre* to Mary Queen of Scots. A Catholic, he rapidly rose in favour as Mary's confidant, and in 1564 was appointed her French secretary to the bitter resentment of the Scottish Protestant councillors. The more extreme of these under Lord Ruthven brutally murdered him in the queen's presence, an act that was to prove the tragic turning-point in Mary's career.

In the 18th century Rizzio acquired something of a reputation as a composer of Scots songs. This curious and groundless fiction seems to have started in William Thomson's *Orpheus Caledonius* (1725). The songs ascribed to Rizzio are all native airs and though some, like *An thou were my ain thing*, can be traced back to the earliest (early 17th-century) surviving sources of Scots folk music, it is much more likely that Rizzio simply sang part-music of an international style, of which there was no lack at Mary's court. Thomson may have used Rizzio's name out of ignorance or for the sake of some sensational publicity. Although Thomson withdrew this ascription from his second edition of 1733, the legend persisted for several decades. Those who subscribed to it included James Oswald and Francesco Geminiani, but by the 1770s it had been completely discredited.

rNam-rgyal, A-jo (*b* Dvags-po Glang, 1894; *d* Lhasa, 1942). Tibetan traditional folk singer. He came from a poor wood-logging family and lost his eyes after he was attacked by a raven at the age of one; he was nicknamed Ko-stong rNam-rgyal ('blind Namgyal'). Like his father, he was a talented musician and was first noticed while busking with his *sgra-snyan* lute in Lhasa shortly after arriving in 1914. He was subsequently invited to join the Nang-ma'i sKyid-sdug society, of which he became the last teacher, and to play at the banquets of high society. He created the style of *lha-sa'i stod-gzhas* by adapting folksongs from western Tibet into the Lhasa musical style. According to legend he knew 70 *stod-gzhas* and created many new ones, of which only 'Gya-gling sras' and 'A-jo bSod-nams Thob-rgyal' remain in contemporary Tibet. He also made many melodic changes, especially in ornamentation. Two *stod-gzhas* songs pay homage to him: 'A-jo de' and 'Tambura'i mkhan-po'. His students came from many different backgrounds and included bSod-nams Dar-gyas Zhol-khang.

ISABELLE HENRION-DOURCY

Roach, Max(well) (*b* New Land, NC, 10 Jan 1924). American jazz drummer and composer. His mother was a gospel singer and he first played drums at the age of ten in gospel bands; this early involvement with black religious music had a significant influence on his musical development, though he also studied formally at the Manhattan School of Music. In 1942 he became associated with Charlie Parker, Dizzy Gillespie and others and, as the house drummer at Monroe's Uptown House, participated in the jam sessions there and at Minton's Playhouse that led to the development of the bop style. From the 1940s Roach played and recorded frequently with bop groups in New York, notably as a member of quintets led by Gillespie (1944) and Parker (1945, 1947–9 and, intermittently, 1951–3). During the same period, however, he also performed with musicians as dissimilar as Louis Jordan, Henry 'Red' Allen and Coleman Hawkins (with whom he made his first recordings, 1943), and took part in sessions with Miles Davis (1948–50), some of the results of which were issued as *Birth of the Cool*.

From 1954 to 1956, with Clifford Brown, Roach led an important quintet; this group produced a number of seminal recordings, including *Study in Brown* (1955, EmA) and *At Basin Street* (1956, EmA), that epitomized the style of jazz known as hard bop. During the late 1950s and early 60s Roach made a series of recordings that prefigured developments associated with free jazz: on *Max Roach Plus 4 at Newport* (1958, EmA) and *Deeds Not Words* (1958, Riv.) he sometimes omitted the piano from his ensembles; on *We Insist! Freedom Now Suite* (1960, Can.) he utilized a wide variety of open formal structures instead of the more usual theme and variation format; and on *Drums Unlimited* (1965–6, Atl.) he drew on his earlier innovatory concept of performing solo drum improvisations as independent pieces (*Drum Conversation*, 1953, Debut).

In the 1960s Roach became an articulate spokesman and activist in the black American cultural arts movement, and the titles of many of his compositions and albums from that period – notably *We Insist! Freedom Now Suite*, on which he collaborated with Oscar Brown jr – reflect his awareness of and involvement in the struggle for racial equality. Much of his work was undertaken in conjunction with the singer Abbey Lincoln, his wife at the time, and made use of solo voices and chorus as well as jazz ensemble. From that time he also composed music for Broadway musicals, films, television and symphony orchestra. In 1970 he organized M' Boom Re: Percussion, an ensemble of ten percussionists that performs and records works written specifically for percussion instruments. He also made recordings with such artists as Abdullah Ibrahim (1977), Anthony Braxton (1978–9), Archie Shepp (1979) and Cecil Taylor (1979), and as a soloist with a string quartet (*Survivors*, 1984).

Roach has continued to work regularly with his own groups. In 1989 there was a salute to the drummer at the Chicago Jazz Festival, when M' Boom Re: Percussion, Roach's jazz quartet and his quartet playing with the Uptown String Quartet were all presented. That same year he made an acclaimed duo recording, *Max Roach plus Dizzy Gillespie: Paris, 1989* (1989, A&M). He has been an active lecturer on jazz and has retained posts at the Lenox School of Jazz and the University of Massachusetts at Amherst.

Roach holds a significant position in the history of jazz. With Kenny Clarke, he was particularly important in establishing the practice of setting the fixed pulse on the ride cymbal instead of the bass drum; this enabled more flexible use to be made of the other parts of the drum kit and allowed for greater polyrhythmic texture. His imaginative performances as a soloist and his mature technique of improvisation, which is based on the use of deft

interaction of pitch and timbral variety, subtleties of silence and sound, rhythmic and metrical contrast and a refreshingly flexible approach to the fixed pulse, establish him as one of the most outstanding and innovative drummers of his time.

OLLY WILSON

Robbin, Catherine (*b* Toronto, 28 Sept 1950). Canadian mezzo-soprano. She studied at the Royal Conservatory in Toronto and then privately in Paris and London. Her career has from the start centred on the Baroque and period-instrument performance. She has often performed and recorded with John Eliot Gardiner's Monteverdi Choir, most notably in *Messiah*, Beethoven's *Missa solemnis* and as Annius in *La clemenza di Tito* (semi-staged, 1990). With Christopher Hogwood and his Academy of Ancient Music she has sung Purcell's Dido and Handel's Julius Caesar in concert. She sang Medoro in Handel's *Orlando* with Hogwood at the 1989 Proms, and also recorded the role under his baton. In 1990 she sang the title role in the North American première, in Toronto, of Handel's *Floridante*. Her other Handel opera recordings include Eduige in *Rodelinda*. Robbin's concert repertory has concentrated on Brahms (Alto Rhapsody), Berlioz (she has contributed to a mixed-voice version of *Les nuits d'été* with Gardiner), the Mahler cycles and Elgar's *Sea Pictures*. She has also appeared frequently with Graham Johnson's Songmakers' Almanac. Her voice is a slim, attractive mezzo, which she uses with expressive nuance and a keen feeling for style.

ALAN BLYTH

Robbins, Richard (Stephen) (*b* South Weymouth, MA, 4 Dec 1940). American composer. He attended the New England Conservatory of Music (1962–8) and studied the piano with Howard Goding. He then studied in Vienna with Hilda Langer-Rühl (1972–4), later becoming the director of the Music School at Rivers (Weston, MA, 1980–84). While there, he met the film producer Ismail Merchant and the director James Ivory, who helped him to make a documentary about Mannes's musically gifted children, *Sweet Sounds* (1976). Two years later he was asked to score the Merchant-Ivory adaptation of Henry James's *The Europeans* (1979). By 1998 he had scored 14 films directed by Ivory, and worked on other independent films and related projects.

Robbins achieved particular distinction in his music for the three Merchant-Ivory films taken from E.M. Forster novels (*A Room with A View*, 1986, *Maurice*, 1987, and *Howards End*, 1992), as well as in *Remains of the Day* (1993) and *Surviving Picasso* (1996). These reveal a consistent style, in which plaintive melodic fragments are superimposed upon recurring rhythmic and harmonic patterns, often in a neo-Baroque, Impressionist or Minimalist vein. The music rarely mimics particular screen actions or ties itself thematically to individual characters, but provides moody and shimmering atmosphere (often enhanced by synthesizer tracks). He has also incorporated appropriate music by other composers into Merchant-Ivory films, such as Mozart in *Jane Austen in Manhattan*, Puccini in *A Room with a View* and Corelli and Sacchini in *Jefferson in Paris*. Other projects by Robbins include the documentary film, *Street Musicians in Bombay* (1993), and *Via Crucis*, an installation-piece composed for an exhibition by visual artist Michael Schell (1994).

Robbio di San Rafaele. *See* SAN RAFAELE, BENVENUTO ROBBIO.

Roberday, François (*b* Paris, bap. 21 March 1624; *d* Auffargis, now in Seine-et-Oise, 13 Oct 1680). French composer and organist. Like his father he was a royal goldsmith. In 1659 he bought a privilege of 'Valet de chambre de la Reine', serving successively Anne of Austria, mother of Louis XIV, and Queen Marie-Thérèse. After a few years of affluence his fortunes were reversed and he was forced to retire, bankrupt, to Auffargis, where he died in an epidemic. It seems highly unlikely that he was organist to the order of Petits-Pères, as Fétis suggested. The possibility that he was one of Lully's teachers has not yet been clearly proved either.

Roberday's only extant work is the *Fugues, et caprices, à quatre parties* (Paris, 1660; ed. J. Ferrard, Le Pupitre, xliv, 1972). In his 'Avertissement' he mentioned the musicians who gave him the themes for the fugues: La Barre (?Pierre [iii]), Couperin (presumably Louis), Cambert, D'Anglebert (his brother-in-law), Froberger, Bertali and Cavalli. Three pieces are mere copies of works by Frescobaldi, Ebner and Froberger; until now only the fifth capriccio has been identified, as Froberger's Ricercar no.7. Seven of the nine fugues are followed by a capriccio, and each pair is linked thematically. The rhythmic variations of the subjects, typical of Frescobaldi and

Froberger, and the writing of the music in score denote a strong Italian influence. Indeed an Italian sense of rhythm and freedom, allied with a solid contrapuntal technique inherited from Titelouze, characterizes Roberday's most valuable music.

JEAN FERRARD

Robert, Johan. French or Spanish singer, possibly identifiable with the composers TREBOR and BORLET.

Robert, Pierre (*b* Louvres, nr Paris, *c*1618; *d* Paris, bur. 30 Dec 1699). French composer and ecclesiastic. Robert, who stemmed from a family of high magistrates, was trained at the Notre Dame choir school in Paris. No evidence supports Fétis's contention that he sang at Noyon Cathedral and, after 1637, at St Germain l'Auxerrois, Paris. Fétis also claimed that Robert was ordained as a priest as early as 1637. In 1648 he was appointed *maître de chapelle* at Senlis Cathedral. From 1650 to 1652 he served in the same capacity at Chartres. On 28 April 1653 he returned to Notre Dame for ten years' service succeeding Bournonville as *maître de chapelle*. In 1663 Louis XIV appointed four *sous-maîtres* for his royal chapel, each to serve for one quarter; Robert was assigned the quarter beginning in April. In 1669 Gobert and Expilly retired; Robert and Du Mont then divided the year between them, Robert taking the July and October quarters. Robert, along with Du Mont, was made *compositeur de la musique de la chapelle et de la chambre du roi* after Gobert's death in 1672. For unknown reasons he resigned from the royal chapel in 1683. His annual pension of 2500 livres began in December of that year. He had become abbot of Cambon in the diocese of Poitiers in 1671 and in 1678 of St Pierre-de-Melun, positions that he retained until his death.

No secular music by Robert survives, although he spent 17 years as a musician attached to the king's chamber. His major contribution is the collection of *Motets pour la chapelle du Roy* published in 1684 by Christophe Ballard in 20 partbooks. These 24 *grands motets*, printed 'by the express order of His Majesty', differ little in outward appearance from those of Lully and Du Mont. Both the *grand choeur* and orchestra have the five-part texture typical of the period in France. It is only in the *petit choeur* with its 'ensembles de récits' that the individuality of the composer is expressed. Choosing from eight possible solo voices, Robert contrasts sonorities by rapid and occasionally arbitrary alternation of vocal timbres.

In his *petits motets* Robert was more sensitive to the expressive power of dissonance and modulation: for example, the italianate dialogue that closes *O flamma* with textual repetitions, melodic sequences and chromaticism is far removed from the often stiff *récits* of the *grands motets*.

JAMES R. ANTHONY

Robert ap Huw [ap Hugh] (*b* Penmynydd, Anglesey, *c*1580; *d* Pen-y-Dentyr, Llandegfan, Anglesey, 1665). Welsh harper and poet. He was the copyist of the greater part of 'Musica neu Beroriaeth', *GB-Lbl* Add.14905 (pp.15–112, dated 1613 on p.69). The manuscript is the largest and earliest surviving collection of Welsh harp music, and is generally known as 'the Robert ap Huw manuscript'.

He was brought up at Bodwigan, Llanddeusant, Anglesey, where his father had settled. He may be the 'boye of llan ythyssante b[e]ing harper' mentioned in a list of payments of 1594–5 (*Lbl* Add.14918, f.9*v*). He became an itinerant musician, and was among the last to pursue such a career in Wales. In the winter of 1599–1600 he toured the households of minor gentry in north-east Wales. In April 1600 he was arrested and imprisoned in Ruthin on charges of abducting a young lady and several instances of theft, including 'writtinges' (i.e. manuscripts) and a petticoat. He escaped in May but was tried in his absence.

By at least 1615 Robert had become *pencerdd* (bardic master of music). A poem by Huw Machno (*Cywydd i ofyn telyn*; *GB-Ob*) names him as a musician of King James I, and Robert's own will states that his harp bore the silver arms of the king. There is no known record of his employment at court, but unnamed Welsh musicians received payments from Prince Henry's privy purse (1608–9) and Queen Anne's household accounts (1615–16, 1618–19). In later life he was a gentleman farmer on Anglesey.

Robert had connections with the intellectual and literary circles of Wales, which were at that time engaged in the copying and preservation of the Welsh language and other cultural artefacts. The manuscript *Lbl* Add.14905 may be associated with this movement; it may even have arisen from a specific commission. Lewis Morris, the antiquarian who owned the manuscript from the late 1720s, appears to have added the title-page 'Musica neu Beroriaeth' and pages with supplementary comments and notes. The manuscript is a retrospective compilation of the work of named Welsh musicians and poets of the 14th and 15th centuries belonging to an oral tradition that had declined rapidly during the 16th century, in spite of attempts to revive the *eisteddfodau*. An 18th-century hand (perhaps Lewis Morris) attributes a portion of the repertory (pp.23–34) to the 16th-century

harper Wiliam Penllyn, who gained admission as *pencerdd athro* (master and teacher of music) at the *eisteddfod* in Caerwys in 1567.

The notation employed by Robert (for further discussion, *see* WALES, §II, 1; for illustration, *see* NOTATION, fig.143) has three elements: a letter-based tablature naming each string with additional signs to indicate fingering and the precise way in which the strings are to be plucked and stopped (a number of special techniques are indicated), especially in executing the musical figuration; a number sequence to indicate the two basic harmonic elements which form the '24 measures' (24 set harmonic patterns listed on p.107 of the manuscript, which form a structural foundation for virtually every type of composition in this repertory); and tunings. There are annotations in Welsh, a graphic explication of the tablature ('principles for learning the pricking'), and separate tables of figuration and tunings. Many modern transcriptions have been highly speculative on account of uncertainties relating to each of these elements. However, Taylor (in Welsh Music History, 1999) has clarified the interpretation of the tablature and Evans (op. cit.) has made progress towards the reconstruction of the Welsh tuning and scale schemes. There are five 'standard and guaranteed' tunings: is gywair ('lower tuning', a diatonic scale with no accidentals), cras gywair ('hoarse tuning', pentatonic: C, D, E, G, A), lleddf gywair y gwyddil ('Irishman's re-tuning', pentatonic: C, D, E, G, B), go gywair ('sharp tuning', diatonic scale with the E flattened), and bragod gywair ('mingled tuning', diatonic with E and B flattened); and a sixth, common tuning, tro tant ('turn string', diatonic with B flattened). Robert's table indicates that cras gywair and lleddf gywair are pentatonic, but reconstruction of the other scales is dependent on evidence found in other sources. The tablature requires a harp with 25 strings (*c–g‴* or *C–g″*, the bass octave having no E string), intended for harp with horse hair strings, and brays, played with medieval fingernail technique. The form of tablature used by Robert ap Huw is also found in Lbl Add.14970, a copy of an earlier source made by Iolo Morganwg in about 1800. Comparable figuration, reduced to ornaments or 'graces', is recorded in Edward Bunting's Ancient Music of Ireland (1840), perhaps gathered at the Belfast harp festival of 1792.

The Robert ap Huw manuscript may contain the earliest extant European harp music (allowing for the updating that is inherent to the process of oral transmission). It consists principally of three types of piece: four gostegion (preludes), 15 caniadau (textless song settings; some of the most extended works), and eight profiadau (technical tests). There are also four shorter pieces, and four sets of clymau cytgerdd ('knots of harmony'): exercises based on harmonic patterns which make use of all or some of the 24 measures. Attempts to link the caniadau with recitations of surviving Welsh poems have yet to prove successful in performance. Suggestions that the compositions contain references to melodies popular in 16th-century Europe cannot be substantiated. The music is sectional, repetitive, and often based on short melodic patterns set over a chord sequence dictated by the 24 measures. Stylistically and aesthetically the repertory is quite distinct from contemporary harp, lute and keyboard music; much of its character depends upon the understanding and interpretation of the system of harp tuning.

RECORDINGS

Two Worlds of the Welsh Harp, Dorian Recordings DOR–90260 (1999)

JOHN HARPER

Robert de Blois (*fl* 13th century). French trouvère. The five songs attributed to him in musical sources represent a minor aspect of his literary output, which includes a long narrative poem *Floris et Liriopé* based on Ovid, and the *Enseignements des dames*, a manual of instruction for noble ladies. Although he is known only through his works, one poem that has been attributed to him, *Li departis de douce contree*, refers to an abortive crusade of the year 1239. All of his songs are in the very common bar form, and two survive with more than one melody. While his larger works appear to have been well known, the songs are found in a very limited group of sources and none seems to have been imitated by other trouvères.

ROBERT FALCK

Robert de Castel [du Chastel] (*fl* late 13th century). French trouvère. He was one of a large group of trouvères active around Arras in northern France in the late 13th century. The only datable reference to him is in the *Congés* of Baude Fastoul, written in 1272. He is addressed in the jeu-parti *Robert du Chastel, biaus sire* (R.1505) by Jehan Bretel (*d* 1272), a trouvère of Arras. Of the six songs attributed to Robert, only two seem to have enjoyed a wider popularity. *En loial amour* is designated as 'coronée' in one source, and *Se j'ai chanté* not only survives in a large number of sources, but was itself 'coronée' in the lost Chansonnier des Memses; it subsequently inspired a French religious contrafactum.

ROBERT FALCK

Robert de Handlo [Haudlo] (*fl* 1326). English theorist. He was the author of a treatise on notation, the *Regule cum maximis magistri Franconis cum additionibus aliorum musicorum*, dated 1326 (*CoussemakerS*, i, 383–403; Lefferts). He may have been a member of the de Handlo family prominent in Kent in the 13th and 14th centuries; a Robertus de Handlo is traceable from about 1315 to 1322 in the service of the Despensers. The *Regule* tells us more than any other single treatise about the development of mensural notation in the late Ars Antiqua, while introducing important refinements in vocabulary and conceptualization. Handlo took as his point of departure one version of a number of related treatises in a tradition transmitting in abbreviated fashion the notational doctrines of Franco of Cologne's *Ars cantus mensurabilis* (in most sources these treatises begin either 'Gaudent brevitate moderni' or 'Quandoque punctus quadratus'). To this basic text Handlo added material totalling about twice the size of the original, including not only his own explanatory glosses but also material drawn from what was probably an earlier treatise of his own and further additions credited to a number of other late 13th- or early 14th-century musicians, some of whom are otherwise unknown, including Petrus de Cruce, Petrus Le Viser, Johannes de Garlandia, Admetus de Aureliana and Jacobus de Navernia. Handlo divided this material into 13 'rubrics', or chapters, consisting of 'rules', with musical examples, and commentaries on the rules, called 'maxims'.

Handlo retained Franco's three simple figures – the long, breve and semibreve – at the centre of the notational hierarchy. Rather than creating new names and figures for larger and smaller values, thus adding new levels to the hierarchy, larger values are here still regarded simply as multiples of the long (*longa simplex*, *duplex*, *triplex*, etc.) and smaller values as subdivisions of the breve. The appearance and meaning of figures could be amended by signs, and the ways in which they might be grouped was carefully distinguished. For instance, Handlo raised oblique figures and conjunctions of semibreves to a notational status equivalent to that of *divisiones* and ligatures. Complexes or aggregates of single notes are identified by the word *divisio* (pl. *divisiones*), while the adjectives *divisa*, *nuda* and *sola* are used to characterize unattached single notes. *Plicae* also receive exceptional treatment, in large part because plicated longs and breves were to be distinguished from 'raised' longs and breves (which are raised a semitone by means of a short stem). Handlo was the only theorist to prescribe specific durations for plicas. Furthermore, in expressions using the word *vox* (voice) he argued that vocalization was still necessary in order to understand and realize the relationship of notational figures to their proportional durations and tempo.

The single most significant development of late Ars Antiqua notation is the division of the breve into more than two (unequal) or three (equal) semibreves. The *Regule* is one of a small number of treatises in the 'Gaudent moderni brevitate' tradition that identify Petrus de Cruce by name as the innovator who subdivided the breve first into four, and then into as many as five, six or seven semibreves, all identical in name and appearance. Handlo's authority JOHANNES DE GARLANDIA took the next major steps beyond the Petronian system. He distinguished the major semibreve from the minor by giving the former a descending stem, took advantage of this visible distinction to allow the major semibreve to precede or follow the minor, extended subdivision of the breve beyond seven to eight or nine, named the values worth a ninth and two-ninths respectively the *semibrevis minima* (or *minima*) and *semibrevis minorata* (or *minorata*), and prescribed use of a *signum rotundum* to clarify groupings of these small values. Johannes de Garlandia is possibly the unnamed figure identified by Jacobus of Liège as having first put eight or nine semibreves in place of a breve (CSM iii, vol.7, 1973, p.38). Jacobus, however, cited an otherwise unknown French triplum by this individual, *Mout on chanté*, that does not use either descending stems or the *signum rotundum*. The only known piece that uses the notation of Johannes de Garlandia as described in the *Regule* is an English motet fragment, *Hac a valle/Hostem vicit*, from *GB-Lwa* 12185.

Garlandia's *minorata* and *minima* were identical in appearance, so he had to stipulate that a pair of them were to be interpreted as a *minima* followed by a *minorata*. According to another of Handlo's authorities, Admetus de Aureliana, musicians of Navarre took the next step and distinguished these two smallest semibreves by signs, using a downward-slanting stem to identify the *minorata* and an upward stem to identify the *minima*, thus corroborating a remark in the *Quatuor principalia* that the minima was invented in Navarre (*CoussemakerS*, iv, 257). Garlandia's notational system, with its equal division of the breve into nine parts, is equivalent to two contemporary formulations: Philippe de Vitry's *tempus perfectum maior* and Marchetto da Padova's *novenaria*. His approach is not as fully developed, however, because the *minorata* and *minima* do not possess corresponding rests; one consequence of this, as Garlandia observed, is that they cannot be used in hockets.

Jacobus de Navernia, perhaps one of the musicians of Navarre referred to by Admetus, is cited in the *Regule* for a threefold typology of hockets, differentiating the types by their prevalent note values and rests. This is a specific example of a more general, recurrent issue for Handlo and his authorities, namely, what ranges of note values may properly be used together, and what tempo is appropriate for any specific mixture of note values. Petrus Le Viser, in particular, distinguished three rates of performance, *mos longus*, *mos mediocris* and *mos lascivus*. The first is the slowest and applies to Petronian semibreves, for instance, while the third is the quickest and suitable for hockets. Only in the doctrines attributed to Petrus Le Viser is there mention in the *Regule* of duple divisions of time; Petrus recognized a binary long of two equal breves in the *mos lascivus* and a binary breve divisible into two or four equal (or three or five unequal) semibreves in the *mos mediocris*.

Although the *Regule* discusses continental developments in notation, many details serve to confirm its insular origin. These include its discussion of certain notational devices found only in English sources (e.g. the raised long and breve, the notation of Johannes de Garlandia, and the anti-Franconian (long–short) interpretation of some pairs of semibreves); its introduction of music examples with insular connections (e.g. the five-section voice-exchange motet *Rota versatilis*, the St Magnus hymn contrafact *Rosula primula* and a triplum for an *Agmina* motet otherwise known only from its citation by the English theorist Walter Odington); its reference to topics also treated in Odington's *Summa de speculatione musice* (e.g. mixtures of modes, the confusion of rests in hockets, the transmutation of the 3rd and 4th modes); and its association of Navarre with mensural music (a theme linking it both to Anonymus 4 and to the *Quatuor principalia*). An abbreviated form of Handlo's treatise was incorporated into the later *Summa* (*c*1375) of the English music theorist John Hanboys. *See also* NOTATION, §III, 3(vi).

PETER M. LEFFERTS

Robert de la Piere (*d* Arras, 1258). French trouvère. He was a member of a prominent bourgeois family of Arras whose earliest member is documented in the year 1212. Robert himself appears twice in archival documents: as a municipal magistrate (1255) and in his obituary (spring, 1258). In the jeux-partis that bear his name he debated with Jehan Bretel, Mahieu de Gant and Lambert Ferri among others, all of whom were mid- or late 13th-century poets from the north of France.

The nine songs and five jeux-partis attributed to him appear in a small number of northern French sources and seem not to have been particularly well-known. Only *Hé, Amours, je fui nouris* was recorded in a wider variety of sources and inspired two French contrafacta, one of them a Marian song. This song and *Joliement doi chanter* are both more often attributed to Gillebert de Berneville in their manuscripts. The remaining songs employ some variety of bar form with considerable freedom in the *Abgesang* section. Their melodies follow the same pattern, with a repeated two-part element at the beginning and a through-composed *Abgesang*.

ROBERT FALCK

Robert de Reins [Rains] **La Chievre** (*fl* ?13th century). French trouvère. Originally from the Ile de France, he may have been a member of the family called 'La Chievre' which is documented in Reims in the 13th and 14th centuries. A 'Chievre de Reins' who may be identifiable with Robert is mentioned in the *Roman de Renart*, where a Tristan poem is attributed to him. Wilhelm Mann concluded from this that he was active before 1300, but others have maintained on linguistic grounds that his poems must be later. Of the nine works attributed to him, *Main s'est levée Aelis*, *Quant feuillisent li buisson* and *Quant voi le dous tens venir* are motets and *L'autrier de jouste un rivage* is constructed like a motet, although no tenor is extant. He is one of a very exclusive group of trouvères, including Richart de Fournival, who are associated with the early motet.

ROBERT FALCK

Robert du Chastel. *See* ROBERT DE CASTEL.

Roberti, Girolamo Frigimelica. *See* FRIGIMELICA ROBERTI, GIROLAMO.

Roberti, Giulio (*b* Barge, Saluzzo, 14 Nov 1823; *d* Turin, 14 Feb 1891). Italian composer and teacher. Although he began as a lawyer, he studied music privately with Luigi Felice Rossi and soon turned to composition as a career. His first opera, *Piero de Medici* (1849), had some success, his second, *Petrarca alla corte d'amore* (1859), none. He wrote no more operas, concentrating on chamber, piano, sacred music and songs, as well as didactic and historical writings. In 1866 he settled in Florence as a singing teacher, founding a free singing school for the pupils of the Pia Casa di Lavoro; his method proved so successful that he was entrusted with establishing choral singing in the city schools. He also directed concerts of early Italian polyphony, in 1874 founding the Società di Coro 'Armonia Vocale', which made a tour of Germany. In 1879 he moved to Turin, where he directed vocal teaching in the elementary schools. He also served there as director of the Accademia Corale Stefano Tempia, which he conducted in the first Italian performance of Handel's *Judas Maccabaeus*.

MARVIN TARTAK

Robert le Pelé. French singer. He was previously thought to be identifiable with ROBINET.

Roberto [Roberti, Ruberti], **Costantino** (*b* Naples, 1700; *d* Naples, 17 March 1773). Italian violinist and composer. He studied briefly at the S Maria di Loreto conservatory, probably under Giovanni Veneziano, *secondo maestro di cappella* from 1716 and one of the pioneers in Neapolitan *opera buffa*, the field that Roberto was to enter. He also took lessons from the master violinist and friend of A. Scarlatti, G.C. Cailò, from whom he learnt enough to be called 'virtuoso'. Subsequently he made his living as a violinist, first in the orchestra of the Teatro S Bartolomeo and, after the opening of the new theatre in 1737, at the S Carlo, where he remained until his old age. On 3 June 1732 he entered the Neapolitan royal chapel as an extra musician, in response to the success of his oratorio *Santa Tecla*, dedicated to the viceroy, the Court of Harrach, and performed at the palace during Lent of that year. His appointment was favoured by letters of reference from Leonardo Leo and Francesco Mancini but the decision to admit him to the chapel was ultimately due to the document drawn up by the Captain of the Guardia Alemanna: 'he is not only an able violinist, but also a fine composer, as Your Excellency will have been able to judge from his composition of one of the oratorios performed in the palace' (5 May 1732).

None of his music is known to survive, but his comic operas are of historical interest, for it was just when he was writing, between about 1725 and 1735, that, in the hands of the librettists Mariani, Saddumene and Federico, the form underwent significant morphological changes, increasing the ratio of recitative to set numbers and decreasing the quantity of the latter while lengthening and elaborating them.

WORKS

OPERAS

opere buffe performed at Naples, unless otherwise stated; all lost

La cantarina [Acts 2 and 3] (A. Piscopo), Fiorentini, carn. 1728 [Act 1 by M. Caballone]
Lo cicisbeo coffeato (T. Mariani), Fiorentini, aut. 1728
Lo Conte di Scrignano [Act 2] (Mariani), Nuovo, carn. 1729
La Zita (G.A. Federico), Fiorentini, wint. 1731
Il Filippo (Federico), Nuovo, sum. 1735
Santa Tecla (orat), Naples, Palazzo Reale, 1732

JAMES L. JACKMAN/PAOLOGIOVANNI MAIONE

Roberts, (John) Bernard (*b* Manchester, 23 July 1933). English pianist. His early studies were with Dora Gilson in Manchester; at the age of 15 he came to London, where he studied with Eric Harrison at the RCM and then with Ferdinand Rauter. He made his London début at the Wigmore Hall in 1957. In 1962 he was appointed to a piano professorship at the RCM. He performed frequently at the Queen Elizabeth Hall in London between 1976 and 1981 and gave an admired Beethoven sonata cycle at the Wigmore Hall in 1980. His repertory focusses on Classical and Romantic composers, Debussy and Bartók; he also gave the world premières of Stephen Dodgson's Piano Sonata no.3 (1985) and his Piano Sonata no.5 (1993). He played in the Tononi Piano Trio (with the violinist Jürgen Hess and cellist Olga Hegedus, 1965–72) and the Parikian-Fleming-Roberts Trio (with Manoug Parikian, violin, and Amaryllis Fleming, cello, 1975–85), and in 1990 formed the Bernard Roberts Trio with his sons Andrew and Nicholas Roberts. His playing is notable for its clarity, lyricism and good humour, as can be heard in his recordings of the complete Beethoven sonatas.

JESSICA DUCHEN

Roberts, Eleazer (*b* Pwllheli, 15 Jan 1825; *d* Liverpool, 6 April 1912). Welsh musician. He was brought up in Liverpool, started work at the age of 13 in a solicitor's office and eventually became chief assistant to the clerk to the stipendiary magistrate. He was elected Justice of the Peace in 1895, the year following his retirement. He contributed regularly to Welsh newspapers and journals, and his books included a biography of Henry Richard and a novel *Owen Rees*, written in English and portraying the life of the Liverpool Welsh community at that time. Precentor at Netherfield Road Chapel, Liverpool, he was important in the early days of the Tonic Sol-fa movement in Wales. After hearing John Curwen in Liverpool in 1860 he and John Edwards immediately started teaching the system in their Sunday school. In 1880 the two men

conducted the first Welsh singing festival held in Liverpool. He also travelled throughout Wales explaining Tonic Sol-fa and setting up classes, and in 1861 brought out *Hymnau a thonau* ('Hymns and Tunes'), the first hymnbook in sol-fa notation published in Wales. His own hymn tunes include the popular 'O na bawn yn fyw tebyg i Iesu Grist yn byw'.

OWAIN EDWARDS

Roberts, Helen (Heffron) (*b* Chicago, 12 June 1888; *d* North Haven, CT, 26 March 1985). American ethnomusicologist. After studying at Chicago Musical College (1907–9) and the American Conservatory of Music (1910–11), she studied anthropology under Franz Boas at Columbia University (1916–19, MA 1919) and subsequently did her first fieldwork in Jamaica (1920–21) for the Vassar College Folklore Foundation. In 1923–4 she worked in Hawaii at the invitation of a government commission; she collected songs in northern and southern California (1926–8) and in Rio Grande Pueblos (1930). From about 1920 to 1936 she transcribed and analysed field recordings (her own and those of others) in New York and Washington (working with Fewkes) and at Yale (under Clark Wissler). She was a founder and later secretary (1934–7) of the American Society for Comparative Musicology. In 1936, when support for her work was discontinued, she abandoned her musical career, later becoming a nationally known gardening specialist.

Roberts was a pioneer ethnomusicologist and one of the best of her generation. Her transcriptions and analyses of songs collected in Jamaica and Hawaii and from the Nootka Indians, the Copper Inuit and others put all ethnomusicologists in her debt, and her studies based on her own Jamaican material (1925, 1926) are still important. Her best-known work is perhaps *Musical Areas in Aboriginal North America*, which was partly superseded by Bruno Nettl's *North American Indian Musical Styles* (Philadelphia, 1954). Problems of form particularly interested her (1932, 1933), and her account of the problem of variation in traditional music (1925) is regarded as a classic study. The collection of Hawaiian music is valued not only by scholars, but also by Hawaiians for its documentation of national traditions which have now disappeared.

BARBARA KRADER

Roberts, Henry (*fl* 1737–*c*1782). English engraver, printseller and publisher in London. From 1737 until about 1762 he kept a music and print shop in Holborn from which he issued several notable books of songs with pictorial embellishments heading each piece. The earliest, the two-volume *Calliope, or English Harmony*, was issued from 1737 by and for the engraver in periodical numbers of eight octavo pages each at sixpence per number. The first volume of 25 numbers was completed in 1739; the parts of the second volume began to appear in the same year, though it was probably not finished until about 1746. John Simpson brought out second issues of volume one in 1740 and of volume two in 1747. Late in 1741 Roberts and John Johnson (successor to the Wrights), were accused by Thomas Arne of violating his copyright by printing some of his songs in the second volume of *Calliope*. The case did not go to trial but no Arne songs appeared in later numbers. The plates later came into the possession of Longman & Broderip, who reprinted from them about 1780. In 1743 Roberts published *The New Calliope* with an inscription to Handel on the title-page and a frontispiece showing Milton and Handel.

Roberts is also known for *Clio and Euterpe, or British Harmony* which was similar in style to *Calliope*, and issued by him in parts (from 1756) and in two volumes (1758–9). A later edition, dated 1762, had a third volume engraved by Roberts, and a fourth volume was added when John Welcker reissued the work about 1778.

Among other examples of Roberts's fine ornamental engraving are the dedicatory leaf in Giuseppe Sammartini's *XII sonate* op.3 (1743) and the title-page engraving of William Jackson's *Elegies* (*c*1762). Though he is not known to have engraved musical items after about 1762, he continued as a general engraver until at least 1782.

FRANK KIDSON, WILLIAM C. SMITH/PETER WARD JONES, DAVID HUNTER

Roberts, John (i) (*fl* 1650–70). English composer. He was probably one of the many men who, according to John Playford (*Musicall Banquet*, 1651), were teaching the harpsichord in London during the Commonwealth. He

was one of the more important English harpsichord composers of this period, and a suite of his was published in *Melothesia* (1673). His music displays a particularly strong French influence, shown by his fondness for corants and his final cadences which, unlike those of most of his countrymen, never have a leading note added briefly to the last chord. A thematic list of works can be found in Hodge.

WORKS

Hpd: Suite (5 movements), 1673[6]/*R*; Suite (3 movements), *GB-Och*; 2 corants, *Och, US-NYp*; Saraband, *GB-Och*; 10 other dance movements, *US-NYp*

B.A.R. COOPER

Roberts, John (ii) [Ieuan Gwyllt] (*b* Penllwyn, nr Aberystwyth, 27 Dec 1822; *d* Llanberis, nr Caernarvon, 14 May 1877). Welsh writer, composer and conductor. After an indecisive start to his career Roberts (he used the name Ieuan Gwyllt until 1839) moved in 1852 to Liverpool to become assistant-editor of the Welsh national newspaper *Yr Amserau*. Shortly afterwards he began preaching. Though a nonconformist, he came strongly under the influence of the Anglican style of church music while he was in Liverpool, and during this period he began work on his collection of hymn tunes. He moved to Aberdare to edit *Y Gwladgarwr* in 1858. The following year a new religious revival swept through Wales; he became a minister (but was not ordained until 1861) and published his *Llyfr Tonau Cynulleidfaol*. This hymn tune collection sold 17,000 copies in the first three years and its excellent preface, which emphasizes the importance of music in worship and exhorts churches to establish weekly 'singing meetings', was taken seriously. Roberts gave his energetic support to the Tonic Sol-fa movement and edited among other newspapers and journals *Telyn y Plant* (1859–61), *Y Cerddor Cymreig* (1861–73), *Cerddor y tonic sol-ffa* (1869–74), and *Y Goleuad* (1871–2). He was prominent as an adjudicator at competitive eisteddfods and as a conductor at singing festivals. Many of his hymn tunes are still well known, his finest being 'Moab' and 'Liverpool'. The former was considered by W.H. Hadow to be one of the world's seven greatest tunes.

OWAIN EDWARDS/A.F. LEIGHTON THOMAS

Roberts, John Henry [Pencerdd Gwynedd] (*b* Mynydd Llandegai, Caernarvonshire, 31 March 1848; *d* Liverpool, 6 Aug 1924). Welsh composer and teacher. He started work as a boy in the Penrhyn slate quarry, Bethesda, but devoted his spare time to music. At the age of 20 he was appointed clerk at the Bryneglwys quarry, Abergynolwyn, and the choir which he founded and conducted sang in the 1868 Harlech Music Festival. His talent was recognized by S.S. Wesley, at whose instigation a fund was set up to enable him to study (1870–74) at the RAM, where he was a pupil of Sterndale Bennet for composition and Charles Steggall for organ. He also took the Cambridge MusB externally in 1882, and the FTSC diploma. On his appointment as organist of the Welsh Calvinistic Methodist Church in Chatham Street, Liverpool, in 1898 he started the Cambrian School of Music and a small music publishing company. Unlike most of his contemporaries in Welsh music, Roberts disliked publicity. He seldom conducted and would not adjudicate at eisteddfods. A number of his partsongs (notably *Cwsg, Filwr, Cwsg*), anthems and hymn tunes became very popular: the hymn tunes 'Adelaide', 'Uxbridge' and 'Port Penrhyn' are still sung. His overture *Caractacus* was performed in Caenarvon at the 1894 National Eisteddfod, Roberts himself conducting. Among his other works are the partsong *Isle of Beauty* and a memorial anthem for John Roberts (ii) (Ieuan Gwyllt). He contributed regularly to *Y Cerddor*, published a rudiments book *Llyfr Elfennau Cerddoriaeth* (1890), edited a selection of Welsh anthems (1896) and either solely or jointly edited *Llawlyfr Moliant* (1880), *Hymnau yr Eglwys* (1893), *Hymnau a Thonau y Methodistiaid Calfinaidd* (1897) and *Llyfr Tonau ac Emynau* (1904).

OWAIN EDWARDS/A.F. LEIGHTON THOMAS

Roberts, Marcus [Marthaniel] (*b* Jacksonville, FL, 7 Aug 1963). American jazz pianist. Blind from the age of four, Roberts took up the piano at the age of eight and concurrently played the organ in church. Four years later he began formal lessons, by which time he was already intrigued by jazz. After earning a degree in music from Florida State University (1985), he joined Wynton Marsalis's band and in 1987 won the Thelonious Monk International Piano Competition. He left Marsalis in 1991 and led groups and worked as an unaccompanied soloist. Through his relationship with Marsalis, Roberts became deeply involved in jazz activities at Lincoln Center, where in 1993 he presented his composition *Romance, Swing and the Blues*. During the following winter, in Marsalis's absence, he toured with the Lincoln Center Jazz Orchestra as its leader, pianist and master of ceremonies. Although he lacks the trumpeter's charisma in undertaking this role, his approach to performance rivals that of Marsalis in its intensely neo-conservative advocacy of bop and earlier styles. Apart from his work in combos and big bands, he has released an unaccompanied recording in which he interprets the music of Monk, Ellington and Waller (*Alone with Three Giants*, 1990, Novus), and his concerts have featured dazzling improvisations on James P. Johnson's classic stride composition, *Carolina Shout*.

GARY W. KENNEDY, BARRY KERNFELD

Roberts, (William Herbert) Mervyn (*b* Abergele, Denbighshire, 23 Nov 1906). Welsh composer. He read English and history at Trinity College, Cambridge (1925–8). In 1924–5 and intermittently between 1928 and 1939 he studied at the RCM, where his teachers were Alexander for piano and Morris and Jacob for composition. He taught music at Clarendon School, Abergele (1953–6), and at Christ's Hospital (1963–7). A fastidious composer, he has produced his most important work for the piano. This, with its highly chromatic but fundamentally tonal idiom and its elegant, spacious keyboard writing, places him in the tradition of Bax and Ireland. The most important of his solo piano works is the Sonata, for which he was awarded the Edwin Evans Prize in 1950. There are also some substantial pieces for two pianos, written mainly for performance with his wife. The songs and choral works are on the whole more diatonic, often with a pronounced modal flavour. In addition to his activities as a composer Roberts has contributed to music journals, notably *Music in Education*.

Robertson, Alec [Alexander] **(Thomas Parke)** (*b* Southsea, 3 June 1892; *d* Midhurst, 18 Jan 1982). English writer on music. He was educated at Bradfield College and the RAM (1910–13), where he studied chiefly the organ, harmony and composition, and was organist and choirmaster at Frensham parish church and briefly at Farnham. During World War I he served in India, Egypt and Palestine. In 1919 he was appointed music lecturer to London County Council evening institutes. In 1920 he joined the Gramophone Company's educational staff, first as a lecturer and later as its head. In 1930 he entered the Collegio Beda, Rome; he was ordained priest in 1934 and held an appointment at Westminster Cathedral. Though he returned to professional life in 1938 his experiences of Catholic church music, particularly Gregorian plainchant, led him to write a number of books on the subject. In 1940 he joined the Gramophone Department of the BBC, and after the war was appointed chief producer of music talks on the Home and Third Programmes. He developed a highly individual manner as a broadcaster and gave many illustrated talks, which he continued even after his retirement from the BBC in 1952. As an author and critic he reviewed records for *Gramophone* almost from its inception (1923) and was later its music editor (1952–72). His warmly personal style won him a wide public following. He was made FRAM in 1946.

JULIAN HERBAGE

Robertson, Alexander. Scottish firm of music publishers, successors to PENSON, ROBERTSON & CO.

Robertson, Anne Walters (*b* Houston, 1 Aug 1952). American musicologist. She studied at the University of Houston (BM 1974, MM 1976) and at the Shepherd School of Music at Rice University (MM 1979). Continuing graduate studies at Yale, she took the MPhil in musicology in 1981 and the doctorate in 1984, with a dissertation on music and liturgy at Saint-Denis Abbey. She taught at the University of Houston (1976–7) and at the University of Chicago (1984–), becoming associate professor (1990) and professor (1996). Robertson specializes in the music, ritual and music theory of the medieval period. She also studies the music of the Ars Nova and music in the context of the spaces and communities in which it was performed. She has written

on musical life at Saint-Denis Abbey and on liturgical music in other centres in northern France.

PAULA MORGAN

Robertson, Jeannie [née Stewart, Regina Christina; Robertson, Christina Jane; Higgins, Jean]. (*b* Aberdeen, 1908). Scottish traditional singer. Both sides of Jeannie Robertson's family were travellers, who earned their living in the north-east of Scotland. Her father Donald Robertson (sometimes known as Stewart) died nine months after his daughter's birth. She learnt about half of her vast repertory of songs from her mother, who was regarded within her own community as a great singer, and many songs came from her travelling kin who sang as part of family life around the camp-fire at night. Her three brothers and her daughter, Lizzie Higgins, became singers, while her husband, David Higgins and his younger brother Isaac were both pipers. In 1913, when her family first crossed the Grampians for the berry-picking season in Blairgowrie, Perthshire, she encountered different singing styles and repertories. Her own style became influenced by the singing of that area as well as the bothy and traveller repertory of Deeside and Donside in Aberdeenshire.

In 1953, Hamish Henderson arranged for Jeannie Robertson to be recorded extensively for the School of Scottish Studies and by the BBC. She subsequently appeared on the Scottish Home Service radio, at concerts, in folk clubs, at festivals, and in 1954, at the Royal Festival Hall, London. Attracting a cult following outside of her own community, she dramatized her performance style to conform with the image created for her as the world's greatest ballad singer. This did not detract from the fact that she was a fine, charismatic traditional singer.

REG HALL

Robertus de Anglia (*fl* 1454–74). English composer. He was witness to a deed of the Este family in 1454 in which he is called the son of Petrus Suchar, a name that cannot be traced and is probably corrupt. (It is not clear whether he was the don Robertus de Anglia who in 1418 acquired a curacy formerly held by the composer Bartolomeo da Bologna; see Peverada, 131–2.) He went to Ferrara Cathedral in September 1460 to instruct the vicars in singing, and was still there a year later, perhaps staying until 1467 when he was enrolled by the chapter of S Petronio, Bologna, as *magister cantus*. There he remained until October 1474 when he returned to England. Apart from his two songs *O fallaze e ria Fortuna* and *El mal foco arda* (both in *P-Pm* 714 only), there is a poem *Iti caldi suspir e mente afflitta* by his Bolognese contemporary, Cesare Nappi, which appears with the annotation that it was set to music 'Magistri Roberti angli'. The music of *O fallaze e ria Fortuna* is in a style that suggests it may originally have had English text and could belong to a repertory similar to that represented in the Ritson Manuscript (*GB-Lbl* Add.5665). Ramos de Pareia had some stern views on his mensural practice.

DAVID FALLOWS

Robertus de Brunham [?Burnham], Frater (*fl* 2nd quarter of the 15th century). English cleric and musician. He was named by JOHN HANBOYS (*fl c*1370) in connection with three features of notation. Robertus denoted altered semibreves in ligatures by using unusual shapes, some of which are defective according to the mensural system, or by writing a sign resembling a 'v' above or (inverted) below the note. This second method is used in the early 15th-century MS *GB-Lbl* Add.40011B, ff.9*v*–10, 13. He also 'invented' three new rests for values not included in the normal symbols. In a theoretical manuscript of 1441, Torkesey's triangle (a diagram of mensural values) and the accompanying *declaratio* (CSM, xii, pp.9, 63) are ascribed to Robertus. His notational devices are mentioned (without attribution) in the *Regule* of Thomas Walsingham. (For further discussion see P.M. Lefferts, ed. and trans.: *Robertus de Handlo, The Rules, and Johannes Hanboys, The Summa*, Lincloln, NE, 1991, pp.62–3, 286–9, 338–41.)

ANDREW HUGHES

Robertus de Sabilone, Magister (*fl* early 13th century). Teacher of music, active in France. Anonymus 4 (ed. Reckow, 1967, i, 46, 50), writing about 1275, clearly regarded him as the most significant figure since Perotinus: 'He taught most widely, and made the singing of music sound truly delicious'. Anonymus 4's reference to him in conjunction with Petrus optimus notator may suggest that he was a scribe; the theorist also reported that 'the book of books of Perotinus were in use up to the time of Robertus de Sabilone in the choir of Notre Dame in Paris, and from his time up to the present day'. Despite a suggestion that he may have been the first choirmaster of the new cathedral (Niemann, 1902) and attempts to identify him with one of two succentors at Notre Dame in the 12th century (Birkner, 1962), Robertus remains unidentified.

For bibliography *see* ORGANUM.

IAN D. BENT

Robeson, Paul (Leroy Bustill) (*b* Princeton, NJ, 9 April 1898; *d* Philadelphia, 23 Jan 1976). American bass-baritone and actor. He attended Rutgers University (BA 1919) and studied law at Columbia University (LLB 1923). He appeared in the play *Simon the Cyrenian* at the Harlem YMCA (1921) and sang in the choruses of several Broadway shows before establishing his reputation as an actor in *All God's Chillun got Wings* (1924) and *The Emperor Jones* (1925). He gave his first concert in 1925 and made his mark with his singing of black spirituals. In 1926 he made a coast-to-coast tour of the USA with great success. Soon he became internationally known: he packed Drury Lane, London, by his majestic presence and his singing (especially of 'Ol' man river') in *Show Boat* (1928) and was seen as Shakespeare's Othello in London (1930), later in the USA, and finally at the Memorial Theatre, Stratford-upon-Avon (1959). His many films included *The Emperor Jones* (1933), *Sanders of the River* (1935), *Show Boat* (1936) and *The Proud Valley* (1939). His embracing of communism in the 1940s after a tour of the USSR brought his American career to a halt, but he continued to appear elsewhere, making an extensive European tour during the summer of 1958. His voice was often listed as a baritone, but in reality it was a true bass of enveloping richness and earthy resonance, although of limited compass.

MAX DE SCHAUENSEE/R

Robijns [Robyns], **Jozef** (*b* Meldert, 15 Aug 1920; *d* Kessel-Lo, Leuven, 29 June 1993). Belgian musicologist. He studied music at the Lemmens Institute in Mechelen, where he obtained a performer's diploma, and later took the doctorate in musicology in 1954 at the Catholic University of Leuven with a dissertation on Pierre de La Rue. In 1958 he became a deputy lecturer at Leuven and successively lecturer (1961) and professor (1963). For many years he was also librarian of the Bruges Conservatory and secretary of the Société Belge de Musicologie. His particular field of research was 15th- and 16th-century Netherlandish polyphony. In his capacity as editorial secretary, he contributed numerous articles to the *Algemene muziekencyclopedie* (Amsterdam and Antwerp, 1957–63), to which as editor he added a seventh supplementary volume in 1972. In recognition of this achievement he was awarded the Dent Medal at the 11th congress of the IMS in Copenhagen (1972). He later published with Miep Zijlstra an enlarged edition of the encyclopedia in ten volumes (Haarlem, 1979–84). He unearthed some previously unknown music in old church archives; his musicological writings are thus supported by a thorough study of the source material.

GODELIEVE SPIESSENS/SYLVIE JANSSENS

Robilliard, Louis (*b* Beirut, 10 Dec 1939). French organist. In 1967, after winning a *premier prix* for organ and improvisation at the Paris Conservatoire (where he studied with Rolande Falcinelli), he was appointed professor of organ at the Lyons Conservatoire and organist of St François-de-Sales, with its famous Cavaillé-Coll organ. He has specialized in 19th-century repertory, performing the entire works of Liszt for French radio in 1971. With his many recitals, Robilliard has found a wide audience both in France and abroad, particularly in the USA, for the works of Franck, Widor, Vierne, Liszt and Reger, and for his own transcriptions of orchestral works by Franck and even Rachmaninoff's *The Isle of the Dead*. His recordings include major works by Bach, Liszt, Mendelssohn, Franck, Saint-Saëns, Brahms, Reger and Widor, a disc of improvisations, and works by Claude Ballif, including an award-winning recording of his *Imaginaire IV*.

FRANÇOIS SABATIER

Robineau [Robinot], Abbé **Alexandre-Auguste** (*b* Paris, 23 April 1747; *d* Paris, 13 Jan 1828). French violinist, composer and painter. Son of the engraver, painter and jeweller Jean-Charles Robineau and Madeleine-Charlotte Regnier, he became a choirboy at the Ste Chapelle in 1754 and also studied the violin with Gaviniès. Between about 1762 and 1767 he studied in Italy, first the violin and composition under Lolli at the conservatory of S Maria di Loreto in Naples, and later painting in Rome. In Naples his success was such that he was called 'Lollinelli' after his teacher. Returning to Paris, he made his début at the Concert Spirituel on 24 December 1767, and in the following year published his set of six brilliant sonatas 'in the style of six different masters'.

During the next two decades Robineau continued a double career as musician and painter, while simultaneously working as secretary to high government officials. In about 1774 he renounced his religious vows and married the singer Adélaïde Bertin. Six trips to England resulted in a number of important paintings there. Between 1778 and 1789 Robineau was listed in Parisian directories as a violin teacher, and from 1785 until the outbreak of the Revolution four years later he helped organize entertainments for the French court as *secrétaire des menus plaisirs*. His opera *Stratonice* (1791), never produced at the Opéra, was given privately in Paris. During this period Robineau was orchestral leader at the Théâtre Français (1789–92), and his paintings were exhibited at

the Salon of 1791. In 1793, however, Robineau fled France, and, except for a brief visit in 1799 when he again exhibited at the Salon, he was an expatriate for the remainder of the Revolutionary and Napoleonic eras, embarking on picaresque travels during which he worked as a musician or painter at various courts in Spain, Germany and Russia.

Returning to Paris with the re-establishment of the monarchy in 1815, Robineau struggled to gain a musical position at court, but failed. His old age was spent in poverty, and lightened only by the publication of his autobiography and by a menial position playing among the violists at the Odéon.

WORKS

Stratonice (op, ?F.B. Hoffman), Paris, 1791, lost

6 sonates, vn, b (Paris, 1768)
Concertos, vn, orch (Paris, 1770)
6 nouvelles sonates, ded. M. Audibert de Lussan (Paris, 1774), lost
Trio, ded. Duchesse de Polignac (Paris, *c*1779), lost
Cosaque walse, pf (Amsterdam, 1814)

NEAL ZASLAW

Robinet [F. Rubinet] (*fl* 1482–1507). French composer. Six pieces in the manuscript *I-Fn* Banco Rari 229 (ed. in Brown, nos.105–7, 193, 201 and 262) are ascribed 'F. Rubinet'. Since the manuscript was copied in Florence in the early 1490s, there seems a good chance that the composer is to be identified as the 'Robinetto francioso cantore' at SS Annunziata in Florence in 1482–3, perhaps the same as the 'fratrem Rubinectum franciosum' paid as a 'contro alto' at Florence Cathedral in 1506–7 (see D'Accone, 1970; for other possible identifications, see D'Accone, 1997, and Fallows). Several of these works display the 'cycle of fifths' imitative pattern (e.g. entries on F, C and G) apparently first exploited by Loyset Compère.

The Glogauer Liederbuch (40098; *c*1480) gives 'Rubinus' as the composer of the widely copied ballade *Entre Peronne et Saint Quentin* (*Der bauern Schwanz*), found in seven sources dating back to the early 1460s, including two from the central-French area, and subsequently used in Obrecht's *Missa plurimorum carminum II*. This could well be a different composer, perhaps Robert (or Robinet) Collier (Caulier), a singer at the French royal chapel from 1465 to 1475 and still there as canon of Lisieux in 1486 (see Perkins, 554–5).

None of these works is likely to be by the eminent singer Robert (Robinet) le Pelé de la Magdalaine (*b* 1415; *d* 1478). He was a choirboy at Beauvais (1422), was ordained (1438) at Rouen and returned there from England in 1444; he joined the papal chapel in 1447 and that of the Duke of Burgundy in 1448, remaining there until at least 1474. He was later praised by Eloy d'Amerval, and appears to have been author of a story in the *Cent nouvelles nouvelles* as well as *prince* of a puy at Brussels in 1460 (see Pirro).

DAVID FALLOWS

Robinson (i). English family of musicians.

(1) John Robinson (*b c*1682; *d* Westminster, London, 30 April 1762). Keyboard player. Trained under Blow, he was pensioned off as a Chapel Royal chorister in May 1705, by which time his voice had broken. In May 1710 he was appointed organist of St Lawrence Jewry, and two years later he became organist of St Magnus's, London Bridge. He retained both posts even after he had become organist also of Westminster Abbey in 1727 in succession to Croft, whose deputy he had been. At St Magnus's he played a large four-manual instrument by Shrider and Jordan (1712), the first in England with a Swell box. In 1739 he was one of the signatories to the original declaration of trust by which the Royal Society of Musicians was established. His first wife, whom he married on 6 September 1716, was the soprano Ann Turner (see (2) below).

Though Robinson is of no account as a composer – only a single chant and one organ voluntary are known – he was evidently 'a most excellent performer' (Boyce). According to Hawkins he was 'highly celebrated as a master of the harpsichord … and had a greater number of scholars than any one of his time' (*HawkinsH*). His organ playing, however, he described as not only 'elegant', but also 'very florid', and in his 'Memoir of Dr. Boyce' prefixed to the second (1788) edition of Boyce's *Cathedral Music*, Hawkins accused him of degrading the instrument by tickling the ears of his listeners with pieces 'calculated to display the agility of his fingers in Allegro movements on the Cornet, Trumpet, Sesquialtera, and other noisy stops'.

(2) Ann Turner Robinson [née Turner] (*d* London, 5 Jan 1741). English soprano, the youngest daughter of the countertenor and composer William Turner (ii). She first sang in public at the King's Theatre on 5 April 1718, when she introduced a cantata by Ariosti composed 'purposely on this Occasion'. She repeated it on 21 March at a concert with the castrato Baldassari. In spring 1719 she was engaged by John Hughes to replace Mrs Barbier at a private concert, apparently accompanied by Handel, when according to Hughes "her late Improvement has I think plac'd her in the first Rank of our English Performers". Between October 1719 and March 1720 she appeared several times at Drury Lane in Ariosti's cantata *Diana on Mount Latmos*, but Ariosti mentioned her in uncomplimentary terms in letters to Giuseppe Riva in February and March. She had a benefit there on 17 May 1720. She was generally announced as 'Mrs

Robinson, late Mrs Turner' or 'Mrs Turner Robinson', to distinguish her from Anastasia Robinson, who was singing at the same period and sometimes at the same theatre; but it is not always easy to tell which is meant. In the spring of 1720 both appeared together in the short first season of the Royal Academy of Music, in Porta's *Numitore* (2 April), Handel's *Radamisto* (27 April) and Domenico Scarlatti's *Narciso* (30 May). Ann Turner Robinson was the original Polissena in *Radamisto*, but missed the final performances of all three operas. She sang a Handel cantata at her Drury Lane benefit on 20 March 1723.

She was probably the Mrs Robinson who sang regularly between the acts at Drury Lane from December 1725 to December 1726, played in Carey's pantomime *Apollo and Daphne* from February 1726, and included seven Handel opera arias in her benefit programme on 28 April. She certainly had a benefit at Drury Lane on 26 March 1729, when she sang 14 Handel pieces, including two duets with Clarke; most of them had been composed for Cuzzoni or Faustina. She was in Handel's first London oratorio performances at the King's Theatre in May and June 1732, as an Israelite Woman in *Esther* and Clori in the bilingual *Acis and Galatea*. Her part in *Radamisto* shows that she was a capable singer with some brilliance at the top of her compass (*e′* to *a″*).

(3) **Robinson,** Miss [first name unknown] (*fl* 1733–45). Mezzo-soprano, the daughter of (1) John and (2) Ann Turner Robinson. She was probably the Miss Robinson who sang and played the harpsichord, having 'never appear'd before in Publick', for her own benefit at the New Theatre in the Haymarket on 29 March 1733, and possibly the one 'who never appeared on any stage before' in the pantomime *Harlequin Sorcerer* at Tottenham Court on 4 August 1741. (She cannot have been either of the Miss Robinsons who sang and danced constantly as children at Drury Lane in the mid-1720s, a period when the London theatre was peculiarly rich in Robinsons.) Handel engaged her for his last oratorio season at the King's Theatre in 1744–5, when she sang Barak in *Deborah* (October, one performance only), Ino in *Semele* (December), Dejanira in the first production of *Hercules* (5 January), Micah and an Israelite and Philistine Woman in *Samson* (Handel composed a new air, 'Fly from the cleaving mischief', for her), Phanor in *Joseph*, Daniel in the first production of *Belshazzar* (27 March), and in *Messiah*. She may have been in the March revival of *Saul*. She sang Handel airs and a part in the *Acis and Galatea* trio at the Musicians' Fund benefit at Covent Garden on 10 April, and again at her own benefit at the King's on 29 April. Handel paid her £210 from his Bank of England account on 4 May. If the magnificent part of Dejanira, which has a compass of *a* to *g♯″*, was composed for her, Handel must have held a high opinion of her vocal and dramatic ability. She was to have sung Cyrus (compass *b♭* to *f″*) in *Belshazzar*, but took over Mrs Cibber's part (raised in pitch) when the latter fell ill. The boy Robinson who sang alto in *Israel in Egypt* (April 1739), and possibly in the oratorios of the following season, may have been her brother.

WATKINS SHAW/H. DIACK JOHNSTONE (1), WINTON DEAN (2, 3)

Robinson (ii). Irish family of musicians.

(1) **Francis James Robinson** (*b* Dublin, *c*1799; *d* Dublin, 21 Oct 1872). Tenor, organist and composer. His father Francis was an administrator and baritone, who in 1810 founded the Sons of Handel, a large-scale concert-giving society. Francis James Robinson was a chorister in Christ Church Cathedral, Dublin, and assistant organist from 1816 to 1841. He was also organist at St Patrick's Cathedral there (1828–9) and a tenor vicar-choral at Christ Church from 1833 until his death and at St Patrick's from 1843. In June 1834 he sang an important role at the Musical Festival in Westminster Abbey. He composed church music and songs, and was given an honorary MusD at Dublin in 1852. His brother William (*b* Dublin, *c*1805) was a bass, and sang in the choirs of St Patrick's Cathedral, Christ Church and Trinity College; another brother, John (*b* Dublin, *c*1812; *d* Dublin, 1844), was a chorister at Christ Church Cathedral and organist at St Patrick's Cathedral (1829–43), Christ Church Cathedral (1841–4) and Trinity College (from 1834).

(2) **Joseph Robinson** (*b* Dublin, 20 Aug 1815; *d* Dublin, 23 Aug 1898). Baritone, conductor and composer, brother of (1) Francis James Robinson. He was a chorister at St Patrick's at the age of eight. In 1834 he founded the Antient Concerts Society, which he conducted for 29 years. In 1837 he became conductor of the University Choral Society, founded by the students; at one of its concerts Mendelssohn's music for *Antigone* was given for the first time outside Germany. He conducted this Society for ten years. He conducted music for the opening of the Cork Exhibition in 1852, and the Dublin International Exhibition in 1853. In 1856 efforts were made to revive the Irish Academy of Music, founded in 1848 but languishing for want of funds and pupils. Robinson and his wife (3) Fanny Arthur joined as professors, and when, after 20 years, Robinson resigned, the institution had become stable and important. He also taught Stanford harmony. For the Handel centenary in 1859 he gave *Messiah*, with Lind and Belletti among the principals. In 1865 he conducted an orchestra and chorus of 700 when the Prince of Wales opened the large Exhibition Palace. In 1876 he established the Dublin Musical Society, a chorus which he trained. He wrote songs, concerted pieces and anthems. After Fanny Arthur's death he remarried in 1881.

(3) **Fanny Arthur** (*b* Sept 1831; *d* Dublin, 31 Oct 1879). English pianist, teacher and composer, wife of (2) Joseph Robinson. Having studied with Sterndale Bennett and Thalberg, she first appeared in Ireland on 19 February 1849. She was married to Joseph Robinson on 17 July 1849. Her first London appearance was at the Musical Union (26 June 1855) when she played Beethoven's op.24 with Ernst and was praised by Meyerbeer. In 1856 she played a Mendelssohn concerto at the New Philharmonic, and became professor at the Irish Academy of Music. She played at the Salle Erard in Paris, 4 Feb 1864. Her public life was often interrupted by illness. She wrote a cantata *God is Love*, piano pieces (*Song of the Mill-Wheel, Elf-Land, The Hunt* and *Village Fete*) and some songs.

R.J. PASCALL/R

Robinson, Anastasia (*b* ?Italy, *c*1692; *d* Bath, April 1755). English soprano, later contralto. She was the eldest

daughter of Thomas Robinson, a portrait painter from Leicestershire who travelled and studied in Italy. She studied music with Croft and singing with Sandoni and the Baroness (Lindelheim). At first she exercised her talent in private, singing to her own accompaniment at weekly *conversazioni*, much patronized by society, in her father's house in Golden Square. When her father's sight failed she turned professional to support the family and began to give concerts at York Buildings and elsewhere. The solo soprano part in Handel's *Ode for Queen Anne's Birthday* was written for her, and she presumably sang it in February 1714. On 9 June 1713 she had a benefit at the Queen's Theatre; on 20 June she introduced a new cantata there. She joined the opera company at the beginning of 1714, making her début in the pasticcio *Creso* on 27 January. She sang that spring in *Arminio* and *Ernelinda*, on several occasions with new songs, and met with immediate favour. The following season, in addition to her old parts, she played Almirena in the revival of Handel's *Rinaldo* and sang in the new pasticcio *Lucio Vero*. She created the part of Oriana in Handel's *Amadigi*, but retired after one performance owing to illness. In the 1715–17 seasons she was in Alessandro Scarlatti's *Pirro e Demetrio*, the pasticcios *Clearte* and *Vinceslao*, and revivals of *Rinaldo* and *Amadigi*. She had benefits in *Arminio* (1714), *Ernelinda* (1715) and twice in *Amadigi* (1716 and 1717); on the last occasion (21 March) Handel composed a new scene for her and Nicolini.

Anastasia Robinson: mezzotint by John Faber the younger after John Vanderbank, 1727

Although the opera closed in summer 1717, Robinson had benefits at the King's Theatre on 15 March 1718 and 21 February 1719. It must have been during this period that her voice dropped from soprano to contralto as the result of an illness. She sang at Drury Lane from October 1719 to March 1720. On the foundation of the Royal Academy of Music she rejoined the opera company and sang in its first three productions in spring 1720: Porta's *Numitore*, Handel's *Radamisto* (creating the part of Zenobia) and Roseingrave's arrangement of Domenico Scarlatti's *Narciso*. A Hanoverian diplomat, de Fabrice, paid tribute to her performance in *Numitore*, ranking her in beauty of voice with the brilliant Durastanti. Robinson missed the opening of the autumn season, but returned in spring 1721 and sang in all the operas between then and summer 1724: the composite *Muzio Scevola* (Irene), Handel's *Floridante* (Elmira), *Ottone* (Matilda), *Flavio* (Teodata) and *Giulio Cesare* (Cornelia), Giovanni Bononcini's *Ciro*, *Crispo*, *Griselda*, *Erminia*, *Farnace* and *Calpurnia*, Ariosti's *Coriolano* and *Vespasiano*, and the pasticcios *Odio ed amore* and *Aquilio consolo*. She appeared with the rest of the company in concerts and ridottos at the theatre in March and June 1721 and February and March 1722; on the first occasion she took part in a serenata by Alessandro Scarlatti. In June 1724 she retired from the stage, having secretly married the elderly Earl of Peterborough two years earlier; he did not acknowledge her publicly until shortly before his death in 1735.

Robinson's salary at the Royal Academy was reputed to be £1000, almost doubled by benefits and presents. In retirement she lived at Parson's Green (where she held a kind of musical academy at which Bononcini, Tosi, Greene and others performed) and, after Peterborough's death, at his seat near Southampton. She was on friendly terms with Bononcini, who had helped to advance her career (Peterborough had paid him £250 for teaching her), and obtained him a pension of £500 from the Duchess of Marlborough; he dedicated his *Farnace* to Peterborough. On 11 January 1723 she took part with Mrs Barbier, the opera orchestra and the Chapel Royal choir in a private performance at Buckingham House of Bononcini's choruses to the late Duke of Buckingham's play *Julius Caesar*, conducted by the composer. She was buried in Bath Abbey.

Robinson enjoyed great personal and artistic popularity. As a singer she was remarkable for charm and expressiveness rather than virtuosity; the care with which Handel supported and sometimes doubled her part in the orchestra suggests technical limitations. His richest part for her, Oriana, which offers many openings for pathos, belongs to her soprano period (compass *d′* to *a″*). From 1720 her range diminished (*b♭* to *e″*), and Handel seldom taxed her with coloratura; but he gave her a highly emotional part in *Giulio Cesare* and an ironically humorous one in *Flavio*. She disliked playing termagants and found the role of Matilda in *Ottone* as first composed impossible to sing: 'a Patient Grisell by Nature' (an allusion to her success in Bononcini's *Griselda*), she was asked to play 'an abomminable Scold'. Afraid to face Handel, she enlisted the help of the diplomat Giuseppe Riva (and suggested approaching Lady Darlington, the king's half-sister) to have it altered – apparently with success, for the aria to which she chiefly objected, 'Pensa, spietata madre', was replaced before performance. Robinson's letters to Riva in the Campori collection at Modena (*I-MOe*) show an attractive and generous character, though Lady Mary Wortley Montagu referred to her as 'at the same time a prude and a kept mistress'. Riva described her as 'of moderate beauty but of the highest spirit'. She was a woman of culture and social gifts, rare in an 18th-century singer, a friend of Pope and a Roman Catholic. The one blot on her memory is her

destruction of Peterborough's memoirs after his death. There is a mezzotint of her by John Faber (1727; see illustration) after a portrait by John Vanderbank (1723), and an amusing caricature by A.M. Zanetti (1721) in the Cini collection (*I-Vgc*).

WINTON DEAN

Robinson, Earl (Hawley) (*b* Seattle, 2 July 1910; *d* Seattle, 20 July 1991). American composer and songwriter. As a child he studied the piano, the violin and the viola, and from 1929 to 1933 he attended the University of Washington studying composition with George F. McKay (BM and teaching diploma 1933). In 1934 he moved to New York, where he joined the Workers Laboratory Theater and the Composers Collective of the Pierre Degeyter Club. He studied with Copland at the Downtown Music School and with Hanns Eisler. He wrote numerous topical songs – of which *Abe Lincoln* and *Joe Hill* are perhaps the most famous, though others such as *The House I Live in*, *Black and White* and *Hurry Sundown* also achieved great popularity – and topical cantatas, notably *Ballad for Americans* (1938, first performed on radio in 1939 with Robeson as soloist) and *The Lonesome Train* (1942). In the mid-1940s he worked in Hollywood on film scores, but he was blacklisted in the 1950s and returned to New York, where he was chairman of the music department at Elisabeth Irwin High School (1958–65). He received several awards including a Guggenheim Fellowship (1942) and an Academy Award (1947) for *The House I Live in*, which was the basis for the film of that name made in 1946.

The folk-music revival of the 1960s brought renewed attention to Robinson's work; subsequently he turned to larger, more abstract compositions including a concerto for the banjo (1966–7) written for Eric Weissberg and a piano concerto, *The New Human* (1973). The latter, a single movement of four sections, is technically Robinson's most advanced work, with a new chromaticism and textural complexity. His music is tonal and readily accessible, reflecting his desire to reach large numbers of people. Virtually all his works have either a text or a programme and most have sources in folk material.

WORKS

texts by Robinson unless otherwise stated

Stage: Processional (musical, J.H. Lawson), 1938, New York, 1938; Sing for your Supper (musical, J. Latouche), 1939, New York, 1939; Dark of the Moon (incid music), 1947; Bouquet for Molly (ballet, L. Horton), 1949, Los Angeles, 1949; Sandhog (folk op, W. Salt, after T. Dreiser), 1951–4, New York, 1954; One Foot in Amer. (musical, L. Allan, after Y. Suhl), 1962, Evanston, IL, 1962; Earl Robinson's America (musical, 2), 1976, Virginia, MN, 1979; David of Sassoon (folk op), 1978, Fresno, CA, 1978; Listen for the Dolphin (children's musical, 2), 1981, Santa Barbara, CA, 1981; Song of Atlantis (music drama, 2), 1983

Cants.: Ballad for Americans (Latouche), Bar, chorus, orch, 1938; The People, Yes (C. Sandburg, N. Corwin), 1938–41 [collection, incl. In the Folded and Quiet Yesterdays, nar, solo vv, chorus, orch, 1939]; Battle Hymn, chorus, orch, 1942; The Lonesome Train (M. Lampell), 6 spkrs, 8 solo vv, chorus, orch, 1942; The Town Crier, solo vv, chorus, orch, 1947; When we Grow up, children's vv, insts, 1954; Preamble to Peace, nar, chorus, orch, 1960; Giants in the Land, chorus, solo vv, orch, 1961 [orig. film score]; Illinois People (C. Haverlin), spkrs, solo vv, chorus, orch, 1968; Strange Unusual Evening: the Santa Barbara Story, 1970; Ride the Wind (after W.O. Douglas), Bar, spkrs, chorus, orch, 1974

Songs: Abe Lincoln (A. Hayes), 1936; Joe Hill (Hayes), 1936; The House I Live in (L. Allan), 1942; Black and White (D. Arkin), 1955; Hurry Sundown (E.Y. Harburg), 1963; numerous others

Inst: Good Morning, orch, 1949; A Country they call Puget Sound, tone poem, T, orch, 1956, rev. 1961; Banjo Conc., 1966–7; Soul Rhythms, band, 1972; Pf Conc. 'The New Human', 1973; To the Northwest Indians, nar, folk insts, orch, 1974

Many film scores, incl. The House I Live in, 1946; A Walk in the Sun, 1946; Adventures of Huckleberry Finn, 1975; The Roosevelt Story

MSS in *US-EDu* and George Mason University, Fairfax, VA

Principal publishers: Chappell, Leeds, Robbins, Shawnee

STEVEN E. GILBERT

Robinson, Joseph (*b* Lenoir, NC, 20 June 1940). American oboist and teacher. After studying with Marcel Tabuteau and John Mack, Robinson played with the Atlanta SO (1967–73) and taught at the North Carolina School of Arts (1974–8). In 1978 Mehta appointed him Harold Gomberg's successor as principal oboist of the New York PO, with whom he gave the première of George Rochberg's Oboe Concerto in 1984. Equally well known for his activities in music education and arts funding, Robinson created the John Mack Oboe Camp, held annually in Little Switzerland, NC, as a forum for fostering the American tradition of oboe playing. A Fulbright Fellowship enabled him to study state arts funding in Germany and, alongside teaching the oboe, Robinson lectures on public administration in the field of orchestral managment. He holds an honorary doctorate from Davidson College (1963), and was awarded an Emmy for work towards Jewish awareness in the documentary concert-film *Heroes of Conscience* (1992).

GEOFFREY BURGESS

Robinson, Michael F(inlay) (*b* Gloucester, 3 March 1933). English musicologist and composer. A music scholar at Rugby School (1946–51), he read music at New College, Oxford (1953–63; BA 1956, BMus 1957, DPhil 1963). In 1958 he was awarded an Italian Government Scholarship to research Neapolitan opera, the subject of his doctoral dissertation (1963). After teaching at the Royal Scottish Academy of Music, Glasgow (1960–61), he held appointments as lecturer at the University of Durham (1961–5), and as assistant professor (1965) and associate professor (1967) at McGill University, Montreal. In 1970 he was appointed lecturer at University College, Cardiff, becoming senior lecturer in 1975, head of department (University of Wales, College of Cardiff) in 1987 and professor in 1991. Following retirement in 1994, he was made professor emeritus in 1995. His research focusses on 18th-century Neapolitan opera, his study *Naples and Neapolitan Opera* and his two-volume thematic catalogue of Paisiello being among his major publications. His earlier book *Opera before Mozart* describes the rise of opera in its contemporary intellectual, social and aesthetic context. His critical editions include Paisiello's *Il re Teodoro in Venezia* which was first performed in Ludwigsburg and Dresden in 1997. Much of Robinson's own music is inspired by literary texts and includes voice. *A Child's Vision of Night*, composed for the 1964 Durham Festival, sets a variety of poets and incorporates serial techniques in two of the seven songs. Moving away from serialism towards other number-generated processes

in subsequent works, his music makes use of referential tonal centres within predominantly chromatic and linear textures. *Three Songs about Love* is a stylistic parody in reverse chronology and *A Pretty How Town* is characterized by dance rhythms of American folk music.

WORKS
(*selective list*)

Vocal: A Child's Vision of Night, S, pf, 1964; Credo and Gloria, SATB, org, 1968; 3 Settings of Thomas Hardy, Bar, pf, 1975; 3 Settings of W.B. Yeats, T, pf, 1979; A Pretty How Town (e.e. cummings), Bar, fl, cl, hn, gui, vn, vc, perc, 1984; 3 Songs about Love, Bar, pf, 1994; The Huron Carol, children's vv, pf, 1995

Chbr and solo inst: Sonata Movement, va, pf, 1960; 6 Fugues, hp, 1967–8; 2 str qts: no.1, 1972, no.2, 1975; Duo, vn, pf, 1978; Duo, 2pf, 1983; Phoenix, ob, pf, 1988, rev. 1993; Fantasy, vc, 1997

CAROLINE RAE

Robinson, Smokey [William] (*b* Detroit, 19 Feb 1940). American soul singer, songwriter and producer. While at school in the mid-1950s he founded the vocal group the Miracles with Bobby Rogers, Ronnie White, Warren 'Pete' Moore and Claudette Rogers. Loosely modelled on the Platters, they achieved little success until Robinson met Berry Gordy. Gordy was impressed with Robinson's talent and began recording and producing the Miracles and tutoring Robinson in the art of songwriting. However, the group received little support from End and Chess Records, to which they had leased their Gordy-produced singles, and in 1959 Gordy inaugurated the Tamla label and signed the Miracles. *Shop Around*, which was co-written by Gordy and Robinson and featured the latter's lead falsetto, provided the label with its first hit the following year. The group achieved a total of 39 hits in the American pop and rhythm and blues charts until Robinson's departure in 1972. These ranged from dance numbers such as *Mickey's Monkey*, *Going to a Go-Go* and *Tears of a Clown* to exquisite ballads such as *You've really got a hold on me*, *Ooo Baby Baby*, *The Tracks of my Tears*, *The love I saw in you was just a mirage* and *I second that emotion*.

In 1967 the group's recordings began to be issued as by Smokey Robinson and the Miracles, preparing the way for Robinson's departure. Over the next 20 years as a soloist, he continued consistently to write and produce hit records, including *Cruisin'*, *Being with You*, *Just to See Her* and *One Heartbeat*.

From the beginning of Tamla/Motown, Robinson served as Gordy's assistant, writing and producing, auditioning, promoting and occasionally helping to run the company. His earliest assignments involved the Supremes and Mary Wells. While he was unable to create quality material for the Supremes, he achieved instant success with Wells, writing and producing such early 1960s classics as *You beat me to the punch*, *Two Lovers* and *My Guy*. Subsequent to Wells's departure from Motown in 1964, Robinson wrote and produced a series of hits for the Temptations (*The way you do the things you do*, *My Girl*, *It's Growing* and *Get Ready*) and the Marvelettes (*Don't mess with Bill* and *The hunter gets captured by the game*). He also co-wrote two of Marvin Gaye's early hits, *Ain't that peculiar* and *I'll be doggone*.

Robinson's songwriting is characterized by his gift for melody and a lyric style employing a superior use of irony, metaphor, paradox and simile. His influence is widespread and a number of artists have recorded his songs, including the Beatles and the Rolling Stones.

WORKS
(*selective list*)

Shop Around, 1960 [collab. B. Gordy]; The One who Really Loves You, 1962; You beat me to the punch, 1962 [collab. R. White]; Two Lovers, 1962; You really got a hold on me, 1962; The way you do the things you do, 1964; My Guy, 1964 [collab. R. Rodgers]; My Girl, 1964 [collab. R. Rodgers]; Ooo Baby Baby, 1965 [collab. W. Moore]; First I look at the purse, 1965 [collab. Rodgers]; The Tracks of my Tears, 1965 [collab. Moore, M. Taplin]; Don't mess with Bill, 1965; Get Ready, 1966; The hunter gets captured by the game, 1966; I second that emotion, 1967 [collab. A. Cleveland]; The Tears of a Clown, 1970 [collab. H. Cosby, S. Wonder]; Floy Joy, 1971; Quiet Storm, 1975 [collab. R.E. Jones]

ROB BOWMAN

Robinson, Thomas (*fl* 1589–1609). English lutenist, cittern player, composer and teacher. From the dedication to James I in his *Schoole of Musicke* (1603) we know that he was 'once thought (in Denmarke at Elsanure) the fittest to instruct your Majesties Queene'. This must have been before Anne's marriage to James in 1589. In the dedication of his second publication, *New Citharen Lessons* (1609), to Sir William Cecil, he made it clear that both he and his father enjoyed the patronage of several members of the Cecil family. He wrote that he was 'sometime servant' to Thomas Cecil, Earl of Exeter, and that his father had been 'true and obedient servant' to 'your Lord and Grandfather', William Cecil, Lord Burghley. Robinson was one of 12 lutenists who played in the Merchant Taylors' banquet given in honour of James I on 16 July 1607.

Robinson's importance lies in the clear exposition of his lute method set forth in *The Schoole of Musicke*. Before its publication it is likely that lute technique in England had, for some time, been based mainly on J. Alford's translation (*A Briefe and Easye Instru[c]tion*, 1568) of Adrian Le Roy's method (now lost), published in Paris in 1567. Robinson's method shows some important differences from Le Roy's, chiefly in his treatment of right-hand technique. He advocated the use of the thumb more consistently in passages on the lower courses where, according to earlier instruction books, alternating thumb and first finger would have been used; his use of the third finger in some passages of single notes on upper courses was a complete innovation. He explained with care the graces to be used in playing his music and included sections on playing the viol and on singing. He also indicated left-hand fingering for five pieces.

One other work of Robinson's, *Medulla Musicke*, was entered in the registers of the Stationers' Company in 1603, but no copy is now known. The full title of the work indicated that it contained his intabulations and arrangements for voices of the '40tie severall waies' by Byrd and Ferrabosco on *Miserere* (*see* WAYES). Robinson's music is fresh, charming and often witty; some is of outstanding quality.

DIANA POULTON/ROBERT SPENCER

Robinson, Sir **William Cleaver Francis** (*b* Rosmead, Co. Westmeath, Ireland, 14 Jan 1834; *d* London, 2 May 1897). British civil administrator, music patron and composer. He had a distinguished career in the Colonial Office during which his posts included Governor of Prince Edward Island (1866), Governor of Western Australia (1874–7, 1880–83, 1890–95) and Governor of South Australia (1883–9). In his 20 years of vice-regal representation he acquired a popular reputation among musical and literary circles. He was patron of numerous societies including the Perth Musical Union (1882), Adelaide Quartet Club until 1886, and the Melbourne Metropolitan Liedertafel in 1883, besides lending his active support to numerous composers including Heuzenroeder, Julius Herz and Marshall-Hall, whose appointment to the Ormond Chair of Music at Melbourne University (1870) was largely due to Robinson's influence with Sir Charles Hallé and the London selection committee.

Unlike that of his predecessors, Robinson's influence on public concert-giving and musical taste in Australia stemmed from a personal commitment to music rather than social prestige. Having written partsongs and pieces for military band in London under the pseudonym 'Owen Hope', he composed several successful songs in Australia including *Remember me no more* (1885), *The Poet's Last Dream* (1890), *Severed* (1890) and *Unfurl the Flag* (1883), and collaborated with Herz in a two-act comic opera *Predatores* (F. Hart, 1892–4). His generosity extended to donating funds towards the establishment of a chair of music at Adelaide University (founded in 1885 as the Elder Chair). He was made CMG in 1873, KCMG in 1877 and GCMG in 1887.

ELIZABETH WOOD

Robledo, Juan Ruiz de. *See* RUIZ DE ROBLEDO, JUAN.

Robledo, Melchor (*b* ?diocese of Segovia, ?*c*1510; *d* Zaragoza, 22 Nov 1586). Spanish composer and church musician. He is known to have been active in Tarragona (1566–9) and in Zaragoza (1569–86). There were many other musicians with this surname in 16th-century Spain, and many attempts have been made to identify these with Melchor. Calahorra identified him with a Robledillo, *cantor* (perhaps an acolyte or chorister) of the royal chapel in Granada in 1520, but 'Robledillo' may be a surname (perhaps a toponym) in its own right as much as a nickname for young Robledo. There are several references to an Antón or Antonio de Robledo in Nuestra Señora del Pilar in Zaragoza, and to a man of the same name in Segovia Cathedral; soon afterwards, a Francisco de Robledo was *maestro de capilla* and then cantor in Segovia. There are also references to a Tomás de Robledo in the Segovia archives. Each of these men may have come from one of the villages of the same name; this may also apply to Melchor Robledo, who is referred to in one document as a 'cleric from the diocese of Segovia'.

According to a list of the *maestros de capilla* of Tarragona Cathedral published by Sanç Capdevila (*Les antigues institucions escolars de la Tarragona restaurada*, Barcelona, 1929), Robledo held the post there in 1549; this is not confirmed by the chapter records in Tarragona, but these do refer to him at later dates. In January 1566

'magistro Robledo' was appointed as *maestro de canto*, and in the same month the chapter asked for his compositions to be collected into a book. That this man is the same as Melchor Robledo, *maestro* at the cathedral of La Seo in Zaragoza, is confirmed by a much later entry, in 1576.

On 2 July 1569 the chapter of La Seo, Zaragoza, appointed him *maestro de capilla*, and awarded him a basic daily wage of 'two and nine [*dos y nueve*]; and in addition, as long as he is not ordained, 50 escudos'. He was not therefore in holy orders, and an award by the archbishop of two benefices in 1571 (in which documents he is referred to as a 'cleric') led to court cases that were not resolved until 1575, when he was given an increase in pay of 25 libras a year until he received holy orders. In May 1576 he appears on the list of those to be promoted to subdeacon, and he was ordained deacon in December of that year.

Meanwhile, in 1572 the Tarragona chapter had tried to tempt him back to his former post, but without success (due to the low salary), and the post was eventually offered to another man. In 1576 he was approached by Segovia Cathedral chapter to compete for the position of director of music there, but it was awarded to Gabriel Gálvez, who declined the post. Sebastián de Vivanco was eventually appointed in February 1577, but it is possible that Robledo was there in the interim period – he was certainly absent from Zaragoza at this time, and he was still away in June 1578 when the chapter threatened him with dismissal. He had certainly returned by 1580, in which year he was approached by Palencia Cathedral, but once again the post of *magisterio de la catedral* was awarded to another candidate. Robledo thus remained at La Seo in Zaragoza, where he died, still *maestro de capilla*, in 1586.

According to Fétis, Robledo lived in Rome in the mid-16th century; Lozano stated that Robledo came to Zaragoza from the Pontifical Chapel. Calahorra thought that Robledo could have been in Rome between 1562 and 1566, although the known documentation of the Capella Sistina does not list him among the singers there. He is mentioned in a letter, dating from 1574, from Antonio Boccapaduli, *maestro* of the Capella Sistina, who suggested him along with Juan Navarro (i), both 'pratichi' of the chapel, as people who would be able to recommend suitable singers for the Capella Sistina.

After his death the chapter at Zaragoza actively promoted the performance of Robledo's works in the cathedral, placing him on a par with composers such as Guerrero and Victoria. His works were still being copied outside Zaragoza in the 17th and 18th centuries.

It is difficult to evaluate Robledo's musical works, partly because of the small number that survive and partly because many of them present problems of attribution. One such is the invitatory of the Dead, *Regem cui omnia vivunt*, which Eslava y Elizondo published from an unknown source as Robledo's work (Lira sacro-hispana, siglo XVI, I/i, Madrid, 1869, p.173) but which is attributed to Cristóbal de Morales in a source in Puebla Cathedral. Some of his motets (*Hoc corpus, Domine Jesu Christe*) are similar in structure to, and of a quality comparable with, works of Victoria; while his vespers psalms, alternating plainchant with instrumental verses, show an extreme austerity and economy of means that in no way diminish their high status. Of particular importance are the two pieces setting Spanish texts that are preserved only as fragments: one sets the beginning of Jorge Manrique's *Coplas* on the death of his father (also set by Pere Alberch Vila and by Juan Navarro (i)); the other is a secular madrigal on a romantic theme. Unfortunately there is no trace of the villancicos and chanzonetas that Robledo must have composed for Christmas and other festivities.

WORKS

Edition: *Melchor Robledo: Opera polyphonica*, ed. P. Calahorra (Zaragoza, 1986–)

4 masses, 4, 5–7vv, *E-Ac*, *CA*, *MO*, *SE*, *TZ*, *VAc*, *VAcp*, *I-Rvat*
3 Proper settings, 4vv, *E-MO*
5 Magnificat, 4–6vv, *CA*, *H*, *MO*, *TZ*
Te Deum, 4vv, *Boc*, *H*, *TZ*, *Zac*
Benedictus, 4vv, *H*, *TZ*
2 Benedicamus Domino, 4, 5vv, *H*
Salve regina, 6vv, *H*, *TZ*, Puebla Cathedral, Mexico
3 hymns, 4, 5vv, *E-Bbc*, *H*, *MO*, *SEG*, *TZ*, *Zac*, *I-Bc*
7 motets, 4, 5vv (2 inc.), *E-Bbc*, *CAL*, *H*, *TZ*, *V*, *VAcp*, *Zac*, *I-Rvat*
2 secular songs (inc.), 4, 6vv, *E-V*

2 Passions, *H* (attrib. Germano Robledo)

LUIS ANTONIO GONZÁLEZ MARÍN, MARIA CARMEN MARTÍNEZ GARCÍA

Robles, Marisa [Robles Bonilla, Maria Luisa] (*b* Madrid, 4 May 1937). Spanish harpist. She studied with Luisa Menarguez from an early age, graduating from the Madrid Conservatory in 1953. She made her formal concerto début in Madrid in 1954, playing the Mozart Concerto for flute and harp with Jean-Pierre Rampal. Appointed professor of harp at the Madrid Conservatory in 1958, she left Spain after her marriage and in 1960 became a British citizen. There soon followed an extremely successful series of television appearances, in which the charm of her personality and the brilliant, quicksilver qualities of her playing endeared her to the public and created new audiences for harp music. She made her London début at the Royal Festival Hall in 1963, and taught at the RCM from 1971 until 1993, being made a FRCM in 1983. From the early 1970s, often with her second husband, the flautist Christopher Hyde-Smith, Robles was much involved in chamber music, and was the dedicatee of works by, among others, William Mathias, Stephen Dodgson, Alun Hoddinott, William Alwyn and Manuel Moreno-Buendia; she had already given the première of Moreno-Buendia's Concerto, written for her, with the Spanish National Orchestra in 1958. In 1994 he dedicated to her his *Concierto Neo-Clasico* for harp, marimba and strings, and other Spanish

composers who have written concertos for her include Rodrigo, whose *Sones en la Giralda* she first performed in Madrid in 1969. Malcolm Williamson, Jesús Guridi and John Metcalf have also written concertos for her. Robles has worked with many celebrated conductors, including Mehta, Masur, Frühbeck de Burgos, Rostropovich and Menuhin, and has toured throughout Europe, the USA, Japan, Australia and China. In both 1991 and 1994 she was artistic director of the World Harp festivals held in Cardiff, and in 1993 the series of television programmes entitled 'Concerto', in which she appeared with the LSO, Dudley Moore, Michael Tilson Thomas and James Galway, received the prestigious Emmy Award in New York. Robles and James Galway have given more than 1000 performances of the Mozart Flute and Harp Concerto, and have made four recordings of the work.

ANN GRIFFITHS

Robletti, Giovanni Battista (*fl* Rome, 1609–50). Italian printer. He usually published at his own expense at a time when printers were frequently financed either by a bookseller or the author or composer. However, he did occasionally print 'at the author's request' (e.g. Puliaschi's *La gemma musicale*, RISM 1618[13]) or on behalf of booksellers, among them Antonio Poggioli (books 1, 4, 5 and 6 of Rontani's *Varie musiche*, 1620–23) and G.D. Franzini (Florido de Silvestri's *Florida verba* of 1648[1]). Like other publishers of the time he brought out several anthologies of music he chose himself: two of sacred music (*Lilia campis*, 1621[3], and *Litanie*, 1622[1], both for voices and organ) and three of secular music (*Giardino musicale*, 1621[15], *Vezzosetti fiori*, 1622[11], and *Le risonanti sfere*, 1629[9]). He also published non-musical works.

Robletti's publications are accurate and clear, if not particularly elegant. A list of those extant shows that he catered for a wide range of styles and interests. He included many famous and lesser-known names in his output: G.F. Anerio (at least 16 volumes, 1609–29), Cifra (1609–20), Quagliati (1611–27) and Alessandro Capece (1615–25), as well as Frescobaldi, Landi, G.B. Nanino, Galeazzo Sabbatini, Soriano, Lodovico Viadana, Agazzavi, Falconieri, Federigo Fiorillo and d'India. Between 1631 and 1633, at the printing house of the Hospitio dei Letterati, Rome, he printed Agostino Diruta's *Messe concertate* for five voices, op.13, Serpieri's *Missa et vespertinum officium* and Sacchi's *Missarum liber primus*. Contemporary with these are Filippo Vitali's *Arie* for one to three voices and the *Varie musiche* for one to five voices 'concertate con il basso continuo' by Giulio Pasquali, which were published by a press of Robletti's in Orvieto.

Most of Robletti's output was produced in Rome, but he is known to have worked also in Tivoli, where a subsidy from the town granted in 1620 enabled him to print for almost 25 years, and in Rieti in 1636. His last publication is thought to be Giamberti's *Antiphonae et motecta* (1650). (*SartoriD*)

STEFANO AJANI

Roboam. *See* VOBOAM.

Robredo, Manuel Saumell. *See* SAUMELL ROBREDO, MANUEL.

Robson, Christopher (*b* Falkirk, 9 Dec 1953). Scottish countertenor. He studied with Paul Esswood and Helga Mott, making his concert début in 1976 and his operatic début in 1979 at the Barber Institute, Birmingham, as Argones (*Sosarme*). He has subsequently sung with Kent Opera, Opera Factory and Scottish Opera, and at Frankfurt, Karlsruhe and Berlin. He made his ENO début at Nottingham in Monteverdi's *Orfeo* (1981) and his Covent Garden début (1988) as Athamas (*Semele*). A specialist in Baroque opera, Robson has sung Endymion (*Calisto*), Corindo (Cesti's *Orontea*) and many Handel roles, notably Julius Caesar, Ptolemy, Arsamene (*Serse*), Ezio, Andronicus and the title role in *Tamerlano*, and Polinesso (*Ariodante*). His keenly focussed, flexible voice is also heard to advantage in modern works, and he scored a huge success in the title role of Glass's *Akhnaten* at Houston and with New York City Opera (both 1984), and for the ENO (1985). In 1989 he sang Edgar in the UK première of Reimann's *Lear* for the ENO, and created Ometh in Casken's *Golem* at the Almeida Festival. In 1994 he made his début, as Julius Caesar, at the Staatsoper in Munich, returning as Arsamene the following year. A fine recitalist and concert singer, Robson has recorded works including *Messiah*, Purcell odes and Bach's *Magnificat*, as well as *Golem*, Monteverdi's *Orfeo*, Tippett's *The Ice Break* and Maxwell Davies's *Resurrection*.

ELIZABETH FORBES

Robson, Jean-Jacques (*b* Dendermonde, bap. 4 Dec 1723; *d* Tienen, 24 Oct 1785). Flemish composer and organist. He was singing at Onze Lieve Vrouwkerk in Dendermonde by 1734, and in 1749 became choir director of the collegiate Germanuskerk in Tienen, a post which he held until 1783. The subscription lists appended to several of his works indicate that he held an important position in the musical life of his time. In 1772, with J.-F. Krafft and Ignaz Vitzthumb, he served on a panel of adjudicators established to fill the post of organist of St Rombout and bellringer of the town of Mechelen. It is known that he wrote bell pieces for this competition, but none has yet been discovered. Gregoir, who considered Robson one of the greatest organists of the period, claimed to be in possession of over 200 of his organ compositions, but his only known extant work for the organ is the *Préludes et versets* op.5; it reveals a technique orientated towards the harpsichord.

In Robson's early works an Italian influence seems prominent, though the language of Couperin and Rameau remains important. He gradually broke away from the ornamental French style but never achieved complete Classicism. His *Recueil de concert* is a model of the art of detail, of which he was undeniably a master.

Robson's brother, Sébastien-Joseph Robson (*b* Thuin, bap. 13 May 1734; *d* Turnhout, 3 July 1814), was the organist at the Pieterskerk in Turnhout from 1754, and composed during the revolution in Brabant a *Marche des patriotes* which retained a regional popularity as *Turnhout verheven*. A later member of the family, Martin-Joseph Robson (*b* Turnhout, 18 Nov 1817; *d* Turnhout, 6 March 1884), was the organist at the Pieterskerk from the age of 18, and later taught at Turnhout's Collège St Joseph; he also composed a *drame lyrique*, *Charles Quint*, as well as various motets and a mass.

WORKS

Hpd: Piesce de clavecin, op.1 (Liège, 1749), excerpts ed. in Elewyck (1877); Le divertissement du clavecin, vn acc., op.2 (Paris, n.d.); Sonates et concerts, acc. 2 vn, va, b, op.4 (before 1768); Recueil de concert (Brussels, n.d.)

TONY BILLEN

Robson, Joseph (*d* ?1842). English organ builder. His partnership with Benjamin Flight was called FLIGHT & ROBSON.

Robyns. This name appears on a page of 15th-century music (*GB-STb* Archer 2, f.1*v*) and has been assumed to apply to this setting in score of Kyrie *Deus Creator*. It is improbably located for an ascription. There is no evidence to support the existence of a composer of this name.

For bibliography *see* OLD HALL MANUSCRIPT.

MARGARET BENT

Roca, Matheo Tollis de la. *See* TOLLIS DE LA ROCA, MATHEO.

Rocca, Giuseppe (*b* Barbaresco, nr Alba, 27 April 1807; *d* San Francesco d'Albaro, Genoa, 17 Jan 1865). Italian violin maker. He came from a peasant family and, while born in Barbaresco, returned to Alba, the home of his father, within a few years. By the mid-1830s he had arrived in Turin, where he became a pupil of the well-known violin maker Giovanni Francesco Pressenda. In 1838 he entered the Exposition of Turin under his own name, marking the beginning of his independent career. His early work was strongly influenced by that of his teacher, but over the following years his work was increasingly influenced by that of Stradivari, until by about 1845 there is little of Pressenda's influence to be seen. His best period is from then until about 1850, many of his instruments being strikingly handsome and excellent tonally. He used only two basic models, with almost no variation in such details as the set of the soundholes; one was based on Stradivari, the other on the Guarneri violin that belonged to the collector Tarisio and is now known as the 'Alard'. The wood is usually but not invariably of good appearance, sometimes American in origin and occasionally from a worm-affected plank said to have come from the old bridge at Turin. Violas and cellos are much rarer in his production than violins. In addition to the usual label Rocca sometimes branded the interiors with his initials. He achieved an accuracy of workmanship which often gives the appearance of French work, and which inevitably resulted in Rocca labels being inserted into French instruments. His genuine violins are used by many fine players. He moved to Genoa after his wife's death in 1851, remarried in that town and perhaps maintained two separate workshops; according to his labels he was living in Genoa in 1853–4, and he gave that city as his home in his entry for the Exposition Universelle, Paris, in 1855. His later work from Genoa often lacks the finesse of earlier years, and his brief tenure there came to an unfortunate conclusion when he drowned in a well under somewhat mysterious circumstances.

Enrico Rocca (*b* Turin, 22 April 1847; *d* Genoa, 7 June 1915) was Giuseppe's son and heir and for a brief period his pupil. He became, however, a woodworker in the naval shipyard at Genoa, and only in 1878 did he take up violin making, with the advantage of his father's designs, moulds and tools. Many of the instruments he made during the final years of the 19th century were mandolins, for which he received awards at international exhibitions; many of his violins date from the early years of the 20th century. His production seems to have been much smaller than that of his father, whom he did not equal as a craftsman. (*VannesE*)

CHARLES BEARE/PHILIP J. KASS

Rocca, Lodovico (*b* Turin, 29 Nov 1895; *d* Turin, 25 June 1986). Italian composer. He studied in Turin and with Giacomo Orefice in Milan, and was director of the Turin Conservatory, 1940–66. His fame rests on his third opera, *Il Dibuk*, in relation to which most of his other works may be regarded as preparations, by-products or post-scripts. The first two operas are most interesting where they foreshadow *Il Dibuk* most strongly; the fourth, *Monte Ivnor*, uses an idiom very similar to that of its predecessor, but is less compelling and sometimes self-imitative. More drastic creative decline is evident in *L'uragano* and in other works completed after the war though the *Antiche iscrizioni* still show individuality. *Il Dibuk* is a difficult work to assess: while the libretto is unusually striking, the music itself often seems more an eclectic amalgam than a unified whole. The sombre modality of the choral writing, tinged with oriental inflections reminiscent of Bloch, gives way in more dramatic episodes to a highly dissonant language, with abrupt outcrops of parallel seconds, while the final duet reverts to a more traditional, sentimental Italian manner. Nonetheless the total effect in the theatre proved powerful enough, when the work was new, to win it one of the biggest Italian operatic successes since Puccini's *Turandot*.

Of Rocca's non-theatrical works, the early songs already point the way to *Il Dibuk*, and the *Interludio epico*, composed when the opera was in progress, is particularly close to it in style. In the *Proverbi di Salomone*, *Salmodia*, the *Schizzi francescani* and the relatively light *Storiella*, Rocca's taste for freakish instrumentation is carried to startling extremes. At their best these pieces recapture something of *Il Dibuk's* poetry, but in their weaker moments they show that the devices deployed so tellingly in the opera can too easily degenerate into mannerisms.

WORKS

(*selective list*)

Ops: La morte di Frine (E. Marco Senea [C. Meano]), 1917–20, Turin radio, 32 May 1936; stage, Milan, Scala, 24 April 1937; In terra di leggenda (La corona di re Gaulo) (3, Meano), 1922–3, concert perf., Milan, Palazzo dell'Arte, 28 Sept 1933; Stage, Bergamo, Donizetti, 1 Oct 1936; Il Dibuk (prol, 3, R. Simoni, after S. An-ski: *Tzvischen tzvei Velter*), 1928–30, Milan, Scala, 23 Dec 1934; Monte Ivnor (3, Meano, after F. Werfel: *Die vierzig Tage des Musa Dagh*), 1936–8, Rome, Opera, 23 Dec 1939; L'uragano (3, E. Possenti, after A.N. Ostrovsky: *The Storm*), 1942–51, Milan, Scala, 7 Feb 1952

Orch: Chiaroscuri, suite, 1920; La cella azzurra, 1924; Interludio epico, 1928; suites from ops In terra di leggenda, Il Dibuk and Monte Ivnor

JOHN C.G. WATERHOUSE/R

Rocchigiani, Giovanni Battista (*b* Orvieto; *d* ?Rieti, after 1632). Italian composer, anthologist and organist. When his op.3 was published in 1623 he was a musician at Orvieto Cathedral, but on 29 November in the same year he was appointed organist of Rieti Cathedral; he was confirmed in this position for five years in 1626 and again in 1631 for three, but there is no record of him after this latter date except for the publication of his op.7 in 1632. Most of his music appears lost. Of the eight monodies, seven duets and one trio (a dialogue) in op.3 only three monodies, Monteverdi's *Lamento d'Arianna* and Giulio Caccini's *Amarilli, io mi parto* and *Occhi soli d'amore*, have been identified; but the first song, if not others, may be by Rocchigiani since it is a setting of a poem by him in praise of the volume's dedicatee. It is surprising that so famous a piece as Monteverdi's lament should have appeared anonymously. Some of the other pieces, notably the solo sonnet *Non dormo, no, non sogno*, are not unworthy companions for it.

WORKS

Il primo libro de' motetti, 1–4vv, bc, op.1 (Orvieto, 1620)

NIGEL FORTUNE (with TIM CARTER)

Roccia. Italian family of musicians. They were active mainly in Naples. Apart from the members discussed below, the family included Teseo, Geronimo, Nicandro and Aniello who served as singers at the SS Annunziata chapel between 1604 and 1621.

(1) **Aurelio Roccia** (*b* ?Venafro, ?*c*1540–50; *d* ?Naples, after 1571). Composer and instrumentalist. Both he and his brother Plinio (*b* *c*1540–50) were among the original members of a corporation of musicians formed in Naples in 1569. Both were musicians at the Naples court; Aurelio was employed there as a cornettist. His *Primo libro de' madrigali a quattro voci*, published in Naples in 1571, includes settings of texts by Alamanni, Ariosto, F.M. Molza and Parabosco. One of his sons, Vespasiano (*b* Naples, ?*c*1570–80), is represented by four *laude* in Giovenale Ancina's *Tempio Armonico* (RISM 1599[6]).

(2) **Dattilo Roccia** (*b* ?Venafro, ?*c*1570–80; *d* ?Naples, after 1617). Singer and composer, son of (1) Aurelio Roccia. He was an alto in the chapel of the SS Annunziata in Naples from 1592 to 1594. Some time before 1600 he dedicated his first book of five-voice madrigals (now lost) to Cardinal Innico d'Avalos d'Aragona and, on 2 August 1603, his *Secondo libro de madrigali a cinque voci* to Benedetto Giustiniano. His *Primo libro de madrigali a quattro voci* (Naples, 1608) and his *Libro terzo de madrigali a cinque voci* (Naples, 1617[19]) avoid the extreme dissonances and contrasts of the Neapolitan *seconda pratica* madrigal. One madrigal was printed in an anthology (RISM 1609[16]).

(3) **Francesco Roccia** (*b* Naples, 5 Jan 1582; *d* ?Naples, after 1613). Composer and organist, son of Plinio Roccia. He is mentioned in Cerreto's *Della prattica musica* (1601) as an excellent composer and organist, but only four works, a lauda (RISM 1599[6]) and three madrigals (1609[16], 1617[19] and Dattilo's *Secondo libro*) survive. On 3 January 1613 he was paid 20 ducats for giving singing lessons. In 1588 a Francesco Roccia was organist of the S Maria di Loreto Conservatory in Naples.

KEITH A. LARSON

Rocha, Francisco Gomes da (*b* ?Vila Rica, *c* 1746; *d* Vila Rica, 9 Feb 1808). Brazilian composer, singer and conductor. He was active in Minas Gerais during the colonial period. On 2 June 1768 he entered the Brotherhood of St Joseph of Coloured Men (St Joseph's was the church of the many mulattos in Vila Rica). In 1780 he was mentioned as a contralto in a document of the Royal Senate of the city of Vila Rica. About 1800 he succeeded the composer Lôbo de Mesquita as conductor for the Brotherhood of the Third Order of Carmo. The records of the Brotherhood of St Joseph mention him as kettledrummer in the local regiment of dragoons, an indication of the varied sources of income of many colonial musicians.

Rocha appears to have been a prolific composer, though most of his compositions have been lost. His extant works are: *Novena de Nossa Senhora do Pilar a 4* (1789), preserved in the Curt Lange Archive, Ouro Prêto; *Spiritus Domini a 8* (1795), *Populе meus a quatro vozes*, *Cum descendentibus in lacum* (for Good Friday), Venite adoremus, Santa Maria, Alleluia and eight motets for Our Lady of the Assumption (all in the Music Museum,

Mariana). They reveal a thorough assimilation of Classical stylistic idioms in the treatment of the chorus and in the concertato style of the instrumental accompaniment.

GERARD BÉHAGUE

Rochberg, George (*b* Paterson, NJ, 5 July 1918). American composer. After receiving the BA from Montclair (New Jersey) State Teachers College, he attended the Mannes College of Music in New York (1939–42); studying counterpoint and composition with Hans Weisse, George Szell and Leopold Mannes. War service interrupted his studies, but on his return to the USA in 1945 he enrolled at the Curtis Institute, where he studied theory and composition with Rosario Scalero and Gian Carlo Menotti (BM 1947). In the following year he was awarded the MA from the University of Pennsylvania and joined the faculty of Curtis, where he remained until 1954. In 1950, while on Fulbright and American Academy fellowships in Rome, he met Dallapiccola and was strongly impressed by serial music. In 1951 he began his association with Presser as a music editor and soon became director of publications, a post he held until he was named chair of the music department at the University of Pennsylvania in 1960. After resigning the chair in 1968 he remained at the university as professor of music and in 1979 was named Annenberg Professor of the Humanities. The importance of his work as a composer and teacher has been recognized by appointments as guest composer at SUNY, Buffalo (1964), the Temple University Institute of Music in Ambler, Pennsylvania (1969), the Festival of Contemporary Music, Oberlin, Ohio (1970), the concert series Testimonium in Jerusalem (1970–71) and the Conference on Contemporary Music, Aspen, Colorado (1972), and by election to the American Academy and Institute of Arts and Letters in 1985. He has written *The Hexachord and its Relation to the Twelve-Tone Row* (Bryn Mawr, PA, 1955) and has contributed articles to the *Journal of Music Theory*, *Perspectives of New Music* and other periodicals. *The Aesthetics of Survival: a Composer's View of Twentieth-Century Music*, a collection of his writings, was published in Ann Arbor, Michigan, in 1984 (edited by William Bolcom). Among his awards are two Guggenheim fellowships (1956–7, 1966–7) and two NEA grants (1972, 1973); his commissions include *The Confidence Man* for the Santa Fe Opera (1982), a number of compositions for major American orchestras (e.g. the Violin Concerto for the Pittsburgh SO, 1974, and the Oboe Concerto for the New York PO, 1983) and six works for the Concord String Quartet (1972–82).

Rochberg's early works revealed a vigorous temperament with strong affinities for the idioms of Stravinsky, Hindemith and especially Bartók (*Capriccio* and the First String Quartet, which won the Society for the Publication of American Music Award in 1956). Then in the early 1950s he plunged into Schoenbergian serialism, his imagination liberated by a language that he took to be the inevitable culmination of historical developments. With such works as the 12 Bagatelles, the Chamber Symphony, *David, the Psalmist* and the Symphony no.2 he mastered its technique and explored its possibilities of expression. Around 1957 Webern's influence led him to an increasingly refined serialism (*Cheltenham Concerto*), but at the same time he became interested in the superimposition of tempos as a way of breaking down what he regarded as the temporal and gestural constraints of serialism (*La bocca della verità* and *Time-Span II*). The most important work demonstrating these developments is the Second String Quartet.

In 1964 Rochberg's 20-year old son Paul died, prompting the composer to discard serialism. He increasingly found the method 'over-intense', limited in gesture and constricting in its 'palette of constant chromaticism'. Thus, after the Piano Trio of 1963 (his last serial piece), he adopted a language that mixed abstract chromaticism with tonal idioms. While assimilating traditional elements of style into a more universal language, he explored the technique of assemblage in such works of the mid-1960s as *Contra mortem et tempus* (where he quotes from Boulez, Berio, Varèse and Ives) and *Nach Bach*. Quotation from the tonal repertory is carried to a higher level of synthesis in such works as the Third String Quartet (Naumburg Chamber Composition Award, 1972), in which he quotes from Beethoven and Mahler.

Rochberg's long-standing partnership with the Concord Quartet resulted in a number of important works, including the Piano Quintet, the String Quartets nos.4–6 (the 'Concord' Quartets) and the String Quintet, in which he furthered his syncretistic ideal of ensuring 'maximum variety of gesture and texture and the broadest possible spectrum ... from the purest diatonicism to the most complex chromaticism' (Rochberg). Another aspect of his creativity emerged in the series entitled *Ukiyo-e* (a traditional school of Japanese art), where, instead of formalized and highly articulated structures, he produced a continuous, meditative flow of delicate figures that reflect the slow, impersonal processes of eternal return.

In his music of the 1980s and 90s Rochberg continued to blend Modernist and Romantic elements. In gesture and emotion the Fifth and Sixth Symphonies belong to the Austro-German model of the 19th century. Symphony no.5 uses atonality more consistently than do most of his works, and is dominated by an intense, passionately executed organic development. The interior movements, entitled alternately 'episodes' and 'developments', all treat materials from the opening movement 'Opening Statement'. Passages from Mahler's symphonies saturate the work. Symphony no.6, exhibiting a more extroverted (or what the composer calls a more public) language, returns to Rochberg's more typical alternation of chromaticism and tonality. The second movement refers overtly to Mahler's ländler style. *Summer 1990* (Piano Trio no.3) begins with one of Rochberg's most richly Romantic passages: undulating diatonic broken chords in the piano support a searing, lyrical melody presented in octaves in the strings. Principal motifs from the opening section return in later sections within sparse textures, chromatic harmonies and angular melodic contours.

AUSTIN CLARKSON/STEVEN JOHNSON

Roche, Jerome (Lawrence Alexander) (*b* Cairo, 22 May 1942; *d* Vittorio Veneto, Italy, 2 June 1994). British musicologist. He studied at Downside School (1956–9) before reading music at St John's College, Cambridge (1959–62, 1964–7; BA 1962, MusB 1963). He took the doctorate at Cambridge in 1968 with a dissertation on Italian 17th-century sacred music, supervised by Denis Arnold, in which he concentrated on the development of the sacred vocal duet. In 1967 he was appointed a lecturer at Durham University. He received a British Academy Scholarship to study at the Cini Foundation, Venice, in 1973. Italian studies dominated Roche's research and through his work much Italian church music, particularly by Cavalli, Crivelli and Grandi (editions of whose music he published in 1968), has become more widely known. His monograph on Palestrina attempts to place the composer in a broad context. He also edited *The Penguin Book of Four-Part Italian Madrigals* (Harmondsworth, 1974) and *Masterworks from Venice* (London, 1994), an anthology of four- and five-voice Venetian motets from the 16th and 17th centuries.

DAVID SCOTT/R

Rochefort, Jean-Baptiste (*b* Paris, 24 June 1746; *d* Paris, 1819). French composer and conductor. He was a choirboy at Notre Dame in Paris. In 1775 he joined the orchestra of the Paris Opéra as a double bass player, but left in 1780 to take charge of the French opera at the Landgrave of Hesse's court in Kassel. In 1785 he returned to the Opéra orchestra and shortly afterwards was appointed second conductor; he remained in the service of this institution until 1815. Apart from some chamber music, he composed mainly for the theatre, contributing additional music to other composers' works, arranging a pasticcio *Descente d'Orphée aux Enfers* (1798) and a parody of Anfossi's *L'incognita perseguitata* as *L'inconnue persécutée* (1776). His own works suggest his efficiency in meeting the demands of the ballet-masters rather than any pronounced individuality, although there are moments of originality in some of his major works, and his command of the orchestra is evident. The *ballet-héroïque Bacchus et Ariane* (1791, Paris) calls for a serpent, an instrument seldom explicitly named in scores of the period. His later works include several pieces of revolutionary sentiment, among them an (unfulfilled) 'prophétie', *La descente en Angleterre*, in which he attempted to depict in music the characteristics of the English and French peoples.

WORKS

STAGE

first performed in Paris unless otherwise stated

JULIAN RUSHTON

Rochereau, Tabu Ley [Pascal, Tabu; Rochereau le Seigneur] (*b* Bandundu, Democratic Republic of Congo, 13 Nov 1940). Central African composer, arranger and singer. Along with Joseph Kabasele ('le Grand Kalle') and 'Franco' Luambo Makiadi, Rochereau is considered to be one of the early innovators of Central African dance band music. His compositions are in the *soukous* style, a tradition originally drawing on elements of Cuban rumba recordings of the 1940s. At the age of 14 he composed 'Besama Muchacha', which was recorded by Kabasele's L'African Jazz. Later when Rochereau joined Kabasele's band he recorded 'Kelia', a song written for him by Kabasele. 'Kelia' was a success and propelled Rochereau into the public consciousness. Rochereau left Kabasele's band in 1965, forming a new, experimental group with Nicholas Kasanda ('Docteur Nico'), African Fiesta.

Rochereau has recorded over 2000 songs on over 100 albums. His performances characteristically combine South and North American popular dance elements to traditional Central African rhythms, instruments and harmonies. Artists who have trained and performed in his bands include Mbilia Bel and Sam Mangwana. Rochereau now makes his home in Los Angeles where he continues to lead L'Orchestre Afrisa International.

GREGORY F. BARZ

Rochester. City in New York, USA. It was incorporated in 1834. The earliest accounts of music, dating from 1819, describe vocal recitals, hymn-singing and concerts by town bands. German settlers had added to the city's cultural life by the middle of the 19th century. Touring virtuosos such as Ole Bull and Jenny Lind shared their popularity with troupes of family singers, bell-ringers and minstrels. The Columbia Opera Company flourished briefly during the 1880s. Church choirs performed oratorios as well as popular hymns.

By the beginning of the 20th century four recital halls had been built. Choral societies, bands, orchestras and an opera company were founded. Music was included in the curricula of the public schools in response to community demand. Teachers' institutes for vocal instruction, annual choral festivals and competitions were well attended. The impresario James E. Furlong, with an excellent artists'

series, added to the city's importance as a concert centre in western New York.

In 1912 Hermann Dossenbach and Alf Klingenberg organized the Dossenbach-Klingenberg School of Music, which formally opened for instruction in 1913. Oscar Gareissen joined the school in 1914, and its name was changed to the DKG Institute of Musical Art, the initials being those of the three proprietors. In 1918 George Eastman (the owner of the Eastman Kodak Company) purchased the property and corporate rights of the institute and sold it to the University of Rochester in 1919 for a nominal sum. Eastman envisaged that the institute would form the nucleus of a new school which he would provide to the university and which would consist of a professional music school, a theatre for the performing arts and film, and a recital hall, all under one roof. In 1921 he presented the new Eastman School of Music building, with an endowment fund, to the University of Rochester. The adjoining Eastman Theatre (cap. 3100), which opened in 1922, has become the city's principal auditorium and provides the location for concerts by the Rochester PO. The Eastman School contains four smaller halls: Kilbourn Hall (cap. 470), Howard Hanson Hall, the Schmidt Organ Recital Hall and the Ciminelli Lounge in the Student Living Center. Concerts are also given at the Nazareth Arts Center, built in 1967 (cap. 1153), the Memorial Art Gallery Auditorium, built in 1968 (cap. 300), and the Andrews B. Hale Auditorium, built in 1996 (cap. 985).

In 1922 the Rochester American Opera Company developed out of the opera department of the Eastman School. Underwritten by George Eastman, with Vladimir Rosing as director and Eugene Goossens as conductor, the company presented operas in English and developed rapidly toward professional status, making its first appearance as a professional company at the Eastman Theatre in 1924. It appeared at the Chautauqua Opera Festival, toured to neighbouring cities and in 1927 made a highly successful début in New York. Renamed the American Opera Company and independent of Eastman's support, the company flourished both in Rochester and on tour until 1929. The Opera Theatre of Rochester, founded in 1962 by Ruth Rosenberg, presents guest artists and local singers. Eastman Opera Theatre (EOT) was founded in 1947 by Leonard Treash to give performing opportunities to singing students at the Eastman School in a professional setting. Richard Pearlman was director from 1977 to 1995, and in 1996 the team of music director John Greer and dramatic director Steven Daigle took over the supervision of EOT's annual season of full productions, studio performances and technique classes. A wide variety of works and styles are featured, from the standard operatic repertory to the newest works for the lyric stage. From 1952 to 1974 the school sponsored (with the County of Monroe and the New York State Council on the Arts) an annual summer festival, Opera under the Stars, at the Highland Park Bowl.

The Rochester PO had its origins as the Eastman Theatre Orchestra, which was used from 1922 until 1929 to accompany silent films. In 1923, however, augmented by additional personnel, it began giving an annual concert season as the Rochester PO under the direction of Eugene Goossens, who remained the orchestra's conductor until 1931. Other music directors have included Albert Coates (1923–5), José Iturbi (1936–44), Erich Leinsdorf (1947–56), Theodore Bloomfield (1958–63), Lászlo Somogyi (1964–9), David Zinman (1974–85), Mark Elder (1989–94), Robert Bernhardt (1995–8) and Christopher Seaman (from 1999). Since 1983 the orchestra has performed at the Finger Lakes Music Festival in Canandaigua each summer, and since 1990 it has also been engaged to perform summer concerts in Vale, Colorado. The Rochester Chamber Orchestra, founded in 1964 by its conductor David Fetler, presents four subscription concerts annually in various local halls.

The Rochester Oratorio Society, founded in 1945 by Theodore Hollenbach, is a community chorus of 200 members. Conducted by Roger Wilhelm since 1986, the chorus gives four concerts each season, including its annual performance of *Messiah*. Madrigalia, a chamber choir founded in 1975, is also conducted by Roger Wilhelm. The 18-member ensemble appears on many community and college concert series.

The Eastman School has a full-time faculty of over 100 and a student body of 825. It offers a complete range of degrees in performance, conducting, composition, musicology, theory, jazz studies and music education. The school supports two symphony orchestras, a symphonic wind ensemble, chamber groups, choruses, an opera theatre, a collegium musicum and jazz ensembles, and it sponsors several series of professional concerts by visiting artists and by the faculty. The school's Community Education Division trains 1350 pupils. Howard Hanson, director from 1924 to 1964, continued to conduct the Eastman's annual Festival of American Music until 1971. More than 250 works chosen from the programmes of these festivals have been recorded. The Sibley Music Library, founded by Hiram W. Sibley in 1904, was incorporated into the school in 1921. The library contains the country's largest collegiate music collection, including medieval and Renaissance theoretical treatises, incunabula, many autograph scores and letters, early opera scores and works by 19th- and 20th-century American composers.

The Hochstein School (founded in 1918) is a member school of the National Guild of Community Schools of the Arts and provides a comprehensive programme of music and dance instruction. The Arts and Cultural Council of Greater Rochester (founded in 1958) coordinates activities, publishes a bulletin and issues a monthly calendar of cultural events.

RUTH T. WATANABE, N. DAVIS-MILLIS/VINCENT A. LENTI

Rochetti, (Gaetano) Filippo (*fl* 1724–after 1750). Italian tenor. In 1724 he joined John Rich's company at Lincoln's Inn Fields Theatre as a singer between the acts. He remained there until the end of 1732, then moved to Rich's new theatre at Covent Garden until 1735. He sang in many pantomimes and afterpieces, with music mostly by Galliard or Pepusch, a revival of Giovanni Bononcini's *Camilla* (1726), Purcell's *Dioclesian* (1731) and a one-act *Telemachus* with music by Alessandro Scarlatti (1732). He took part in the first public performance of Handel's *Acis and Galatea* in 1731, and in Handel's oratorios at Oxford under the composer in 1733. At Lincoln's Inn Fields in 1734 he played small parts for the Opera of the Nobility in Bononcini's *Astarto* and Porpora's *Enea nel Lazio*. In 1739 he appeared at Covent Garden in Pescetti's *Angelica e Medoro* and sang in a composite Purcell masque. He was a member of Lord Middlesex's company at the New Haymarket in 1740, singing in a pasticcio and operas by Hasse (*Olimpia in Ebuda*) and Pescetti (*Busiri*), and appeared once at Covent Garden in 1741. He was singing in Edinburgh in the 1750s, having apparently settled permanently in Britain.

WINTON DEAN

Rochlitz, (Johann) Friedrich (*b* Leipzig, 12 Feb 1769; *d* Leipzig, 16 Dec 1842). German critic, writer and editor. He was educated at the Thomasschule, Leipzig, where he studied composition and counterpoint with the Kantor, J.F. Doles. He began composing at an early age and was 17 when his cantata *Die Vollendung des Erlösers* was first performed. It was perhaps the impression made on him by Mozart, whom he met in Leipzig in 1789, that caused him to doubt his own talent and abandon a musical career; on his father's advice he began studying theology, but in 1794 he chose the career of a writer, since his humble background prevented advancement in the Church. He published many stories and dramatic works, as well as popular scientific articles, most of which found recognition in his lifetime. He enjoyed close ties with Weimar: a *Lustspiel* by Rochlitz was performed there in 1800, performances of three other stage works soon followed and Rochlitz visited Weimar in 1832 and 1835. He also won much praise for his translation of Sophocles' *Antigone* (1809); and his German text of Mozart's *Don Giovanni* (1801) was retained as the standard version in Germany for longer than any other contemporary translation. It was certainly these successes which prompted the publishers Breitkopf & Härtel to engage him in 1798 as editor of the newly founded journal *Allgemeine musikalische Zeitung*. This turned Rochlitz to a career of musical writing, and he quickly made an important name for himself. In 1818 he withdrew as the journal's editor, but he remained a contributor until 1835. As one of the directors of the Leipzig Gewandhaus Orchestra, he was able to affect directly the music of his time through the selection of music.

Rochlitz's influence was due not only to the fact that, during its life span of 50 years, the *Allgemeine musikalische Zeitung* greatly overshadowed other similar journals; it rested also on his comprehensive education and musical discrimination. Although Goethe did not consider himself particularly stimulated by Rochlitz, he held his friend of long standing in high esteem and treated him with distinction. For his part, Rochlitz highly esteemed Goethe. He procured for him the carefully tested Streicher grand piano on which Mendelssohn and Hummel performed 'great and important concertos'. Goethe's friend C.G. Carus could picture Rochlitz only in 18th-century court dress, and it is true that Rochlitz was rather conservative even in his aesthetic views. He is often portrayed as standing between the Classical and Romantic periods. Thus he particularly admired the music of Handel, Haydn and Mozart, as well as that of J.S. Bach, but he also appreciated Weber and Spohr. (Both these composers set texts by Rochlitz, as did Zelter and Schubert.) Rochlitz's first-hand accounts of Mozart nevertheless must be treated with caution; some of the anecdotes have proved to be fabrications.

Although he recognized Beethoven's genius, Rochlitz's attitude to his great contemporary was generally critical. The first issues of the *Allgemeine musikalische Zeitung* contained quite severe appraisals of Beethoven's early works. These articles reveal the way in which Beethoven's music deviated from the prevailing theory of art, and clarify what was considered strange at the time. Beginning with the review of the violin sonatas opp.23 and 24 (May 1800) the critiques became benevolent. During a visit to Vienna in 1822, Rochlitz paid his respects to Beethoven and described the encounter in detail in his *Für Freunde der Tonkunst*. Again, however, the authenticity of his personal accounts has been seriously questioned. In addition, it appears that Anton Schindler fabricated Beethoven's deathbed request that Rochlitz should write his biography. Rochlitz's relationship with Beethoven was certainly not as unproblematic as once thought; careful study of his remarks about Beethoven raises doubt that he was able fully to appreciate the composer's character (Rochlitz saw him as having a disposition of 'childlike geniality'), though Rochlitz regarded him as the most important representative of the new German music. However, Beethoven respected Rochlitz and seemingly showed no further interest in the *Allgemeine musikalische Zeitung* after Rochlitz resigned as its editor. Indeed, the entire German-speaking world heeded Rochlitz's artistic judgments; Schindler lauded them as 'the only critical tribunal of generally recognized authority'.

Rock. A term used to denote a particular category of pop music. A contraction of ROCK AND ROLL, it first appeared in the 1960s, when it was used to describe certain new pop music styles developing after about 1965 in North America and Britain. These styles were mostly associated with young, white audiences and musicians: for example, the Beatles and the Rolling Stones in Britain, and bands based in California such as Jefferson Airplane and the Grateful Dead. The governing principles that were felt to underlie these styles were their seriousness and commitment. These qualities were the basis of a contrast made by rock fans and musicians between their music and contemporary popular music styles considered to be more commercially orientated, by now often described pejoratively as 'pop'. Subsequently 'rock' was applied to music thought to display the same sense of commitment or to derive stylistically from rock of the late 1960s. The rock–pop contrast became a staple of critical and historical discourse. However, even in the 1960s the sociological and stylistic distinctions between rock and pop were often blurred, and this was increasingly so from the 1970s on, especially after punk rock (*c*1976–8). For this reason this article concentrates on the terminological dispute itself. For a detailed discussion of the full range of pop/rock styles, *see* POP; for individual rock styles *see* CLASSIC ROCK, COUNTRY ROCK, GLAM ROCK, GRUNGE, HARD ROCK, HEAVY METAL, KRAUTROCK, PROGRESSIVE ROCK, PSYCHEDELIC ROCK, PUNK ROCK, SOFT ROCK, THRASH METAL and BAND (i), §VI, and for instrumentation see below.

Rock can be defined along three dimensions. Sociologically, it is a commercially-produced popular music aimed at an exclusionary youth audience of a type characteristic of late-capitalist societies. Musically, it tends to be highly amplified, with a strong beat and rhythmic patterns commonly considered erotic, and to draw heavily on proto-folk (especially African-American) musical sources from Southern USA. Ideologically, it is associated with an aesthetic programme of 'authenticity', developing elements from discourses around folk-revival ('community', 'roots') and art music ('originality', 'personal expression', 'integrity'). The sociological and musical elements are so variable, however, that the ideological dimension is the strongest factor. It can be observed organizing the other two in Friedlander's delineation of the whole spectrum of what he calls 'rock/pop' (1996, p.3): 'This reflects a dual nature: musical and lyrical roots that are derived from the classic rock era (rock), and its status as a commodity produced under pressure to conform by the record industry (pop).' It is also clear in Harron (1990, pp.209–10):

> Pop stands for mutability and glitter . . . and its value is measured by record sales and the charts. Pop is about dreams and escapism and ecstatic moments; it believes in cliches and its philosophy is 'give the people what they want.' It is egalitarian by nature . . . Rock is about the search for permanence within the freefloating values of the marketplace. It is about tradition (blues, country, and folk roots), and it is hierarchical in that it believes in geniuses and heroes . . . originality and self-expression in defiance of crass commercialism.

When the British government decided (1990) to license three new national commercial radio stations, they stipulated that one should be 'other than pop'. A bid from Rock FM produced consternation. Using terms similar to Harron's, Rock FM put the representative view of the music industry: that pop and rock were different. The government disagreed, and changed the legislation to define what they wanted to exclude simply with reference to strong rhythm and amplification. In ideological terms, the music industry was right; in musical terms, however, the government had a good case. Stylistic distinctions were unreliable by this stage: fans would disagree, for instance, over whether Prince's music was 'pop' or 'rock'. Such distinctions also changed over time, and particular music might migrate; thus Meat Loaf's heavy metal songs might be regarded as turning into pop as a result of heavily, and perhaps ironically, romanticized presentation. Moreover, the 'authenticity' often drained out of rock songs as they were used for commercial purposes, such as in TV advertisements.

From the 1970s on, the pop–rock distinction came under attack from several directions. Punk's often parodic use of rock conventions implied that rock, no less than pop, was knowingly constructed and, moreover, was frequently the vehicle of commercial calculation and manipulation. Feminists criticized the masculinist assumptions of rock self-expression. Dance music practice suggested that, in the world of collective production that actually obtained in popular music, rock's ideology of self-authorship was a fabrication and also boringly egotistical. New production technology – especially sampling, digital storage of musical data and computer-sequenced assembly of compositions – weakened the connection, insisted on by rock, between musical value on the one hand and instrumental and vocal performance skill on the other.

Thus understandings of both rock and pop are best if traced historically. A rock discourse came into being in the late 1960s, in association with a changing musical audience (more educated and middle-class), and emergent interests in countercultural community, radical politics and a more theorized aesthetic. The 'heavy' and 'progressive' styles of that period, linked to these ideological and social interests, generated a rock lineage, which can be followed through such performers as Led Zeppelin, Rod Stewart, Phil Collins, Peter Gabriel, Neil Young, Bruce Springsteen, Nirvana and the many heavy metal bands. From the 1970s, though, rock was only part of the pop

music field and was distinguished tendentially from pop in programme and audience (on the whole, older for rock). Subjected to deconstruction from various quarters, the idea of rock still had some weight in the 1990s (for example, in the context of the British movement of BRITPOP, it was possible to talk of Oasis as being nearer to rock and Blur closer to pop traditions), but it was now heavily qualified. Such an approach to the relationship between pop and rock also enables historians to connect them to pre-1950 popular music history, rock to American folk 'roots' (blues, country music and folk-revival), pop to Tin Pan Alley traditions of songwriting craftsmanship and show business presentation.

RICHARD MIDDLETON

Rockabilly. The earliest recognized style of rock and roll by white performers. Its practitioners were white southerners in the USA who had been attracted to and learned from the music of African-Americans; they called it country rock, but music industry figures and fans dubbed it rockabilly as a different way of signifying the merger of blues and hillbilly styles. One of its first stars, Carl Perkins, defined it as 'a country man's song with a black man's rhythm'. Its origins are usually traced to the 1954 recordings of the genre's most successful singer, Elvis Presley. Like Presley, most of rockabilly's early stars recorded at Sam Phillips's Sun Studios in Memphis, where a distinctive echo effect was used to enhance the music. Typically, twangy electric guitar, slapped upright bass and (after 1956) drum kit accompanied the singer, although other instruments often appeared, most notably Jerry Lee Lewis's piano. Rockabilly generally used the electric guitar as the main solo instrument, marking a shift away from the saxophone and piano solos of jump blues and other popular African-American genres. However, it frequently used boogie rhythms and 12-bar blues progressions, and was closely related to the rhythm and blues of African-American performers such as Bo Diddley, T-Bone Walker and Chuck Berry.

One of rockabilly's most distinctive musical characteristics was the range of unpredictable vocal inflections of the singers: lyrics about sex and love were performed with gasps, hiccups, trembling, non-linguistic syllables and repetition, implying that the singer was consumed by desire. Many rockabilly singers cultivated a wild, sexy image and performed with intensity and abandon, all of which contributed to their popularity and impact. Successful performers of the 1950s included Presley, Perkins, Lewis, Bill Haley, Buddy Holly, Roy Orbison, the Everly Brothers, Eddie Cochran, Wanda Jackson, Johnny Cash, Gene Vincent and Brenda Lee. The Stray Cats briefly revived the style in the 1980s, and some of its elements persisted in the swing revival of the 90s.

ROBERT WALSER

Rock and roll [rock 'n' roll]. A term sometimes used broadly to refer to the popular music of the second half of the 20th century, but which often narrowly designates a style of the 1950s. The phrase can be found as early as the 1930s in blues lyrics, where it typically served as a euphemism for sex. Bill Haley and his Comets were the first rock and roll group to be listed on Billboard charts with their song *Crazy Man Crazy* (1953), and when their 1955 hit *Rock Around the Clock* went to number one, the sounds of rock and roll became ubiquitous. The genre is often described as a merger of black rhythm and blues with white country music, with more emphasis on the contributions of black musicians; indeed, some historians argue that rock and roll began in the early 1950s, when many white teenagers began listening and dancing to rhythm and blues.

Rock and roll combined boogie-woogie rhythms, song forms and vocal styles from both the blues and Tin Pan Alley popular song, hillbilly yelping and the ecstatic shouts of gospel. Increasingly, electric guitar solos replaced the honking saxophone solos of rhythm and blues, and straight quaver rhythms became an alternative to swing rhythms, with either option providing strong rhythmic drive. Gillett identifies five distinct subgenres of rock and roll during the mid-1950s: the northern band rock and roll of Bill Haley and others, New Orleans dance blues, the Memphis country rock of Elvis Presley and other ROCKABILLY singers, Chicago rhythm and blues and vocal-group rock and roll.

The development of rock and roll was facilitated by the migrations of millions of black and white southerners to urban areas in the north and west of the USA, post-war prosperity, the break-up of the large swing bands after the war, the rise of independent local record labels and the growth of mass-mediated culture, which accelerated the mixing of traditions, sounds, images and audiences. Although segregation kept black and white people apart in many ways, radio, recordings and television crossed racial boundaries and facilitated cultural interactions.

White teenagers acquired new idols in black musicians, which undermined social authority and helped make rock and roll a target for governmental and other forms of repression. It is often dismissed as a music of rebellious teenagers, but rhythm and blues had long been an adult music, and Chuck Berry and Bill Haley were both over 30 when they had their biggest hits. More importantly, such a characterization ignores the serious challenges the music posed to dominant ideas about race, sexuality, class and social authority. Rock and Roll was attacked partly out of racism and partly because of an accurate assessment of its power to legitimize alternative ideals and norms. In its various forms, rock and roll brought the styles and sensibilities of black and white working-class southerners to the centre of American culture. From there the music quickly spread, primarily via mass mediation, around the globe – especially but not exclusively to English-speaking areas, most notably England. The forms, instrumentation, vocal styles and rhythms of rock and roll were adopted with little variation merged with local styles. In some cases, such as African Guitar-based genres and Jamaican reggae, rock and roll remixed with the musics of Africa and the diaspora from which it had originally risen. Rock and roll continues to have an impact on popular music around the world, from the rock and heavy metal of Brazil, Scandinavia and Indonesia to Hungarian punk and Australian rap.

ROBERT WALSER

Röckel [Roeckel]. German family of musicians.

(1) Joseph [Josef] **(August) Röckel** (*b* Neunburg, Upper Palatinate, 28 Aug 1783; *d* Cöthen, 19 Sept 1870). Tenor. He was originally intended for the church, but in 1803 entered the diplomatic service. In 1804 he was engaged to sing in Vienna at the Theater an der Wien, where on 29 March 1806 he appeared as Florestan in the première of the second version of Beethoven's *Fidelio*. Beethoven esteemed him as artist and person, and asked his advice about cuts in the opera. Röckel subsequently taught singing at the Hofoper, where Henriette Sontag was among his pupils. After travelling to Mannheim, Trier, Bremen, Prague, Zagreb and Aachen, he went in 1830 to Paris, where he produced German operas with a German company. Encouraged by the success of this venture he remained in Paris until 1832, when he took his company to London and produced *Fidelio, Der Freischütz* and other German operas at the King's Theatre with such distinguished singers as Schröder-Devrient and Haizinger. The company was conducted by Hummel, Röckel's brother-in-law. In 1835 he retired from operatic life, and in 1846 went to York as a music teacher, returning to Germany in 1853. He appears to have had an active interest in Wagner.

(2) August Röckel (*b* Graz, 1 Dec 1814; *d* Budapest, 18 June 1876). Conductor and composer, son of (1) Joseph Röckel. He was taught by his father, with whose travelling company he worked as a répétiteur. He later studied the piano in Vienna with J.C. Kessler and in Paris with J.P. Pixis and H. Payer; he was also Rossini's assistant at the Théâtre Italien. He followed his father to London, but returned to Germany in the late 1830s, serving as director of music in Bamberg (1838), Weimar (1839–43) and Dresden (1843–9), where he met Wagner. In 1839 he wrote an opera, *Farinelli,* which was later accepted for performance at Dresden, although Röckel withdrew it out of esteem for Wagner's genius. Like Wagner, he was involved in the Dresden Revolution of 1848, when he abandoned music and devoted himself entirely to politics. Röckel edited the revolutionary *Volksblätter*, which had come into existence in 1848. After 13 years in prison (1849–62), he became editor of various newspapers in Coburg, Frankfurt, Munich and Vienna successively. It is for his correspondence with Wagner that he is chiefly remembered: Wagner's letters contain above all valuable insights into the *Ring*. Although Röckel was one of Wagner's closest friends and confidantes during the late 1840s and 1850s, they had a falling out in the late 1860s, due to Wagner's belief that Röckel was spreading gossip about his relationship with Cosima. Röckel was the author of *Sachsens Erhebung und das Zuchthaus in Waldheim* (Frankfurt, 1865), as well as other political pamphlets.

(3) Eduard Röckel (*b* Trier, 20 Nov 1816; *d* Bath, 2 Nov 1899). Pianist, son of (1) Joseph Röckel. He travelled with his father, and completed his studies in Weimar with his uncle, Hummel. He went to London in 1835 and gave his first concert the following year at the King's Theatre. He subsequently toured in Germany and performed with great success at the courts of Prussia, Saxony, Saxe-Weimar, Anhalt-Dessau and elsewhere. In 1848 he settled in Bath. He published a large amount of piano music, and Schumann is said to have valued him as a composer. He actively supported Wagner, especially in connection with Wagner's trip to England in 1855.

(4) Joseph Leopold Röckel (*b* London, 11 April 1838; *d* Vittel, Vosges, 20 June 1923). Teacher and composer, son of (1) Joseph Röckel. He studied composition in Würzburg with Eisenhofer and orchestration with Götze in Weimar. Having settled in Bristol, he became well known as a teacher and a prolific composer of songs and cantatas.

Rock gong. A Lithophone in the form of a rock, boulder, stalagmite, stalactite etc., or group of such formations, having a sonorous quality when struck.

Rock harmonica. *See under* Lithophone.

Rock steady. A style of urban popular music, originating in Jamaica. It was a transitional music between ska and reggae, akin to American rhythm and blues, and with a heavy emphasis on harmony groups and solo vocalists, who also began to explore social issues in their lyrics. The distinctive horn section of the influential ska group, the Skatalites, no longer dominated the local popular music sound after they disbanded in 1965. Instead, a line-up of piano, bass and drums established rock steady and ultimately led to reggae in 1968. In addition, the frenetic beat of ska had been slowed down for dancing during the summer heatwave of 1966, and so provided a chance to penetrate the increasingly political and socially aware lyrics sung by groups like Desmond Dekker and the Aces, and the Wailers, then including Bob Marley. Stylists such as the 'king of rock steady' Alton Ellis and his main rival Ken Boothe made distinctly Jamaican covers of American soul songs. As with the emergence of ska, entrepreneurs 'Sir Coxsone' Dodd and 'Duke' Reid promoted the sound through their recordings and sound system dances. Other producers included Joe Gibbs, Sonia Pottinger, Ken Lack, Lloyd Daley and Derrick Harriott: from them came the international popularity of reggae in the 1970s through which many of rock steady's stars were able to sustain global careers.

ROGER STEFFENS

Rockstro [Rackstraw], **W(illiam) S(mith)** [Smyth] (*b* North Cheam, Surrey, 5 Jan 1823; *d* London, 2 July 1895). English music historian, composer, teacher and pianist. Baptized at Morden church in the name of Rackstraw, he used an older form of his surname from 1846. His first teacher was the blind organist John Purkis and he received tuition in composition and piano from William Sterndale Bennett. His earliest work to be performed in public was the song *Soon shall chilling fear assail thee*, sung by Joseph Staudigl at Franz Cramer's farewell concert in London on 27 June 1844. From 20 May 1845 to 24 June 1846 he studied at the Leipzig Conservatory with Mendelssohn (composition and piano), Moritz Hauptmann (theory) and Louis Plaidy (piano).

On his return to London Rockstro gave lessons in piano and singing, and was the regular accompanist at the Wednesday Concerts. In the early 1860s he moved to Torquay and in 1867 became organist and honorary precentor at All Saints' Church, Babbacombe. He collaborated with T.F. Ravenshaw in *The Festival Psalter ... adapted to the Gregorian Tones* (1863); this was followed in 1869 by Rockstro's *Accompanying Harmonies to the Ferial Psalter*. At Torquay Maude Valérie White was for a time his pupil and in her memoirs recollected his devotion to his invalid mother, on whose death in 1876 he became a Roman Catholic.

In 1879 Rockstro's *History of Music for the Use of Young Students* was published; it was followed by elementary textbooks on harmony (1881) and counterpoint (1882), eulogistic biographies of Handel (1883) and Mendelssohn (1884), and *A General History of Music* (1886). In 1885 he directed a concert of sacred music of the 16th and 17th centuries at the Inventions Exhibition at the Albert Hall. The following year he conducted his oratorio *The Good Shepherd* at the Three Choirs Festival in Gloucester, but it was unsuccessful. His continued enthusiasm for early music led to the publication of *English Carols of the 15th Century* (1891) with added vocal parts by Rockstro, edited by J.A. Fuller Maitland. Returning to London in 1891, Rockstro continued to teach privately and lectured at the RAM and the RCM. With Henry Scott Holland he produced a biography of his friend Jenny Lind (1891) with examples of her vocal cadenzas edited by her husband, Otto Goldschmidt. He suffered ill-health for many years before his sudden death.

Rockstro was highly regarded as a teacher and an authority on early music. He was an important contributor to the first edition of Grove's *Dictionary*. His compositions, conservative in style, include numerous operatic fantasias, short piano pieces, and songs, including the once popular *Queen and huntress*. His piano arrangements of operas in Boosey & Co.'s series *The Standard Lyric Drama* (1847–52) made the works available to a wide public.

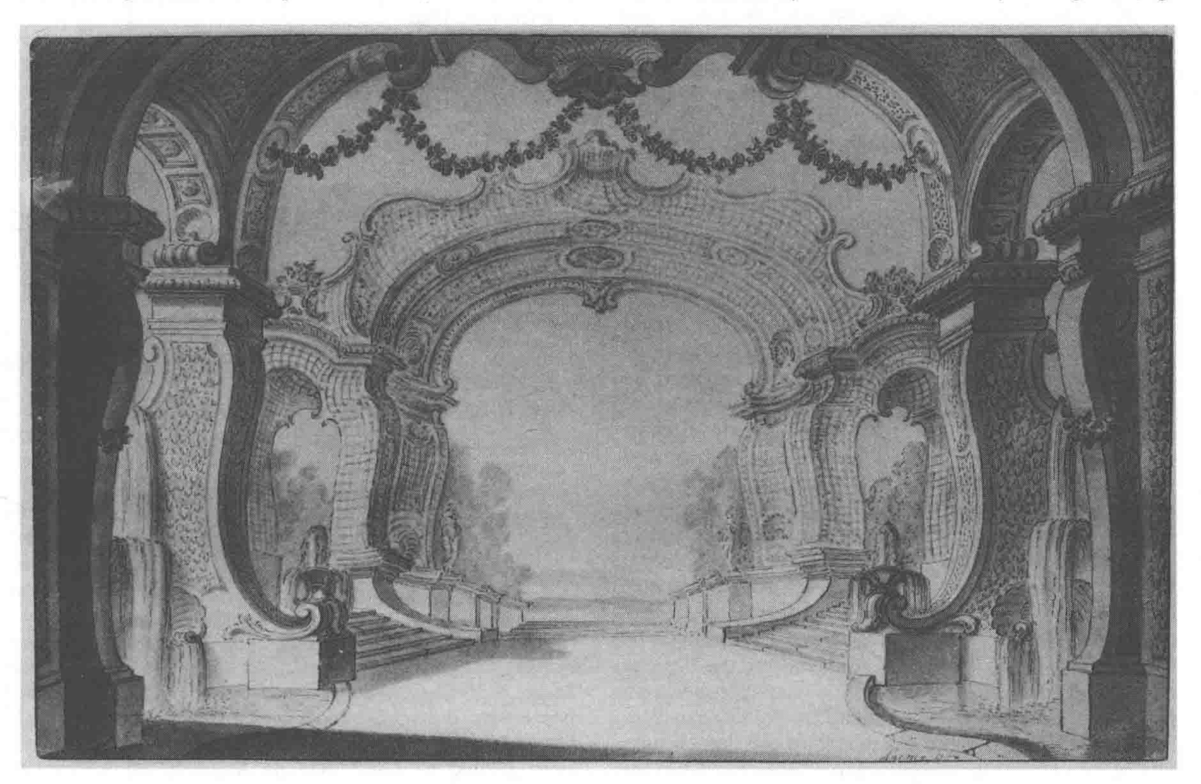
ROSEMARY WILLIAMSON

Rockwell, John (Sargent) (*b* Washington DC, 16 Sept 1940). American music critic and arts administrator. He was educated at Harvard (BA 1962, in German history and literature) and the University of California, Berkeley (MA 1964, PhD 1972), where he studied cultural history under Carl Schorske and completed a dissertation on the Prussian Ministry of Culture and the Berlin State Opera, 1918–1931. He worked as music and dance critic for the *Oakland Tribune* (1969) and the *Los Angeles Times* (1970–72). In 1972 he became a member of the music staff of the *New York Times*, and from 1974 he broadened his areas of interest, serving as chief rock music critic until 1980. After 1980 his criticism also included reviews of contemporary music and opera and he served as classical music editor at the *New York Times*, 1980–91. In 1992 he moved to Paris as European cultural correspondent for the *New York Times*, covering all arts. Returning to New York in 1994, he left the *Times* and became director of the Lincoln Center Festival, which from its opening in 1996 became a unique summer festival of both traditional and innovative productions, many new to the USA. In early 1998, he left the festival and rejoined the *Times* as editor of its influential Sunday arts section. He has written on a wide variety of topics: his books include *All American Music: Composition in the Late Twentieth Century* (New York, 1983, 2/1977), a collection of essays surveying the



current music scene; *Sinatra: an American Classic* (New York, 1984); and essays on a variety of general subjects and such figures as Kurt Weill, Philip Glass, Bruce Springsteen, and Linda Ronstadt. An upholder of the virtues of generalism in music criticism, Rockwell brings two signal attributes to his critical work: a genuine admiration for all kinds of music and the arts, and the ability to fit a spirit of inquiry and enthusiasm for newer approaches to music into a reasoned overview of cultural history.

PATRICK J. SMITH, MAUREEN BUJA

Rococo. A term from decorative art that has been applied by analogy to music, especially French music, of the 18th century. It properly stands for a style of architectural decoration that originated in France during the last years of the 17th century, born of a relaxation of the rules of French classicism, not as a consequence of the Italian Baroque. The derivation of the term (*rocaille*, 'shellwork') is *post facto* and pejorative, like most critical descriptions of the style. The term seems to have originated around 1796–7 as artists' jargon in the studio of Jacques-Louis David, where (as Sheriff noted) it was used 'to denigrate the painting produced during the reign of Louis XV, when Mme de Pompadour was an arbiter of taste'. (Condemnation of the more 'feminized' features of the Rococo style was routine until recent times.)

Kimball, one of the first to establish the origins of the Rococo, described it as 'linear organization of surface through the transformation of the frame on the suggestion of the arabesque'. According to him the first phase, one of incomparable lightness and grace, lasted until about 1730 and is properly called 'style régence'; the main creative figure was Lepautre, who derived his inspiration from the painted arabesque of Berain, the so-called prophet of Rococo. A second phase, the 'genre pittoresque', 'genre rocaille' or 'style Louis XV', lasted until about 1760 and was an elaboration of the first in the direction of more exaggerated shell- and plant-derived forms; Pineau and Meissonnier were the main figures. The accompanying illustration, probably dating from the 1730s, shows the second phase. The style's caprices were criticized even during its heyday, by Voltaire (1731) and the architect Blondel (1738) among others. The Rococo's downfall was hastened by its diffusion beyond the nobility, for whom it had connoted a distinct set of cultural values (Scott, 1995), and by the neo-classical reaction, begun by French academicians in Rome working in collaboration with Piranesi. The 1750s marked the triumph of the neo-classical style in Paris, and in 1754 Cochin published an ironic obituary of Pineau saying 'everything that separates art from the antique taste may be said to owe its invention or perfection to Pineau'. In 1763 Grimm summarized the change in style: 'The forms of ancient times are much in favour. Taste has benefited thereby, and everything has become *à la Grecque*'. The demise of the older style was less complete or abrupt than he claimed; it was too ingrained and quintessentially French to disappear without leaving many traces. Several of the greatest artists, schooled in the playfulness of the Rococo, continued to draw delight from its manner, albeit in more refined and sober terms, for example Boquet, whose ethereal costumes and scenic designs set the style at the Opéra into the 1770s.

The Rococo style, in all its applications, spread rapidly, even as far as China, generally with a lag of a decade or so behind Paris. A Viennese equivalent evolved somewhat independently, starting from the same designs of Berain. As 'the French style' it flowered briefly in England (e.g.

Rococo stage design by Jacques de Lajoüe, pen and ink with watercolour, c1730 (Metropolitan Museum of Art, New York)

Chippendale, and Hogarth's serpentine 'line of beauty'), whence it travelled to the American colonies; there, during the Revolutionary period, it became so 'naturalised' as to acquire patriotic connotations, in opposition to the neo-classical taste then gaining favour in Britain. The most genial clients of the Rococo were in the southern, predominantly Catholic, parts of Germany. By the 1720s French artists, or their plans, were put to use at Bonn and Würzburg. The elder Cuvilliés, trained in Paris (1720–24), carried the style to Bavaria, where he worked under the lavish patronage of the electors for several decades, building several country houses and the theatre in the Munich residence (1751–3) which has been called the 'Jewel of the Rococo'. French architects dominated building at the courts of the two most important south German music centres, Mannheim (Pigage) and Stuttgart (Guépière). German artists fused Rococo ornament with traditional styles of church building, largely Italian-inspired, and achieved an architectural synthesis that is still much admired. The collision of an Italian-derived style with a French-derived one in south Germany and Austria has led to theories that the former yielded to the latter, temporally, producing the sequence Baroque–Rococo–neo-classicism within a few decades around the middle of the century. Hitchcock correctly regarded German Rococo as 'a sort of enclave in the Late Baroque rather than its successor'. He added that 'no inexorable stylistic sequence leads from the Baroque, through the Rococo, to the Neoclassic. The major historical break ... came not at the beginning but at the end of the Rococo'.

The concept of a Rococo in music has never been seriously elaborated. Critics have applied the term to a wide variety of musical phenomena, most of them more appropriately described by the 18th-century expression 'galant'. Pergolesi's *La serva padrona* has been called 'Italian Rococo', which illuminates neither artistic nor musical connections between France and Italy; nor is Sedlmayr and Bauer's connection of the stage architect Galli-Bibiena's *scene vedute per angolo* with the Rococo's characteristic asymmetry particularly helpful. The concept has been used just as dubiously about literature, even about the young Goethe. Prudence dictates that musical parallels with the Rococo style in the visual arts be restricted to France, or to areas, geographic or artistic, where French culture was paramount. The ballet is such an area, being largely French-directed wherever encountered. At Paris itself preferences for the *opéra-ballet*, a lighter and less demanding spectacle than the *tragédie lyrique*, corresponded in time no less than in aim with the early Rococo. The *opéras-ballets* and pastorales of Destouches and Campra represented a considerable relaxation of tone compared with the solemnity and pathos of Lully's heroic tragedies. Favart's later pastorales for the fairground theatres inspired notable examples of Rococo decorative art, in tapestries and porcelains after designs by Boucher. The first phase, or 'style régence', of the Rococo also corresponds with the maturity of François Couperin, who lightened the French style by further refinements in ornamentation while continuing the traditions of his 17th-century predecessors; the Rococo element is especially clear in his little character-pieces on pastoral subjects, a genre in which Daquin also excelled. The same period saw the emergence of the French flute school, of significance in helping to establish and further the *galant* style, which could also be described as a relaxing of the old rules. La Laurencie outlined a 'style rocaille ou galant' in connection with the French violin school (Leclair). The second phase (*c*1730–60) corresponds with the ascendancy of Rameau, whose works baffled many listeners with their unexpected harmonic turns and complications. One contemporary commentator (Bricuaire de la Dixmérie, *Les deux âges du goût*, 1770) applied the term 'pittoresque' to Rameau's *Platée* (1745); Gardel attributed the perfection of dancing to Rameau, saying he created it by 'l'expression pitoresque' and the prodigious variety of his *airs de ballet* (Albert de Croix, *L'ami des arts*, 1776). Mondonville's new kind of keyboard sonata with string accompaniment, a fanciful and rather fussy genre, might also be compared with the 'genre pittoresque'. Even so, the clearest parallels between music and visual arts emerge when the Rococo was overthrown by neo-classicism (*see* CLASSICAL, §3).

DANIEL HEARTZ/BRUCE ALAN BROWN

Rocourt [Rocour, Roucourt], **Pierre de** (*b* ?Rocour, nr Liège; *fl* 1540–50). South Netherlandish composer. His name may indicate that he was from Rocour; it may, however, be a patronymic, in which case he may have been related to Guillaume de Rocourt, who became chaplain at Furnes on 14 December 1545.

Rocourt's main work was printed by Jacques Bathenius in a book of motets (Leuven, 1546), and although the book is now lost, records of its title-page indicate that Rocourt was a priest and held a position as a singer at Liège Cathedral.

His few surviving works suggest that he was known essentially in the Low Countries, for they are found exclusively in publications brought out by Susato and in the well-known Cambrai Partbooks (*F-CA* 125–8; compiled in Bruges in 1542). In his own country, however, Rocourt's reputation must have been a formidable one, for, along with Crecquillon and Manchicourt, he was among the first composers to be honoured by the publication in the Low Countries of a music book devoted solely to his works. Susato, moreover, placed him in the company of such important chanson composers as Certon, Claudin de Sermisy, Hesdin and Sandrin; his *Premier livre des chansons à deux ou à trois parties* of 1544 includes his arrangement of a piece by Rocourt along with similar arrangements of works by the most illustrious composers. Notably among Rocourt's songs, *Je me contente* and *O cueur ingrat* belong to complexes of 'responces' and 'repliques', based, respectively, on Rogier Pathie's famous *D'amour me plains* and Lupi's *Reviens vers moy*. In general, his chansons bridge the stylistic gap separating the Parisian from the Flemish idiom, for they combine genuine imitative writing on the one hand, and the chordal texture and melodic stereotypes of the Parisian chanson on the other.

LAWRENCE F. BERNSTEIN

Roda, Paulus de. *See* PAULUS DE RODA.

Rodan, Mendi (*b* Iaşi, 17 April 1929). Israeli conductor of Romanian birth. He studied the violin and conducting at the Bucharest Academy of Music (1945–7), then took a degree at the Arts Institute there (1947–9). He made his début with the Romanian RSO in 1953. He settled in Israel in 1961, conducted the Israel PO that year, and became chief conductor and music adviser to the Israel Broadcasting SO (1963–72), presenting new Israeli works and giving first performances in Israel of works in the international repertory. As a conductor he inclines towards post-Romantic and less extreme contemporary music. In 1965 he founded the Jerusalem Chamber Orchestra and, as its permanent conductor until 1969, toured with it to Europe, East Asia, Australia, South Africa and the USA. His recordings with this orchestra include a series with the harpsichordist Frank Pelleg of music by Bach and his sons. Rodan has appeared as a guest with various European orchestras and has frequently conducted at the Israel and the Artur Rubinstein festivals, with such soloists as Rubinstein himself, Barenboim, Rampal, Perlman and du Pré. In 1962 he began to teach at the Rubin Academy of Music, Jerusalem; in 1973 he received his professorship and was appointed head of department. He was music director of the Israel Sinfonietta in Beersheba from 1977 and chief conductor of the Belgian National Orchestra in Brussels (1983–9). In 1993 he became co-conductor of the Israel PO.

WILLIAM Y. ELIAS

Rode, (Jacques) Pierre (Joseph) (*b* Bordeaux, 16 Feb 1774; *d* Château de Bourbon, nr Damazon, 25 Nov 1830). French violinist and composer. He began lessons when he was six with André-Joseph Fauvel, a violinist of solid reputation with whom he studied for eight years. At the age of 12, he was able to give successful performances of concertos in his native town. In 1787 Fauvel took his gifted pupil to Paris, where Rode attracted the attention of Viotti and soon became the master's favourite student. In 1790 Rode made his Paris début, playing Viotti's Concerto no.13. Since Viotti no longer played in public, he entrusted Rode with the first performances of his latest concertos, nos.17 and 18, given with immense success in the spring of 1792. All these concerts took place in the Théâtre de Monsieur of which Viotti was musical director; during those years (1789–92) Rode also occupied a modest place in the violin section of the orchestra.

On 22 November 1795 he was named professor of violin at the newly founded Conservatoire; however, he immediately took a long leave to give concerts in the Netherlands and Germany. He also visited London but was not successful in his single appearance at a benefit concert. His reunion with his former teacher Viotti had a sad ending when both were exiled from England in February 1798, through political intrigues. Rode returned to Paris where he resumed his duties at the Conservatoire in 1799 and also served briefly as solo violinist at the Opéra. Towards the end of that year he played in Madrid and became friends with Boccherini. It is said that Rode's Concerto no.6, dedicated to the Queen of Spain, profited from Boccherini's advice. In 1800, on his return to Paris, Rode was named solo violinist to Napoleon Bonaparte, then first consul, and introduced his famous Seventh Concerto with great success.

In 1803 Rode decided to visit Russia; on the way, he played extensively in Germany. Spohr heard him in Brunswick and was captivated by his playing. From 1804 to 1808 Rode was solo violinist to the tsar in St Petersburg and enjoyed extraordinary popularity. However, his gifts as a performer seem to have suffered; at his reappearance in Paris on 22 December 1808, the public was unresponsive, and his latest concerto (no.10) was described as 'suffering from Russia's cold'. He resumed his European travels in 1811 and reached Vienna in December 1812 where he gave the first performance of Beethoven's Violin Sonata op.96, with the Archduke Rudolph at the piano. Although Beethoven had shaped the violin part to conform to Rode's style, the performance disappointed the composer. For a repeat performance, he decided to send Rode the violin part for further study, although he was afraid of offending him. Spohr, who heard Rode in Vienna, found that his skill had deteriorated.

In 1814 Rode settled in Berlin and married. On 26 April 1815 he gave a concert and introduced his Twelfth Concerto. Here he composed his *Air varié* no.6 and the famous 24 Caprices. Among his pupils at that time was Eduard Rietz, later violin teacher and close friend of Mendelssohn. Towards 1819 he returned with his family to France and settled in his native Bordeaux, visiting Paris only occasionally. Mendelssohn saw him there in 1825 and reported: 'Rode refuses to touch a violin'. However, he continued to compose for his instrument: he wrote his Concerto no.13, several string quartets and *airs variés*, and another set of 12 Etudes. In 1828 he made an ill-advised attempt to play in Paris; the concert was a complete fiasco and undermined his health. He was stricken with paralysis and died soon afterwards.

At the height of his career, Rode was the most finished representative of the French violin school. Having assimilated Viotti's Classical approach, he imbued it with characteristically French verve, piquancy and a kind of nervous bravura. His artistic growth took place during the revolutionary decade, and it is not surprising that his music is akin to that of Cherubini and Méhul and the operas of the 1790s; there is declamatory pathos, martial dash and melting cantilena. His gift for lyrical, often melancholy melody, which represents a prominent trend in French music of this period, made his music particularly attractive to German early Romantic composers. Rode's best music is in his 13 concertos: they represent, to a greater degree than those of Viotti, the model of the French violin concerto, accepted as such by the entire generation and respected even by Beethoven. His *airs variés*, which led to the vogue for brief and brilliant violin pieces, enjoyed great popularity: one of them, the Variations in G major, a favourite concert piece of the young Spohr, became a repertory piece for voice, sung by Catalani, Malibran, Viardot and other celebrities. Rode's virtuosity was always controlled by charm and taste and never served pure exhibitionism. He also composed a dozen string quartets (so-called 'quatuors brilliants' with a dominant first violin part), and 24 duos for two violins. He was co-author of the violin method (together with Baillot and Kreutzer) adopted by the Conservatoire (1803). His innate gifts as a teacher are demonstrated in his 24 Caprices, which balance the musical and technical needs of the student and have become an indispensable part of the violin curriculum.

BORIS SCHWARZ/CLIVE BROWN

Rode, Wilhelm (*b* Hanover, 17 Feb 1887; *d* Icking, nr Munich, 2 Sept 1959). German bass-baritone. He studied in Hanover and made his début in 1908 as the Herald in *Lohengrin* at Erfurt. After engagements at Bremerhaven, Breslau and Stuttgart, he joined the Staatsoper in Munich (1922–32), and from 1926 sang with the Städtische Oper, Berlin, where he took part in the premières of Weill's *Die Bürgschaft* and Schreker's *Der Schmied von Gent* (1932). He sang Wotan at Covent Garden (1928), and Count Almaviva and Don Pizarro at Salzburg (1929–32). At the Vienna Staatsoper (1930–33) he sang Scarpia, the four villains in *Les contes d'Hoffmann* and Simon Boccanegra, as well as the Wagner roles for which he was best known. In 1933 he took over as director of the Deutsches Opernhaus following Max von Schillings's death, until 1944. He was forced to retire in 1945 because of his Nazi associations, but later sang at Regensburg (1949–51). Rode's warm, rounded voice and articulate style are preserved in recordings from his best roles: Scarpia, Hans Sachs, Wotan, Amfortas and the Dutchman.

LEO RIEMENS/R

Rodeheaver, Homer A(lvan) (*b* Union Furnace, OH, 4 Oct 1880; *d* Winona Lake, IN, 18 Dec 1955). American evangelistic musician and music publisher. During the first half of the 20th century he greatly influenced the creation and popularization of gospel song both in the USA and elsewhere. He worked for 20 years with the evangelist Billy Sunday. In 1910, with Bentley DeForrest Ackley, he established the Rodeheaver–Ackley publishing house in Chicago, which became the Rodeheaver Co. in 1911. With the purchase of the Hall–Mack Co. of Philadelphia in 1936 Rodeheaver's company, now the Rodeheaver Hall-Mack Co., became a leader in the field of gospel music. The firm moved to Winona Lake, Indiana, in 1941, and changed its name back to the Rodeheaver Co.; in 1969 it became a division of Word, Inc. During the 1920s Rodeheaver established Rainbow Records, one of the earliest labels devoted solely to gospel song recordings. Although he composed little, Rodeheaver edited or compiled some 80 collections of Gospel songs. (For further information see T.H. Porter: *Homer Alvan Rodeheaver (1880–1955): Evangelistic Musician and Publisher* (diss., New Orleans Baptist Theological Seminary, 1981).

See also GOSPEL MUSIC, §I, 1(iv).

THOMAS HENRY PORTER

Rodensteen [Rottenstein-Pock]. Dutch family of organ builders. Israel Rodensteen was apparently the first of the line; he built a new organ in St Pieter, Utrecht (1507–8). Raphael (*d* between 26 Oct 1552 and 4 Sept 1554) obtained the citizenship of Vollenhove (Overijssel) in 1527, and lived in Bolsward (Friesland) from about 1535 to at least 1552. He was probably the builder of the organ in St Maartenskerk at Bolsward (*c*1540; part of the casework survives). Raphael's son Hermann (*d* Weimar, bur. 9 July 1583) worked in Denmark and Germany, and became a citizen of Zwickau in 1562. His new organs

include those in Roskilde Cathedral (1553–5); the chapel of Copenhagen Castle (1556); St Jakobi, Chemnitz (1559); Bautzen Cathedral (*c*1560); St Katharinen, Zwickau (1560–62); the Schlosskirche, Dresden (1563); the Michaelerkirche, Vienna (*c*1567); Schloss Augustusburg, near Chemnitz (1570); and the Stadtkirche, Bayreuth (1573). He also worked at Freiberg, Kronach, Leipzig (Nikolaikirche and Thomaskirche), Nuremberg (Egidienkirche, St Lorenz and St Sebaldus), Oelsnitz, Schweinfurt, Vienna (Stephansdom), Waldenburg, Weiden and Wunsiedel, and he entered into negotiations with the minster authorities at Ulm. Hermann's younger brother Gabriel worked with him at first, but later established an independent business.

Hermann Rodensteen was evidently the most important member of the family by far. His specifications were full of variety, with a good Principal chorus (Diapason, Principal, full Mixture and sharp Mixture); wide-scaled flue stops (Gedeckt, Flute, Nasard, Gemshorn, Quintflute and Sifflet); narrow-scaled flue stops (Quintaden, Schweizerpfeife, Querpfeife); and reeds (Trompete, Krummhorn, Regal). His set of registration instructions, which appeared in 1563, is among the most informative of the 16th century.

HANS KLOTZ

Röder, Carl Gottlieb (*b* Stötteritz, nr Leipzig, 22 June 1812; *d* Gohlis, nr Leipzig, 29 Oct 1883). German music printer. He was active in Leipzig. After a ten-year apprenticeship as a music engraver and printer with Breitkopf & Härtel, he opened his own music engraving business in 1846. In 1863, after many attempts, he succeeded in adapting the lithographic mechanical press built by G. Sigl to the printing of music; his subsequent improvements to the mechanical music printing process were used for various musical editions (from 1867) and considerably furthered the development of German music publishing. The Röder printing works were among the most important of their kind and collaborated with music publishers around the world. In the 1870s Röder's two sons-in-law and later their successors (e.g. Carl Johannes Reichel) ensured the constant expansion of the firm. It became a joint stock company in 1930; having suffered severe damage in World War II, it was subsequently nationalized and as the 'Röderdruck' printing works had a considerable international reputation.

HANS-MARTIN PLESSKE

Röder, Johann Michael (*b* Berlin; *fl* 1713–45). German organ builder. He was first trained as a joiner, and then served a four-year organ builder's apprenticeship with Arp Schnitger, who held him in sufficient esteem to place him in charge of his business during his absence, but later tried to discredit him. In spite of Schnitger's well-established position, Röder managed to break away and set up his own independent business. In 1708 he was apparently still too young to take on a contract; he is last heard of in 1745. He is known to have worked on the following organs: St Stephan, Tangermünde (1711–16; rebuilding); Alte Garnisonkirche, Berlin (1713); Dorotheenstädtische Kirche, Berlin (1717); Alte Schloss- und Domkirche, Berlin (1720; two manuals, 31 stops); Marienkirche, Crossen (now Krosno Odrzańskie; 1720–22; three manuals, 55 stops); St Maria Magdalena, Breslau (1721–5; three manuals, 55 stops); Gnadenkirche, Hirschberg (now Jelenia Góra; 1727–9; three manuals, 50 stops); Frauenkirche, Liegnitz (now Legnica; 1733–7); Peter-Paulkirche, Liegnitz (1736); Marienkirche, Prenzlau (1745); Marienkirche, Wesenberg (the casework and some stops survive). Röder's specifications and organ cases were significantly different from those of his former master. Adlung described his large instrument at Breslau as a 'very valuable organ', and Röder himself as a 'famous master'.

HANS KLOTZ/DIETRICH KOLLMANNSPERGER

Roderici, Johannes [Rodrigues, Johan] (*fl* 1300–25). Castilian or Catalan composer and scribe. Documents from the convent of Las Huelgas near Burgos in the kingdom of Castile suggest that he may have been the brother of the abbess Maria Gonzales de Agüero, who died in 1325. Four conductus (two polyphonic and two monophonic) in the Las Huelgas Codex (*E-Blh*) bear the ascription 'Johannes Roderici me fecit'; three others (all monophonic) appear to be in the same hand and may be by the same composer. They use an early form of Franconian notation, suggesting that Roderici probably received his musical training between about 1260 and 1290. The polyphonic works are stylistically typical of the late 13th century, with contrary motion, voice exchange and hocket. A series of marginal notes in *Blh* (ff.105*v*–140*v*)

credit 'Johan Rodrigues' with emendations to many Ars Antiqua tenors.

MICHAEL O'CONNOR

Rodericus [S Uciredor] (*fl* late 14th century). French composer. The only surviving piece attributed to him (under the reversed form of his name), *Angelorum psalat* (*F-CH* 564; ed in *MD*, xxv, 1971), dates apparently from the 1390s. It displays proportional methods and a textual dichotomy (contrasting the harmony of the angelic spheres with Eve's sin) derived from the contemporary motet, though the piece is a Latin ballade. Its notational complexity suggests the influence of Senleches. Identification with the Spanish instrumentalist and composer Rodrigo de la Guitarra is possible.

NORS S. JOSEPHSON

Rodgers, Jimmie [James] **(Charles)** (*b* Meridian, MS, 8 Sept 1897; *d* New York, 26 May 1933). American country music singer and songwriter. Sometimes called the 'Father of Country Music', the 'Singing Brakeman' and the 'Blue Yodeler', he learned the guitar and banjo as a child. At 14 he went to work on the railroad, but poor health led him to change to music. His songs owed as much to blues as to cowboy ballads, and his popularity grew through the Nashville radio show 'Barn Dance' (later 'The Grand Old Opry'). In the late 1920s he recorded *The Soldier's Sweetheart* and the yodel song *Sleep, baby, sleep*, which brought him immediate success. He went to New York where he began work on the Blue Yodel series of records, which included the songs *T for Texas* and *Waitin' for a Train*.

Over six years Rodgers recorded more than 100 diverse songs and, in his lifetime, sold more than five million records. In taking country music out to a mass, city audience, Rodgers laid the foundation stones of the country music industry. The most imitated figure in country music, his style is discernible in work by Hank Williams, Bill Monroe and Gene Autry among others. He was the first to use Hawaiian bands, pedal steel guitars and dobros alongside the traditional country staples of guitar, banjo and fiddle: today, all are regarded as an essential part of country music's vernacular.

LIZ THOMSON

Rodgers, Joan (*b* Whitehaven, Cumbria, 4 Nov 1956). English soprano. After reading Russian at the University of Liverpool and studying at the RNCM, she made a remarkable début as Pamina at the 1982 Aix-en-Provence Festival. Engagements followed at both London opera houses and across Europe in the lyric Mozart roles – Susanna, Zerlina, Despina – and she enjoyed close working relationships with the producer Jean-Pierre Ponnelle and the conductor Daniel Barenboim, with whom she made several Mozart opera recordings. More recently, along with several highly effective appearances in Handel operas, she has enlarged both her range and her repertory by undertaking Mozart's Countess and Elvira; much praised accounts of Tchaikovsky's Iolanta, Mimì, and Mélisande with Opera North; and Chabrier's Briséïs (a rare concert revival at the 1995 Edinburgh Festival, also recorded). In 1996 she made her Metropolitan début as Pamina. Her voice has grown in size without sacrificing its gentle, palpitating freshness of timbre and precision of delivery. In recital Rodgers has become internationally known for her expert delivery of Russian, which affords eloquent interpretations of Musorgsky, Tchaikovsky and Rachmaninoff; alike in *mélodies* and lieder she communicates through graceful, unforced delivery of words as well as notes. She is married to the conductor Paul Daniel.

MAX LOPPERT

Rodgers, Richard (Charles) (*b* Hammels Station, Long Island, NY, 28 June 1902; *d* New York, 30 Dec 1979). American composer. He was the second son of Dr William A. Rodgers (originally Rogazinsky) and Mamie Levy, Russian Jews who had emigrated to the United States in 1860 and married in 1896. His father was an enthusiastic amateur who enjoyed singing the latest Broadway tunes accompanied on the piano by his wife. Richard showed early talent on the piano but resisted lessons, preferring to play by ear. In 1916, at the age of 14, he composed two songs at Camp Wigwam, Harrison, Maine, and the following year copyrighted his first song, 'Auto Show Girl'. Also in 1917 Rodgers completed the music and some lyrics for his first musical, *One Minute, Please*, the first of 14 amateur shows composed over the next eight years. Late in 1918 or early 1919 he was introduced to lyricist LORENZ HART (1895–1943), who shared Rodgers's appreciation of Jerome Kern and was looking for a composer. In a frequently quoted remark from his autobiography, Rodgers remembered that he 'left Hart's house having acquired in one afternoon a career, a partner, a best friend, and a source of permanent irritation'. After directing the reopening of Rodgers's next

amateur show, Hart contributed lyrics to most of the remaining amateur productions and for the next 24 years would become Rodgers's exclusive creative partner for 26 Broadway shows and nine films.

Within months of meeting, their song 'Any Old Place with You' was interpolated in *A Lonely Romeo* (1919), and several songs appeared in *Poor Little Ritz Girl* (1920). The next five years, however, were discouraging. Although they produced successful amateur Varsity Shows at Columbia University (which Rodgers attended from 1919 to 1921) and three shows at the Institute of Musical Art where Rodgers was studying theory and harmony with Percy Goetschius, their professional début with *The Melody Man* in 1924 was unsuccessful. When Rodgers was on the verge of abandoning Broadway to become a babies' underwear salesman, he received an invitation to compose some songs with Hart for a Theatre Guild fund-raising project. The resulting revue, *The Garrick Gaieties* (1925), a clever parody of popular contemporary plays and performers, was a great success, much of which was credited to the songs, especially 'Manhattan' from the unproduced *Winkle Town* (1922). Following this, Rodgers and Hart were able to produce a previously composed professional book musical, *Dearest Enemy* (1925), the first of many hit shows on Broadway with librettist Herbert Fields, in addition to several London successes over the next three years. Even with their considerable musical and dramatic strengths and frequent innovations, these early shows are virtually never revived. Nevertheless, the early hits as well as the modest successes and failures that followed *A Connecticut Yankee* (1927), have left a major legacy of perennial song favourites.

From 1931 to 1935 Rodgers and Hart spent most of their creative energies in Hollywood. Despite relatively limited productivity compared to their Broadway output, they produced three memorable film musicals (*Love Me Tonight* – and *The Phantom President*, both 1932, and *Hallelujah, I'm a Bum*, 1933), numerous isolated songs for popular film stars, and one unused song that became their major hit not associated with a show or a film, 'Blue Moon' (1934). In particular, *Love Me Tonight* – directed by Rouben Mamoulian, the future director of Gershwin's *Porgy and Bess* (1935) and Rodgers's first two musicals with OSCAR HAMMERSTEIN II (1895–1960), *Oklahoma!* (1943) and *Carousel* (1945) – is widely regarded as one of Hollywood's most innovative as well as tuneful film musicals. The film also introduced in 'Lover' what would become a personal trademark, the Rodgers waltz, eventually to include 'The Most Beautiful Girl in the World' from *Jumbo* (1935) and 'Falling in Love with Love' from *The Boys from Syracuse* (1938) with Hart, a waltz standard in almost every show between *Oklahoma!* ('Out of My Dreams') and *The Sound of Music* ('Edelweiss') with Hammerstein, and the title song from *Do I Hear a Waltz?* composed with Hammerstein's protégé Stephen Sondheim.

The return of Rodgers and Hart to Broadway with *Jumbo* inaugurated, first with Hart and then with Hammerstein, perhaps the most remarkable 15-year period of sustained artistic, popular, and financial success ever experienced by a Broadway composer. During the next eight years Rodgers and Hart had few rivals as they produced nine musicals, mostly hits. Of these, five had librettos by or were directed by George Abbott, four had choreography by George Balanchine, and three were directed by Joshua Logan. In addition to the many songs that would establish lives of their own – there are five standards alone in *Babes in Arms* (1937) – several shows have proven to be revivable, albeit with new books, including *On Your Toes* (1936), with its two full-length ballets staged by Balanchine, and *The Boys from Syracuse*, the first important Broadway musical adapted from Shakespeare. In its original form, *Pal Joey* (1940), with its unsavoury adult themes and its shiftless hell of a protagonist, is widely regarded as a major milestone in the development of the genre.

After a successful final show, *By Jupiter* (1942), Hart, increasingly incapacitated by alcoholism and other personal problems, was unable and unwilling to collaborate on a new Theatre Guild property, *Oklahoma!* (1943, 1979; London, 1947, 1998), and Rodgers joined creative forces with Hammerstein, with whom he had previously composed two amateur songs in 1919, also the year he began to work with Hart. In addition to its record-breaking run of 2212 performances, *Oklahoma!* launched a new Broadway era of thoughtful and convention-shattering musicals, with well-constructed central plots, imaginative and sometimes serious subplots, credible stories populated with believable and complex characters who spoke in an authentic vernacular, and songs and ballets that advanced the action. For the next two decades musicals were to be measured against the Rodgers and Hammerstein model of the 'integrated' musical, in which the various disparate dramatic components were united to the integrity of the whole. Rodgers's well-crafted songs to Hart's bittersweet and occasionally acerbic lyrics with rare exceptions demonstrated craft, originality, and an extraordinarily varied range of song styles, ranging from the jazzy 'Johnny One Note' to romantic ballads like 'My Heart Stood Still'. Although Rodgers's songs with Hammerstein continued to achieve independent popularity outside of their dramatic contexts, the songs themselves became less influenced by the jazz vernacular styles and favoured more complex and continuous forms over the more conventional 32-bar song patterns he had typically used with Hart.

In any event, Rodgers and Hammerstein shows became increasingly more important than individual songs, and during the first eight years of their collaboration, they created four of their five major international successes (*Oklahoma!*, *Carousel*, *South Pacific* and *The King and I*, and the successful film musical *State Fair*). Also during these years with Hammerstein, Rodgers produced many successful and profitable plays, including John Van Druten's *I Remember Mama* (1944), Anita Loos's *Happy Birthday* (1946) and Samuel Taylor's *The Happy Time* (1950), a successful revival of Kern and Hammerstein's classic musical *Show Boat* (1946), and the première of a rare non-Rodgers and Hammerstein musical hit during this period, Irving Berlin's *Annie Get Your Gun* (1946). Original musicals such as *Allegro* (1947) and later *Me and Juliet* (1953) were less critically and popularly successful, and *Pipe Dream* (based on John Steinbeck's *Sweet Thursday*) became their first adaptation to fail financially. After a successful televised broadcast of *Cinderella* (1957), a modestly successful stage musical, *Flower Drum Song* (1958), and a fifth international hit, *The Sound of Music* (1959, 1998), Hammerstein died of cancer. Rodgers, once again without a collaborator,

became his own lyricist as well as the composer of one last successful show, *No Strings* (1962).

Final collaborations with the lyricists Stephen Sondheim for *Do I Hear a Waltz?* (1965), Martin Charnin for *Two By Two* (1970) and *I Remember Mama* (1979), and Sheldon Harnick for *Rex* (1976), were marred by conflicts with collaborators and actors, shorter runs, and his own diminished artistry. He was also beset by health problems, including cancer of the jaw. The legacy of Rodgers and Hammerstein, however, continued to flower during these years when the filmed version of *The Sound of Music* (1965) became a huge international success. After the quick demise of *I Remember Mama*, his 40th new musical in 54 years, a brilliant revival of *Oklahoma!* on Broadway began three weeks before his death. He was survived by his wife Dorothy, whom he had married on 5 March 1930, and two daughters, Mary and Linda. Mary Rodgers (*b* New York, 11 Jan 1931), composed *Once Upon a Mattress* (1959), originally an off-Broadway musical that has enjoyed considerable international success, including a major New York revival in 1997.

GEOFFREY BLOCK

Rodio, Rocco (*b* Bari, Apulia, *c*1535; *d* Naples, after 1615). Italian composer and theorist. Both his volume of masses and the *Corona delle napolitane* (RISM 1570[18]) describe him as a native of Bari, and although the latter mentions that he had served Sigismund August of Poland he probably did not have a permanent post there. Kastner noted that Rodio's name does not appear in the surviving lists of Polish court musicians and suggested that his contacts with the Polish court originated with the marriage of Bona Sforza of Bari to Sigismund August. In his works printed after 1575 Rodio is described as 'Napolitano', and although it cannot be proved that he held a post either at the court or at the cathedral there, he evidently cultivated the acquaintance of distinguished Neapolitan composers and performers. He was a member of Gesualdo's academy in Naples, and together with other musicians founded the Camerata di Propaganda per l'Affinamento del Gusto Musicale. He probably also had ties with Spanish composers such as Diego Ortiz and Francesco Salinas.

Rodio's sacred works display a command of counterpoint and his madrigals and canzoni contain progressive harmonic and melodic features. The *Regole di musica*, which was reprinted twice and widely circulated outside Italy, also contains advanced theoretical views. Rodio edited and contributed a piece to the *Aeri racolti* (1577[8]), which is an interesting demonstration of Neapolitan attempts to adapt *arie da cantare* to various poetic forms.

WORKS

Missarum decem liber primus, 4–6vv (Rome, 1562)
Libro di ricercate, a 4 (Naples, 1575); some ed. in Kastner
Il secondo libro di madrigali, 4vv (Venice, 1587[12])
2 canzoni, 3vv, 1570[18]; 1 canzone, 4vv, 1577[8]; 2 motets, 1585[2]; 1 madrigal, 5vv, 1591[18], 1 kbd Salve Regina in A. Valente, Intavolatura de Cimbalo (Naples, 1576); ed. C.G. Jacobs (Oxford, 1978)
Il primo libro di madrigali; Duetti, 1589: lost

WRITINGS

Regole di musica di Rocco Rodio sotto brevissime risposte ad alcuni dubij propostigli da un cavaliero, intorno alle varie opinioni de contrapontisti con la dimostratione de tutti i canoni sopra il canto fermo (Naples, 1600/*R*)

JOSEF-HORST LEDERER

Rodolfus of St Truiden [Rodulfus Sancti Trudonis; Rudolf of St Trond] (*b* Moustiers-sur-Sambre, nr Namur, *c*1070; *d* St Truiden, 1138). South Netherlandish ecclesiastic. He was abbot of St Truiden (north-east of Liège) from 1108 until his death. He began the *Gesta abbatum Trudonensium* (ed. in *PL*, clxxiii, 33–434; and Monumenta Germaniae historica, *Scriptores*, x Hanover, 1852/*R*, 227–317), in which he described all aspects of monastic life including musical practice at St Truiden and the teaching of boy scholars according to the methods of Guido of Arezzo. An anonymous tract *Quaestiones in musica* has sometimes been attributed to him, probably incorrectly (*see* ANONYMOUS THEORETICAL WRITINGS).

GORDON A. ANDERSON/C. MATTHEW BALENSUELA

Rodolphe, Jean Joseph [Rudolph, Johann Joseph] (*b* Strasbourg, 14 Oct 1730; *d* Paris, 12 or 18 Aug 1812). Alsatian horn player, violinist and composer. Initially a pupil of his father, Theodor Peter Rudolph, he studied with J.-M. Leclair in Paris during the mid-1740s and played the violin in Bordeaux and Montpellier. By 1754 he was probably a violinist in the orchestra of the Duke of Parma, and studied counterpoint there with Tommaso Traetta from 1758. He joined the court orchestra at Stuttgart as a chamber virtuoso in 1760 (or shortly thereafter) and continued his studies with Jommelli. With J.-G. Noverre as choreographer he composed several ballets at Stuttgart: their most famous collaboration, *Médée et Jason*, was first performed in 1763 after Act 1 of Jommelli's *Didone abbandonata*. While visiting Paris, in 1764, he played a horn concerto at the Concert Spirituel and his comic opera, *Le mariage par capitulation*, was performed at the Comédie-Italienne later that year. This received only one performance, but *L'aveugle de Palmire* (1767), another unambitious *opéra comique* in the pastoral style (which Grimm dismissed as nothing more than 'a string of romances, rondos and couplets without end'), remained in the repertory for slightly longer and was re-staged, with a sumptuous mise-en-scène at Fontainebleau in 1776.

Rodolphe must have left Stuttgart permanently at the end of 1766 or early in 1767 (perhaps due to Noverre's dismissal and the reduction of the ballet budgets), for he was a member of the Prince of Conti's orchestra in Paris by 1767. He played both the violin and the horn in the Opéra orchestra, and later joined the royal chapel. Two further works received premières at court in 1773: *Isménor*, written for the wedding of the Count of Artois (later Charles X) and Marie-Thérèse of Savoy, and *Nanine*, a parody of Monsigny's *Aline, reine de Golconde* (1766). He again collaborated with Noverre in the ballet *Apelles et Campaspe* (1776) for Noverre's début as ballet-master at the Opéra, and rewrote *Médée et Jason* for a new production by Noverre in 1780. When Mozart visited Paris in 1778 Rodolphe befriended him and even tried to find a position for the young composer (letter of 14 May 1778). Rodolphe became a composition teacher at the new Ecole Royale de Chant et de Déclamation in 1784, but lost this position during the Revolution; he was reinstated as a solfège professor at the newly named Conservatoire in 1798, a post he held until 1802.

Rodolphe was apparently an exceptionally fine horn player. It is likely that he independently developed a technique for hand-stopping, and was probably the first to introduce this innovation to Parisian audiences. By demonstrating the horn's virtuoso and expressive resources, including a tone so sweet it was said to resemble that of a flute, he persuaded Jommelli and other composers to treat it as a solo instrument. His ballets mainly adhered to traditional French dance forms in the style of Rameau, with none of the German folksong influence found in the works of F.J. Deller, his colleague at Stuttgart. His two theory methods proved popular, his *Solfège ou Nouvelle méthode de musique* (1784) remaining in use throughout the 19th century. It is probable that he was the father of Anton Rudolph (*b* *c*1770), a violinist and possibly also a horn player in Regensburg, who published two sets of variations for solo violin with orchestral accompaniment in 1802.

WORKS

STAGE

Renaud et Armide (ballet, choreog. J.-G. Noverre), Stuttgart, 11 Feb 1761; choreog. by E. Lauchery, 1765; formerly in *D-DS*, ed. DDT, xliii–xliv (1913/*R*)
Psyche et l'Amour (ballet, choreog. Noverre), Stuttgart, Hof, 11 Feb 1762, lost
L'épouse persane, Stuttgart, Hof, 11 Feb 1762
Médée et Jason (ballet, choreog. Noverre), Ludwigsburg, 11 Feb 1763; choreog. Regnaud, Kassel, 1773; rev. Noverre, Paris, Opéra, 30 Jan 1780; *F-Po*, formerly *D-DS*, ed. in DDT, xliii–xliv (1913/*R*)
Les Danaicles ou Hypermnestre, Stuttgart, Hof, 11 Feb 1764
Le mariage par capitulation (oc, 1, L.H. Dancourt), Paris, Comédie-Italienne, 3 Dec 1764
Apollon et Daphne (ballet, choreog. Lauchery), Kassel, *c*1764, collab. Deller, music lost; scenario (Kassel, *c*1764)
L'aveugle de Palmire (comédie-pastorale mêlée d'ariettes, 2, Desfontaines [F.G. Fouques], after Mme Riccoboni: *L'aveugle*) Paris, Comédie-Italienne, 5 March 1767, *F-Pc* (Paris, 1768)
Titon et l'Aurore (ballet, choreog. Lauchery), Kassel, 1767, collab. Deller, music lost; scenario (Kassel, 1767)
Telephe et Isménie ou La mort d'Eurite (ballet, choreog. Lauchery), Kassel, 1768, collab. Deller, music lost; scenario (Kassel, *c*1768)
Isménor (ballet-héroïque, 3, Desfontaines), Versailles, 17 Nov 1773
Nanine, soeur de lait de la reine de Golconde (pastorale en ariettes et vaudevilles, 3, Desfontaines or P.-T Gondot), Fontainebleau, 1773
Apelles et Campaspe (ballet, choreog. Noverre), Paris, Opéra, 1 Oct 1776

Spurious: La mort d'Hercule (ballet, choreog. Noverre), 1762 [by Deller]

FRIDERICA DERRA DE MORODA (with ELISABETH COOK)

Rodotheatos [Rhodhotheatos], **Dionyssios** (*b* Ithaca, 1849; *d* Italy, ? after 21 Oct 1893). Greek composer. The son of a judge, he spent his childhood in Corfu, where he learnt music from Mantzaros; he then studied for seven years at the Naples Conservatory. In Corfu he composed the opera *Roberta di Cherandini*, and he subsequently completed his studies at the Milan Conservatory, later travelling in Austria and Germany. In 1875 he received an award in the third Olympia competition in Athens. He was vice-president of the musical section of the Corfu Philharmonic Society from 1875 to 1886, teaching harmony and counterpoint. His opera *Oïtona* was staged in Corfu in 1876, as a result of which he was awarded a gold medal

by the society. In 1885 he published *Hymnos pros tin Patridha*, and in 1886 his treatise on harmony, *Peri harmonias: theoritiki ke praktiki pragmateia*, probably the earliest Greek textbook on harmony. While still in Corfu Rodotheatos was afflicted by a serious mental disorder, and he died, probably in an asylum, in Italy. The existence of copies of his three symphonic works and his *Inno funebre* (*Gr-An*) suggest the survival of the originals in some unknown Ionian archive.

Rodotheatos, whose output embraces nearly all genres cultivated by Ionian Greek composers, was one of the most important forerunners of Samaras and Camilieri. His symphonic poems show the development of Greek orchestral music from the one-movement sinfonias of Mantzaros and Padovanis; *Lo Cid* and *Atalia* are in fact suites in several movements. His music exploits dramatic alternation of quick and slow tempos to contrast between chromaticism and cantilenas, and displays versatility in quick movements and dramatic climaxes (such as the finale of *Lo Cid* and the third, fifth and sixth movements of *Atalia*), which renovate conventional operatic formulae; his expressive cantilenas (the Larghetto for solo flute in *Idée allégorique*, or the beautiful solo oboe opening of *Lo Cid*) sustain long melodic lines with the technique of developing variation.

WORKS

all but 'La mia stella' in GR-An

Stage: Roberta di Cherandini (op, 3), before 1875, unperf., lost; Oïtona (azione melodramatica, 1, after Ossian: *Nuath*), Corfu, San Giacomo, Jan 1876, lib (Corfu, 1876), music lost; other works, lost

GEORGE LEOTSAKOS

Rodrigo (Vidre), Joaquín (*b* Sagunto, 22 Nov 1901; *d* Madrid, 6 July 1999). Spanish composer. Blind from the age of three, he began his musical education at an early age and took lessons in composition with Francisco Antich in Valencia. In 1927 he moved to Paris as a pupil of Dukas at the Ecole Normale. After his marriage in Valencia in 1933 to the Turkish pianist Victoria Kamhi, he returned to Paris for further study at the Conservatoire and the Sorbonne. He lived and worked in France and Germany during the Spanish Civil War, and returned finally to Madrid in 1939. Soon after the première in 1940 of his first concerto, the *Concierto de Aranjuez* for guitar, he began to be recognized as one of the leading composers in Spain. Apart from writing a great deal of music during the following years, he was active as an academic and music critic, writing for several newspapers and publishing articles on a wide range of topics. He also worked in the music department of Radio Nacional and for the Spanish National Organization for the Blind (ONCE). In 1947 he was appointed to the Manuel de Falla Chair of Music at Complutense University, Madrid, created especially for him, and in 1950 he was elected to the Real Academia de Bellas Artes de S Fernando.

During these and subsequent years he made several tours throughout Spain, Europe, the Americas and Japan, teaching, giving piano recitals and lectures, and attending concerts and festivals of his own music. Amongst the most important of these were Argentina (1949), Turkey (1953 and 1972), Japan (1973), Mexico (1975) and London (1986). Distinctions awarded to Rodrigo included the Gran Cruz de Alfonso X el Sabio (1953), the Légion d'Honneur (1963), election as a member of the Académie Royale des Sciences, des Lettres et des Beaux-Arts of Belgium (1978) to the place left vacant on the death of Benjamin Britten, and honorary doctorates from the University of Salamanca (1964), the University of Southern California (1982), the Universidad Politécnica de Valencia (1988), and the Universities of Alicante, Madrid (both 1989) and Exeter (1990). A series of concerts and recitals to celebrate his 90th birthday took place throughout the world during 1991 and 1992. Two significant distinctions of Rodrigo's old age were the conferment of the hereditary titles 'Marqueses de los Jardines de Aranjuez' on the composer and his wife Victoria by King Juan Carlos I in 1992, and the award of the Premio Príncipe de Asturias de las Artes in 1996.

During the second half of the 20th century Rodrigo came to occupy a position in Spanish musical life close to that of Manuel de Falla in the first. Like his mentor, he cultivated a style far removed from the major currents of European musical development and, as with Falla, his music needs to be judged in the context of Spain's classical and traditional music, art and literature. His compositions number around 170, including 11 concertos, numerous orchestral and choral works, 60 songs, some two dozen pieces each for piano and guitar, and music for the ballet, theatre and cinema. His published writings (1999) also demonstrate a remarkable breadth of knowledge of music and the arts. Rodrigo's music attracted favourable attention from both critics and performers from the start of his career, first in Valencia and Paris and subsequently worldwide. His first two guitar concertos, *Concierto de Aranjuez* and *Fantasía para un gentilhombre*, also achieved remarkable popularity. From the late 1970s onwards, however, appreciation of his music began to broaden. Wider knowledge of his music demonstrated that the charge that Rodrigo merely repeated the formula of his first concerto in later ones could no longer be substantiated, and recordings showed the quality of such works as the symphonic poem *Ausencias de Dulcinea* (1948), the Scarlatti-inspired piano suite *Cinco sonatas de Castilla* (1950–51), the *Invocación y danza* for solo guitar, written in homage to Falla (1961), the austere *Himnos de los neófitos de Qumrán* (1965), the brilliant *Concierto madrigal* for two guitars (1966), based on a Renaissance love-song, or the serenely beautiful *Cántico de San Francisco de Asís* (1982). Happily the composer's 90th birthday was also the occasion for thoughtful and appreciative critical re-evaluations of Rodrigo's music.

Rodrigo's music was fundamentally conservative, 'neo-casticista', or 'faithful to a tradition', to use the composer's own words. His first works revealed the influence of composers such as Granados, Ravel and Stravinsky, but his individual musical voice was soon heard in the songs, piano works and orchestral pieces composed during the 1920s and 30s. As he matured, his wide knowledge of and sympathy with the music and culture of earlier times bore fruit. His forms were traditional, but appropriate for his purposes, and his musical language, drawn from both Classical and nationalist sources, underpinned a melodic gift of remarkable eloquence. He made many of the finest settings of classical Spanish poetry, his guitar pieces are in the central repertory, and his concertos are the most significant such works composed in Spain.

RAYMOND CALCRAFT

Rodrigo de la Guitarra (*b* ?Seville, before 1400; *d* after 1457). Spanish instrumentalist. He was among the most famous musicians who served the Trastámara family, and formed part of the entourage which Fernando I of Castile took with him when he took possession of the Aragonese throne in 1412. After entering the service of Alfonso V the Magnanimous as 'ministril de cámara', he visited the Count of Foix. Two years later he visited the courts of Navarre and Castile with his servant Diego, who was a singer. He then went to Naples with Alfonso, who in August 1421 awarded him the title of 'Consul of the Castilians' in Palermo. In December 1423 he was in Barcelona. Rodrigo and Diego, 'lute and guitar players', were mentioned for the last time in an Aragonese document of 6 January 1427. On 15 August 1458 Rodrigo took part in the procession of the Assumption in Toledo. The repertory of Rodrigo and Diego, like that of their colleagues, probably included Spanish *romances* and songs. It has been suggested that Rodrigo may be identifiable with the RODERICUS of *F-CH* 564, but this seems unlikely.

MARICARMEN GÓMEZ

Rodrigues Coelho, Manuel (*b* Elvas, *c*1555; *d* probably at Lisbon, *c*1635). Portuguese composer and organist. He probably began his musical studies at Elvas Cathedral about 1563 and may also have studied at Badajoz Cathedral, where he served as temporary organist from 1573 to 1577. During the 1580s he returned as organist to Elvas Cathedral, where he remained until in 1602 he became king's chaplain and organist at the Lisbon court. He retired on 13 October 1633.

Rodrigues Coelho's only known published collection, *Flores de musica pera o instrumento de tecla & harpa* (Lisbon, 1620/*R*; ed. in PM, i, iii, 1959–61; xxv, 1974), the earliest surviving keyboard music printed in Portugal.

Its contents span his creative life up to 1620. The most important are the 24 *tentos* (three for each tone), several of which are between 200 and 300 bars long. They are based on the imitative treatment of one or more themes in long notes, which are enhanced by much lively figuration with dotted and triplet figures sometimes repeated as many as 40 times consecutively. The themes are not related to each other. Dissonance is rare, and the broken-keyboard device (*medio registro*) common in Spanish music is not used. A second, larger group consists of 97 versets, most based on plainchant melodies richly elaborated with figuration; these include 35 for Kyries and 23 which have a verse of the *Magnificat* or *Nunc dimittis* sung to organ accompaniment. There are also four pieces based on the traditional Spanish melody *Pange lingua* and four intabulations of Lassus's chanson *Susanne ung jour*.

Rodrigues Coelho's musical style stems from that of Cabezón but is also indebted to Sweelinck and the English virginalists, who could have been known in Lisbon through residents such as Rinaldo del Mel and the elder Francis Tregian.

BARTON HUDSON

Rodríguez, Arsenio [né Ignacio Loyola] (*b* Guira de Macurije, Matanzas, 30 Aug 1911; *d* Los Angeles, 1971). Cuban composer and bandleader. Blinded by a mule kick at the age of six, Rodríguez was a gifted *tres* player (the Cuban three double-coursed guitar) renowned for his developments of Cuban SON in the 1940s. His innovations include expanding the *son conjunto* or ensemble from one trumpet to three, and the addition of piano and *conga* drums. In contrast to the lighter, upbeat *son* developed in eastern Cuba during the 1920s, he created a 'heavier', more percussive style influenced by the Afro-Cuban rumba centred on Havana and Matanzas. Many of his compositions are classified as *son montuno* (mid-tempo pieces emphasizing the compelling rhythmic repetitions of the *montuno* sections), often called '*diablos*' in allusion to their devilishly exciting arrangements. Some of his most famous songs include *Bruca manigua*, *Dile a Catalina*, *Anacaona*, *Pa'que huele*, *Tumba palo cucuyé*, *El reloj de pastora* and *Fuego en el 23*. Rodríguez's aggressive and dynamic sound had an enormous influence on later New York and Puerto Rican salsa bands of the 1970s.

Rodríguez founded his first band in 1942, taking over leadership of the Sexteto Bellamar. In 1946–50 he established what many consider to be his 'classic' *conjunto*, with whom he made some of his best recordings. Among the distinguished members of this group were the pianist Lilí Martínez, trumpeter Felix Chappotín and vocalist Miguelito Cuní, who each established renowned *conjuntos* of their own after Rodríguez left Cuba for New York in 1951. Through the 1950s and early 60s he continued to play and record in New York, but without the strong profile he had enjoyed in Cuba. He died virtually forgotten.

RECORDINGS

Legendary Sessions 1947–53, Arsenio Rodríguez (with Chano Pozo and Machito), reissued Tumbao 17 (1992)
Montuneando 1946–50, Arsenio Rodríguez y su Conjunto, reissued Tumbao 31 (1993)

LISE WAXER

Rodríguez, Marcela (*b* Mexico City, 18 April 1951). Mexican composer. She began her musical career as a guitarist, studying with Miguel López-Famos and later with Abel Carlevaro (1975). She also took composition courses, notably with Brouwer (1975), Lavista and Lozano (1975–8). Rodríguez's style is characterized by the constant use of chromatic textures, by a meticulous melodic design and by a handling of patterns that approaches minimalism. Her opera *La sunamita* – the culmination of previous theatre music – is vital and dramatic, driven by the strength of the musical characterization of the main protagonists; the plot tells of an old landowner and his young niece, whom he obliges to marry him with the false promise of leaving her his fortune and of preserving her honour. Drama as a source of inspiration has continued in such works as *Arias* to texts by Alarcón and Juana I. de la Cruz.

WORKS

RICARDO MIRANDA-PÉREZ

Rodríguez (Suárez-Arange), Nilo (Manuel) (*b* Jagüey Grande, 19 Sept 1921; *d* Havana, 23 Jan 1997). Cuban composer. He began to study music in his native town before moving to Havana in 1941, where he studied composition with Ardévol at the city's municipal conservatory. He was a founder and vice-president of the Sociedad Cultural Nuestro Tiempo (1951–61), and a founder-director of the School of Music attached to the Escuela Nacional de Arte (1962–5). From 1965, he was an adviser to the Cuban Ministry of Culture's Department of Music and was heavily involved in music publishing. He turned to professional composition in the late 1940s, but only came to prominence after winning the 1952 Premio Nacional de Música for his symphonic work *El son entero*, dedicated to Nicolás Guillén and first performed in 1953. The musical language of this and other works of the same period has strongly nationalistic connotations, a characteristic that is also apparent in

his compositions of the 1960s, which in addition involved experimentation and the search for fresh tonal qualities. The relationship in Cuban music between rhythm and language were also decisive factors in the creation and interpretation of his work. His most outstanding achievements included the conception and performance of epic cantatas using massed choirs, soloists and orchestra, such as the *Elegía y canto por José Martí* (1952), *Cantata por la paz* (1953) and that dedicated to Manuel Ascunce Domenech (1965), the teacher murdered during the literacy campaign in Cuba in 1961.

VICTORIA ELI RODRÍGUEZ

Rodríguez, Robert (Xavier) (*b* San Antonio, TX, 28 June 1946). American composer. He studied the piano as a child and then took two degrees in composition at the University of Texas, Austin, before completing his doctorate at the University of Southern California in 1975. His teachers included Hunter Johnson, Ingolf Dahl, Druckman, Maderna and Carter. From 1969 to 1976 he worked intermittently with Nadia Boulanger in Fontainbleu and Paris. Rodríguez taught at USC from 1973 to 1975, and since 1975 at the University of Texas, Dallas. Awards include the Prix de Composition Musicale Prince Pierre de Monaco (1971), the Prix Lili Boulanger (1972), a Guggenheim Fellowship (1979) and the Goddard Lieberson Award from the American Academy and Institute of Arts and Letters (1980). He was president of the Texas Composers Forum (1984–96). He has also been composer-in-residence with the Los Angeles Chamber Orchestra (1974), the Dallas SO (1982–5), and the San Antonio SO (1996–9).

Rodríguez is a practical composer who has contributed to the repertory where he perceives a need. While best known for his operas and orchestral work, he has also been prolific as a chamber music composer. He has a strong literary and historical bent; most of his compositions are programmatic. In recent years he has also produced several successful pieces for children. Many of his scores juxtapose serial techniques with pronouncedly tonal styles, as in *Estampie*, which merges a medieval dance with ragtime and 12-note rows. In his finest works, such as *A Colorful Symphony* and *Sinfonía à la Mariachi*, the immediacy and fast-paced clarity of tonal popular music is synthesized with the multi-layered complexity of the post-Webern tradition. While lyrical atonality informs most of his work, Rodríguez's music embraces many styles, ranging from Gregorian chant to jazz. His scores also allude occasionally to earlier composers such as Bach, Mozart and Beethoven, often in an unexpected or humourous manner.

WORKS

LAURIE SHULMAN

Rodríguez, Tito [Pablo] (*b* San Juan, 4 Jan 1923; *d* New York City, 28 Feb 1972). Puerto Rican popular singer, bandleader and composer. Raised in Puerto Rico, he arrived in New York City in 1939, singing in the band of his brother Johnny before moving on to perform in the orchestras of Enric Madriguera, Xavier Cugat and Noro Morales. He recorded the hit song *Bim-bam-bum* with Cugat in 1942. In 1946 he joined the band of José Curbelo along with another promising young musician, Tito Puente, then left to form a small ensemble of his own in 1947, and by the early 1950s had established one of the leading mambo orchestras in New York. Like fellow 'Mambo Kings' Puente and Machito, he performed regularly at the Palladium Ballroom.

One of the most popular vocalists and Latin bandleaders of the 1950s, Rodríguez is best remembered for his romantic songs. His band was notable for its driving rhythm section and tight horns, a perfect complement to his velvety voice and improvisatory skills as a *sonero*. Among his most famous songs from this era are dance numbers such as *Mama Güela* and *Vuele la paloma*. During the 1960s Rodríguez put the mambo aside and recorded many famous boleros, such as *Inolvidable*, *Mi ultimo fracaso*, *Lo mismo que a usted*, *Llanto de luna*, *Ha Llegado la hora*, *Cara de payaso* and *Tiemblas*. He remained active up until his death in 1972. See also J.S. Roberts: *The Latin Tinge: the Impact of Latin American Music on the United States* (New York, 1979).

LISE WAXER

Rodríguez, Vicente (*b* Onteniente, nr Valencia; *d* Valencia, bur. 16 Dec 1760). Spanish organist and composer. After the death of Cabanilles he was named interim organist of

Valencia Cathedral on 1 June 1713 and was awarded the permanent post on 1 April 1715 after a competitive examination, retaining it until his death. His brother Félix Jorge Rodríguez (*d* 1748) was second organist and harpist there from 1703 until his death.

Rodríguez's masterpiece is a beautifully prepared manuscript, *Libro de tocatas para cimbalo repartidas por todos los puntos de un diapason* (*E-Boc*), which contains 30 harpsichord toccatas and a pastorela, arranged in ascending chromatic order through the available major and minor keys. These are actually sonatas (so called in the individual titles), some in several movements, but most in the single-movement bipartite form of Domenico Scarlatti and Soler. The style is animated and brilliant, with frequent hand-crossings. Textures are varied, including lively figuration, ornamented melody, full chords and occasional fugal passages. Sharp dissonance, chromaticism and a wide range of modulatory schemes occur. One of these works was published by Joaquin Nin (*Classiques espagnols du piano*, ii, Paris, 1928).

The organ works of Rodríguez include three colourful multi-movement toccatas in fanfare style (*de batalla*) and an incomplete *Pange lingua* (both at *E-Bc*). The style and type of notation of *Gran salmodia por Rodriguez* (*E-Bc*) indicate that it was composed by Vicente Rodríguez rather than the younger Felipe (1759–1814), whose works are also at the Biblioteca Central in Barcelona; among the 64 versets for the eight tones are a number of fugues with strikingly chromatic subjects. Two masses and two motets are at Valencia (*E-VAc*).

ALMONTE HOWELL

Rodríguez de Hita [Ita, Yta], **Antonio** (*b* Valverde de Alcalá, 18 Jan 1722; *d* Madrid, 21 Feb 1787). Spanish composer and theorist. He attended the choir school of the prebendary church of Alcalá de Henares (where the theorist Andrés Lorente had served as organist), and was *maestro de capilla* of that church from 1738 to 1744. In 1744 he became *maestro de capilla* of Palencia Cathedral; three years later he was ordained to the priesthood. His works for Palencia Cathedral included *Escala diatónico-chromático-enharmónica* (1751), a cycle of 75 short imitative pieces for up to five wind players, ordered according to tonality and mode, as well as Latin sacred works and villancicos. In 1757 he published *Diapasón instructivo*, one of the most important and progressive Spanish musical treatises of the 18th century. Following the liberal ideas defended by B.J. Feijoo in his *Cartas eruditas y curiosas*, he justified innovations as long as they provided aural pleasure, thus opposing the rationalist view of music. This aspect of the treatise was criticized by the moderate A.V. Roel del Río in his *Razón natural i científica de la música* (1760).

During this period, Rodríguez applied unsuccessfully for more prestigious posts; eventually in September 1765 he succeeded José Mir y Llusá as *maestro de capilla* of the Monasterio de la Encarnación in Madrid, which enjoyed royal patronage.

Barely three years after his arrival, he began a short but brilliant career as a composer of stage music, collaborating mainly with the dramatist Ramón de la Cruz (1731–94). These productions took place during the enlightened period of rule under the Count of Aranda, president of the Council of Castille between 1766 and 1773; their first joint work, the serious zarzuela *Briseida*, was chosen to open the first special summer season of daily performances at the municipal theatres of Madrid. With a heroic plot based on the episode of the wrath of Achilles during the Trojan War, it represents an adaptation of Metastasian *dramma per musica* to the post-Calderón zarzuela tradition; the music, which alternates with spoken dialogue, consists mostly of arias and cavatinas, with recitatives in the second act for the two main roles, Achilles and Briseida, an ensemble at the end of the first act and a chorus at the conclusion of the work. *Las segadoras de Vallecas* (whose score is lost), by contrast, was modelled on the pattern of Goldoni's *drammi giocosi* as set by Piccinni, Traetta and Galuppi; its libretto portrays a rural environment, presenting folk characters along with noble ones.

Rodríguez's second comic zarzuela, *Las labradoras de Murcia* (1769), shows the clear influence of *opera buffa*, notably in the 443-bar 'chain' finale of Act 1, which reflects the dramatic action (the significance of a *jota murciana*, accompanied by popular instruments, in the fifth section, has been exaggerated). The peasants' arias convey the humour and simplicity of the text, while the serious and semi-serious characters are portrayed with stylistic elements borrowed from *opera seria*. In his last important stage work, *Scipión en Cartagena* (1770), Rodríguez collaborated with a little-known writer, Pablo Agustín Cordero, who centred the work on the conquest of the Spanish port of New Carthage (Cartagena) during the Second Punic War. This work diverges further than *Briseida* does from the Metastasian type; there are two choruses in each act, and the music shows a greater fluency and familiarity with the pre-Classical forms and idiom. With these four zarzuelas, Rodríguez became the Spanish composer with the largest number of works first performed in the commercial theatres of Madrid between 1760 and 1770, and at the end of the 1760s his zarzuelas were the only ones that could rival the operas adapted from Piccinni and Galuppi. With the two comic works he effectively established the comic zarzuela, which was then cultivated in the 1770s by Fabián García Pacheco, Ventura Galván, Antonio Rosales and others; these works in turn opened the way to the zarzuela of the 19th century.

After the poor reception of *Scipión en Cartagena*, which ran for only three days, Rodríguez composed no more zarzuelas, although he contributed some pieces to stage works, and wrote interludes for the neo-classical tragedy *Hormesinda* by Nicolás Fernández de Moratín (1770). The 1770s were his most productive years as a composer of sacred music; notable among the surviving works are a large number of villancicos, mostly for Christmas and Corpus Christi, as well as works to Latin liturgical texts. From 1781 onwards his sacred compositions were compiled in two bound volumes entitled *Música práctica de romance* and *Música motética práctica* (now preserved in *E-Mm*). The majority of his Latin liturgical works, especially those for the Office and the masses, are scored for two choirs and are in the *stile antico*. In works such as the psalms, hymns, antiphons and Magnificat settings,

homophonic choral writing predominates, alternating with contrapuntal passages and solos or duos (generally for soprano or tenor). The influence of Italian operatic style is evident in the villancicos and other Spanish sacred pieces as well as in some Latin works, such as the Lamentations for Holy Week. Like other Spanish composers of the time, Rodríguez varies the formal pattern of the Baroque villancico, and in many instances a sequence of recitative and aria (usually da capo) replaces the *coplas* (solo verses).

During his last years, Rodríguez enjoyed a solid reputation and great respect. At the request of the Marquis of Florida Pimentel, he wrote a *Noticia del gusto español en la música* in 1777, a brief report for London on the state of sacred, theatre and folk music in contemporary Spain; in a critical review of Antonio March y Estrader's *Conocimientos de los organistas en las máquinas de los órganos y modo de reconocerlos* (1779), a translation of extracts from François Bédos de Celles's *L'art du facteur d'orgues*, he demanded the creation of an academy of music similar to the fine arts academies of San Fernando in Madrid, San Carlos in Valencia, or the Three Noble Arts in Seville. His works remained practically forgotten until 1896, when Felipe Pedrell rescued part of the music for *Briseida* for a series of conferences at the Madrid Athenaeum and, with Jesús Monasterio, produced *Las labradoras de Murcia* at the Madrid Conservatory.

WORKS

STAGE

first performed in Madrid; in E-Mm unless otherwise stated

Briseida (zar, 2, R. de la Cruz), home of Count Aranda, 10 July 1768, Príncipe, 11 July 1768

Las segadoras de Vallecas (zar, 2, De la Cruz), Príncipe, 3 Sept 1768, music lost, lib *Bit, Mm, Mn, SAN*

Las labradoras de Murcia (zar, 2, De la Cruz), Príncipe, 16 Sept 1769, ed. in MH, ser. A, xxi (1998)

Scipión en Cartagena (zar, 2, P.A. Cordero), Príncipe, 15 July 1770

Others: El chasco del cortejo (tonadilla a solo), ?Príncipe, 1768; Intermedios de Hormesinda (tragedia, N. Fernández de Moratin), Príncipe, 12 Feb 1770, partially lost; music in El loco vano y valiente (pasticcio), Príncipe, 31 March 1771; La república de las mujeres (sainete, De la Cruz), Príncipe, 4 Oct 1772; music in El sacrificio de Ifigenia (comedia), 1772 or later; Las payas celosas (sainete, De la Cruz), ?Cruz, 1773, music lost; other arias

LATIN SACRED

principal sources: E-Mn, MO (including many autographs)

Masses (all for 8vv, orch): 12 masses; 1 mass, inc.; 2 Missa de difuntos

Others: 10 ants (1 doubtful); 3 Compline settings; 25 hymns (2 inc.), incl. Exsultent modulis, 1779, ed. P. Capdepón Verdú, *La música en la Monasterio de la Encarnación (siglo XVIII)* (Madrid, 1997); 4 invitatories; 19 Lamentations settings for Holy Week, incl. Jod–Manum suam misit hostis (Madrid, after 1765); 1 lit; 2 Mags; 11 motets (1 inc.); 2 offs; 21 psalms (1 doubtful); 24 responsories; 5 seqs; 1 Vespers setting

SPANISH SACRED

principal sources: E-Mn, MO (both including some autographs)

46 villancicos and responsiones (4 inc.), incl. Al ver la fragua de amor, ed. P. Capdepón Verdú, *La música en el Monasterio de la Encarnación (siglo XVIII)* (Madrid, 1997); 2 others, doubtful

Others: 27 cuatros (1 inc.); 2 pastorelas; 4 gozos; 1 aria; 1 orat, music lost

OTHER WORKS

Escala diatónico-chromático-enharmónica: música sinfónica, dividida en [75] canciones (Libro de chirimías), 2–5 insts, 1751, *E-PAL*, 8 ed. in MH, ii, ser. C, xi (1973)

Others: Minuet, kbd, Monasterio de San Pedro de las Dueñas, León; Seguidillas, S, bc, Minuet, kbd, 2 sonatas, kbd, Monasterio de San Pedro de las Dueñas, León, all doubtful

THEORETICAL WORKS

Diapasón instructivo, consonancias músicas y morales, documentos a los professores de música, carta a sus discípulos . . . sobre un breve, y fácil méthodo de estudiar la composición, y nuevo modo de contrapunto para el nuevo estilo (Madrid, 1757)

ALBERT RECASENS

Rodríguez de Ledesma, Mariano (*b* Zaragoza, 14 Dec 1779; *d* Madrid, 28 March 1847). Spanish composer. While a choirboy at Zaragoza Cathedral, he was taught music by F.J. García Fajer ('Il Spagnoletto') and José Gil Palomar. From boyhood he was noted for his excellent voice and his extraordinary musicality. He also began conducting orchestras at an early age, in opera and sacred concerts, and won such a reputation that in 1800 he was made conductor of the opera company of Seville and in 1805 of the theatre of 'Los Caños del Peral' in Madrid. In 1807 the king named him a supernumerary tenor of the royal chapel with a substantial retainer. In 1811 he had to emigrate for political reasons and went to London, where he became so successful as a singing teacher that he was made an honorary member of the Philharmonic Society and, in 1814, taught Princess Charlotte, daughter of the prince regent. Also in 1814 the *Allgemeine musikalische Zeitung* warmly reviewed the first publication of his compositions in Germany by Breitkopf & Härtel. Later that year he was able to return to Spain, where he was named first tenor of the royal chapel and then singing master to the Princess Luisa Carlota. He wrote for her his most important pedagogical work, *Cuarenta ejercicios de vocalización*, prefaced by his 'Instrucciones teóricas o teoría del canto' and published in Madrid, Paris (1827) and London (under the title *A Collection of Forty Exercises, or Studies, of Vocalisation*, n.d.). In 1823, again because of the political situation, he

returned to London, where he was remembered and welcomed with great enthusiasm. He was made a member of the Royal Academy of Music and, in 1825, director of its singing class. In spite of this prosperous position and his virtual adoption of England as a second home, he returned in 1831 to Spain, where he took up his post as tenor in the royal chapel until he was made its choirmaster in 1836, a position he held until his death.

Rodríguez de Ledesma's creative life was divided into two periods by his appointment as choirmaster of the royal chapel. In the first he composed only secular music – piano sonatas and, above all, vocal works (arias, *ariettes* and duets, accompanied by piano or orchestra). In the second he composed religious music almost exclusively, including three masses, an Office for the Dead, responsories for Epiphany, a None for the Ascension and motets. His best work is the nine Lamentations for Holy Week of 1838. The autographs of almost all the sacred works are in the music archives of the royal palace in Madrid. During his lifetime he did not enjoy in Spain a reputation commensurate with his worth, or the fame accorded some of his contemporaries. The most important reasons for this were his prolonged absences from the country and the many years spent as a singer rather than *maestro* in the royal chapel. But it may also have been because of his disregard of the musical style prevailing in Spain at that time. Although trained in the italianate school of 'Il Spagnoletto' and in the principles of the old Spanish polyphonic school by Gil Palomar, he was profoundly influenced by the German school – at first by the Classicism of Haydn and Mozart (he worked hard to make Mozart known in Madrid) and then especially by Weber, who fully converted him to Romanticism. He can almost be considered the first musical Romantic in Spain, though in a way very different from Adalid and the other great Spanish Romantics.

JOSÉ LÓPEZ-CALO

Rodríguez-Losada Rebellón, Eduardo (*b* La Coruña, 2 March 1886; *d* La Coruña, 2 Nov 1973). Spanish composer. An architect by profession, with functionalist convictions, he was a self-taught composer whose musical ideas were strongly influenced by French and German academic theory. His first comic opera, *El monte de las ánimas*, is an elegant sketch full of modernist charm. Two years later he produced *O Mariscal* with a libretto in Galician, a 'grand opera' based on a late medieval legend of Galician history, interpreted as the vain struggle of a nobleman against the centralist aims of Ferdinand and Isabella. This was followed in 1935 by *¡Ultreya!*, in which the question of nationalism is raised again, with the legend of Santiago, St James the Apostle, being treated as a component of Galician identity.

O Mariscal and *¡Ultreya!* are both in the Wagnerian tradition in their melodic shaping, dense orchestration and harmonic formulae. The use of non-professional singers in *O Mariscal* imposed limitations on the complexity of the vocal writing, to the advantage of the dramatic tension and ensemble scenes, while the use of dialogue in *¡Ultreya!* gives the work a kinship with dramatic epic. Years later Rodríguez-Losada Rebellón embarked on a work of extraordinary complexity, *El gran teatro del mundo*, which could be performed only as a dramatic cantata.

His instrumental works of the 1920s and 30s consist mainly of symphonic poems and descriptive works intended for the La Coruña PO and the Madrid SO. The imagination in these compositions is similar to that shown in his works as city planner and fashionable architect in La Coruña. Following the Civil War, his activities as both architect and musician were significantly reduced. Obsessed by the great classical forms, he composed symphonies for medium-size orchestras and a large amount of chamber music, which demonstrate skilful academic contrapuntal writing.

WORKS
(*selective list*)

Stage: El monte de las ánimas (comic op, 2, Núñez de Cepeda, after J.J. Casal), La Coruña, 6 June 1927; O Mariscal (op, 3, A. Vilar-Ponte and R. Cabanillas), Vigo, Tamberlick, 31 May 1929; ¡Ultreya! (op, 3, A. Cotarelo-Valledor), Madrid, Zarzuela, 12 March 1935; El diablo mundo (ballet); El gran teatro del mundo [perf. as dramatic cant.], 1950; La santa comaña (ballet), *c*1965–70

XOÁN M. CARREIRA

Rodriguez Mata, Antonio (*d* Mexico City, 1643). Mexican composer. He was named *maestro de capilla* of Mexico City Cathedral directly by Archbishop Juan Pérez de la Serna on 23 September 1614, with the aim of replacing the elderly and intractable Juan Hernández, who had held the position since 1586. Hernández would not go quietly, and a compromise was reached, giving the position to Mata in all but name. Hernández finally resigned in 1618 and Mata assumed the title, which he retained until his death. Under Mata's tutelage the musical establishment grew in quality and reputation, and by the 1620s its excellence was known throughout the Spanish empire. Two of the cathedral musicians employed in 1623, Luis Coronado and Fabián Ximeno, followed Mata as *maestros de capilla*. Mata's works include two sets of Lamentations, three Passions and several vernacular *chanzonetas* and villancicos. His compositions display a dark, sober style, nurtured in the Spanish tradition of Victoria.

MARK BRILL

Rodulfus Sancti Trudonis. *See* RODOLFUS OF ST TRUIDEN.

Rodwell, George (Herbert Bonaparte) (*b* London, 15 Nov 1800; *d* London, 22 Jan 1852). English composer and

playwright. He was a pupil of Vincent Novello and Henry Bishop. His brother (James) Thomas Gooderham Rodwell was proprietor and manager of the Adelphi Theatre, where his first musical stage piece (*Waverley*) was produced in 1824. In March 1825, on his brother's death, he succeeded to the proprietorship. In 1828 he became a professor of harmony and composition at the RAM, and in 1836 he was appointed director of the music at Covent Garden, where his most successful piece, *Teddy the Tiler*, had been produced in 1830. There he assisted in the Covent Garden policy of trying to anticipate the repertory of Drury Lane, as in the case of his version of Auber's *The Bronze Horse*. He wrote the words of many farces and melodramas (Nicoll lists 21 besides the ones for which he composed music), and also a novel, *Memoirs of an Umbrella* (1846). He was musical instructor to Princess Victoria before her accession, and in this capacity composed three glees in honour of her 18th birthday (24 May 1837). He married the daughter of John Liston, the comedian. For many years he persistently advocated the establishment of a national opera. Rodwell's songs, glees and stage pieces enjoyed a good deal of popularity in their day, but they scarcely outlived him, and to modern taste they have only a faint appeal.

W.H. HUSK/NICHOLAS TEMPERLEY

Rodziński, Artur (*b* Spalato, Dalmatia [now Split, Croatia], 1 Jan 1892; *d* Boston, MA, 27 Nov 1958). American conductor of Polish descent. He had his early musical training in Lemberg (later Lwów), then studied law in Vienna, simultaneously studying composition with Marx and Schreker, conducting with Franz Schalk, and the piano with Sauer and Lalewicz. After military service he returned to Lwów, first as a choral conductor, then in 1920 at the Opera, making his début with *Ernani*. From 1921 he was also active in Warsaw at the Opera and at Philharmonic concerts.

On Stokowski's invitation he went to Philadelphia in 1925, first as a guest conductor, then as assistant. He also took charge of the opera and orchestral departments of the Curtis Institute. In 1929 he became conductor of the Los Angeles PO, and in 1933 of the Cleveland Orchestra,

Artur Rodziński

which then began its history as a front-rank virtuoso ensemble. The American première, on 31 January 1935, of Shostakovich's *Lady Macbeth of the Mtsensk District* was the single event that attracted the most attention during his ten-year stay in Cleveland. He was the most exciting of the younger conductors in the USA in the 1930s. He made a strong impression wherever he appeared as a guest, notably with the New York PO in 1934 and 1937 (his concert *Elektra* that year with Rosa Pauly is a landmark in the orchestra's history), in Salzburg in 1936, and in Vienna in 1937. In 1937, at Toscanini's request, the NBC engaged him to assemble and train its new symphony orchestra. He was a serious contender for the conductorship of the New York PO, which Toscanini had left in 1936; the appointment of Barbirolli to that post was the probable first cause of the bitterness that was to explode a decade later between Rodziński and the Philharmonic's manager, Arthur Judson. In December 1942, Barbirolli having gone, the Philharmonic announced that Rodziński would take over the following autumn. He began by dismissing 14 players, including the leader; it was generally agreed, however, that the orchestra played with a brilliance it had not shown in years. The major controversy came in February 1947, when Rodziński demanded that the board choose between himself and Judson. They accepted Rodziński's resignation, but his image was somewhat dimmed when it was revealed that he had all along been negotiating for the musical directorship of the Chicago SO. Chicago at once announced his appointment for 1947–8, but 11 months later dismissed him, charging him with 'last-minute program changes causing confusion in rehearsals, staging of operatic productions in place of regular concerts, exceeding the budget by $30,000 and attempting to secure a three-year contract'. For the public and the critics, however, Rodziński's Chicago season was a brilliant success (his *Tristan* was the occasion of Flagstad's return to the USA after the war). After 1948, in reduced health, he was a guest conductor in Latin America and Europe and eventually settled in Italy, where he had particular success in opera. His last performances, in November 1958, were of *Tristan* at the Chicago Lyric Opera.

Rodziński was, above all, a great builder of orchestras. He made the Cleveland Orchestra, and stunningly restored the New York and Chicago orchestras, having inherited both in wretched condition. As an interpreter, he was ruggedly energetic, in no way eccentric or even strikingly individual, sometimes fiery, hardly ever poetic or delicate. He was generous, warm, impulsive, proud, reckless and much in the thrall of Frank Buchman and Moral Rearmament. It was characteristic of him that he chose for his Chicago SO farewell the 'Eroica' Symphony, *Ein Heldenleben*, and *The Stars and Stripes Forever*. In later years his temperament got in the way of a full realization of his potent musical and technical gifts.

MICHAEL STEINBERG

Roeckel. *See* RÖCKEL family.

Roedelius, Hans-Joachim (*b* Berlin, 26 Oct 1934). German electronic musician and composer, active in Austria. He has described himself as a painter or poet in sound, and does not regard himself as a traditional composer. He first experimented with spontaneous composition in Berlin during the late 1960s. After co-founding the Zodiac artistic laboratory, he formed the Kluster group (1969) with artist Konrad Schnitzler, a student of Joseph Beuys, and graphic artist Dieter Moebius. The ensemble avoided traditional instruments and improvised with noises and chance sounds. After 1971 Roedelius and Moebius performed as the duo Cluster, conceiving works that organized delicate sounds, created with the aid of sound generators, rhythm machines, electronic organs and special effects, into sweeping 'soundscapes'. The result was electronic mood music with strong natural echoes. After 1978 Roedelius worked primarily under his own name. With the support of the Alban Berg foundation he founded a small studio in the south of Vienna, where he worked in seclusion. During the 1980s his output was dominated by piano fantasias consisting of simple rippling melodies; he later wrote ballet music and songs. In 1998 the LP *Cluster 71* was chosen by the magazine *Wire* as one of the '100 Records that Set the World on Fire'.

WOLFGANG KOS

Roel del Río, Antonio Ventura (*fl* 1748–64). Spanish theorist. A pupil of Pedro Rodrigo, *maestro de capilla* at Oviedo Cathedral, he served throughout his career as *maestro de capilla* of the cathedral at Mondoñedo. In his major work, *Institución harmonica* (1748), his stated purpose was to collect from past writers principles on which to base modern practice. The work summarizes the elementary theory and practice of plainsong and mensural music and contains a 'preliminary dissertation' treating the 'origin, progress and estimation of music' which draws upon the major Spanish theorists as well as a number of foreign theorists, historians and theologians. A defender of tradition, he published two later attacks on the works of progressives. His *Razón natural* was directed against Rodríguez de Hita's *Diapasón instructivo* (1757) and claimed that the classical theorists offered sounder principles for composition than the modern Italian school; his *Reparos*, which attacked Soler's *Llave de la modulación* (1762), provoked a devastating reply by Soler in *Satisfacción a los reparos* (1765). A series of church pieces in Latin and Spanish, which Roel del Río printed with his *Institución*, show in their examples of recitative and aria and their Rococo melodic style that he was more modern in practice than in theory.

ALMONTE HOWELL

Roelkin. *See* RAULIN.

Roelstraete, Herman (*b* Lauwe, West Flanders, 20 Oct 1925; *d* Kortrijk, Belgium, 1 April 1985). Belgian composer and organist. He studied at the Lemmens Institute of Malines (1942–6) with Durieux, De Jong, Van Nuffel, De Laet and Peeters, and at the conservatories of Brussels and Ghent (1946–51) with Weynandt, Maleingrau, Poot, Defossez, Bourguignon and Van Eechaute. Between 1951 and 1961 he visited Solesmes several times to study Gregorian chant. In 1957 he studied 12-note technique with Seiber. He was director of the Izegem Academy of Music (1949–77), and from 1969 until his death taught harmony at the Brussels Conservatory. Apart from working as a composer and teacher, Roelstraete conducted the Kortrijk Mixed Choir and won the 1967 Peter Benoit Prize for his conducting. He has also been active in the field of musicology, reviving older, neglected music.

As a composer Roelstraete won several national and international awards. His music is mostly tonal and strongly contrapuntal, with occasional polytonal digressions. In some of his works he used 12-note technique (e.g. the Symphony no.4). In his later music he moved away from his expressive tendencies, evolving a more melodic and meditative style and using a simpler technique. (*CeBeDeM directory*)

CORNEEL MERTENS/DIANA VON VOLBORTH-DANYS

Roemheld, Heinz (Heinrich) Erich (*b* Milwaukee, WI, 1 May 1901; *d* Huntington Beach, CA, 11 Feb 1985). American composer. After graduating from the Wisconsin College of Music (1918) he studied in Germany with Hugo Kaun, Rudolf Breithaupt and Egon Petri. He made his concert début as a pianist with the Berlin PO in 1922. From 1923 to 1929 he was musical director for Carl Laemmle theatres in Milwaukee (the Alhambra, 1923–6), Washington, DC (the Rialto, 1927–8) and Berlin (1928–9). In 1929 Laemmle brought him to Universal Studios in Hollywood, where he succeeded David Broekman as general music director in 1930. Sometimes writing under the pseudonym Rox Rommell, he was the most prolific composer in Hollywood; he composed music for over 300 films, working for every major motion picture studio, as well as for many independent producers. He wrote music for more Warner Bros. films than any of his colleagues. In 1942 he and Ray Heindorf shared an Academy Award for *Yankee Doodle Dandy* (1942). In 1945 he was appointed chief of the film, theatre and music section of the Information Control Division for US Forces in Europe. His song 'Ruby', featured in the film *Ruby Gentry* (1952), became a standard. After retiring from film composing in 1960, he devoted his compositional energies to concert music.

Stylistically conservative, Roemheld's film music reflects the influence of his teacher Hugo Kaun and the eclectic late Romantic-Impressionist-Gershwinesque style prevalent in Hollywood throughout the 1930s and 40s. Despite these influences, his scores are rarely lush and given to excess. The musical language of his concert music is more progressive than that of his film scores; written in a neoclassical vein, these works show him to be a master of short forms.

WILLIAM ROSAR

Roeser, Valentin (*b* Germany, *c*1735; *d* Paris, probably 1782). German composer and clarinettist, active in France. The date of birth given above is an approximation based on the appearance of his first published works in 1762 and the publication of two instrumental works by his son, Charles Roeser, in 1775 (Charles also arranged some pieces by Antonín Kammel, published in Paris about 1770). Although Valentin's op.1 orchestral trios are modelled after Johann Stamitz, there is no evidence to support Riemann's assumption that he was Stamitz's pupil. Roeser had arrived in Paris by 1754 or 1755 when he played Stamitz's sextet for two clarinets, two horns, and two bassoons for the composer as mentioned and published in Roeser's *Essai d'instruction* of 1764. According to announcements in the *Mercure de France* (February 1762, p.155), his op.1 *Six sonates à trois ou à tout l'orchestre* was available for sale 'chez l'Auteur, rue de Varenne, à l'hotel de Matignon'. The work is dedicated to the Prince of Monaco, and its author is described on the title-page as a musician of the dedicatee. He lived and worked in Paris for the next two decades, during which time his name frequently appeared in the contemporary press and publishers' catalogues. In 1766 his title was given as *virtuoso di camera* to the Prince of Monaco. Three years later Roeser was in the service of the Duke of Orléans and had moved to the home of Lamy, a clockmaker in the rue Fromenteau. In 1775, still at that address, he was called 'musician and pensioner of the Duc d'Orléans'. After 1775 he was mentioned in press announcements primarily in connection with his publications. He was considered sufficiently important in 1780 for his name to be included in an advertisement for a harmony treatise by Mehrscheidt along with those of the Parisian composers Philidor, Gossec, Grétry and Rigel. The *Tablettes de renommée des musiciens* (1785) describe him as a 'celebrated composer known by a number of symphonic works, a clarinet quartet etc'. He probably died in 1782 as his name ceases to appear in the Paris press after that time; the 1785 description in *Tablettes* seems to be an error.

Roeser played an active role in the musical life of Paris, although he is not mentioned in the press as a solo clarinettist, a member of a Parisian orchestra, or as a *maître de clarinette*. His main activities were in pedagogy and composition. In 1764 he published the first of a series of eight didactic works, *Essai d'instruction à l'usage de ceux qui composent pour la clarinette et le cor*, the first true instrumentation treatise. Choron and Fayolle said he was responsible for the French translation of Marpurg's *Die Kunst das Clavier zu spielen* (1750), published anonymously under the title *L'art de toucher le clavecin selon la manière perfectionnée des modernes* and first announced by Le Menu in 1764. His name does appear, however, on *gammes* (scales) for serpent, bassoon, clarinet, oboe and flute, as well as on the French translation of Leopold Mozart's *Violinschule*, published as *Méthode raisonnée pour apprendre à jouer du violon* (1770) with an additional 12 duos and a caprice; it is the work for which he is best known. Roeser was the first to describe the classical four-key clarinet and to publish a fingering chart for it in his *Gamme de la clarinette* (*c*1769).

Roeser composed numerous original works ranging from clarinet duos to string trios that could 'also be played on the mandoline' and symphonies 'for grand orchestra' as well as a large number of instrumental arrangements. His extant works show him to be a competent composer of limited originality. In his earliest symphonic works, the orchestral trios op.1, the *Sinfonia périodique* no.2 (1762) and four of the six symphonies op.4 (1766), he imitated the style and four-movement framework of Johann Stamitz and the early Mannheim school. But his work lacks Stamitz's fire and abounds in clichés. After 1766 his symphonies follow French taste and employ the Parisian three-movement plan exclusively. Like his chamber works, many of which are limited to two movements, they never rise to great heights. Although he was so prolific, his importance lay primarily in his didactic works, his translations and his function as a conduit of German influences to Paris.

WORKS

published in Paris unless otherwise indicated

Syms: 6 sonates à trois ou à tout l'orchestre, op.1 (1762); Sinfonia périodique no.2 (1762), also as no.2 of 6 symphonies da vari autori, 4th collection by A. Bailleux (1762); Symphonie périodique no.34 (*c*1763), lost; 6 sinfonie, op.4 (1766), pubd separately as Symphonies périodiques nos.19–24; 6 simphonies, op.5 (*c*1772); 6 simphonies à grand orchestre, op.12 (1776)

BARRY S. BROOK, RICHARD VIANO/ALBERT R. RICE

Roesli, Harry (*b* Bandung, Java, 10 Sept 1951). Indonesian composer. In the early 1970s he caused a stir in the world of Indonesian rock music with his opera *Ken Arok* and was the first on the Indonesian rock music scene to experiment with gamelan instruments. Having studied at the Bandung Institute of Technology, Roesli left in 1977 to study composition at the Jakarta Arts Institute. A year later he won a scholarship to study percussion and composition at the Rotterdam Conservatory, where he began his deep involvement with contemporary music. On his return to Indonesia in 1982 he caused another commotion by experimenting with forms of musical expression new to the Indonesian people. In *LKJMH* he set diverse musical idioms in a theatrical form to a text loaded with social criticism. Roesli's consistent tendency to use his compositions as a medium for launching criticism at the excesses of the Suharto regime meant that in Indonesia he was regarded as the musical 'public enemy number one', and was frequently in and out of prison. After staging a performance by Roesli in 1996 the Jakarta Percussion Festival received a severe reprimand because the piece openly mocked the regime's corrupt and nepotistic practices. Involved in leading the reform groups which contributed to the deposing of Suharto in 1998, Roesli is a composer who occupies a unique and complex position in the cultural life of Indonesia.

For illustration *see* INDONESIA, fig.25.

FRANKI RADEN

Roethinger. French firm of organ builders. It was founded in 1893 at Schiltigheim, near Strasbourg, by Edmond Alexandre Roethinger (*b* Strasbourg, 12 April 1866; *d* Strasbourg, 20 Feb 1953). He was apprenticed to Heinrich Koulen in Strasbourg from 1880 to 1886, and then worked for Maerz (Munich), Merklin (Paris), Cavaillé-Coll (Paris) and Didier (Epinal), before setting up his own firm. After 1942 the business was managed by his son Max Roethinger (*b* Strasbourg, 2 Nov 1897; *d* 22 March 1981) and grandson André (*b* 2 Feb 1928). Roethinger initially built mechanical-action organs with valved wind-chests, but later turned to pneumatic action, the most significant of these instruments being that built for Ernstein (1914). He subsequently sought to apply the principles of 'Alsatian reform' as proposed by Emile Rupp, Albert Schweitzer and F.X. Mathias: these organs include Strasbourg Synagogue, where Rupp was organist (1925), Strasbourg Cathedral (1935), Amiens Cathedral (1937), Bourges Cathedral (1955), St Pie X, Luxembourg (1958), Gérardmer (1960) and Arras Cathedral (1963). In 1939 Roethinger undertook the restoration of the Silbermann organ in Ebersmunster. The later years of the firm's activities saw a return to mechanical action in the instruments built for Immaculée-Conception, Schiltigheim (1960), Mont-Ste-Odile (1964), Ste Marie-Madeleine, Strasbourg (1965), and Ste Famille, Schiltigheim (1968). The firm ceased organ building in 1969. A number of other organ-building firms trace their descent from Roethinger: Ernest Muhleisen, Georges Schwenkedel, Alfred Kern and Jean-Georges Koenig all worked there before setting up their own firms.

MARC SCHAEFER

Rofe, Esther (Freda) (*b* Melbourne, 14 March 1904; *d* Melbourne, 26 Feb 2000). Australian composer. She studied the piano and violin privately from the age of four and began her musical career playing in the Melbourne SO, conducted by her mentor, Alberto Zelman, at the age of 13. At the age of 18 she began working as a piano accompanist. As a composer she was largely self-taught. After private tuition from A.E. Floyd and Fritz Hart, she attended the RCM as a part-time student (1933–6), where she was significantly influenced by Gordon Jacob, Arthur Benjamin, R. O. Morris, Howells and Vaughan Williams. She achieved considerable success with her ballet scores, of which the best-known, *Sea Legend* (1935–43), became the first Australian ballet to enter the repertory of an overseas company. She was also a gifted arranger and worked in the commercial field for the ABC in Melbourne and the Colgate Palmolive Radio Unit, Sydney. Her music is strongly influenced by narrative ideas and encompasses a wide range of genres. It incorporates free counterpoint, modality and the English pastoral style. Recognition for her efforts came belatedly in the 1990s.

PAULINE PETRUS

Roffredi, Guglielmo. *See* GUGLIELMO ROFFREDI.

Rogalski, Theodor (*b* Bucharest, 11 April 1901; *d* Zürich, 2 Feb 1954). Romanian composer, conductor and pianist. After studying with Cucu (theory), Castaldi (composition) and Cuclin (music history) at the Bucharest Conservatory (1919–20), he went on to study composition and conducting with Karg-Elert at the Leipzig Conservatory (1920–23) and then to take lessons at the Schola Cantorum, Paris (1924–6) with d'Indy (composition) and Ravel (orchestration). Rogalski was conductor of the Radio Bucharest SO (1930–51), making many hundreds of broadcasts and recordings of first performances of Romanian works; he was also conductor of the Romanian Railways SO and the Perinitza Folk Ensemble, and he ended his career as principal conductor of the Enescu PO. He was professor of orchestration at the Bucharest Conservatory from 1950 to 1954. A sensitive piano accompanist, he was also engaged for a time as répétiteur at the Romanian Opera. He left a small body of polished works, notable above all for their lavish orchestral colouring, as in the *Două schiţe simfonice* ('Two Symphonic Sketches') and *Trei dansuri româneşti* ('Three Romanian Dances'). Rogalski's use of instruments was always individual, although sometimes indebted to French Impressionists, with a free handling of dissonant and polytonal harmonies and a close awareness of the potentialities of Romanian folk music.

VIOREL COSMA

Rogalyov, Igor' Yefimovich (*b* Leningrad, 6 Sept 1948). Russian composer, pianist and musicologist. He studied at the Leningrad Conservatory with Arapov (completing his postgraduate studies in 1977) and Pozdnyakskaya. In 1985 he defended his Kandidat dissertation entitled *Lad i garmoniya v muzïke S. Slonimskogo* ('Mode and harmony in the music of S. Slonimsky'). In 1977 he became a teacher, and in 1986 a senior lecturer, at the department for the theory of music at the Leningrad Conservatory. In 1991 he initiated the festival Ot Avantgarda do Nashikh Dney [From the Avant-Garde to the Present Day], one of the most representative festivals of new music in St Petersburg, and Rogalyov became its artistic director and general manager. His music is marked by diversity of themes, by wit, a vivid feeling for theatre and playfulness. These features are embodied not only in his works for the stage (such as the opera *Sol'* ('Salt') after Isaak Babel') but also in his instrumental works (such as the neo-classical concerto *Domeniko Skarlatti*).

In the 1960s and 70s Rogalyov reacted to the prevailing new wave of folklorism with the piano suite *Plachi* ('Laments'), the Concerto for a cappella choir set to folk poetry, the Concerto for an orchestra of folk instruments and the Sonata for bayan. Later, features of neo-classicism and neo-Romanticism made an appearance in *Noch'* ('Night') and other works.

M. GALUSHKO

Rogatis, Pascual de. *See* DE ROGATIS, PASCUAL.

Rogé, Pascal (*b* Paris, 6 April 1951). French pianist. The third generation of a family of musicians, he received his first piano lessons from his mother, an organist. At the age of 11 he was admitted to the Paris Conservatoire in the class of Lucette Descaves, and in the same year made his first public appearance with an orchestra in Paris. In 1966 he won *premiers prix* for the piano and chamber music at the Conservatoire, and began a three-year period of study with the American pianist Julius Katchen. In 1969 he gave his first recital in Paris and in London. After taking first prize in the Marguerite Long-Jacques Thibaud International Competition in 1971, Rogé was engaged to play with a number of European orchestras, and invited

to give recitals in Holland, Luxembourg, Yugoslavia and Germany. A pianist of finesse and sensitivity, he shows particular affinity with the French repertory. Among his recordings are colourful accounts of solo pieces by Debussy, Ravel, Fauré and Poulenc, as well as outstanding renditions of the five concertos of Saint-Saëns.

DOMINIC GILL

Rogel, José (*b* Orihuela, 24 Dec 1829; *d* Cartagena, 25 Feb 1901). Spanish composer. At the age of nine he began composing waltzes and *pasodobles* while studying the piano, flute, theory and composition with Josquín Cascales, organist of Orihuela Cathedral; in his early teens he conducted the town band. His father insisted on his studying law at Valencia, where he lived from 1845 to 1851, also studying composition, counterpoint and fugue with the cathedral organist Pascual Pérez Gascón (1802–64) and supporting himself by giving flute, piano and solfège lessons. In 1852 he moved to Madrid, where he again taught the piano and singing, arranged zarzuelas for piano and began publishing dances and operatic fantasies. Between 1854 (when his zarzuela *Loa á la libertad* was first performed at the Teatro Lope de Vega) and 1881 he composed some 80 zarzuelas. By far the most successful was the two-act *El jóven Telémaco* (1866, Variedades), with which was instituted the Compañía de los Bufos Madrileños after the style of Offenbach's Bouffes-Parisiens. Rogel's style was essentially a light and facile one, and as such he was something of a precursor of the more lastingly popular Chueca.

ANDREW LAMB

Roger, Estienne (*b* Caen, 1665/6; *d* Amsterdam, 7 July 1722). French music printer, active in the Netherlands. He and his family, as Protestants, left Normandy after the revocation of the Edict of Nantes in 1685 and moved to Amsterdam where Estienne Roger registered as a member of the Walloon church in February 1686. He soon went into the printing trade, apprenticed successively between 1691 and 1695 to Antoine Pointel and Jean-Louis de Lorme. On 11 August 1691, listed in the records as 'marchand', he married Marie-Suzanne de Magneville (*c*1670–1712). On 7 November 1695 he was on the rolls of the association of booksellers, printers and binders. During 1696 he published in association with his former master, de Lorme, but by the following year he was publishing music and other books (including histories, grammars and a dictionary of antiquities) under his own name.

Roger had two daughters. He designated the younger, Jeanne (1701–22), as his successor in the business in a will dated 11 September 1716, and from that date he used her name alone on the titles of the books he printed. The elder daughter, Françoise (1694–1723), married Michel-Charles Le Cène (*b* Honfleur, *c*1684; *d* Amsterdam, 29 April 1743) in May 1716. Le Cène worked with his father-in-law for a few years after his marriage (on non-musical publications only), but by 1720 was operating his own printing establishment producing non-musical books.

After Roger's death Jeanne maintained her father's business with the help of a faithful employee, Gerrit Drinkman. But she soon fell ill, and died in December of the same year, after cutting Françoise out of her will (because, she said, her sister had left her ill and did not help her in her weakness), and leaving the business to Drinkman. Within a short time Drinkman was also dead. At this point Le Cène arranged to buy the printing firm from Drinkman's widow. In an advertisement in the *Gazette d'Amsterdam* of June 1723 he was able to announce that he was continuing 'the business of the late Mr Estienne Roger, his father-in-law, which had been interrupted since his demise'. His wife Françoise, the last of the Rogers, died two months later.

Le Cène carried on the business for 20 years more until his death in 1743. Although he was not as active as Roger, he added the works of many new composers to the house's roster. He frequently reprinted from Roger's plates, listing the firm's name then as 'Estienne Roger & Le Cène'. Music books for which Le Cène was the originator carried only his name. Since the earlier firm had used the names

of 'Estienne Roger' and 'Jeanne Roger' there were then four names under which the business was identified.

After Le Cène's death his inventory was bought by the bookseller E.-J. de la Coste (*fl* 1743–6). Shortly after this La Coste published a catalogue of 'the books of music, printed at Amsterdam, by Estienne Roger and Michel-Charles Le Cène'. There is no evidence that he was engaged in any printing activity. In 1746 La Coste sold the business to Antoine Chareau, a former employee of Le Cène. Chareau left the firm in 1748, after which the stock and plates were dispersed.

In the period from 1696 to 1743, 600 titles (not including reprints) were printed by the firm. More than 500 of them were issued by Roger between 1696 and 1722 and less than 100 during Le Cène's regime, although Le Cène continued to republish and to retain in stock most of Roger's output. Under both Roger and Le Cène the firm's music books were carefully edited and beautifully printed from copperplate engravings; they were valued for their quality.

Besides seeking new manuscripts through direct contacts with composers, Roger's practice from the beginning was to copy music of publishers in other countries and since there were no copyright laws he could do so with impunity. While most other music printers had little distribution outside their own countries or even outside their own cities and printed the works of local composers only, Roger's distinction was that he could offer an international repertory. Furthermore his distribution network was highly effective. At various times he had agents in Rotterdam, London, Cologne, Berlin, Liège, Leipzig, Halle, Paris, Brussels and Hamburg.

Early in the 18th century, as engraving superseded movable type, music printers discontinued the practice of dating their books. Roger was the first to use publishers' numbers, a practice soon imitated by others (such as Walsh and Balthasar Schmid) and one that continued to identify books through the 18th century and part of the 19th. In about 1712–13 he assigned numbers to all the books in stock, without regard, however, to their chronological order of printing. The numbers after that time follow directly in chronological order.

Though the plate numbers of books printed before 1713 do not help in dating them, another of Roger's practices provides an approximation. From 1698 to 1716 he printed catalogues of his music books in the back of dated non-musical books. He also placed advertisements in the Amsterdam and London papers over this period of time. Thus the listing of a new work in these sources serves as a *terminus ante quem*.

Roger's repertory was particularly strong in works by Italian composers. He printed the second editions of Vivaldi's opp.1 and 2, and beginning with op.3, *L'estro armonico*, the first editions of all but two of Vivaldi's printed works were published by Roger or his successors. Roger also published all Corelli's works. The trios opp.1–4 were copied from Italian sources, as were the solos op.5 in the first instance; the latter were reprinted with added ornamentation in 1710, nearly certainly authentic (see illustration). In 1712 Roger concluded a contract with Corelli concerning his op.6 which was published posthumously in 1714. Other Italian composers in Roger's catalogues were Albinoni, Bassani, Bonporti, Caldara, Gentili, Marcello, C.A. Marino, Alessandro Scarlatti, Taglietti, Torelli, Valentini and Veracini. There

Part of an Adagio from 'Sonate a violino e violone o cimbalo di Arcangelo Corelli' op.5 (Amsterdam, 3/1715), printed by Estienne Roger from engraved plates, showing the written-out embellishments claimed to be Corelli's own

are first editions of works by Albinoni, Torelli, Pistocchi, Bernardi, Valentini, Mossi, G.B. Somis and others. From Ballard in Paris he reprinted works by La Barre, Lebègue, Lully, Marais and Mouton, and Ballard's annual *Airs sérieux et à boire*. In fact, Roger was the main publisher of many composers working in the Netherlands, England and northern Germany, including Albicastro, de Konink, Schenk, Pepusch and Schickhardt. During Le Cène's time Geminiani, Handel, Locatelli (whom Le Cène evidently knew as a friend), Quantz, Tartini and Telemann, among others, were added to the catalogue. First editions include works by Locatelli, Tartini, Geminiani, San Martini and G.B. Martini.

Although Roger copied the music of others, he also had to defend himself against plagiarism of his own publications. There were many altercations with JOHN WALSH (i) of London from 1700 onwards. More serious was the threat from the Amsterdam printer Pierre Mortier, who copied many of Roger's books in 1708 and advertised them for sale at a lower price. This problem was only resolved with Mortier's death in 1711, when Roger bought his plates and later even issued some of Mortier's editions under his own name. The importance of the firm in the distribution of music in the first half of the 18th century cannot be overestimated.

SAMUEL F. POGUE/RUDOLF A. RASCH

Roger, Gustave-Hippolyte (*b* Paris, 17 Dec 1815; *d* Paris, 12 Sept 1879). French tenor. He entered the Paris Conservatoire in 1836 as a pupil of Blès Martin and won *premiers prix* in singing and in *opéra comique* the following year. In 1838 he made his début as Georges in Halévy's *L'éclair* at the Opéra-Comique, where he subsequently created a number of roles written for him by Halévy, Auber and Thomas. His success rested on his considerable intelligence, fine bearing and pure tone. In 1846 he sang Faust in the first performance of Berlioz's *La damnation de Faust*, and in 1848 he moved from the Opéra-Comique to the Opéra, where, in 1849, he created the role of Jean de Leyde in Meyerbeer's *Le prophète*. Although his voice was too light for such parts, he had enormous success and continued to sing a number of leading tenor roles at the Opéra. He successfully toured Germany on several occasions. His most celebrated partners were Jenny Lind and Pauline Viardot, and he enjoyed the friendship of Berlioz, Meyerbeer and many literary figures. In 1859 he sang in Félicien David's *Herculanum* at the Opéra, but shortly afterwards he lost his right arm in a shooting accident. For some years he continued to appear on stage with a mechanical arm, at the Opéra-Comique and in the provinces, and from 1868 until his death he was a professor of singing at the Conservatoire. His book *Le carnet d'un ténor* (1880) contains lively memories of his career, including an account of his visits to England in 1847 and 1848. In 1861 Berlioz orchestrated Schubert's *Erlkönig* for him.

HUGH MACDONALD

Roger (i Casamada), Miquel (*b* Barcelona, 16 July 1954). Catalan composer. He studied at the Barcelona Conservatory and continued his studies with Josep Soler. In 1985 he obtained a degree in arts and philosophy from the University of Barcelona. He taught musical theory at the Manresa Conservatory (1982–6). In 1987 he was appointed head of the music theory department and teacher of counterpoint, history, aesthetics and composition at the Badalona Conservatory. His chamber opera, *Nascita e apoteosi di Horo*, won a prize at the First Chamber Opera Competition of the Spanish National Youth Orchestra.

Roger's music has its roots in the Second Viennese School and has developed gradually towards an aesthetic free of academic restraints. At times, the morphological structure of his music displays a markedly contrapuntal mentality which, by its audacity, seems to establish a link with the inquiring spirit of Renaissance polyphony. On the other hand, he occasionally displays a clearly homophonic tendency. His work stands out for the logical structure and austere progression, free of digressions, which he applies to the development of his compositions.

F. TAVERNA-BECH

Roger, Roger (*b* Rouen, 5 Aug 1911; *d* France, 12 June 1995). French arranger, composer and conductor. The son of Edmond Roger, a well-known Paris opera conductor and friend of Debussy, he was attracted more to popular music and at 18 formed his first small group for a music hall. This encouraged him to develop his arranging skills, although he also showed a flair for composing. During a long career he accompanied almost every French singer, and his 'Paris Star Time' radio series was heard worldwide. He once claimed to have made over 2000 recordings, half of them his own compositions. The Roger style suited the requirements of production music companies, and he worked extensively for the Paris office of Chappells; his *City Movement* (1960) became well known in Britain as the theme for the BBC television programme 'Compact'. During the 1950s he recorded several albums for the American market, but concentrated his career in France. He claimed to have drawn his inspiration from Wagner, Gershwin, Debussy and Ravel, yet developed a unique style, often using strings and brass in counterpoint, assisted by the particularly intimate sound qualities of his favourite recording studios.

Feux Follets, 1954; Haute couture [Paris Fashions], 1954; La vitrine aux jouets, 1954; Clowneries, 1956; En carriole [Horse and Buggy], 1956; Industrie dans la ville [New Town], 1956; Près des flots, 1956; Tele-Ski, 1956; Traffic Boom, 1956; Grands travaux, 1957; Rythme des rues, 1957; Paris Pullman, 1958; City Movement, 1960; La forêt enchantée, 1962; Scenic Railway, 1962; Contorsions, 1963; Fête foraine, 1963; Lunar Landscape, 1963; Polka mauve, 1963; Djanina, 1964; Danse lunaire, 1966

DAVID ADES

Roger, Victor (*b* Montpellier, 22 July 1853; *d* Paris, 2 Dec 1903). French composer. The son of a musician, he studied at the Ecole Niedermeyer and began his career as a composer of songs and operettas for the Eldorado music hall. It was with *Joséphine vendue par ses soeurs* (1886), a parody of Méhul's *Joseph*, that he made his mark, and he confirmed his success in France and abroad with the military operetta *Les vingt-huit jours de Clairette* (1892) and *L'auberge du Tohu-Bohu* (1897). Both are examples of the 'vaudeville-opérette' – more comedy-with-music than full-blown comic opera – in which he specialized. A Chevalier of the Légion d'Honneur, he was critic for *La France*, edited the theatrical news in the *Petit journal* and was general secretary of the balls at the Opéra. Besides his songs and operettas, his compositions included some ballet pantomimes and salon pieces. His music is admirably crafted, demonstrating melodic grace, charm and a flair for rhythmic effect that are well suited to the lighthearted stage works to which he contributed. *Les vingt-huit jours de Clairette* especially has remained in the French repertory.

ANDREW LAMB

Roger, William (*d* Lauder Bridge, Scotland, 22 July 1482). English courtier and musician, active in Scotland. According to Ferrerio he was one of an embassy sent to Scotland by Edward IV to negotiate a 20 years' peace; he was so delighted with the music there that he remained in Scotland for the rest of his life. He was perhaps the William Roger Esquire 'of the realm of Scotland' who on 13 November 1470 was granted a safe conduct pass to come and go between England and Scotland for a year. In 1467 Roger was clerk of the Chapel Royal at the court of James III, and was awarded lands at Traquair in November 1469, resigning them after the general revocation of 1476. As one of the king's familiars, he would have had an official position in the royal household; he was probably the clerk of spices whose own clerk was paid for receiving spices in 1472–3. In 1482 dissident nobles seized the king and hanged Roger and other favourites off Lauder Bridge.

Ferrerio described Roger as 'musicus rarissimus ex Anglia' and wrote that in 1529 there were numerous distinguished men who claimed to have been taught by him. It is possible that, in his privileged position, Roger advised James on the disposition of his proposed royal chapel in Stirling (described by Pitscottie) but there is no evidence to support this.

MARGARET MUNCK

Roger de Chabannes (*b c*965; *d* Limoges, 26 April 1025). French monk and cantor. He served at the abbey of Saint Martial in Limoges. Roger, who was the paternal uncle of Adémar de Chabannes, is known to have become cantor at the abbey after 1010 (see J. Grier, 'Roger de Chabannes (d.1025), Cantor of St Martial, Limoges', *EMH*, xiv, 1995, pp.53–119). During his lifetime, and perhaps under his direction as cantor, the monastery undertook a complete codification of its liturgical music, the results of which are preserved in extant notated manuscripts. An antiphoner written at St Martial in the late 10th century, *F-Pn* lat.1085, is one of the earliest surviving monastic chant books for the Divine Office, and

the troper-proser *Pn* lat.1120 (*c*1000; St Martial) also contains offertories and processional antiphons.

JAMES GRIER

Roger-Ducasse, Jean (Jules Aimable) (*b* Bordeaux, 18 April 1873; *d* Taillan-Médoc, Gironde, 19 July 1954). French composer and teacher. A student at the Paris Conservatoire from 1892, he studied composition with Fauré, counterpoint with Gédalge, harmony with Pessard and piano with Charles-Auguste de Bériot. In the 1902 Prix de Rome competition his cantata, *Alcyone*, beat Ravel's entry, gaining the second prize. He was a founding member of the Société Musicale Indépendante (1909) along with Ravel, Vuillermoz and Koechlin. A friend of Debussy's, he gave an early of performance *En blanc et noir* with him in December 1916, and was with Chouchou (Debussy's daughter) when Debussy died. In 1910 Roger-Ducasse became inspector general for the teaching of singing in Paris schools. In 1935 he succeeded Dukas as professor of composition at the Conservatoire, a post from which he resigned in 1940, after the fall of France.

Roger-Ducasse's early compositions were indebted to Fauré. He retained a lasting admiration for him, dedicating several works to his teacher. The fourth movement of the First String Quartet (1900–09) outlines the letters of Fauré's name (FAGD), and the second movement reveals Debussy's impact in the varied manipulation of the string textures and pizzicato effects. The orchestral *Suite française* (1907) shows technical assurance; it is succinct and logical, displaying a wit rather like Chabrier's. Roger-Ducasse soon developed a distinct personal style, showing a predilection for large forces and symphonic and vocal combinations. This individuality is first revealed in the symphonic poem *Au Jardin de Marguerite* (1901–5), in which he exploits the capabilities of his large forces, deploying varied orchestral textures and juxtaposing countrapuntal and homophonic writing. In addition to shaped and rhythmically flexible vocal lines, he introduces evocative wordless choruses to accompany the soloists. His Sarabande for orchestra and voices starts from a simple theme in Spanish style and gradually builds to a climax of high emotional intensity. *Ulysse et les Sirènes* (1937), a symphonic poem with women's voices, is characteristic of his mature style, displaying abrupt contrasts of texture, ostinato patterns, scalic passages, prominent use of unpitched percussion and a wordless chorus treated as another orchestral texture. Despite an obvious interest in the voice and text, Roger-Ducasse wrote only two dramatic works. Gabriel D'Annunzio thought of approaching Roger-Ducasse to set *Le martyre de Saint Sébastien* before securing Debussy's services in 1910. In the 'mimodrame lyrique' *Orphée* (1912–13) Roger-Ducasse blurs the boundaries between ballet, opera and oratorio; the action on stage is mimed, the text, which the composer adapted from the Orpheus myth, being delivered by the chorus. *Orphée* was performed at the Ziloti concerts in St Petersburg in 1914. A stage production planned for the same year with choreography by Fokine and sets by Bakst has abandoned because of the outbreak of World War I. The work was eventually staged at the Paris Opéra by Ida Rubinstein in 1926.

BARBARA L. KELLY

Rogeri, Giovanni Battista (*fl* *c*1670–*c*1705). Italian violin maker. He was a pupil of Nicolò Amati in Cremona. By 1675 he was in Brescia and his violins of that period are neat in appearance and reflect an awareness of the Amati system of design and construction. The wood for his backs, sides and scrolls was at first mostly the narrow-flamed variety found locally; and perhaps not surprisingly he sought in certain of his violins to introduce features of Maggini, his predecessor in Brescia half a century earlier.

By 1690 Rogeri's work achieved a visual elegance exceeded by few of his contemporaries, and he was no doubt already assisted by his son, Pietro Giacomo (*b* *c*1670; *d* Brescia, 23 Sept 1724), though no instruments by the latter dated earlier than 1705 are known. Pietro Giacomo was a much finer craftsman than is usually appreciated, with a preference for hooked and almost clubby corners: in that detail and in others, such as the rather heavy, flatly carved scrolls, he exaggerated the taste of his father. Wood of the handsomest figure was often used, but there are also instruments less refined in appearance, many with unpurfled backs. This could have been the consequence of his collaboration with members of the Pasta family of violin makers. Tonally some Rogeri instruments compare with the best of the Amatis, particularly the violins with 'grand pattern' dimensions. The many cellos offer a good blend of incisiveness and Cremonese quality.

Since Pietro Giacomo Rogeri usually spelt his name 'Ruggerius' it has been suggested that the family may have been related to Francesco Rugeri, who worked at Cremona, but their workmanship is quite dissimilar, and is seldom confused.

CHARLES BEARE/CARLO CHIESA

Rogers. English firm of piano makers. George Rogers, a fine craftsman, founded the firm in London in 1843 as George Rogers & Sons. Shortly after World War I Rogers and the firm of Hopkinson amalgamated and became the Vincent Manufacturing Co. Ltd, after which Rogers and Hopkinson pianos – grand and upright – were made under the same roof. In 1963 H.B. Lowry and I.D. Zender took over and Lowry redesigned the string scales and casework of the pianos. Manufacture of grand pianos then ceased and the firm began specializing in uprights, establishing a considerable reputation for quality and durability. An upright piano of about 1909, veneered all over with rosewood and decorated with two brass candlesticks in *art nouveau* style, is preserved at the Liverpool Museum. In 1993 manufacture of Rogers and Hopkinson pianos was taken over by WHELPDALE, MAXWELL & CODD.

MARGARET CRANMER

Rogers, Benjamin (*b* Windsor, bap. 2 June 1614; *d* Oxford, June 1698). English organist, singer, cornett player and composer, brother of JOHN ROGERS. According to his friend Anthony Wood, he was the son of Peter Rogers, a lay clerk at St George's Chapel, Windsor, and was a chorister and singing-man there. He became acting organist of Christ Church, Dublin, in summer 1638, and was confirmed in the post on 9 September 1639. He returned to Windsor as a lay clerk in 1641, and was given a pension during the Interregnum 'by the favour of the men then in power'. In 1653 he became a singing-man at Eton, where he was patronized by Nathaniel Ingelo, one of the fellows. In November that year Ingelo accompanied Bulstrode Whitelocke on his embassy to Sweden as chaplain, and took with him some four-part suites by Rogers, which were performed by Queen Christina's Italian musicians (autograph parts of two suites are in *S-Uu*). Wood wrote that about the same time several of Roger's four-part suites were also sent to the future Emperor Leopold I's court, where they were played 'to his great content'. In 1658 Rogers received a MusB from Cambridge, on Cromwell's orders and probably at the instigation of Ingelo and Whitelocke. His lost first setting of Ingelo's *Hymnus eucharisticus* was performed at Charles II's civic reception at the Guildhall in London on 5 July 1660 'by 12 voices, twelve instruments and an organ', according to Wood.

Soon after the Restoration Rogers became joint organist of Eton with Charles Pearce, and was sole organist from 1661. In addition, in October 1662 he was again appointed a lay clerk at St George's Chapel, and was allowed extra money 'in consideration of his being able to play upon the organs and cornett'. He was appointed organist and *informator choristarum* of Magdalen College, Oxford, on 22 July 1664, beginning his duties in January 1665 with the unusually large salary of £60 with rooms in the college. He received an Oxford MusD in July 1669, though his career at Magdalen came to a sudden end in January 1686. It was said that he talked 'so loud in the organ loft that he offended the company', and that he refused to accompany the choir properly, 'but out of a thwarting humour would play nothing but Canterbury [psalm] tune'. There was also scandal surrounding his daughter, a 'lewd creature' who had been living in his rooms and was pregnant by the college porter. Despite this, the college gave him a pension of £30, which he enjoyed until his death in June 1698.

Rogers was mainly remembered in the 18th and 19th centuries for his services and anthems, though they tend to be unadventurous, with homophonic four-part textures and simple, foursquare rhythms, and were outdated by the 1660s, when most of them seem to have been written. His consort music is more interesting, and includes nine lively and accomplished four-part suites in the mid-century manner derived from the first version of William Lawes's *Royal Consort*. Wood wrote that the Oxford music professor John Wilson 'usually wept when he heard them well perform'd, as being wrapt up in an extasie or, if you will, melted down, while others smil'd or had their hands and eyes lifted up at the excellency of them &c.'. In his harpsichord music Rogers occasionally used the expressive *style brisé* idiom derived from French lute music, though most of the pieces are simple tune-and-accompaniment dances, and several are arrangements of his consort music. Like most English organists at the time, he would have normally improvised voluntaries, though a fine C major voluntary in an autograph dated 1664 survives to give an idea of his abilities.

PETER HOLMAN

Rogers, Bernard (*b* New York, 4 Feb 1893; *d* Rochester, NY, 24 May 1968). American composer and teacher. He began piano studies at the age of 12 and left school at 15 to work for the firm of architects Carrère & Hastings, attending evening classes in architecture at Columbia University. Ambitious to become an artist, he obtained permission to copy paintings at the Metropolitan Museum of Art in New York. Throughout his life he painted as a hobby, and his interest in art, particularly in Japanese prints, continued to influence his music. His strong liking for poetry was also reflected in his compositions. Rogers studied music theory with Hans van den Berg, composition with Farwell, and harmony and composition with Bloch before enrolling at the Institute of Musical Art in 1921 to study with Goetschius. For several years he was on the editorial staff of *Musical America*, and in 1922–3 he was at the Cleveland Institute of Music, also serving as music critic for the *Cleveland Commercial*. In 1923, returning to New York, he resumed his work with *Musical America*. He taught at the Hartt School of Music in 1926–7, and from 1927 to 1929 he held a Guggenheim Fellowship, which enabled him to study with Frank Bridge in England and Nadia Boulanger in Paris. Returning to the USA, he joined the faculty of the Eastman School of Music, where, at the time of his retirement in 1967, he was chairman of the composition department, and where he taught many students who became prominent composers, including Ussachevsky, Mennin, Argento and Diamond. Among the awards he received were a Pulitzer Travel Scholarship for the orchestral dirge *To The Fallen*, given its first performance by the New York PO in 1919, the David Bispham Medal for the opera *The Marriage of Aude* and the Alice M. Ditson Award for opera for *The Warrior*. In 1947 he was elected to the National Institute of Arts and Letters.

Rogers was often inspired by biblical themes, particularly in larger works and choral pieces; and poetry, notably that of Whitman, provided texts or points of departure for several works. Japanese prints influenced his orchestral colour as well as his subject matter. His sensitivity to possibilities of instrumentation informs his treatise *The Art of Orchestration* (1951), a standard work. His compositions can be striking, stark and majestic, but also witty, delicate and full of gossamer-like effects.

WORKS

OPERAS AND CHORAL

Ops: Deirdre, 1922; The Marriage of Aude (C. Rodda, after the *Chanson de Roland*), 1931; The Warrior (N. Corwin), 1944; The Veil (R. Lawrence), 1950; The Nightingale (B. Rogers), 1954

Choral with orch: The Raising of Lazarus (L. Rogers), 1929; The Exodus (Rodda), 1931; The Passion (Rodda), orat, 1942; A Letter from Pete (cant., W. Whitman), 1947; The Prophet Isaiah, cant., 1950; The Light of Man (orat, after Bible: *John*), 1964

Other choral works: Ps xcix, chorus, org, 1945; Response to Silent Prayer, 1945; Hear my Prayer, o Lord, S, chorus, org, 1955; Ps xviii, male vv, pf, 1963; Ps lxxxix, Bar, chorus, pf, 1963; Faery Song (J. Keats), female 4vv, 1965; Dirge for Two Veterans (Whitman), chorus, pf, 1967; Ps cxiv, chorus, pf, 1968

ORCHESTRAL

Syms.: no.1 'Adonais', 1926; no.2, A♭, 1928; no.3 'On a Thanksgiving Song', 1936; no.4, g, 1940; no.5 'Africa', 1959

Large orch: To The Fallen, 1918; The Faithful, ov., 1922; In the Gold Room, 1924; Fuji in the Sunset Glow, 1925; Hamlet, prelude, 1925; 3 Japanese Dances, 1933; 2 American Frescoes, 1934; The Supper at Emmaus, 1937; The Song of the Nightingale, suite, 1939; The Colors of War, 1939; The Dance of Salome, 1940; The Sailors of Toulon, 1942; Invasion, 1943; Anzacs, 1944; Elegy in Memory of Franklin D. Roosevelt, 1945; Amphitryon Ov., 1946; The Colors of Youth, 1951; Portrait, vn, orch, 1952; Dance Scenes, 1953; Variations on a Song by Moussorgsky, 1960; New Japanese Dances, 1961; Apparitions, 1967

Small orch: 5 Norwegian Folk Songs; Rhapsody Nocturne; Soliloquy no.1, fl, str, 1922; Pastorale, 11 insts, 1924; Once upon a Time, 1936; Fantasy, fl, va, str, 1937; Soliloquy no.2, bn, str, 1938; The Plains, 1940; Characters from Hans Christian Andersen, 1946; Elegy, 1947; The Silver World, 1949; Fantasy, hn, timp, str, 1952; Allegory, 1961; Pastorale mistico [prelude to The Passion], 1966

OTHER WORKS

Solo vocal with orch: Buona notte, T, orch; Aladdin, dramatic scene, T, B, orch; Arab Love Songs, S, orch, 1927; Horse Opera (M. Keller), nar, orch, 1948; Leaves from the Tale of Pinocchio, nar, orch, 1951; Ps lxviii, Bar, orch, 1951; The Musicians of Bremen, nar, 13 insts, 1958; Aladdin, nar, wind ens, 1965

Chbr: Elegy, vc, pf, 1913; Mood, pf trio, 1918; Str Qt no.1, 1918; Free Variations and Fugue, str qt, 1918; Str Qt no.2, 1925; Untitled, perc, 2 pf, 1937; The Silver World, fl, ob, str, 1950; Str Trio, 1953; Ballade, bn, va, pf, 1959; Sonata, vn, pf, 1962

12 songs, 4 solo inst pieces, 8 transcriptions, 1 documentary film score

MSS in *US-R*

Principal publishers: Elkan-Vogel, MCA, Southern

RUTH T. WATANABE

Rogers [née Barnett], **Clara Kathleen** [Doria, Clara] (*b* Cheltenham, 14 Jan 1844; *d* Boston, 8 March 1931). American singer, composer and teacher of English origin. The granddaughter of the cellist Robert Lindley and daughter of the composer John Barnett, she received musical instruction from her parents before entering the Leipzig Conservatory at the age of 12. She studied the piano with Ignaz Moscheles and Louis Plaidy, as well as harmony and singing. After further piano study (with Hans von Bülow) and singing lessons, she made her début in 1863 in Italy as Isabelle in Meyerbeer's *Robert le diable*, using the stage name Clara Doria. After triumphs in Genoa, Naples and Florence, she returned to London in 1866 and continued her concert career. In 1871 she went to the USA with the Parepa-Rosa troupe, and the following year toured with the Maretzek company. She settled in Boston (1873) and concentrated on composition and teaching after her marriage in 1878 to the Boston lawyer Henry M. Rogers. In 1902 she was appointed professor of singing at the New England Conservatory. Her published writings are extensive and significant, including several on singing and a multi-volume autobiography. Her early chamber works show solid craftsmanship and her songs display a steady development towards an expressive chromatic, lyrical language, often tinged with humour. Her manuscripts and correspondence are in the Library of Congress, Washington DC.

WORKS
(*selective list*)

Vocal: *c*100 songs, incl. 2 cycles (R. Browning), op.27 (Boston, 1893), op.32 (Boston, 1900); Aubade, with vn obbl (1883)

PAMELA FOX

Rogers, John (*b* ?1605–15; bur. London, 14 Sept 1676). English lutenist, brother of BENJAMIN ROGERS. A 1652 entry in the diary of Lodewijck Huygens mentions him as the brother of Benjamin Rogers and that both were among a group of prominent musicians who had gathered at the home of Davis Mell to play concertos. One of Cromwell's musicians in 1658, Rogers succeeded to the illustrious place of Jacques Gautier (worth £100 p.a.) in the King's Music at the Restoration in 1660; this place is mentioned in one account as 'musician in ordinary for the French lute'. Apart from a single piece entitled *Arrons Jig*, found in Thomas Salmon's *An Essay to the Advancement of Musick* (London, 1672), no music by Rogers survives. Musically the piece is of little interest, but it shows that Rogers taught and played in a form of D minor tuning pitched considerably higher than modern transcriptions of lute music would allow. Salmon wrote 'I have chose this tuning [French B natural] … as 'tis that which the most excellent lutanist Mr John Rogers ordinarily teaches in London to his scholars'. William Chappell in his *Popular Music of the Olden Time* (London, 1855–9) mentioned a manuscript (the lost Etwell Hall manuscript) said to have been in Rogers's hand.

Rogers belonged to John Playford's Old-Jewry Musick Society and was described in John Batchiler's life of Susannah Perwich (*The Virgin's Pattern*, 1661) as 'the *rare Lutenist* of our Nation'. He lived in the City of London, near Aldersgate, and was referred to by Mace in 1676 as the lute's greatest friend, although '*He grows* Old now; *has not long to stay*'. He was dead by Michaelmas the same year and was presumably the 'Mr John Rogers' afflicted by the 'grips' who was buried at St Botolph, Aldersgate, on 14 September. His wife Anne petitioned the crown in 1677 for £525 of unpaid wages 'which is all that is left to the Pet[itioner] and her Children, who are in a starveing Condicon'.

IAN SPINK/MATTHEW SPRING

Rogers, Nigel (David) (*b* Wellington, Shropshire, 21 March 1935). English tenor. He studied at King's College, Cambridge, under Boris Ord (1953–6), then privately in Rome (1957), Milan (1958–9) and at the Musikhochschule in Munich (1959–64), where he was taught by Gerhard Hüsch. There in 1960 he helped to found the Studio der Frühen Musik, a quartet specializing in early music, with whom he made his professional début in 1961. Since 1964 he has also pursued a career as a soloist, particularly in music of the Baroque period, on the Continent, especially in Germany and the Netherlands; he has also sung in Britain and in North America. He teaches at the Schola Cantorum Basiliensis. Rogers has specialized in Monteverdi's operas, singing principal roles in *Il ritorno d'Ulisse in patria*, *L'incoronazione di Poppea*, *Il combattimento di Tancredi e Clorinda* and *Orfeo*. He has been associated with several early music groups, including Chiaroscuro, with whom he has recorded frequently and performed in many European countries, but has not confined himself to music of the 17th century and earlier; he has sung in several 20th-century works (including *Billy Budd* and Goehr's *Arden must Die*), and his recordings include Bach's *St Matthew Passion* and Schubert's *Die schöne Müllerin* (with fortepiano accompaniment) as well as music by Monteverdi (notably *Orfeo*, whose title role he has recorded twice), Morley, the lute-song repertory and 16th- and 17th-century music. His keen sense of style and natural feeling for the expressive character of Baroque music, coupled with an exceptional control in florid music, made him a leading figure in the early music revival of the 1960s and 70s. His voice, apt in scale to Baroque music, has a certain incisive quality; he has a ready command of the *trillo* and of fast-moving,

elaborate lines such as those of Orpheus's 'Possente spirto' from *Orfeo*, an interpretation that has won him special praise. He has also contributed to periodicals and written a chapter on the voice in J.A. Sadie, ed.: *Companion to Baroque Music* (London, 1990).

STANLEY SADIE

Rogers, Shorty [Rajonsky, Milton M.] (*b* Great Barrington, MA, 14 April 1924; *d* Van Nuys, CA, 7 Nov 1994). American jazz and film composer, arranger, trumpeter and bandleader. He studied at the High School of Music and Art, New York, and played professionally with Will Bradley and Red Norvo while still a teenager. After military service he was a member of Woody Herman's big band (1945–49), where he attracted attention as an arranger. Later he contributed scores to Stan Kenton's band (1950–51). In Los Angeles he led groups with former Kenton sidemen, most notably Art Pepper. He supervised such jazz film scores as *The Wild One* (1954, composed by Leith Stevens) and *The Man with the Golden Arm* (1955, composed by Elmer Bernstein), and also served as an artistic director for Atlantic Records (1955) and RCA Victor (from 1954). From the 1960s he turned increasingly to Hollywood studios as a composer of music for films and television and a supervisor of soundtrack recording sessions. He resumed playing jazz in the 1980s on the flugelhorn, and in 1990 he co-led a group with the alto saxophonist Bud Shank at the Chicago Jazz Festival.

Rogers was a leading figure in the West Coast style of jazz in the early 1950s. His big-band scores explored increasing timbral densities (*Infinity Promenade*), irregular ostinatos (*Tale of an African Lobster*; both on *Cool and Crazy*, 1953, KCA) or bitonality (*I'm gonna go fishin'*, on *Jazz Waltz*, 1962, Rep.). In his own groups, and in those of Jimmy Giuffre and Teddy Charles, he dispensed at times with chord progressions, improvising on modes, and, in *Three on a Row* (on Shelly Manne's album *The Three*, 1954, Cont.), pioneering the use in jazz of the 12-tone technique. His arrangements for small group are remarkable for their unusual variety of instrumental textures, *Martians Go Home* (on *The Swinging Mr Rogers*, 1955, Atl.) being a particularly intriguing and influential example. Rogers was also among the earliest jazz musicians to take up the flugelhorn, which, like the trumpet, he played in a subdued manner indebted to Miles Davis's early style and well described in Stravinsky's *Conversations*, where the composer points to Rogers as a possible influence on his use of that instrument in *Threni*.

J. BRADFORD ROBINSON

Rogers Virginal Book [Elizabeth Rogers's Virginal Book] (*GB-Lbl* Add.10337). *See* SOURCES OF KEYBOARD MUSIC TO 1660, §2(vi).

Rogg, Lionel (*b* Geneva, 21 April 1936). Swiss organist and composer. He studied the organ with Pierre Segond and the piano with Nikita Magaloff at the Geneva Conservatoire, gaining *premiers prix* on both instruments. In 1961 he played all Bach's organ works in ten recitals in the Victoria Hall, Geneva, subsequently recording them on the Metzler organ in the Grossmünster, Zürich. This laid the foundation of his international reputation as a Bach specialist; as his interpretative skills increased he re-recorded the complete Bach organ works twice. His illuminating performance of the *Art of Fugue* (recorded in 1970 in Geneva Cathedral) won a Grand Prix du Disque. Rogg has proved equally authoritative with Buxtehude (whose complete organ works he recorded in 1980) and his contemporaries, François Couperin and his school, and the literature of Reger, Liszt and Brahms. He has travelled the world, giving countless recitals and masterclasses in Europe, the Americas, South Africa, Japan and Australia. He was professor of counterpoint (1960–72) at the Geneva Conservatoire, where he was appointed professor of organ in 1967; in addition he gives classes in improvisation and in interpretation at the Scuola Civica in Milan. In 1989 Rogg received an honorary doctorate from the University of Geneva. Having inaugurated the new van den Heuvel organ in the Victoria Hall, Geneva, in 1993, he has made several acclaimed recordings there as resident organist. From the 1980s he has been productive as a composer, principally of organ, piano and choral music. His writings include many articles in *Tribune de l'orgue* (Lausanne, 1963–).

PAUL HALE

Roggius, Nicolaus (*b* Göttingen, *c*1518; *d* Brunswick, 29 Nov 1567). German Kantor and music theorist. He was a Kantor at the school attached to St Martin, Brunswick, from 1551 to 1567. In 1566 he published a treatise entitled *Musicae practicae sive artis canendi elementa* (4/1596) in which he made use of several principles advocated by leading theorists of the time. Following Sebald Heyden (*De arte canendi*, Nuremberg, 1540) Roggius advocated reducing the three hexachords to two, one employing B♮ and the other B♭. He also simplified the rules for mutation. From Glarean (*Dodecachordon*, Basle, 1547) he took the theory of 12 modes. In his section on mensural music he introduced several polyphonic compositions, including Ludwig Senfl's six-voice canon *Laudate Dominum* and Johannes Heugel's *Veni Creator* for three voices. Part of the appeal of the treatise was its question-and-answer format, a procedure popular since medieval times. (*ADB* (R. Eitner); *MGG1* (M. Ruhnke))

CLEMENT A. MILLER

Rogie, S.E. [Rogers, Sooliman Ernest] (*b* Fornikoh, Sierra Leone, *c*1928; *d* London, 4 July 1994). Sierra Leonean songwriter and performer. A self-taught guitarist influenced by the music of country and western singer Jimmie Rodgers, Rogie performed in the palm wine style, steeped in the tradition of sailors' work songs and African traditional music. Rogie usually sang in Mende or Krio (languages of Sierra Leone), his smooth baritone voice accompanied by guitar and percussion.

As S.E. Rogers (Rogie was his nickname), Rogie began recording in the mid-1950s in Freetown. Rogie gained popularity with *My Lovely Elizabeth*, picked up by EMI in 1962. In 1965 he electrified his acoustic sound and formed a band called the Morningstars with whom he recorded some of his best material, including *Baby Lef Marah* and *Man Stupid Being*.

Rogie's fortunes declined in the 1970s. He moved to the San Francisco Bay area in 1973 where he replaced

Rogers with Rogie because it sounded more African. His career was reborn in 1986 with the release of *The 60s' Sounds of S.E. Rogie* (*Palm Wine Guitar Music* in the UK) a compilation of his hit songs. The album's popularity in the UK prompted Rogie to move to London where he performed regularly. Later albums included *The Palm Wine Sounds of S.E. Rogie* (Workers Playtime) and *Dead Men Don't Smoke Marijuana* (Real World).

GARY STEWART

Rogier. *See* PATHIE, ROGIER.

Rogier, Philippe (*b* Arras, *c*1561; *d* Madrid, 29 Feb 1596). Flemish composer, active in Spain. When Geert van Turnhout became *maestro de capilla* to Philip II he brought with him from the Low Countries a number of boy trebles, among them Philippe Rogier, who arrived in Madrid on 15 June 1572. He was subsequently ordained priest, as is shown in the dedication preceding the 1595 collection of his motets, where the initial S, the usual abbreviation for *sacerdos* ('priest'), is placed after his name. Also, in the roster of the royal chapel from 1586, Rogier is listed among the chaplains.

When George de La Hèle became *maestro de capilla* in 1582 the musical establishment of Philip II flourished. In 1584 Rogier was appointed *vicemaestro de capilla*. In 1585 the chapel travelled to Zaragoza for the nuptial festivities of Carlo Emanuele I, Duke of Savoy, and the Infanta of Castile. For this occasion Rogier wrote a six-part *Missa 'Ave martyr gloriosa'*, and an eight-part motet, *In illo tempore*. Upon the death of La Hèle in 1586, Rogier took over the direction of music at the court.

On 2 March 1590 Rogier travelled to the Low Countries to recruit four chaplains, three basses and an assistant for himself. The last Flemish choirboys to come to Spain – twelve of them – were brought there at his request in 1594.

Because he was a priest, Rogier was provided with non-residential benefices by Philip II to augment his income. As early as May 1581 he was granted such a benefice at the church of Notre Dame in Yvoir. In 1592 the king asked that he be appointed to the first prebend vacant at Tournai Cathedral, and at the time of his death he was receiving an annual pension of 300 ducats from the Bishop of León. In 1590 Toledo Cathedral gave Rogier 30 ducats for a volume of his masses, sumptuously bound in calf.

Rogier's last work, mentioned as such in the catalogue of music in the library of João IV of Portugal, was *Toedet anima mea*, written for a Mass for the Dead. In his will Rogier entrusted his student and *vicemaestro de capilla* Géry de Ghersem with the publication of five of his masses, for which support had been promised by Philip II. However, the king also died before the collection was printed in 1598, and it was dedicated to Philip III. To the five masses by Rogier in this collection, Ghersem added a sixth of his own, *Missa 'Ave Virgo sanctissima'*.

Only a small portion of Rogier's work remains. In the library of João IV of Portugal, Rogier was represented by 243 compositions, including 8 masses, 2 *Magnificat* settings, 2 antiphons, 2 responsories, 27 verses, 66 motets, 65 chansons and 71 villancicos. His surviving sacred works show his mastery of the various compositional devices and techniques of the Flemish style of Clemens non Papa and Nicolas Gombert. However, his secular works (with and without text) reveal a rhythmic and harmonic style more adventurous than that of the Flemish chansons of his day, and perhaps owing more to the early secular style of Lassus and the madrigals of Giovanni Maria Nanino. In particular, the extensive syncopation employed in these works is very similar to that found in the early 17th-century villancicos of such composers as Mateo Romero and Gabriel Díaz Bessón, men who studied with Rogier or were influenced by him.

That Rogier's influence was substantial and long-lasting is attested to by Lope de Vega in the fourth *silva* of his poem *Laurel de Apolo*, written in 1630: 'Rogier, honour, glory, and light of Flanders ... left this life in the flower of [his] genius, depriving us of our sweet Orpheus'.

LAVERN J. WAGNER/DOUGLAS KIRK

Rognoni [Rognino, Rogniono, Rognone, Rognoni Taeggio, Rognoni Taegio, Rongione, Rongioni, Taegio]. Italian family of musicians. 'Taeggio', derived from the presumed place of origin of (1) Riccardo Rognoni, was used only by his sons (2) Giovanni Domenico and (3) Francesco below.

(1) Riccardo [Ricardo, Richardo, Richardus] **Rognoni** (*b* ?Val Taleggio, nr Bergamo, *c*1550; *d* ?Milan, before 20 April 1620). Musician and composer. In 1586 his *Canzonette alla napolitana*, for three and four voices, now lost, was published in Venice. After this début as a composer of secular vocal music, he concentrated mostly on instrumental music. He was banished from Val

Taleggio before 1592, possibly for political reasons (see Barblan). The frontispiece of his *Passaggi*, published in Venice in 1592, states that he was working as a musician for the Duke of Terranova, Governor of Milan (this work was thought to have been lost in World War II but a copy does, in fact, survive in *D-Bs*). From this date on he is recorded as living in Milan, where in 1595 he was considered one of the best viol players (Morigi). In 1598 two of his instrumental pieces were included in a collection of duets by G.G. Gastoldi and other leading musicians in Milan. In 1603 Rognoni published in Milan a book of instrumental works in four and five parts, now lost, mentioned as 'Libro I' in Giunta's catalogue. In 1608 one of his instrumental canzonas was included in his son (3) Francesco's *Canzoni francese*. Another of Francesco's collections, *Il primo libro de madrigali* (Venice, 1613), includes two of Riccardo's madrigals, the only vocal compositions by him to have survived. In 1619 Borsieri mentions him as the father of (2) Giovanni Domenico and (3) Francesco, without indicating whether he is still alive, but from a letter signed by Francesco Lomazzo (Filippo's son) and included in the second part of (3) Francesco's *Selva de varii passaggi* (1620), we learn that Rognoni senior was already dead. Picinelli remembers him as an excellent player of the violin, other string instruments and wind instruments, but is remembered chiefly for his *Passaggi*, a treatise on diminution which can be compared with other works of the period on the same subject by Sylvestro di Ganassi dal Fontego, Diego Ortiz, Girolamo Dalla Casa and Giovanni Bassano. Intended as a teaching work, it is divided into two parts, the first of which includes a series of exercises notated in two clefs and arranged in order of increasing difficulty. While the exercises can be used by singers, they are principally for instruments, which can more easily perform the leaps and rapid passages. As in Dalla Casa's work, the preface tackles the differences between strings and wind instruments, stressing the difficulties of bowing in the former and of tonguing in the latter. The *violino da brazzo* is mentioned for the first time. The second part opens with a recommendation to observe as far as possible the rules of counterpoint and to play passages in time, and includes ornamented versions of famous compositions (*Ung gay bergier*, among others).

WORKS

Canzonette alla napolitana, 3–4vv (Venice, 1586); lost, listed in the catalogues of Vincenti (1591), Tini (?1597) and Giunta (1604), cited in Picinelli

Pavane e balli con 2 canzoni e diverse sorti di brandi, a 4, 5 (Milan, 1603); lost, listed in the Giunta catalogue as libro I, cited in Picinelli and *PitoniN*

2 canons, 2 insts (Milan, 1598[13]), ed. M. Giuliani, *'Gli eccellentiss. musici della città di Milano' considerazioni estetiche sull'editoria collettiva in Italia e a Milano* (Trient, 1994)

La Sfrondata (inst canzona), 5vv, in F. Rognoni Taeggio: Canzoni francese per sonar (Milan, 1608)

2 madrigals in F. Rognoni Taeggio: Il primo libro de madrigali, 5vv, bc (hpd/chit) (Venice, 1613)

Domine quando veneris, 1v, *D-Bs**, probably a copy from Il Veromodo, 41

DIDACTIC WORKS

Passaggi per potersi essercitare nel diminuire terminatamente con ogni sorte di instromenti, et anco diversi passaggi per la semplice voce humana (Venice, 1592/*R*)

(2) Giovanni Domenico Rognoni Taeggio [Taegio] (*b* ?Milan, 2nd half of 16th century; *d* ?Milan, before Oct 1624). Organist and composer, son of (1) Riccardo Rognoni. According to Picinelli he was a priest. He appears to have spent his entire life in Milan, where he was already working as an organist in 1600. He was organist of S Marco in 1605, as indicated in his *Canzoni* of that year, and attended the academy of Prospero Lombardo, the dedicatee of the work. He was *maestro di cappella* of S Sepolcro and at the ducal court certainly from before 1619, where he served probably until his death. This must have been before October 1624, as we learn from the dedication of the second book of concertos by Michel'Angelo Grancini, his successor as organist of S Sepolcro.

Rognoni Taeggio wrote both vocal (sacred and secular) and instrumental music. He published four individual and two collected anthologies. Between 1596 and 1626 many of his sacred works were included in miscellanies printed in Milan. In 1598 two of his instrumental works were included in a collection of duets by G.G. Gastoldi. In 1600 he published, together with Ruggier Trofeo, a book of *Canzonette leggiadre* for three voices; according to Picinelli a second book, for three and four voices, was printed in Milan in 1615. In 1605, one of his vocal compositions was included in a collection of *contrafacta* by G. Cavalieri. One of his instrumental canzones for five voices was also included in his brother Francesco's collection of 1608. A requiem mass by Rognoni Taeggio is included in Grancini's 1624 collection mentioned above. It could be this work that Picinelli referred to. A collection of masses for four voices with score is also included in Vincenti's catalogue of 1635 and the list of Federico Franzini of 1676. The *Canzoni* of 1605 includes 17 works for four parts (one by Gasparo Costa) and four vocal and instrumental pieces on sacred texts for eight parts in two choirs. The titles of each song refer to the members of the academy of Prospero Lombardo (see Toffetti). In the four-part canzonas, following contemporary practice, some of the motifs re-use ideas already worked in preceding canzonas. As in the majority of Milanese canzonas the opening sections are, with only one exception, in imitative style. The imitative passages sometimes have homorhythmic fragments or sections inserted, or else alternate with sections or sections in triple time. In a note 'for the organ virtuosi' on the fontispiece of the score, the composer declares that he prefers score to basso continuo.

WORKS

Canzoni, libro primo, a 4, e 8vv (Milan, 1605[20]); ed. in IMM, xvi, 1992

Il primo libro di madrigali, 5vv (Venice, 1605)

Canzonette, a 3–4, with R. Trofeo (Milan, 1615), lost, mentioned by Picinelli, in his entry on Regnoni, p.296, not mentioned in entry on Trofeo, p.484

Madrigali, 8vv (Milan, 1619[14])

15 motets, 1–4vv, requiem mass and litanie ambrosiane, 4vv, in M. Grancini: Il secondo libro de concerti (Milan, 1624[6])

Mass, 4vv, lost, cited in Vincenti catalogue, 1635 and Franzini list, 1676

1 work in F. Rognoni Taeggio: Canzoni francese per sonar (Milan, 1608)

Works in 1596[1], 1598[13], 1600[17], 1605[6], 1608[13], 1612[8], 1612[9], 1615[13], 1616[9], 1619[3], 1623[3], 1626[5]

(3) Francesco Rognoni Taeggio (*b* ?Milan, 2nd half of 16th century; *d* ?in or after 1626). Musician and composer, son of (1) Riccardo Rognoni. Biographical information on him comes principally from his publications. In 1608 he was associated with the Milanese academy of Marco Maria Arese, the dedicatee of his collection of instrumental canzonas of that year. In 1610

he was director of music to the Prince of Masserano, to whom he dedicated a collection of sacred music in that year. In 1613 he was director of instrumental music to the governor of Milan, the dedicatee of his first book of madrigals for five voices of that year, and in 1614 he published there his first violin treatise, *Aggiunta del scolaro di violino & altri strumenti*, now lost. In 1619 Borsieri mentioned him as a flautist and violinist as well as composer. In 1620 he was *maestro di cappella* of S Ambrogio. According to his *Selva de varii passaggi*, he had connections with King Sigismund III of Poland (the dedicatee of the work), and directed the instrumental ensemble of the ducal court at Milan at least between 1620 and 1626. From the collection of masses and motets of 1624, dedicated to Archduke Karl of Austria, we learn that Francesco had been appointed a Papal Knight and hereditary Palatine Count. The inclusion of two of his works in a collection of sacred and instrumental works published in Milan in 1626 indicates that he was still alive in this year.

Francesco has received most attention for his *Selva de varii passaggi*, probably an expanded version of the *Aggiunta del scolaro*. In two parts, the first, devoted to the voice, has two prefaces on the principal problems of singing. They state that beautiful singing consists above all of expressing the text, not of an excess of ornamentation, and the importance of breathing from the abdomen when performing coloratura is stressed. The second part is devoted to string and wind instruments and includes interesting observations on their characteristics: the violin is said to be distinguished by a 'harsh and rasping' sound, which must be mitigated by gentle bowing. The concepts of 'lireggiare' and 'archeggiare', playing several notes in a single bow, are contrasted, and the illustrations of ornaments provide useful references (see Horsley). Francesco Lomazzo, son of the publisher Filippo Lomazzo, in a letter in the second part of the *Selva*, described Francesco, his teacher, as a violin virtuoso, who played the musical passages included in his treatise every day, and was the victim of many jealous musicians, who had even removed some of his finales and cadenzas.

WORKS

Canzoni francese per sonar con ogni sorte de instromenti, a 4, 5, 8 (Milan, 1608)
Messa, salmi intieri e spezzati, Magnificat, falsibordoni, motetti, 5vv, op.2 (Milan, 1610)
Il primo libro de madrigali, 5vv, bc (hpd/chit) (Venice, 1613)
Missarum et motectorum, 4–5vv, org, bk I op.9 (Venice, 1624)
Correnti e gagliarde a 4, con la quinta parte ad arbitrio per suonar su varii strumenti (Milan, 1624), lost, cited in Picinelli
Works in 1612[9], 1616[9], 1619[4], 1619[14], 1626[5]
Exercises for vn or cornetto in J.A. Herbst: *Musica practica sive instructio* (Nuremberg, 1642/*R*)

DIDACTIC WORKS

Aggiunta del scolaro di violino et altri stromenti (Milan, 1614), lost, cited in Picinelli
Selva di varii passaggi secondo l'uso moderno per cantare e suonare con ogni sorte de stromenti (Milan, 1620/*R*); 3 works ed. in Paras

SERGIO LATTES/MARINA TOFFETTI

Rogowski, Ludomir Michał (*b* Lublin, 3 Oct 1881; *d* Dubrovnik, 14 March 1954). Polish composer and conductor. In 1906 he graduated from the Warsaw Conservatory, where he studied composition with Noskowski and conducting with Mtynarski. The following year he went to Leipzig for lessons with Arthur Nikisch. He founded the Vilnius SO in 1910 and was musical director at a Warsaw theatre during 1912–14 and from 1922; additionally he gave concerts in France, Belgium, Prague and Belgrade. In 1926 he emigrated to Yugoslavia to take up the post of director of the Dubrovnik Conservatory. He was awarded the Polish State Prize for music in 1938. By combining Impressionism with elements of east central European folk music Rogowski forged an individual musical expression. The influence of Debussy is apparent not only in his treatment of the orchestra, highlighting the capabilities of different instruments, but in his extended tonal palette: as well as the whole-tone and pentatonic scales, he made use of what he called the Slavonic scale (Lydian mode with flattened 7th: C–D–E–F♯–G–A–B♭–C) and the Persian scale (alternating semitones and tones). Folksong, particularly from Poland, France, Belarus, Bosnia and Dalmatia, provided much of his material. Articles by Rogowski on Romanticism, composition and Polish music were published in Polish journals during the inter-war years.

WORKS
(*selective list*)

DRAMATIC
for detailed list see GroveO

Ops: Tamara (lyrical legend, 3, F. Hellens, trans. Rogowski), 1918; Un grand chagrin de la petite Ondine (1, Rogowski, Fr. trans.), 1920; Sérénade inutile (opéra-burlesque, 1, Rogowski and Hellens), 1921; Na postoju [During a Halt] (1), perf. 1923; Syrena [The Mermaid] (grotesque, 3, M. Grif), 1924; Królewicz Marko [Marko, the King's Son] (5, Rogowski and L. Goleniszczev-Kutuzov), 1930; Kad se mladost vratila [When Youth Came Back] (radio op), 1953
Operetta: Legionistka [The Female Legionary] (3, B. Hertz), perf. 1912
Ballets: Bajka [Fairy Tale], perf. 1923; Kupała, perf. 1926
Incid music

VOCAL

Songs: 2 recitatifs et serenade (N. Clifford Barney), 1v, pf (1917); 3 poematy (Yuan Tseu-Tsai), 1v, pf (1926); Fantasmagorie, 1v, chbr orch (before 1939); other published works, incl. Chansons d'automne, Kołysanka [Lullaby], Wierzba [Willow]
Choral works incl. cants., hymns, sacred music, folksong arrs.

INSTRUMENTAL

Orch: 7 syms.: 'Ofiarna' [Sacrificial], 1926, 'Radosna' [Joyful], 1936, no.3, 1940–41, no.4, 1943, no.5, 1947, no.6, 1949, no.7, 1951; Legenda, sym. poem; 7 księżniczek polskich [7 Polish Princesses], sym. poem; other works, incl. suites, 3 rhapsodies

Chbr: Bibelots chinois, fl, cel, pf (1916); Comte merveilleux, vn, pf (before 1939); Arietta, vc, pf (before 1939); 3 Caprices, vn, va/cl, pf (before 1939); Ukrainka, ob, cl, str qt, before 1939; Suita polska, vn, pf, before 1939; Méditation, 4 vc; 2 str qts

Pf: 6 préludes (n.d.); Réflexions musicales (n.d.); 2 miniatury (1925); Propos sérieux et plaisants (1928)

ZOFIA CHECHLIŃSKA

Rohaczewski, Andrzej (*fl c*1620). Polish composer and organist. He was organist at the court of Albert Radziwiłł at Ołyka and Nieśwież. The Pelplin Organ Tablature, compiled during the 1620s, contains two compositions by him. One is a motet, *Crucifixus surrexit*, for nine voices in two choirs of four and five respectively (ed. in WDMP, xlvi, 1961; AMP, vi, 1965 [facs.]). The other is a four-part canzona (ed. in WDMP, xliii, 1960; AMP, vii, 1965 [facs.], and viii, 1970; MAP, *Barok*, ii, 1969, pp.23f), which, together with similar works by Adam Jarzębski and Adam of Wągrowiec, is the earliest piece of this type in Poland. Its style indicates that it was originally composed for a string ensemble and not, as has sometimes been suggested, for organ.

Rohwer, Jens (*b* Neumünster, Holstein, 6 July 1914; *d* Lübeck, 4 June 1994). German musicologist and composer. Following the first publication of one of his works (the Singspiel, *Der kleine Klaus*, 1933), he attended classes by Georg Götsch at the Musikheim, Frankfurt an der Oder, 1934–5. He studied school music at the Hochschule für Musikerziehung und Kirchenmusik, Berlin (1935–8), while taking classes in musicology at the university and attending lectures by Hindemith. Invalided out of the army during World War II, he met Fritz Jöde when he was in hospital and, with Jöde's encouragement, published his first song collection (*Der Hagestolz*, 1942). From 1943 he taught harmony at the Gaumusikschule, Posen, and after fleeing the Russians in 1945, he settled in Lübeck, where he taught at the Schleswig-Holsteinischen Landesmusikschule from 1946. The school was dissolved then refounded in 1950 as the Schleswig-Holsteinische Musikakademie und Norddeutsche Orgelschule (since 1973 the Musikhochschule Lübeck), and he served as lecturer, department director and director of the academy (the last, 1955–71). During his association with the academy he also published songs and choruses and completed his dissertation under Blume at Kiel University (1958). He retired in 1981.

Through his early contact with the music educationists Götsch, Jöde and Gottfried Wolters, he was influenced by the ideals of the *Jugendmusikbewegung*. As an adherent of cultural and educational aims similar to those of the Arbeitskreis Musik in der Jugend, he doubted the expressive and cultural worth of avant-garde music and tried both as a scholar and teacher to counteract it with systematic research into 'Tonsatzstruktur' and a type of music training based on anthropological methods of education and culture-criticism. These views shaped his prolific activity as a composer. His youth songs and choruses (1945–52) and later his church music were notably successful. He also wrote oratorios, cantatas, orchestral and chamber music, and music for the organ and the piano.

Roi, Bartolomeo. *See* ROY, BARTOLOMEO.

Roiha, Eino (Vilho Pietari) (*b* Vyborg, 12 June 1904; *d* Helsinki, 20 Oct 1955). Finnish musicologist and composer. He studied at Helsinki Conservatory (until 1929) and Helsinki University, where he took the doctorate in 1943 with a dissertation on Sibelius's symphonies. After teaching music at the teacher-training college (1930–35)

and high school (1935–48) in Jyväskylä he held a lectureship at Helsinki University (1948–55) and also taught at the high school in Helsinki (1948–55). His main musicological interests were the psychology of music and contemporary music; he was the first chairman of Nykymusiikki, a society founded in 1949 to promote new music, and of the Finnish section of ISCM from 1951. His structural analyses of Sibelius's symphonies are based on theories of Gestalt psychology. He was also active as a choir conductor, music critic and composer; his works include two orchestral suites, a Concertino for piano and orchestra, violin and piano sonatas, piano pieces and songs.

ERKKI SALMENHAARA

Roince [Rouince, Roynci, Ruince], **Luigi** [Aloisio, Luisio, Aloigi, Aluigi] (*d* Piacenza, 6 June 1597). French composer, active in Italy. He is described as 'francese' in almost all documents referring to him and in the ascription of his one surviving chanson (in RISM 1564[11]), probably composed before he moved to Piacenza. He had assumed the post of *maestro di cappella* at Piacenza Cathedral by 30 May 1571, and in a letter of 14 May 1572 Paolo Burali, the Bishop of Piacenza, stated his satisfaction with 'signor Aluigi the Frenchman'. Roince's admiration for his teacher Annibale Zoilo is evident in letters that he wrote to Cardinal Guglielmo Sirleto, an educated man and patron of musicians: in one dated 24 January 1582 Roince claimed 'you will not hear harmony so sweet as that of my most excellent master Hannibale Zoilo' and he enclosed one of his own motets as a present to the cardinal; in another letter of 9 May 1585 he sent Sirleto a 'spiritual sonnet in music' and a *Te Deum* to offer to the recently elected Pope Sixtus V. He continued as *maestro di cappella* at Piacenza until his death and was succeeded by Tiburtio Massaino in 1598. All of his sacred works were published posthumously by his pupil Giulio Cesare de Colli, with prefaces and dedications to civic dignitaries written by Roince's wife, Donina Cabra.

FRANCESCO BUSSI

Rojko, Uroš (*b* Ljubljana, 9 Sept 1954). Slovene composer. Having learnt the clarinet, he studied composition with Krek at the Ljubljana Academy of Music (1977–81) and with Klaus Huber at the Freiburg Hochschule für Musik (1983–6); between 1986 and 1989 he attended courses given by Ligeti in Hamburg. He has remained in Germany while holding a lectureship at the Ljubljana Academy. During his studies at the Hochschule Rojko was exposed to a variety of compositional approaches. In the early 1980s he came into close contact with prominent Polish composers, among them Meyer, Schäffer and Kotoński. Since then his ideas have been influenced in courses led by Nono, Lachenmann and others at the Freiburg Experimental Studio and by Ferneyhough's classes in musical analysis at the Darmstadt summer course. Drawing on his extensive knowledge of various compositional techniques, Rojko's musical idiom reflects an imaginative and experimental approach to musical form; the *Sinfonia concertante* (1994), in which a musical 'narrative' is unfolded through different approaches to a thematic 'germ' in each of the three movements serves as a particular example. His predominantly structuralist musical language reveals elaborately detailed structures and a refined instrumental palette in both his chamber and orchestral works (*KdG*, W. Rüdiger).

LEON STEFANIJA

Rokitansky, Hans Freiherr **von** (*b* Vienna, 8 March 1835; *d* Schloss Laubegg, Styria, 2 Nov 1909). Austrian bass.

He studied at Bologna and Milan, making his concert début in 1856 in London and his first stage appearance in 1857 at the Théâtre Italien, Paris, as Oroveso in *Norma*. He began an engagement at Prague in 1862 as Cardinal Brogny in *La Juive*. From 1864 to his retirement in 1893 he was engaged at the Vienna Hofoper. He appeared at Her Majesty's Theatre in 1865 and in 1866, when he sang Osmin at a revival of *Die Entführung aus dem Serail* (given in Italian as *Il seraglio*); he returned to London in 1876 and 1877. His roles included Leporello, Sarastro, Bertram (*Robert le diable*), Verdi's Fiesco, Weber's Caspar, the Landgrave (*Tannhäuser*), King Henry (*Lohengrin*) and Giorgio (*I puritani*). From 1894 he taught at the Vienna Conservatory. His voice, a deep bass of great resonance, suffered towards the end of his career from faulty production, which affected his intonation. His brother, Victor Freiherr von Rokitansky (*b* Vienna, 9 July 1836; *d* Vienna, 17 July 1896), was a singer and song composer who taught at the Vienna Conservatory between 1871 and 1880.

ELIZABETH FORBES

Rokitansky, Victor Freiherr **von.** Austrian singer and composer, brother of HANS VON ROKITANSKY.

Rokseth [née Rihouët], **Yvonne** (*b* Maison-Laffitte, Paris, 17 July 1890; *d* Strasbourg, 23 Aug 1948). French musicologist. She studied the organ with Abel Decaux and composition with d'Indy at the Paris Conservatoire and Schola Cantorum, composition privately with Roussel and music history with Pirro at the Sorbonne (from 1920), where she took the diploma in natural sciences and philosophy (1915) and the doctorat ès lettres (1930) with a dissertation on organ music in the late 15th and early 16th centuries. A qualified librarian (1933), she catalogued autographs at the Conservatoire and organized the music department at the Bibliothèque Nationale (1934–7), where she also arranged concerts of medieval music and formulated plans for a musicological institute at the university. In 1937 she became *maître de conférences* at Strasbourg University; during the university's wartime removal to Clermont-Ferrand, she continued its musical activities by founding a choir, orchestra and musical society. After World War II (during which she was an active member of the Resistance) she became professor of musicology at Strasbourg (1948); she was a visiting lecturer in Germany and Switzerland and gave courses at the American Institute of Musicology, Florence.

Few musicologists have brought to their task such enviable mental and practical qualities as Rokseth possessed. Her literary studies brought a memorable quality to her writing, and a scientific training added the precision with which she marshalled the facts derived from intensive study of unfamiliar subjects; moreover, her experience as a composer engendered sympathy for works which her practical musicianship brought to life on the concert platform. Her doctoral dissertation *La musique d'orgue* found an immediate publisher. The period 1450–1531 covered by the survey (which deals not only with music but with every aspect of the instrument) is represented at one end by the German didactic tablatures of Ileborgh and Paumann, and at the other by France's first contribution to the genre published by Attaingnant (1531). In the absence of any previous French tablature, Rokseth reached her conclusions about French practice by relating it to that shared by the countries of western Europe. By-products of this study included editions of Attaingnant's *Deux livres* and *Treize motets*, which embody instruction in the crafts of diminution, improvisation and free composition.

Rokseth's second important work was a definitive four-volume edition (with facsimile, transcription and commentary) of Montpellier manuscript H.196, a compendium of the 13th-century French motet which has intrigued musicologists since Coussemaker's time. Other important undertakings included the unfortunately incomplete *Trois chansonniers*, particularly valuable for reconstituting 15th-century poetic forms, and a contribution (*NOHM*, iii) on early instrumental music, which rightly praises the wide growth of keyboard music while underestimating that of consort music. Rokseth died at the height of her powers leaving a lavishly documented body of work which, in Schrade's words, 'is marked by that thoroughness, comprehensiveness, rigid discipline and devotion that are always characteristic of Pirro's school'.

G.B. SHARP

Roland. Japanese company of electronic instrument manufacturers. It was founded in Osaka in 1972 by the electronics designer Ikutaro Kakehashi (who had co-founded Ace Electronic Industries in Osaka in 1955, marketing rhythm machines and Ace Tone electronic organs); it was named after the legendary medieval French hero. Expansion was rapid, and by the early 1980s the company employed over 500 people in Osaka alone. During the period 1988–90 Roland bought three foreign electronic keyboard manufacturers: Siel, Rodgers and Rhodes.

The range of Roland instruments has included monophonic and polyphonic synthesizers, synthesizer modules, remote keyboard controllers, electronic organs and pianos (many digital models), a digital harpsichord, home keyboards, guitar synthesizers, samplers, vocoders, sequencers and many electronic percussion devices and effects units, some under the names of Roland's offshoots, Boss and Amdek. The company also manufactures a variety of sound equipment as well as a teaching system designed for use with Roland electronic keyboard instruments.

Like other Japanese companies, Roland produces new models each year, updating successful instruments with the latest technology, and quickly withdrawing unsuccessful ones. Apart from three modular synthesizers, Roland's polyphonic synthesizers have included the Jupiter-8 (1981), Juno-60 (1982), the programmable JX-3P (1983) and JD-800 (1991); the most successful was the D-50 (1987), with sales of about 200,000. Roland has made a major contribution in the area of computer-controlled electronic percussion, ranging from the small-scale Dr Rhythm to the Rhythm Composer (for illustration *see* ELECTRONIC PERCUSSION, fig.2) and its smaller version, the Drumatix, as well as the Octapad percussion controller. In 1977 Roland introduced the first effective guitar synthesizer, consisting of a special electric guitar and a synthesizer unit; the company has continued to release improved models. Also in 1977 the first of the Micro-Composer series of polyphonic digital sequencers for controlling synthesizers appeared. Recent interest in specialized dance music equipment led Roland to develop Interactive Light's infrared Dimension Beam (1993) as its D Beam in the Groove Sampler work station (1998) and the Groovebox sequencer, as well as in electronic keyboards (*see also* DRAWN SOUND).

HUGH DAVIES

Roland-Manuel [Lévy, Roland Alexis Manuel] (*b* Paris, 22 March 1891; *d* Paris, 2 Nov 1966). French composer and writer on music. After living for three years in Florida and nine years in Liège, he returned to Paris in 1905, following the death of his father. He was a pupil of Roussel at the Schola Cantorum (where he also studied the violin) and later, on Satie's advice, he went to study with Ravel, becoming a devoted follower of that composer. Besides his work as composer, he was active as an administrator and writer. In 1947 he became vice-president of the French section of the ISCM and a professor at the Paris Conservatoire, giving classes in musical culture and aesthetics. In 1949 he became associated with the UNESCO Music Council. He achieved wide recognition as an original popularizer of music when he inaugurated a long-running Sunday series on French radio entitled 'Plaisir de la Musique' (subsequently published in book form), which he continued until his death.

Roland-Manuel as a composer was firmly in the tradition of the 18th-century artist whose function it was to be impersonal and specialized, in complete antithesis to 19th-century Romantic self-glorification. 'We make music', he said, 'with material which is neutral and mouldable. The individual is of no interest, and art can certainly be something other than a medium of self-expression. Vanity is the death of an artist'. He was a humanist with no sympathy for 'systems'. From his early songs based on Persian texts, *Farizade au sourire de rose*, his music was essentially French in its fastidiousness, restraint, refinement and sensibility, avoiding a direct display of emotion.

Within that aesthetic framework many different kinds of work were possible, though Roland-Manuel's output was not very large. A mystic side can be found in the polyphonic choral works *Bénédictions* and *Le cantique de la sagesse*. Earlier, however, after war service, he had fully entered into the very different Parisian world of Les Six, sometimes expressing in his music the frivolous spirit of that time. The restrained nature of his art kept him from any excess, and also prevented a fully dramatic expression in *Isabelle et Pantalon*, bold and imaginative as this *opéra comique* is in conception. His ingenious, precise, basically simple style found personal and most convincing form in instrumental music. For ballet, his clearcut melodic invention and precise rhythmic designs were practical and effective in, for example, *L'écran des jeunes filles*, where an 18th-century spirit finds integrated modern expression. Of his chamber works, the two trios are more contrapuntal than usual, pointed with characteristic harmonic asperities; and classical forms are used very flexibly. The *Suite dans le goût espagnol* is bold and

direct, a personal Spanish impression which avoids any obvious clichés.

WORKS
(*selective list*)

Stage: Isabelle et Pantalon (oc, 2, M. Jacob), 1920, Paris, Trianon-Lyrique, 11 Dec 1922; Le tournoi singulier (ballet), 1924; L'écran des jeunes filles (ballet), 1928; Le diable amoureux (oc, R. Allard, after Cazotte), 1929, extracts perf.; Elvire (ballet) [after Scarlatti], 1936; Échec à Don Juan (op, C.A. Puget), 1941, unperf.; La Célestine (op, M. Achard, after F. de Rojas), 1942, unperf.; Jeanne d'Arc (op, Péguy), 1955, unperf.

Orch: Le harem du vice-roi, sym. poem, 1919; Tempo di ballo, sym. poem, 1924; Peña di Francia, suite, 1938; Pf Conc., D, 1938

Choral: Jeanne d'Arc (orat, E. Fleg), 1937; Bénédictions, SSA, 1938; Le cantique de la sagesse (orat, Bible: *Proverbs*), 1943–53

Chbr: Pf Trio, 1917; Str Trio, 1922; Suite dans le goût espagnol, ob, bn, tpt, hpd, 1933

Songs: Farizade au sourire de rose (Persian), 1v, pf, 1913; 2 rondels (P. d'Armentière), 1v, pf, 1918; 3 romances (P.J. Toulet), 1v, orch, 1922; Délie, objet de plus haute vertu (M. Scève), 1v, pf, 1923

DAVID COX

Roldán (Gardes), Amadeo (*b* Paris, 12 July 1900; *d* Havana, 2 March 1939). Cuban composer, violinist, conductor and teacher. He studied the violin with Bordas at the Madrid Conservatory (graduating in 1916), won the Sarasate Prize and began a career as a performer. Then he had composition lessons with del Campo in Madrid and with Pedro Sanjuán. In 1921 he settled in Havana, where he was until his death a most active and influential figure in musical life, stimulating the rather dormant cultural activities of the city during the 1920s and 1930s. He was successively appointed leader (1924), assistant conductor (1925) and conductor and music director (1932) of the Havana PO. In 1927 he founded the Havana String Quartet, which, like the Havana PO, presented many concerts of contemporary music, then almost unknown in Cuba. Roldán was professor of composition at the Havana Municipal Conservatory and its director from 1935 until his death; after the Castro revolution it was renamed the Amadeo Roldán Conservatory.

Together with Caturla, Roldán brought to Cuban art music a much-needed imaginativeness, seriousness of purpose and technical accomplishment. His polished compositions use the rhythms of Afro-Cuban music, and he was the first to bring into the concert hall the forceful elements of black Cuban folklore (tango conga, conga, *comparsa*, *son* and rumba), which he deployed in a refined, partly Impressionist, partly dissonant, Stravinskian style. He became the figurehead and the guiding spirit for a younger generation of Cuban composers, united by common artistic ideals and aspirations. A mulatto himself, he thoroughly assimilated the mestizo features of Cuban music, and his works are often imbued with Afro-Cuban mythology. He was something of an intellectual, and in the late 1920s and early 1930s he associated with young Cuban painters and writers, some of whom established the Grupo de Avance, which led a renovation of Cuban artistic life. A close relationship with Carpentier produced a series of remarkable works, most importantly the ballet *La rebambaramba*. Other major compositions include *Rítmicas V* and *VI* (1930), which, with Varèse's *Ionisation*, were among the first Western works for percussion ensemble.

WORKS
(*selective list*)

Ballets: La rebambaramba (Carpentier), 1927–8; El milagro de Anaquillé (1, Carpentier), 1928–9, reorchd 1931

AURELIO DE LA VEGA

Roldán, Juan Pérez. *See* PÉREZ (ROLDÁN), JUAN.

Rolfe. English firm of piano makers, publishers and music sellers. It is thought that the business started in 1785 at 112 Cheapside, London. From 1795 to 1797 William Rolfe, Thomas Culliford and a Mr (Charles?) Barrow formed a partnership, and Rolfe managed the business on his own from 1800 until about 1807, when his sons Nicholas Rolfe (*b* London, bap. 29 Aug 1784) and Thomas Hall Rolfe (*b* London, bap. 8 Nov 1785) joined him to form W. Rolfe and Sons, which briefly became Rolfe & Co. about 1820. In December 1802 William was elected Constable Inquestman and Collector of the Consolidated Rates for the parish of All Hallows, Honey Lane. James Longman Rolfe (relationship not certain) joined the firm in 1836. The firm ceased production in 1888.

In 1797, with Samuel Davis, Rolfe patented (no.2160) the earliest specification for 'Turkish music' in pianos, where a hammer strikes the soundboard to produce the sound of a drum. The hammer action, based on the English single action (*see* PIANOFORTE, §I, 4 and fig.10) and operated by a pedal, is illustrated in Harding (p.135). The patent also specifies that instead of using the soundboard, a kind of frame drum, made from skin, cloth or paper fixed on a frame, could be placed inside the piano for the drum mechanism to strike. Surviving Rolfe squares are attractive and colourful. An early one (no.4481) is at the Cambridge University Music School; it has five octaves and looks as though it may originally

have had hand stops. By the time the serial number 5000 was reached the firm's squares generally had a compass of five and a half octaves. Whereas the early models had French stands (i.e. in the style of Sheraton with a shelf for the music), by 1825 the squares had six turned legs (four in the front and two at the back) and often three drawers, the middle one being curved. Some squares also had a double music rest inside; the firm's instructions for regulating their double action squares are reproduced in Colt and Miall. The firm exported a square piano to Japan in 1823, and they made 'Patent Self-Acting' pianos from 1829 (*see* BARREL PIANO).

MARGARET CRANMER

Rolfe Johnson, Anthony (*b* Tackley, Northants., 5 Nov 1940). English tenor. Originally a farmer, he studied at the GSM with Ellis Keeler and later with Vera Rozsa, Richard Lewis and Peter Pears. He made his début with the English Opera Group in 1973 as Count Vaudémont in *Iolanta* (Tchaikovsky), followed by Stroh (*Intermezzo*) and Lensky at Glyndebourne in 1974. His début with the ENO was in 1978 as Don Ottavio, and in 1983 he was highly successful both in Geneva and with Scottish Opera as Aschenbach (*Death in Venice*); during these years he toured widely in Europe and the USA in concerts and making recordings. In 1988 he made his Covent Garden début as Jupiter (*Semele*) and in 1989 sang an outstanding Ulysses (Monteverdi) with the ENO. He made his Metropolitan début as Idomeneus in 1991, repeating the role in Vienna and Salzburg the same year. In 1994 he sang Peter Grimes for Scottish Opera, Glyndebourne and the Metropolitan Opera. One of the most stylish and versatile tenors of his day, Rolfe Johnson was a founder member of the Songmakers' Almanac (1976), and has since pursued a flourishing concert career in parallel with opera; he is a renowned singer of lieder and English song, and an outstanding interpreter of Handel oratorios and of the Evangelist in the Bach Passions. His extensive discography ranges from Bach and Handel through Mozart operas (his recordings of Idomeneus and Titus have been described as models of Mozartian singing) to *Oedipus rex*, *The Rake's Progress* and many works by Britten, notably *Peter Grimes* and the *War Requiem*. He was appointed Director of Singing Studies at the Britten–Pears School in 1990, and was made a CBE in 1992.

NOËL GOODWIN

Rolla, Alessandro (*b* Pavia, 23 April 1757; *d* Milan, 14 Sept 1841). Italian composer, violinist and viola player. He studied counterpoint in Milan with G.A. Fioroni, a pupil of Leonardo Leo. Having decided to devote himself to the viola, he performed a viola concerto of his own in the church of S Ambrogio at some time between 1772 and 1774, probably under the direction of G.B. Sammartini, and in 1778 he played the viola in the orchestra for the inauguration of the Regio Ducal Teatro alla Scala. In 1782, possibly thanks to Sarti, he was appointed first viola player in the Parma orchestra, becoming its leader and conductor in 1792. In 1802, on the death of the Duke of Parma, he was summoned by the impresario Ricci to conduct the La Scala orchestra, where he remained until 1833, directing operas by Mozart, Mayr, Paer, Rossini, Bellini, the young Donizetti and Mercadante. He also served as first violinist and conductor of the court orchestra of Viceroy Eugenio di Beauharnais from 1805, and from 1808 to 1835 he was first professor of violin and viola at the newly opened Milan Conservatory.

Rolla's conducting style was described by some of his contemporaries: Spohr (1860–61) praised his 'force and precision', while Stendhal (1816) mentioned that Rolla lacked 'brio in the virtuoso pieces'; similarly the journal *I teatri* (1828), having defined him as 'supreme in controlling orchestras', attributed to him 'a certain predilection for the old style and old music'. It is safe to say that the widely praised string sound of the La Scala orchestra in the period of Bellini and Donizetti was the fruit of Rolla's school. Many young musicians who went on to become famous had connections with him: Paganini played for Rolla in 1795 and later gave concerts with him (many of them in 1813–14) and remained a close friend, and in 1832 Verdi consulted Rolla when looking for a private teacher in Milan.

Continuing the northern Italian tradition of Sammartini and others, Rolla was very active in the field of instrumental music. In 1813 he performed excerpts from Beethoven's *Prometheus* music at La Scala and gave private performances of Beethoven's fourth, fifth and sixth symphonies in Milan, and in 1823 he gave the first public performance of a Beethoven symphony at La Scala. After retiring from the conservatory he began private performances of chamber music in his own home; here too he was a pioneer in his emphasis on Beethoven. One of those involved, from 1840 onwards, was the young Antonio Bazzini, later the leading Beethoven interpreter in Italy.

Rolla's compositions, which number some 500 or more, relate to both the Italian instrumental tradition (particularly that of Boccherini) and the Viennese Classical style. His solo concertos reveal the influence of Mozart in the short development sections of their sonata form movements and the clear structural separation of soloist and orchestra; the solo writing is technically demanding, although it requires nothing like the supreme virtuosity of Paganini. The viola concertos, inexplicably neglected by 20th-century performers, are idiomatically written for the instrument. The symphonies are each in a single movement in the form of an Italian opera overture; in some the treatment of the orchestra and the thematic style contain superficial echoes of Mozart, while in others Rolla prefers a freer form with much concertante work between strings and woodwind. In his chamber music Rolla displays his increasing familiarity with Beethoven's music: for example, the opening of the F minor Quartet of op.2 openly recalls that of Beethoven's op.18 no.1. The formal and tonal schemes of Rolla's quartets make them the closest of his works to Viennese classicism.

Among Rolla's children, Ferdinando (*b* Parma, 21 Sept 1782; *d* Parma, 8 Jan 1831) became a viola player, and Filippo (Pietro) (*b* Parma, 29 June 1784; *d* after 1842) a pianist and composer. Another son, Antonio (Giuseppe) (*b* Parma, 18 April 1798; *d* Dresden, 19 May 1837), was director of the Italian Court Opera, Dresden (1823–32)

and composed violin music including a concerto, exercises and studies.

WORKS

ANTONIO ROSTAGNO

Rolland, Romain (*b* Clamecy, 29 Jan 1866; *d* Vézelay, 30 Dec 1944). French man of letters and writer on music. Educated at the Ecole Normale Supérieure (1886–9), he spent the years 1889 to 1891 in Rome where he completed his *mémoire d'étude* in the diplomatic history of the early 16th century. It was also in Rome that he began to expand his musical interests and to lay the foundations for his doctoral dissertation *Les origines du théâtre lyrique moderne* presented at the Sorbonne in 1895. After several years teaching courses in art history at various lycées in Paris (during which time he organized the first music history congress to be held in Paris, in 1900, and the next year was a co-founder of the *Revue d'histoire et de critique musicales*), and then as director of the newly founded music school of the Ecole des Hautes Etudes Sociales (1902–11), he was appointed in 1903 to the first chair of music history at the Sorbonne where he had a profound influence on a whole new generation of scholars including Henry Prunières, Paul-Marie Masson and Louis Laloy. Resigning his post because of ill-health, he spent the years from 1913 until his death in retirement in Switzerland and France.

As historian, critic, biographer, novelist, playwright and polemicist, Rolland ranged inexhaustibly over a wide field of intellectual activity, from music and the fine arts, through literature, to politics, international relations, the peace movement, civil liberties, the emancipation of women and so on. It is significant that in his doctoral dissertation, a solid piece of work now mainly remembered for its rehabilitation of the Neapolitan composer Francesco Provenzale, Rolland subordinated analysis of form and structure to biographical sketches and plot summaries set in a scrupulously documented cultural and political context. For it already clearly elucidates the synthesizing and rigorously moral tone of the personal view of history that he was to elaborate in his inaugural lecture 'De la place de la musique dans l'histoire générale' and which was to give a distinctive flavour to his biographies of Beethoven (of whom he wrote a single-volume life and a seven-volume study) and Handel, and to his articles on a variety of musical subjects contributed to numerous journals and later reprinted in his collections *Musiciens d'aujourd'hui*, *Musiciens d'autrefois* and *Voyage musical aux pays du passé*. Stressing the importance of intuition rather than reason, of a kind of intuitive penetration into the innermost nature of the creative individual and the time in which he lived, Rolland saw history primarily in terms of the noble, superior soul, of a Beethoven triumphing over every adversity, or Handel as the heroic embodiment of the popular spirit of his age. Because of its universality, its profundity and spontaneity, music, he believed, was often the first to give expression to fundamental changes in society that were then translated into words and only later into actions. It was in this spirit that he composed his vast 'roman fleuve' *Jean-Christophe*, for which in 1916 he was awarded the Nobel Prize, using the life of the fictional composer of its title as a central symbol around which to synthesize his convictions about the nature, history and moral significance of music, its specifically racial characteristics and its function in the modern world.

ROBERT HENDERSON

Rolle, Johann Heinrich (*b* Quedlinburg, 23 Dec 1716; *d* Magdeburg, 29 Dec 1785). German composer. His father, Christian Friedrich Rolle (*b* Halle, 14 April 1681; *d* Magdeburg, 25 Aug 1751), wrote several Passions and some chamber music; along with Bach and Kuhnau, he judged a new organ in Halle in 1716, and he was among Bach's competitors for the Kantorate at the Leipzig Thomaskirche. He was Kantor at Quedlinburg until 1721, then left for a similar position in Magdeburg, where he later became city music director. J.H. Rolle received his early training from his father. He served as organist in Magdeburg from 1734. He left Magdeburg in 1737, possibly for Leipzig, where he may have continued his music studies; the claims in his autobiography, that he studied law at Leipzig and entered into legal practice in Berlin, are not supported by records at Leipzig University.

In 1741 Rolle, now in Berlin, was engaged as a violinist (later violist) in Frederick the Great's chapel orchestra. There he became acquainted with the Bendas, Grauns, Quantz and C.P.E. Bach. Compositions that may come from this period include an Italian secular cantata, a setting of Metastasio's *Isaaco* in German translation, and the birthday cantata *L'apoteoso di Romulo*; Rolle's later works reveal the importance of his contact with the musicians of the Prussian court and with the operas of Hasse and C.H. Graun. At the same time, Rolle maintained strong connections with Magdeburg. His obituarist Friedrich Köpken records that during these years he composed a Passion and several sacred cantatas which he sent to his father in Magdeburg for performance.

In 1747 Rolle obtained his dismissal from Frederick's orchestra and returned to Magdeburg to become organist at the Johanniskirche. On his father's death in 1751 he was unanimously appointed to succeed him as city music director, a position he held until his death. Rolle's main duty in Magdeburg was to provide service music for the city's six parish churches; a large number of his cantatas and motets survive in manuscript and printed editions. He was also required to perform a Passion each year, and to present a new composition every four or five years. Eight Passion settings are mentioned in his autobiography, one based on each of the four Gospel narratives and four on newly written librettos. These works established Rolle's reputation as a composer of sacred music.

From 1764 on, Rolle participated in a local gathering of intellectuals known most often as the Mittwochsgesellschaft (also at times called the Gelehrte Clubb or the Literarische Gesellschaft), started around 1760. Out of the meetings of this group arose the idea of presenting a series of public concerts under Rolle's direction. The concerts began in 1764 (after the Seven Years War), only the second of their kind in Germany (the Leipzig Gewandhaus Concerts were established in 1741), and continued until some time after Rolle's death. Rolle presented his most important compositions, nearly 20 dramatic concert works or 'musikalische Dramen', at these 'öffentliche Concerte'.

Though they have most often been called oratorios, Rolle's music dramas are a hybrid genre possessing characteristics of both opera and oratorio. Their subjects are primarily, but not exclusively, biblical. Some texts show the oratorio's usual bipartite division, but others consist of one or three parts, depending on dramatic considerations; the divisions are called parts (Theile) by some librettists and acts (Handlungen) by others. Like German oratorios, Rolle's music dramas place great weight on the chorus, and they also provide the chorus with a dramatic role. Most curious (and revealing) are the stage directions in Rolle's scores and in the published editions of the librettos, indicating scenery, costuming and gestures. While there is no evidence that these works were ever staged, nothing is left to the imagination of anyone wishing to do so.

Rolle was virtually alone at this time in writing biblical-historical works. Composed from 1766 to 1785, they become progressively more dramatic, paralleling trends in German letters (but not those in sacred music). Most German oratorio composers continued setting the popular texts of K.M. Ramler (e.g. *Tod Jesu*), in which plot and characterization are peripheral to a core of meditative verse. Rolle composed two concert works in this reflective style, both on texts by his friend Klopstock (including scenes from *Messias*, 1764). For the vast majority of the music dramas, however, Rolle used the dramatic texts of two members of the Mittwochsgesellschaft: Johann Samuel Patzke, pastor of the Heilige Geist-Kirche and later of the Johanniskirche in Magdeburg, and August Herrmann Niemeyer, an educator and later chancellor in Halle. Patzke's librettos show a wide range of literary influences, including Classical literature, English moral journals and Shakespeare's plays, which became known in Germany during the 1760s and 70s. Niemeyer

intentionally sought to create works that were religious yet resembled opera more than oratorio. In prefaces to the published editions of his librettos, Niemeyer described his ideas on sacred opera and offered his texts as examples. Both writers often chose sacrificial themes and expressed them with vivid, sometimes grotesque images and strongly emotional language that have their roots in 17th-century Protestant Pietism and reflect its continuing influence in North Germany. Such language was designed to elicit strongly emotional yet religious responses from the main characters and similar religious feeling within the listener. Following closely the dramatic intentions of his librettists, Rolle's settings became increasingly operatic. All his mature scores are continuous; traditional aria-recitative patterns, though unnumbered, are clearly perceptible, but at important moments the music is allowed to respond to a situation with a fluid mixture of arioso and obbligato recitative. In such passages one sees a clear parallel to Benda's melodramas. Rolle's music dramas are virtually concert operas, a lone Protestant equivalent to Jesuit school plays.

With his setting of Patzke's *Tod Abels* (1769), Rolle's reputation spread quickly throughout Germany and beyond. Each new work brought increased fame, and generated feverish local interest. He arranged 12 of his oratorios in keyboard reductions for publication, by Breitkopf and Schwickert in Leipzig, whose printed lists of subscribers reveal a large, broadly based audience.

Rolle wrote what many critics have considered his best, most dramatic music dramas when in his 60s, especially *Abraham auf Moria*, *Lazarus* (the same text Schubert set in part) and *Thirza und ihre Söhne*. Here tonal and dramatic units are organized on a larger scale; Schering noted that in *Thirza* the drama unfolds 'as one great scene'. According to Köpken, Rolle studied his texts intently, then mapped out the key areas of an entire work before beginning composition. His musical style, often reminiscent of Graun, includes simple melodies full of repeated diatonic patterns, square phrases, an abundance of parallel 3rds and 6ths, melodic sighs and cadential appoggiaturas. When the text becomes more violently emotional, however, the music employs disjunct melodic lines, chromaticism, sudden tonal shifts and unusual harmonies reminiscent of C.P.E. Bach. Stirring and startling in one place, then soft and touching in another, Rolle called on every musical means known to him to express the meaning of the text.

Rolle's cousin Christian Carl Rolle (*b* Cöthen, bap. 6 July 1725; *d* Berlin, 8 March 1788), was Kantor at the Berlin Jerusalemer Kirche; he wrote a theoretical-didactic treatise, *Neue Wahrnehmung zur Aufnahme ... der Musik* (Berlin, 1784), including complaints about the fallen state of church music and biographies of Graun and J.F. Agricola.

WORKS

DRAMATIC CONCERT WORKS

unless otherwise stated, all first performed in Magdeburg, and printed works published in vocal score in Leipzig

L'aposteoso di Romolo (cant.), for birthday of Friedrich II, Berlin, ?1741–6; Die Opferung Isaacs (orat, P. Metastasio), Berlin, ?1741–6, *D-Bsb*; Jakobs Ankunft in Aegypten (orat, G.S. Rötger), Berlin, ?1741–6, *Bsb**; Die Befreyung Israels (orat, F.W. Zachariä), 1764, rev. (1784); Szenen aus Klopstocks Messias (F.G. Klopstock), 1764; Die Götter und Musen (cant., S. Patzke), for birthday of Frederick the Great, 1765; David und Jonathan (musikalisches Eligie, Klopstock), 1766 (1773); Idamant, oder Das Gelübde (music drama, Patzke), 1766, *Bsb** (1782); Davids Sieg im Eichthale (music drama, Patzke), 1766 (Halle, 1776); Die Schäfer (cant., J.A. Eberhard), for birthday of Frederick the Great, 1766; Orest und Pylades, oder Die Stärke der Freundschaft (music drama, Patzke), 1768; Die Geburt Jesu (Christmas orat, Patzke), 1769, *A-Wn*; Der Tod Abels (music drama, Patzke, after S. Gessner), 1769, *A-Wn** (1771)

Saul, oder Die Gewalt der Musik (music drama, Patzke, after J.J. Eschenburg's trans. of J. Brown), 1770, *D-Bsb** (1776); Die Taten des Herkules (cant., Patzke), for birthday of Frederick the Great, 1770; Hermanns Tod (Patzke, after Klopstock), 1771 (1783); Abraham auf Moria (music drama, A.H. Niemeyer), 1776 (1777); Lazarus, oder Die Feier der Auferstehung (music drama, Niemeyer), 1777 (1779); Thirza und ihre Söhne (music drama, Niemeyer), 1779 (1781); Mehala, die Tochter Jephta (music drama, Niemeyer), 1781 (1784); Simson (music drama, Patzke), 1782 (1785); Gedor, oder Das Erwachen zum bessern Leben (music drama, C.F.W. Herrosee), 1785, ed. Zachariä (1787); Ach, dass du den Himmel zerreisest (Christmas orat), *A-Wn*, *D-Bsb*, *HAmk*

SACRED VOCAL

Mass (Ky, Gl), chorus, orch, *D-BAR*, *HR*, *GB-Lcm*

THOMAS BAUMAN/JANET B. PYATT

Roller, Alfred (*b* Brno, 2 Oct 1864; *d* Vienna, 12 June 1935). Austrian stage designer. At Vienna University he studied law and then art history; in 1884 he enrolled at the Akademie der Bildenden Künste and studied painting and architecture under Lichtenfels and Griepenkerl. During the 1890s Roller belonged to a circle of young Viennese artists which in 1897 evolved into the *Sezession* movement, of which Roller was a co-founder. He was elected its president in 1902 and served as editor of its journal, *Ver Sacrum*. Mahler, director of the Vienna Hofoper, first met Roller that year and invited him to design a new *Tristan und Isolde*; its subsequent production (21 February 1903) was a landmark in the history of stage design. In what was to be his fundamental style, Roller used clear, intense colour and lighting as well as architectural simplicity and clarity, clearing the stage of excessive scenic and decorative clutter.

In May 1903 Mahler engaged Roller as director of scenic and costume design for the Hofoper, a position he retained until 1909, when he was appointed director of the Kunstgewerbeschule. Roller created exemplary productions of *Fidelio* (1904), *Don Giovanni* (1905) and *Iphigénie en Aulide* (1907), the last of which Mahler considered the most satisfying production at the Vienna Opera.

Roller also designed for the spoken theatre, notably for Max Reinhardt in Berlin. He continued to design productions for the Vienna Hofoper, as well as for the Burgtheater and theatres in Berlin, Dresden, Munich and Bayreuth. He created the first Viennese *Elektra* (1909), as well as the premières of *Der Rosenkavalier* in Dresden and Vienna (1911). From 1918 to 1934 he was again director of stage design at the Vienna Staatsoper, creating notable productions of *Die Frau ohne Schatten*, *Die tote Stadt*, *Die ägyptische Helena* and *Arabella*. In 1920 Roller founded the Salzburg Festival with Reinhardt, Strauss and Hofmannsthal; he designed a number of festival productions, several of which transferred to the Vienna Staatsoper.

Roller's published theoretical writings emphasize his view of stage design as a means of communication between composer, playwright and librettist as well as audience. He was the first to put into practice the ideas of the *Gesamtkunstwerk* espoused by Wagner, Adolphe Appia and, later, Edward Gordon Craig. His designs, correspondence and private library are in the Österreichisches Theatermuseum, Vienna; his designs for *Der Rosenkavalier* and *Die Frau ohne Schatten* have been published (Berlin, 1911, 1919).

Roller [Rollet], **Johannes.** *See* ROULLET, JOHANNES.

Rollerboard (Fr. *abrégé*; Ger. *Wellenbrett*; It. *catenacciatura*, *riduzione*). In an organ with tracker action, the part of the action that transfers motion sideways, usually from the trackers attached to the keys to the trackers attached to the pallets in the SOUNDBOARD (*see* ORGAN, §II, 5). Its invention was essential to the development of the keyboard in its present form. The term in English dates at least from 1632. Talbot (*c*1695, MS, *GB-Och* Music 1187) described the 'Rowlers' and 'Rowler-board' mechanism thus:

> between the Keys & the Palats belonging to them are several round pieces of Wood wch are call'd rowlers because they are made to rowl or turn in a centre upon little pins of Wire th[a]t are pass'd from each end of every Rowler into a small square bitt of wood that is fasten'd to the Rowler-board by wch the Rowlers are supported each Key having its distinct Rowler, between which & the Key there passes a slender Rib of Deal wch at the bottom end is fasten'd to the Key & at the top, to a Screw or Pin of Iron th[a]t is fix't in the inside of the Rowler towards one end: on the same side of the Rowler towards its other end there is another Screw or Pin (answerable to the former), from wch there passes up another Rib to the Bottom of the Wind-box.

MARTIN RENSHAW

Rollet, Marie François Louis Gand Leblanc. *See* ROULLET, MARIE FRANÇOIS LOUIS GAND LEBLANC.

Rolli, Paolo Antonio (*b* Rome, 13 June 1687; *d* Todi, 20 March 1765). Italian librettist and poet. His father, an architect from Burgundy, may have introduced him to French literature. Like Metastasio, he was trained by Gian Vincenzo Gravina and was famed as a poetic improviser. Gravina and his pupils were active members

of the Arcadian Academy in Rome until they came into conflict with its head, G.M. Crescimbeni, after which they founded the Quirinian Academy. Rolli produced his first dramatic work, the serenata *Sacrificio a Venere*, set by Giovanni Bononcini, at Rome in 1714. In 1715 he adapted Zeno's *Astarto*, also set by Bononcini, for the Teatro Capranica, where he met Richard Boyle, Earl of Burlington, who presumably encouraged his move to England.

He was in London by the end of January 1716. His primary function in England was to teach Italian to the families of his noble patrons, who included the earls of Stair and Pembroke. He also established a fine literary reputation by editing Italian masterworks (often choosing texts that had been either forbidden or heavily censored by the Inquisition), by issuing his first collection of *Rime* (1717) and by translating Milton's *Paradise Lost* (1729–35). In the summer of 1719, he wrote to his friend Giuseppe Riva that he had pleased Caroline, Princess of Wales, by giving her his *Rime* and his edition of *Il pastor fido*, by reading for her part of his translation of *Paradise Lost* and by singing for her; as a result, she ordered a gold medal for him and became his most important patron. When she became queen in 1727, he was employed to teach her children, including Frederick, Prince of Wales. After the queen's death in 1739, he was granted an annual pension of £70 so long as he remained in England.

From 1720 until he left England in autumn 1744, Rolli wrote or rewrote opera librettos for at least 34 London productions. The first of these were sponsored by the Royal Academy of Music. As its Italian secretary during its first three seasons (1720–22), Rolli provided all texts (except *Radamisto*) and supervised their staging. During this period he worked with the composers Handel, Bononcini and Amadei. In autumn 1722 he was replaced by Haym, apparently because of his unwillingness to accept a reduced salary and to endure 'persecutions', which were undoubtedly related to the government's anti-Jacobite campaign. In 1725 he sought to succeed Ortensio Mauro as court poet in Hanover. During the period 1726–7 he wrote the texts for three operas by Handel. In 1729 he was bitterly disappointed when the emperor chose Metastasio rather than him as Zeno's successor. In 1730, after the election of Clement XII Corsini, he applied for a post in the Vatican Library and a benefice in S Pietro.

From 1733 to 1737 his employer was the 'Opera of the Nobility', formed to rival the company managed by Handel and Heidegger. He provided at least eight operatic texts for its four seasons. Here he had the opportunity to work with Porpora, and was given more freedom in the choice of subjects, which allowed him to introduce 'exotic' elements from French musical theatre. This experiment was discussed by him in the introductions to his *Componimenti poetici in vario genere* (1744) and *De'poetici componimenti*, iii (1753). Such 'contamination' was, however, criticized after his death by Bertola and Arteaga.

With the exception of *Partenio* (1738) and one or two texts for Handel in 1740–41, Rolli's remaining London librettos were written for three opera seasons managed by his final employer, Charles Sackville, Lord Middlesex. *Deidamia* (1741), his last work for Handel, represents a marked improvement over its immediate, apparently hastily assembled predecessors. His librettos of 1742–4 demonstrate that he, like virtually everyone else, was influenced by the consummate works of Metastasio. After Middlesex's financially ruinous endeavour was ended by lawsuits in mid-1744, Rolli saw no future for himself or for Italian opera in London, so he retired to Todi, his mother's ancestral home, which had granted him a patent of nobility in 1735. There he spent his last 21 years, with no further involvement in theatrical activities.

Besides operas, Rolli's texts for music include two serenatas (Rome, 1714 and London, 1728) and a pastoral eclogue for three singers; two oratorios (London, 1734 and Todi, 1745) and a 'melodramma sacro' entitled *L'eroe pastore*; numerous secular cantatas and canzonettas (49 of them were published at London in 1727); three religious cantatas written after his retirement in Todi; and perhaps an anonymous *Cantata for two voices*, set by Salvadore Pazzaglia for production in 1760 at the Accademia degl'Intronati in Siena, where Rolli was enrolled by 'acclamation' before 1733.

His second serenata, *La festa d'Amore*, was set by his brother Giovanni (*d* Todi, 1745), a composer who lived with him in London from 1725 to 1732. Three of his cantata texts of 1727 were set in his brother's *Six Italian Cantatas and Six Lessons upon the Harpsicord* (London, 1733); five were set in Thomas Roseingrave's *Six Cantatas* (London, 1735); and three were set by Handel. J.A. Hasse apparently set more of Rolli's chamber texts than any other composer, since extant manuscripts credit him with four complete cantatas, seven arias from cantatas and 12 arias from canzonettas. Rolli's *Di canzonette e di cantate* of 1727 also received a signal honour: a reprint in 1730 under the name of Michel Angiolo Boccardi, who thus tried to appropriate the volume as his own.

Most, perhaps all, of Rolli's librettos were based upon a model, which he sometimes acknowledged on a title-page or in prefatory comments. He asserted that, by virtue of his alterations, he could claim about half of *Narciso* (1720; after C.S. Capece: *Amor d'un ombra e gelosia d'un'aura*), that he had reworked the whole and altered parts of *L'Odio e l'Amore* (1721; after M. Noris), that he had borrowed material for only one character in *Griselda* (1722; after Zeno) and that *Riccardo I* (1727; after F. Briani: *Isacio tiranno*) was almost entirely his. Since Londoners had no patience for long passages of Italian recitative, he greatly condensed them. This could be called hackwork, but Rolli was a proud poet who demanded respect for a well-wrought libretto, which he termed the 'intellectual part' of an opera. Rolli's librettos usually feature mythological rather than historical characters, so may be considered an outgrowth of the pastoral fables favoured by the Arcadian Academy. In the preface to his final drama, *Teti e Peleo* (1749; after B. de Bovier de Fontanelle), he praised the 'fabulous' tales used for French operas, because, in addition to the human passions found in historical plots, they feature marvels that permit a full panoply of dramatically apt stage settings, machines and dances.

Rolli's letters to the diplomat Riva, the castrato Senesino and the scholar Cocchi reveal an incisively intelligent mind, a haughty and caustic disdain for those in power and a ferocious opposition to any compromise.

LOWELL LINDGREN, CARLO CARUSO

Röllig, Johann Georg (*b* Berggiesshübel, nr Pirna, 1710; *d* Zerbst, 29 Sept 1790). German composer. He received his first musical instruction from J.B. Grellmann, Rektor of his local school. While he was a pupil at the Dresden Kreuzschule (1727–35) he studied harpsichord and organ with Karl Hartwig, composition with T.C. Reinhold, Kantor of the Kreuzkirche, and the cello. Through his friendship with Zelenka he was able to develop his musical accomplishments further, particularly in instrumentation; by this time he was writing successful church and instrumental pieces, and some cantatas survive from this period. He left Dresden about 1735 to study theology at Leipzig University for two and a half years. Here he presumably made contact with J.S. Bach, since formerly there were 65 cantatas by Röllig in Thomasschule and, according to Schering, his *St Matthew Passion* was performed in Leipzig under Bach's direction. Prince Johann August of Anhalt-Zerbst heard Röllig play the organ there and appointed him court organist and chamber musician at Zerbst in 1737. Röllig was promoted to vice-Kappellmeister at Zerbst by Christian August after the death of Johann August (in 1742) and to full (acting) Kapellmeister and councillor after Fasch's death in 1758. He also taught the clavier to several of the princes and princesses of Zerbst, including Sophie Auguste Fredericke, later Catherine the Great of Russia. He married twice, the second time to Johanna Karoline Unger, daughter of a Zerbst *Hofmusicus*, and neither marriage produced any offspring.

Gerber described Röllig as 'one of the best and most diligent composers' of the 18th century. Most of his output consisted of sacred music, symphonies and concertos, of which few have survived, though the extent of his works is indicated by the number of entries in the various Breitkopf catalogues, where he is well represented. The cantatas and the fragments (eight arias, three recitatives and two choruses) of the *St Matthew Passion* show him to have been firmly entrenched in the strict Baroque tradition. His later compositions, however, including the instrumental works, the *St Mark Passion* and the motets, show the influence of the stylistic changes of the mid-18th century, the vocal works being similar in style to those of G.A. Homilius.

WORKS

VOCAL

3 mass movts: San, 1743, *D-Dl*; Ky, Gl, *S-Skma*

19 cants.: Freunde wählen und nicht fehlen, 1734, *D-Bsb*; Ich bin Gewiss, 1739, *ORB*; Mein Geist, lass deine Zuversicht, 1749, *Bsb*; Gott mein Trost, 1758, *Bsb*; Sey getreu bis in den Todt, 1771, *S-Sk*; Kyrie Eleison, funeral, 1778, *D-HAmi*; Alle die gottselig leben wolle, *A-Wn*; Daran ist erschienen die Liebe Gottes, *D-CR*; Das Volk so im Finstern wandelt, *A-Wn*; Der Tod ist verschlungen, *D-HAmi*; Es erhub sich ein Streit im Himmel, *DK-A*; Es ist euch gut dass ich hingehe, *A-Wn*; Euer hertz soll sich freuen, *S-Skma*; Gott fährt mit Jauchzen auf, *A-Wn*; O wie meynt es Gott so gut, *D-Bsb*; Rühmet seinen heiligen Namen, *A-Wn*; Sei du mein Anfang und mein Ende (B. Schmolk), *Wgm,Wn*; Siehe der Herr kommt mit viel tausend Heiligen, *D-HAmi*; Was ist doch das vor eine Gnaden Crone, *Bsb*

2 motets: Ehre sei Gott in der höhe, *Dl*; Lobe den Herrn, in Versuch von kleinen leichten Motetten und Arien für Schul- und Singchöre (Leipzig, 1785)

2 Passions: St Matthew, *c*1736, frags., *ROu*; St Mark, 1750, *KNu*, formerly attrib. C.P.E. Bach

Ihr Sterne spart die Silberkrohn, serenata, *Bsb*

NIGEL SPRINGTHORPE

Röllig, Karl Leopold [Carl Leopold; Johann Ludwig] (*b* Hamburg; *d* Vienna, 4 March 1804). German glass harmonica player and composer. His birthdate is often given as about 1754 (a calculation from the age of 50 given in the Viennese register of deaths) but it is presumably too late, since Röllig was musical director of Ackermann's theatrical company in Hamburg from 1764 to 1769 and in 1771–2. His lost opera *Clarisse* was performed in Hamburg in 1771 and two years later in Hanover. About 1780 he took up the glass harmonica and went on a concert tour; in Dresden he was the guest of J.G. Naumann, and appearances are recorded in Hamburg (1781 and 1788) and Berlin (1787). From 1791 to his death he lived in Vienna, where he had a post at the court library and frequently performed on the glass harmonica.

Röllig was much concerned with the improvement of Franklin's glass harmonica. He visited most of the glassworks of Bohemia and Hungary in his search for the best glasses, and about 1785 developed a system of marking the chromatic glasses with gold rims (Franklin had distinguished the diatonic glasses by the seven colours of the spectrum). Since the instrument placed a great strain on the player's nervous system, in 1784 Röllig (like P.J. Frick 15 years earlier but independently of other contemporary developments) attempted to eliminate direct contact with the glasses by means of a keyboard mechanism. The keyboard action, however, compromised the delicacy of touch that was the instrument's hallmark (*see* MUSICAL GLASSES).

Röllig also invented the ORPHICA in about 1795 and developed the related Xänorphica in 1801 with Mathias Müller, and published numerous essays on the subject of instrument building. His compositions show good ideas but little skill in handling his musical material. Naumann praised his 'subtle use of diminished and augmented intervals and harmonies and their resolution', but Rochlitz in the *Allgemeine musikalische Zeitung* reported that he 'plays far better than he writes'; his playing is said to have 'forced the audience to flee on account of the endless diminished 7ths and disconnected progressions'. Reichardt wrote two pieces for Röllig's glass harmonica.

BRUNO HOFFMANN

Rolling Stones, the. English rock group. They were the foremost London-based rhythm and blues band of the early 1960s to break into popular consciousness, whereupon they acted as the counterfoil to the Beatles' accessible geniality. Mick Jagger (Michael Philip Jagger; *b* Dartford, 26 July 1943; vocals and harmonica), Keith Richards (*b* Dartford, 18 Dec 1943; rhythm guitar), Brian Jones (Lewis Brian Hopkin-Jones; *b* Cheltenham, 28 Feb 1942; *d* Hatfield, West Sussex, 3 July 1969; lead guitar), Ian Stewart (piano) and Dick Taylor (bass guitar) emerged in late 1962 from Alexis Korner's informal, ground-breaking Blues Incorporated, performing covers of rhythm and blues songs by such artists as Muddy Waters and Bo Diddley. By 1963, Bill Wyman (William Perks; *b* Plumstead, London, 24 Oct 1936) had replaced Taylor and Charlie Watts (Charles Robert Watts; *b* Islington, London, 2 June 1941; drums) had joined, while the older Stewart was moved to a backstage role by the group's manager and producer Andrew Oldham. They signed a recording contract with Decca, after the label's unfortunate decision to reject the Beatles.

Their early material was gathered from widely differing sources and moulded into a British rhythm and blues style. Thus Otis Redding's ballad *That's how strong my love is* was speeded up, the rhythm guitar given prominence and the original rich horn parts simplified. In Buddy Holly's up-tempo *Not Fade Away*, they introduced a call-and-response pattern between voice and harmonica, thickening the texture but relaxing the pace. Despite the aggressive nature of the group's early style, they had a number of uneasy flirtations with pop and the ensuing psychedelic age throughout the 1960s.

By 1965 Jagger and Richards had settled into a songwriting partnership, following the precedent set by Lennon and McCartney, and during 1966 they achieved their fifth successive number one hit. Songs such as *Satisfaction*, *Get off my cloud* and *19th Nervous Breakdown* represented a mature style based on Jagger's *faux* aggressive delivery and Richards's raw-toned riffs, and promoted an individualism underpinned by the band's raw sound and Jagger's distinctive pout. Their image was supported by widely publicised drug problems: the arrests of Jagger, Richards and Jones in 1967 resulted in quashed prison sentences. However, the development of Flower Power over the following years proved problematic for the band.

Around this time Jones became interested in Moroccan music (encapsulated in the 1966 song *Paint it black*) and, in an attempt to compete with the Beatles' psychedelic experiments on *Sgt. Pepper's Lonely Hearts Club Band*, the Stones released *Their Satanic Majesties' Request* (1968). In common with other maturing acts, their output had dropped to one album a year. However, Decca refused to release their next recording *Beggar's Banquet* in its original sleeve that showed a graffiti-infested toilet. After his growing difficulties with drugs, from which Jagger and Richards had begun to distance themselves, Jones left the band in 1969, shortly before his death. The arrival of his replacement, Mick Taylor (Michael Taylor; *b* Welwyn Garden City, 17 Jan 1948), who had been a member of John Mayall's Bluesbreakers, coincided with a strong resurgence of material influenced by rhythm and blues, such as *Midnight Rambler* from *Let it Bleed* (1969).

The end of their musical peak was marked by the 1972 album *Exile on Main St.* (notably *Tumbling Dice*), with its horn arrangements redolent of the Stax sound of the 1960s. In 1974 Taylor left the group and was replaced by the ex-Faces guitarist Ronald (Ron) Wood (*b* London, 1 June 1947). The group's popularity continued over the following years and in 1976 they headlined the Knebworth Festival, but the strong *Some Girls* (1978), with the disco-influenced *Miss You*, suffered through competition with punk. After *Emotional Rescue* (Rolling Stones, 1980), they settled into a predictable style of adult-orientated rock. Despite the frequent poor reaction from both critics and fans, subsequent albums continued to sell well. In 1985 Jagger collaborated with Bowie on a cover of Martha and the Vandellas' hit *Dancing in the Street* in support of Band Aid. Following a number of rumoured splits, *Steel Wheels* (CBS, 1989) became the Stones' best-received album of the decade. After Wyman's departure in 1993, *Voodoo Lounge* (Virgin, 1994; available as an interactive CD-Rom in 1995) showed that Jagger and Richards were still able to produce strong work.

Throughout their career the Stones have never been marginalized, its members working with a host of other musicians including Bowie, Clapton, Cooder, Michael Jackson, Lennon, Gram Parsons and Leon Russell, sometimes on peripheral projects. Like Jones, Jagger has shown an interest in traditional Moroccan music, while Watts's individual work has all been jazz-based. After the miscalculation of their disco era, in their gradual shift from rhythm and blues to adult-orientated rock they matched the changing tastes of their own generation of fans. Jagger has also appeared in a number of films, notably *Performance* (WB, 1968).

The Stones have never tried to shed the 'bad-boy' image accepted in the 1960s, an image fostered by the unpolished sounds of Jagger's voice and Richards's guitar. As such, they form a vital link between aggressive rock and roll, such as that of Gene Vincent, and punk. With their advancing years, however, and given Jagger's considerable wealth and passion for cricket, the image has become harder to sustain.

ALLAN F. MOORE

Rollins, Sonny [Theodore Walter; Newk] (*b* New York, 9 Sept 1930). American jazz tenor saxophonist.

1. LIFE. He first learnt the piano, then studied the alto saxophone from about the age of 11, and took up the tenor instrument in 1946. In high school he led a group with Jackie McLean, Kenny Drew and Art Taylor. He rehearsed with Thelonious Monk for several months in 1948, and from 1949 to 1954 he recorded intermittently with a number of leading bop musicians and groups. His most frequent associate during these early years was Miles Davis, with whom he introduced three compositions of his own which later became jazz standards: *Airegin*, *Doxy* and *Oleo* (all of which were recorded on the album *Miles Davis Quintet*, 1954, Prst.). In December 1955 he joined the Clifford Brown-Max Roach Quintet. He remained with Roach until May 1957, then performed briefly in Davis's quintet; thereafter, however, he has led his own groups.

In 1956 came the first of a series of landmark recordings issued under Rollins's own name: *Valse hot* (on *Sonny Rollins Plus 4*, 1956, Prst.) introduced the practice, now common, of playing bop in 3/4 metre; *St Thomas* (on *Saxophone Colossus*, 1956, Prst.) initiated his explorations of calypso patterns; and *Blue 7* (also on *Saxophone Colossus*) was hailed by Gunther Schuller as demonstrating a new manner of 'thematic improvisation', in which the soloist develops motifs extracted from his theme. *Way Out West* (1957, Cont.), which was Rollins's first album using a trio of saxophone, double bass and drums, offered a solution to his longstanding difficulties with incompatible pianists, and exemplified his witty ability to improvise on hackneyed material (*Wagon Wheels*, *I'm an old cowhand*). *It could happen to you* (on *The Sound of Sonny*, 1957, Riv.) was the first in a long series of unaccompanied solo recordings, and *The Freedom Suite* (1958, Riv.) foreshadowed the political stances taken in jazz in the 1960s.

During the years 1956 to 1958 Rollins was widely regarded as the most talented and innovative tenor saxophonist in jazz. Nevertheless, he was discontented: he could not find compatible sidemen, saw shortcomings in his own playing and suffered from poor health. For these reasons he voluntarily withdrew from public life from August 1959 to November 1961. During this period of retirement his habit of practising on the Williamsburg Bridge in New York became legendary.

On resuming his career Rollins had improved his already prodigious skills, but his style was now considered conservative. In an effort to rejoin the vanguard of jazz fashion he began, in mid-1962, collaborating with Don Cherry, Billy Higgins and other musicians playing free jazz; *East Broadway Run Down* (1966, Imp.) illustrates the furthest extent to which he incorporated noise elements into his playing. During these years, as Rollins continued to struggle with changing personnel and instrumentation, he focussed increasingly on unaccompanied playing, and by the end of the decade he had become famous for his extended 'stream-of-consciousness' extemporizations on traditional tunes and on his own calypso songs.

Rollins pursued spiritual interests in India for five months in 1968, and abandoned music altogether from September 1969 to November 1971. From 1972, when he resumed playing once more, he has led various groups of young, lesser-known musicians, performing in a commercial vein and making use of electronic instruments and black-American dance rhythms; a film made the following year, *Sonny Rollins Live*, captures the exuberance of a concert performance.

Sonny Rollins, 1962

Rollins has continued to experiment, recording on the soprano saxophone in 1972 and on the lyricon in 1979. However, touring the USA in 1978 as a member of the Milestone Jazzstars (with McCoy Tyner, Ron Carter and Al Foster), he demonstrated that, as an individual, he remained essentially true to the bop tradition, an aspect of his playing that was again especially apparent in an acclaimed solo performance at the Museum of Modern Art, New York, in 1985. Except for a six-month hiatus in 1983, after he collapsed from exhaustion, Rollins has remained active through the 1990s, touring the USA, Europe and Japan, and recording a fusion of bop and soul music with his quintet.

2. STYLE. Rollins established himself as the outstanding jazz saxophonist between Charlie Parker and John Coltrane and a leading figure in the hard-bop style. The prevailing interpretation of his method of improvisation derives from Schuller's 'thematic analysis' of Rollins's celebrated solo on *Blue 7* (1956); other writers, accepting and expanding on Schuller's insights, have even declared

Ex.1 From *St Thomas*, on *Saxophone Colossus* (1956, Prst.); transcr. C. Blancq

thematic improvisation to be Rollins's greatest contribution to jazz. This view demands reconsideration: Schuller's analysis accounts for only part of Rollins's solo, and several of the motifs in that part do not derive from the theme but occur elsewhere in Rollins's earlier work (most obviously in *Vierd Blues*, which he recorded with Davis on the album *Collector's Items*, 1953, 1956, Prst.). Rollins, like most bop musicians of the period, paid little attention to composed melodies, preferring instead to improvise athematic, 'formulaic' responses to underlying chord progressions. In slow ballads, of course, he often paraphrased the theme, and he occasionally developed motifs from his own calypso themes (as in ex.1, where the first two notes of the theme, inverted and rhythmically displaced, alternate with formulaic bop runs), but he rarely applied this technique to blues or popular songs. Similarly, he seldom used fragments from familiar tunes to anchor long stretches of newly improvised material; *Wagon Wheels* (on *Way Out West*, 1957, Cont.) provides the clearest example of this technique. In essence Rollins has adhered to the bop practice of varying and elaborating a large repertory of formulas and, in a wide range of material, shows a rhythmic imagination, harmonic subtlety and freedom of design that have perhaps been surpassed only by Charlie Parker.

BARRY KERNFELD

Rolltrommel (Ger.). Tenor drum. *See* DRUM, §II, 3.

Rolnick, Neil Burton (*b* Dallas, 22 Oct 1947). American composer. He studied English literature at Harvard (BA 1969) and composition at the San Francisco Conservatory (1973–4) and with Felciano, and Andrew Imbrie and Olly Wilson at the University of California, Berkeley (MA 1976, PhD 1980); he also studied computer music with Chowning at Stanford University and did further research at IRCAM, Paris (1977–9). In 1981 he joined the staff at the Rensselaer Polytechnic Institute, New York, where he founded the iEAR studios and has developed a unique graduate programme in computer music and video arts.

Most of his work is electro-acoustic, often combining real-time synthesizer or computer systems with ensembles or solo performers; he often performs in his own works and collaborates extensively with avant-garde jazz and pop musicians. He has twice won awards at the Festival International de Musique Expérimentale in Bourges (1976, 1980) and has received numerous commissions and awards from organizations such as the NEA, Rockefeller Foundation and Fulbright Commission. In 1990, as a Fulbright scholar, he spent a year in Yugoslavia. His ties to that country are reflected in works such as *Requiem Songs: for the Victims of Nationalism* (1993) and *Balkanization* (1988). His other works include references to American improvisational and jazz practices and world music.

INGRAM D. MARSHALL

Roloff (Reyes-Gavilán), Julio (*b* Havana, 27 Dec 1951). Cuban composer and teacher. He studied in Havana under Roberto Valera, began composing in the 1970s and graduated in composition from the Instituto Superior de Arte in 1983. He was a member of various instrumental groups and in 1978 became a musical consultant to Cuban television, with special responsibility for children's programmes. From 1980 he taught at the National School of Arts and the Amadeo Roldán Conservatory, Havana. In 1984 he became a record producer for the Cuban company EGREM, specializing in classical music. The première of *Masa* (1974) marked the start of his composing career. In 1984 he joined the Estudio Electroacústico, now the Laboratorio Nacional de Música Electroacústica (LMNE) under the direction of Juan Blanco, and in 1984 won an award at the first international electro-acoustic music competition in Bourges, France, for *Halley 86*. In 1987 he won awards at competitions in Canada and Mexico for *Cartas de Africa* and *Concierto para violín y orquesta* respectively. His works for percussion instruments are particularly noteworthy, and *Variaciones para un percusionista* (1979) has become a part of every Cuban percussionist's repertory. Rollof has also written educational and theatre music.

VICTORIA ELI RODRÍGUEZ

Rolón (Alcaraz), José (*b* Zapotlán, 22 June 1886; *d* Mexico City, 3 Feb 1945). Mexican composer. He first studied music with Francisco Godínez in Guadalajara (1900–03), following this with studies in Paris (1904–07) with Moszkowski (piano) and Gedalge (harmony). Between 1907 and 1927 he was based in Guadalajara, founding there the Escuela Normal de Música (1916) and the Orquesta Sinfónica de Guadalajara (1915, now the Orquesta Filarmónica de Jalisco). As well as educating several generations of musicians, Rolón gave first performances of many works, including compositions by Milhaud and Varèse.

In 1927 he returned to Paris to study composition with Dukas and harmony with Boulanger. His encounter with these teachers and with the artistic life of the city resulted in a complete rethinking of his aesthetic. Back in Mexico City he taught composition, piano and harmony at the Conservatorio Nacional (1930–38), becoming its director in 1938. In addition he wrote criticism, essays and a book, *Manual de modulacion* (1930). During this period he received first performances by such conductors as Ansermet, Stokowski, Chávez and Revueltas.

His compositions show a development from the Romanticism of his early works for piano to the modernism of his Piano Concerto (1935), a work characterized by a harmonic and idiomatic development similar to that of his contemporaries Ravel and Bartók. In addition, his lieder to poems by Mexican authors comprise one of the finest groups of songs in the Latin American repertory. His symphonic output is intensely evocative and original. *Zapotlán*, for example, whose orchestration includes two guitars, is one of the masterpieces of Mexican nationalism, and precedes other composers such as Revueltas or Galindo in incorporating into its symphonic language the rhythmic and timbral richness of traditional Mexican music; while *Cuauhtémoc* is distinguished by its dramatic force and by the use of *Sprechgesang*. Rolon's work is one of the most important and original contributions to Latin American modernism, comparable with that of Villa-Lobos or Ponce.

WORKS

Ballet: Los gallos, 1930; El fanfarrón alucinado, 1938; Piñatas, 1938

Orch: Andante malincónico, 1915; Sym., E, 1919; Obertura de concierto, 1920; El festín de los enanos, sym. poem, 1925; Zapotlán '1895', sym. poem, 1926; Pf Conc., 1935, rev. 1942

Choral: Cuauhtémoc (sym. poem, R. López Velarde), chorus orch, 1928; Mi viejo amor, SATB [arr. after A. Esparza Oteo]; Insomnio, SATB (E. Rebolledo); La borrachita, SATB; Estrellita, SATB [from song by M.M. Ponce]

Songs (*for 1v, pf unless otherwise stated*): Ufrasia, 1917; Ay no me digas!, 1917; Ingrata, 1917; Larmes (A. Rivoire); Y ella me 'dicía', 1918; Nocturne (V. d'ile Adam), 1922; Beaux papillons (T. Gautier), 1922; Si tu parles (C. Manclair), 1922; Mystere (Manclair), 1922; Epigrama (R. de Carvahlo), 1928; 3 melodies (P. Reyniel), 1928; ¿Quién me compra una naranja? (J. Gorostiza), 1931; Deseos (C. Pellicer), 1931; El sembrador (Pellicer), 1v, fl, ob, cl, hn, bn, 1932; El segador (Pellicer), 1v, fl, ob, cl, hn, bn, 1932; Dibujos sobre un puerto (Gorostiza), 1932; Canción de la noche (R. Usigli), 1932; Mi tristeza es como un rosal florido (E. González Martínez), 1932; Incolor (X. Villaurrutia), 1936; Naufragio (S. Novo), 1937; Simple conte (J. Cocteau); Junto a tu cuerpo (S. Novo), 1937; Breve romance de la ausencia (Novo), 1938

Chbr: Pf Qt, op.16, vn, va, vc, pf, 1912; Str Qt, op.35, 1935; Allegro y fuga, str qt

Pf: Muzurka, 1895; Bosquejos, 1909; 5 petit morceaux, op.3, 1910; Valse intime, 1911; 5 piezas, op.12, 1911; Vals caprice 'Sobre las olas', op.14, 1914 [from waltzes by J. Rosas]; 3 danzas indígenas jaliscienses, 1928; Loly baila, 1934; 2 estudios, 1935; Canon, 1935; Fuga de tono, 1944; Fuga, pf 4 hands, 1944; Suite All'antica, 1944

MSS in *US-NYp*, *Fleisher Collection (Philadelphia)*

Roman (Fr.). In 12th-century usage, a literary work in the vernacular (Old French) rather than in Latin. After Chrétien de Troyes (*fl* c1160–90) used the term to refer to narrative, it came to be used as a generic term for medieval narrative romance. A *roman* in the early period was a narrative in octosyllabic rhyming couplets which

reworked a variety of older sources into a 'very beautiful combination' ('molt bele conjointure'), according to Chrétien. Its poetic form and subject matter (Alexander the Great, Troy, Arthurian subjects including Tristan and Iseut and the Grail legends, for example) distinguish the *roman* from the CHANSON DE GESTE, a French epic poem in monorhymed, assonanced *laisses* (verse sections). 12th-century *romans* are marvellous adventures that treat of *armes et amors*, the noble arms and love of an idealized aristocracy imbued with *chevalerie* (knightliness) and *courtoisie* (courtliness).

During the 13th century such *romans* gradually came to be written in prose, while new kinds of verse romance developed, such as non-Arthurian romances in contemporary settings and allegorical or dream-vision romances. (By the 14th century, this sort of work, often pseudo-autobiographical and didactic, was more frequently called a *dit*.) The most important of the 13th-century dream-visions is the *Roman de la rose* (completed 1270s) of Guillaume de Lorris and Jean de Meun, a poetic summa that directly inspired poets throughout the 14th century and for much of the 15th. More important for music history, however, is the tendency, probably first seen about 1210 in Jean Renart's non-Arthurian *Roman de la rose* (often called the *Roman de Guillaume de Dole* to distinguish it from the more famous work of Guillaume de Lorris and Jean de Meun), of heightening the sense of realism by interpolating into the narrative diverse lyrical genres from the contemporary repertory.

This article will concentrate on this literary hybrid form of the *roman*, a narrative poem with lyric insertions, sometimes supplied with music in the manuscripts, which was cultivated almost exclusively in France from the early 13th century to the early 15th. In the broadest sense, the practice covers the insertion of lyrics – including *chansons courtoises*, *rondels* and other dance forms, refrains, lais, *complaintes*, motets and the 14th-century *formes fixes* (ballade, rondeau, virelai) – into framing genres, both prose and poetry, such as romances, chronicles, pseudo-autobiographical *dits* and dramas. The *romans* are thus links in an intertextual matrix connecting chansonniers and motet anthologies.

Literary scholars have begun to analyse the *romans* by considering, for example, the ways in which lyrics are incorporated into the narrative, the degree of heterogeneity or disruption occasioned by the contrast of genres, and how a given lyric expresses a particular character's sentiments. Except for the *Roman de Fauvel*, the *romans* have been the subject of few musicological studies. Even when the manuscripts lack music, however, the *romans* may provide anthologies of specific (often datable) slices of the repertory and valuable information about performing practice and the function of the various lyrical genres in courtly society.

Jean Renart, in his *Roman de la rose* or *Guillaume de Dole* (*c*1210; ed. F. Lecoy, Paris, 1979) described his work as an innovation:

> For just as one dyes cloth red to gain praise and esteem, so too the author has placed songs and melodies into this *Roman de la rose*, which is a new thing; and there are so many beautiful verses woven in, by such diverse authors, that peasants could know nothing of it (lines 8–15).

Along with an epic *laisse*, 46 lyrics are quoted in the course of the narrative, including stanzas from 16 *chansons courtoises*, among them works attributed to three troubadours and seven trouvères, a collection of ten anonymous chansons in a more popular style (*chansons de toile*, pastourelles etc.) and 20 dance-songs and refrains. This anthology (unfortunately the single extant source, *I-Rvat* Reg.lat.1725, lacks music) predates any of the extant troubadour and trouvère chansonniers. A few of the prominent 13th-century examples after the *Guillaume de Dole* include: Gerbert de Montreuil, *Roman de la violette* (*c*1230; ed. D.L. Buffum, Paris, 1928; 40 refrains and chansons); Gautier de Coincy, *Les miracles de Nostre-Dame* (1214–33; ed. in PSFM, xv, 1959; 22 chansons, many contrafacta of trouvère songs, plus 35 additional insertions in *F-Pa* 3517-18); the *Roman de Tristan en prose* (anonymous) (*c*1240; ed. T. Fotich and R. Steiner, Munich, 1974; 22 strophic lais); Tibaut, *Roman de la poire* (*c*1250; ed. C. Marchello-Nizia, Paris, 1984; 19 refrains); Adam de la Bassée, *Ludus super Anticlaudianum* (*c*1280; ed. P. Bayart, Tourcoing, 1930; 38 Latin insertions, including contrafacta of liturgical items and trouvère songs); Jacques Bretel, *Le tournoi de Chauvency* (1285; ed. M. Delbouille, Liège, 1932; 35 refrains); Adam de la Halle, *Le jeu de Robin et de Marion* (*c*1285; ed. S.I. Schwam-Baird and M.G. Scheuermann, New York, 1994; 17 refrains and chansons); Jacquemart Giélée, *Renart le nouvel* (*c*1289; ed. H. Roussel, Paris, 1961; *c*65 refrains and two liturgical items); and Jakemes, *Roman du castelain de Coucy et de la dame de Fayel* (*c*1300; ed. L.J. Friedman, Cambridge, MA, 1958; ten songs). The anonymous *chante-fable* (song-story) AUCASSIN ET NICOLETTE (*F-Pn* fr.2168; *c*1225–60; ed. J. Dufornet, Paris, 2/1984), which alternates between sung verse in assonanced octosyllabic *laisses* (fully notated in the manuscript) and prose, is exceptional because the 21 verse segments are not insertions, but are integral to the overall form of the work. (For music example *see* CHANSON DE GESTE, ex.3.)

The most important musical monument of the early Ars Nova, the ROMAN DE FAUVEL (1314) of Gervès du Bus in the enlarged version of *F-Pn* fr.146 (*c*1318; facs., New York, 1990), is the best-known of the 14th-century *romans*, although it is exceptional in that the 169 insertions (including not just French chansons or refrains, but also Latin conductus, polyphonic motets and other genres) comment on a pre-existing narrative, and thus were not introduced by the original author of the narrative. The same manuscript transmits two *diz entés* by Jehannot de l'Escurel (ed. in CMM, xxx, 1966), 'Gracieuse, faitisse et sage' (24 refrains) and 'Gracieus temps est' (28 refrains). The *Roman de Fauvel* and three other *romans* (which unfortunately lack music in the extant sources), Nicole de Margival's *Dit de la panthere* (*c*1310; ed. H.A. Todd, Paris, 1883; 16 songs or refrains, including six chansons by Adam de la Halle), Jehan Acart's *Prise amoureuse* (1322; ed. E. Hoepffner, Dresden, 1910; nine ballades and nine rondeaux) and Jehan de le Mote's *Li regret Guillaume* (1339; ed. A. Scheler, Leuven, 1882; 30 ballades), are important for the emergence of the *formes fixes*. Many of the *dits amoureux* of Machaut include lyrical insertions, of which the most important are the *Remede de Fortune* (*c*1340; ed. and trans. J.I. Wimsatt, W. Kibler and R.A. Baltzer, Athens, GA, 1988; seven songs set to music and a verse *prière*) and the *Voir dit* (1365; ed. and trans. R.R. Palmer and D. Leech-Wilkinson, New York, 1998; 63 lyrics, eight set to music). Several of Froissart's *dits amoureux* incorporate fixed-form lyrics of his own composition, or, in the case of his

Arthurian romane *Meliador* (*c*1383; ed. A. Longnon, Paris, 1895–9), those of his patron Wenceslas de Brabant. Except for one ballade in *Meliador* found in *F-Pn* n.a.fr.6771 and *CZ-Pu* XI E 9, no music is known for these works; nevertheless, the contexts provide useful material on contemporary performing practice. In the early 15th century, three of Christine de Pizan's *dits* (ed. M. Roy, Paris, 1891–6) and the anonymous *Pastoralet* (1422–5; ed. J. Blanchard, Paris, 1983; 30 insertions) provide the last medieval examples of this hybrid form. Outside France only a handful of works exhibit the technique of the *roman* with lyric insertions: Dante's *La vita nuova* (*c*1292–3; ed. G. Gorni, Turin, 1996; 31 lyrics), Ulrich von Liechtenstein's *Frauendienst* (1255; ed. V. Spechtler, Göppingen, 1987; 58 lyrics), and a few works from the Iberian peninsula, of which the best-known is the *Libro de buen amor* of Arcipreste de Hita (1330, enlarged 1343; ed. and trans. R.S. Willis, Princeton, NJ, 1972; 21 lyrics).

Bibliographical control of the *romans* with lyrical insertions remains incomplete. Ludwig's list of works and manuscript sources (1923) in many respects is unsurpassed, particularly for the 13th century; some additional 14th-century examples are included in Boulton (1993, appx i). Van den Boogaard (1969) gives a nearly complete list of 13th-century *romans*, but supplies concordances only for refrains and dance-songs. Fowler (1979, appx i) supplies a complete concordance for all types of insertions for 33 of the 13th- and 14th-century *romans* with lyrics. Gennrich gives surviving music for the insertions in 13th- and early 14th-century works, but his attempts to reconstruct dance-songs often take too much licence with the evidence of the manuscripts; Fowler's editions (1979, appx ii) follow the sources.

LAWRENCE M. EARP

Roman, Johan Helmich (*b* Stockholm, 26 Oct 1694; *d* Haraldsmåla, nr Kalmar, 20 Nov 1758). Swedish composer. He was a leading figure in Swedish music of the 18th century.

1. LIFE. His father, Johan Roman, was a member of the Swedish royal chapel; his mother came from a family of German descent who had settled in Sweden during the 17th century. His paternal ancestors, of Swedish origin, had lived in Finland; the name Roman may be derived from the Finnish place name Raumo. Roman became a member of the royal chapel as early as 1711, his principal instruments being violin and oboe. A grant from King Charles XII enabled him to pursue his musical studies in England from about 1715 to 1721; there he may have studied with Pepusch, had contact with Ariosti, G.B. Bononcini, Geminiani and Handel among others, and was for a time in the service of the Duke of Newcastle as a second violinist. After his return to Sweden he was appointed deputy master of the chapel in 1721 and became the leader of the court orchestra in 1727.

During the 1720s Roman composed several festive cantatas for the court and in 1727 published a collection of 12 sonatas for flute, his only complete work to appear in print during his lifetime. At the same time he was extremely active as an organizer: he considerably improved the standard of the royal chapel and in 1731 introduced the first public concerts in Stockholm.

A year after the conclusion of his brief first marriage (1730–34) Roman embarked on his second journey outside Sweden, this time visiting England, France, Italy, Austria and Germany (1735–7); he returned with new attitudes towards musical style and also brought back much music for the royal chapel. In 1738 he married again and in 1744, with five children, was widowed for the second time. In 1740 he was elected a member of the Royal Academy of Science (established in 1739), thanks probably in large part to his strong interest in demonstrating 'the suitability of the Swedish language to church music'.

The death of his patroness, Queen Ulrika Eleonora, in 1741 marked a turning-point for Roman; the following year he was beset by ill-health and professional opposition. The new crown princess, Lovisa Ulrika of Prussia (sister of Frederick the Great), brought to Sweden new tastes, and her husband, Adolph Frederik, had a competing princely chapel. For the royal wedding in 1744 Roman composed the large orchestral suite *Drottningholmsmusique*, one of his finest works. The following year he retired due to deafness, leaving his student, Per Brant, to defend the court orchestra against the aggressive new chapel of the crown prince, which began to compete even in the public concerts. Roman left Stockholm to settle on the small estate of Haraldsmåla near the town of Kalmar in south-east Sweden. He made a last visit to Stockholm in 1751–2, in part to direct the funeral and coronation music on the accession of Adolph Frederik. His principal activity in the remaining years of his life seems to have been the translation into Swedish of theoretical works on music, including those of Gasparini and Keller, as well as the adaptation of sacred works to that language. Several

of his sacred vocal works also date from this last period. In 1767, nine years after his death, the Royal Academy of Science held a commemorative ceremony; the *Äreminne* (memorial) by the royal secretary A.M. Sahlstedt on that occasion is the earliest summary of Roman's career and significance, and portrays the composer sympathetically, stressing his humility and good humour as well as his skill and industry. No portrait of Roman survives although one of the musicians portrayed on a mural at the provincial estate of Count Horn at Fogelvik may be the composer.

2. WORKS. Roman emerges in many respects as the central figure in Swedish musical culture during the 'Era of Freedom' ('Frihetstid', *c*1720–70). He also played an important role in the widening of contacts with foreign music, particularly Italian and English. There is a grain of truth in the epithet 'the Swedish Handel', for Roman, greatly impressed by Handel's music during his first trip to England (*c*1715–21), had many of his works sent to Sweden and later performed a number of them, including several anthems and oratorios, using translations of the texts into Swedish.

There appears to be no sharp dividing line between Roman's work as master of the royal chapel, arranger and translator of texts on the one hand and his activity as a composer on the other. In a letter of 1772 his pupil Johan Miklin, director of music at Linköping stated that he had 'imitated all the nations of Europe, or sought to express and copy their taste in music'. A typical example of such 'imitation' is his arrangement in 1747 of a *Dixit* by Leo, written five years earlier: Roman replaced the Latin text by a Swedish one and reduced the two choirs to a single four-voice choir; a wide range of reworking is apparent, from straight copying of choral sections (particularly fugal ones) to complete transformation involving changes in melodic line, harmony and key, but the most radical changes are to the orchestral writing, which is considerably enriched and thereby takes on characteristics of Roman's personal style.

The extensive collection of sketches and 'musical jottings' which survives as no.97 of the Roman collection (*S-Skma*) includes, besides sketches of Roman's own compositions, copies, reworkings, fragments and themes of works by more than 50 composers from Lassus and Albrici to Lampugnani, Leo and Porpora; they afford a fascinating insight into Roman's manner of practising 'the science of music'. Another volume, no.95 in the same collection, contains scores in Roman's hand of sacred choral works for all major feasts of the liturgical year, supplied with Swedish texts; among the composers are Carissimi, Fux, Handel and Pepusch. Certain works attributed to Roman are labelled 'alla Corelli', 'alla Marcello' and so on, and in some cases are based on instrumental models; there are also vocal movements turned into instrumental, for example a trio by Handel arranged by Roman as an orchestral movement. Roman was a modest man who aimed above all to enrich the repertory with the best possible music; he rarely put his name even to autographs of his own works, which renders yet more difficult the problems of authenticity.

A Handelian choral style with *galant* elements marks the Swedish settings of the *Jubilate* (Psalm c), *Te Deum* and the Svenska Mässan among Roman's vocal works. The sacred songs for solo voice or duet also include many fine, heartfelt pieces in which the basically orthodox Protestant attitude at times acquires a Pietistic shading. Most are accompanied by continuo alone, but a few also have a solo obbligato part (in one case of considerable virtuosity), and occasionally the indication 'si suona' suggests that such a part is needed. The texts are largely drawn from the Psalter, but in many cases they take the form of metrical paraphrases, usually in hexameters; many of these are by the poet and customs official Anders Nicander.

Roman's instrumental music exhibits stylistic traits reminiscent of a wide variety of 18th-century composers. His style clearly represents the transition from late Baroque to the *galant*, which may in turn reflect his contact with continental styles during his journeys. This technically solid personal style is characterized by an unmistakable rhythmic individuality and an interest in formal development. He employed the 'learned' style only exceptionally, notably in overtures and trio sonata movements, most of which are early works. For a composer who worked in so remote a country as Sweden, Roman produced music which in some respects seems modern for its time, including the numerous symphonies (most of them probably from *c*1735–50), of which several are in four movements. The finest of his large orchestral suites is the *Drottningholmsmusique*, which has rightly become his best-known and most widely performed work. Of the chamber music the 12 flute sonatas of 1727 correspond stylistically to Handel and Telemann. The striking *Assaggi* for unaccompanied violin deserve mention, for they constitute one of the most extensive contributions of the time to this specialized repertory. These pieces, all in several movements, show familiarity with contemporary violin technique and contain passages with multiple stopping. About 400 works attributed to Roman survive; most are in manuscript in the Roman collection of the Swedish Royal Academy of Music in Stockholm. About a quarter are autograph; the rest are copies by perhaps 200 different hands, ranging in period from about 1720 to 1810. This material poses many difficult problems of authenticity, dating and relationship between different versions, as well as those having to do with techniques of reworking and parody. For the instrumental music these questions have essentially been solved by the work of Ingmar Bengtsson.

WORKS

MSS in S-Skma unless otherwise stated

SACRED VOCAL

Svenska Mässan [Ky-Gl with Swed. text], S, chorus, orch, *c*1752, *S-HÄ*, *L*, *V*

Frögdens Herranom al verlden [Ps c], S, B, chorus, orch, ?1743, ed. in *Äldre svensk musik*, v (Stockholm, 1938)

O Gud vi lofve Tig [TeD], S, T, chorus, orch, *L*

*c*10 other choral pieces, mostly psalms, *Klm*, *L*, *Sk*

Dixit Dominus, solo vv, chorus, orch, 1747, partial reworking of Dixit Dominus, 1742, by L. Leo

Beati omnes, attrib. Roman, doubtful authenticity

*c*100 works for 1/2vv, bc/str on psalm texts metrically paraphrased by Swed. poets, incl. *c*75 probably authentic [23 in form of cantatas or verse anthems, incl. Tig vi lofve O Gud (TeD), 2vv, bc; *c*52 in 1 movt], *L*

*c*70 songs on non-biblical Swed. texts, 1v, bc, incl. *c*35 probably parodies of the inst. works, *c*35 on texts by Swed. poets

Numerous reworkings of pieces by other composers, incl. Carissimi, Fux, Handel and Pepusch

SECULAR VOCAL

2 cantatas: Pianti amiche, S, orch, Tu parti amato bene, S, bc

*c*70 solo songs on Swed. texts (several probably parodies); *c*15 solo songs in *c*8 other languages

OCCASIONAL VOCAL

Hoggi sul'orizonte [Festa musicale] (A. Papi), S, T, B, chorus, orch, birthday of Frederik I, 17 April 1725
Verdopple Sonne deinen Schein [Freudige Bewillkommung] (J.C. Lohman), S, B, orch; birthday of Ulrika Eleonora, 23 Jan 1726, *S-HÄ*, *Sk*
Süsse Zeiten eilet nicht [Cantata zu einer Taffel Music] (J. von Köppen), S, B, orch, New Year 1727
Statt up du trogna folk (cant., J. Neresius), S, B, orch, 23 Jan 1727
Förnöijen eder sälla paar [Bröllops music] [wedding music] (U. Rudenschöld), S, B, orch, ? late 1720s, *L*
Warelse som utan dagar (ode/cant., S.E. Brenner), S, chorus, orch, 23 Jan 1730
Välkommen store kung igen [Cantata vid Hans Kongl. Maj:ts . . . återkomst ifrån des tyske arf länder], S, T, B, chorus, orch, Nov 1731, *Sk*
Herren känner the frommas dagar (anthem), S, chorus, orch, funeral of Frederik I, 27 Sept 1751, doubtful authenticity
Prisa Jerusalem Herren, chorus, orch, coronation of Adolphin Frederik, 26 Nov 1751, doubtful authenticity

ORCHESTRAL

thematic catalogue in Bengtsson, 1955

Musique satt til en festin hos Ryska Ministren Gref Gollowin [Golovinmusiken], suite, 1728, *S-L*
Bilägers musiquen (Royal wedding music) [Drottningholmsmusique], suite, 1744, ed. C. Genetay (Stockholm, 1958)
7 suites; 1 ed. H. Rosenberg (Stockholm, 1944); 1 suite, doubtful authenticity
17 sinfonias, a 3 and 4;, 1 ed. in *Äldre svensk musik*, iv (Stockholm, 1935); 3 ed. in MMS, iv (1965); nos. 16 and 20 ed. C. Genetay (Stockholm, 1951); 6 ed. in *The Symphony 1720–1840*, F2: *The Symphony in Sweden* (New York, 1982); sketches for 2 sinfonia movts; 1 sinfonia, doubtful authenticity
4 ovs.; 8 pieces and other sketches, *L*, *Sm*
4 vn concs.; 2 [D, F] ed. in *Äldre svensk musik*, ii, iii (Stockholm, 1935); 1 conc., B♭, ob, str, ed. H. Blomstedt (Berlin, 1959); conc., D, ob d'amore, str; conc., G, fl, previously attrib. F. Zellbell

CHAMBER

thematic catalogue in Bengtsson, 1955

12 sonate, fl, vle, hpd (Stockholm, 1727); ed. P. Vretblad (Stockholm, 1937); ed. U. Schmidt-Laukamp (Berlin, 1995)
13 trio sonatas, 2 vn, bc; ed. P. Vretblad (Stockholm, 1947–9); 1 ed. in *Äldre svensk musik*, i (1935); 1 trio sonata, d, vn, vc, bc; 2 trio sonatas, only bc extant

INGMAR BENGTSSON/BERTIL H. VAN BOER

Roman, Stella [Blasu, Florica Vierica Alma Stela] (*b* Cluj, 23 Aug 1904; *d* New York, 12 Feb 1992). Romanian soprano. She studied in Rome with Giuseppina Baldassare-Tedeschi and subsequently made her Italian début at Piacenza in 1932. After appearing successfully at the Rome Opera, she sang the role of the Empress in the La Scala première of *Die Frau ohne Schatten* in 1940. She made her Metropolitan début as Aida in 1941. For ten years (1941–50) she alternated with Zinka Milanov in such operas as *Il trovatore*, *Otello*, *Ballo*, *Cavalleria rusticana*, *La Gioconda* and *Tosca*. She appeared at San Francisco during the same period, where her roles included Donna Anna, Mimì and the Marschallin; she repeated the last at the S Carlo in Naples in 1951. An unorthodox and sometimes hectic technique prevented the singer and her warm, beautiful lirico-dramatic voice from achieving greatness, but she was a fascinating artist capable of effortless, high *pianissimos* and vibrant climaxes, as can be heard in off-the-air performances from the Metropolitan, notably her Amelia (*Ballo in maschera*) and Desdemona (see P. Jackson: *Saturday Afternoons at the Old Met*, New York, 1992).

MAX DE SCHAUENSEE/R

Roman Catholic church music. This article surveys the liturgical and 'paraliturgical' music of the Roman Catholic Church from the time of the Council of Trent (1545–63), summoned by Pope Paul III to counteract the changes taking place in the Church in the wake of the Reformation.

I. Introduction

The liturgical diversification that had occurred in Europe during the first half of the 16th century was to have a profound effect both on the role of music in worship and on its style. Some Reformers rejected all music except unison congregational song, while others saw the value of continuing older practices and adapting contemporary musical styles to a new repertory in the vernacular. The Council, in response, reasserted the use

of Latin and Latin plainchant in the Catholic liturgy, prohibited singing in the vernacular, approved the use of polyphony and rejected secular musical influences. From this point in the history of music, therefore, it is possible to begin to speak of a distinctly 'Roman Catholic' musical tradition.

The major themes of the ensuing discussion are the correspondence between music and piety and the relationship between liturgical music and the contemporary styles that arose in the secular sphere. These styles were either accepted (the more usual course of action) or rejected by composers writing for the Catholic liturgy. The text most frequently set to music was the Ordinary of the Mass, but the vesper psalms and *Magnificat* were sometimes given elaborate settings for solo voices, chorus and instruments. There also exists a large repertory of sacred music with Latin text, whose use within the framework of the liturgy cannot always be determined precisely.

Gregorian chant was regarded – at least ideally – as the principal musical heritage of the Catholic Church until the Second Vatican Council. Although many medieval elements were eliminated from the vernacular liturgy introduced in the 1960s, the use of chant was not proscribed. However, the virtual disappearance of the Latin Mass, the adoption of metrical hymnody in the vernacular, and the cultivation of idioms derived from popular music relegated plainchant to a subordinate position, its use in the liturgy now being mostly confined to monasteries and some cathedrals.

At the end of the 16th century the glory of Catholic church music was the polyphonic idiom that had achieved an extraordinary degree of perfection in the hands of late Renaissance masters such as Lassus, Palestrina and Victoria. With the dawn of the 17th century, monody – a new style based on completely different, indeed antithetical, textural, structural, formal and expressive principles – superseded it, although the art of 16th-century polyphony, henceforth known as the *stile antico*, was never completely neglected. Opera, the dominant vocal genre from the mid-17th century into the 19th, exercised a frequently irresistible influence on composers of Catholic church music, and by the latter half of the 18th century the rapidly maturing symphonic style began to influence orchestral masses and vesper psalms. The 19th century was less notable for its contribution to the repertory of Catholic church music than for the initiation of projects to 'purify' liturgical music of secular influence. Renaissance polyphony was revived and served as the model for (generally uninspired) imitations. The singing of Gregorian chant was encouraged, and efforts to restore the authentic medieval melodies gained ground.

In the early 20th century, Catholic church music continued largely on the course laid out in the last third of the previous century, but a number of notable original compositions in contemporary styles were added to the Church's musical patrimony. In the wake of the liturgical revisions authorized by the Second Vatican Council, however, the proliferation of musical styles rooted in popular idioms has given rise to an ironic situation. Secular musical style, denounced for centuries by Church Fathers, councils, synods, popes and bishops, has become in a very real sense the basis of many of the songs sung at the liturgy in Catholic parishes today.

II. The 16th century in Europe

1. The Reformation and the Council of Trent. The Reformers of the 16th century demanded that Christian worship be modified more or less radically to permit the laity's meaningful participation. Their opposition to the Mass was thus not confined to theological issues but extended to its celebration in a language (Latin) understood only by the clergy and educated laity. In addition to the linguistic barrier, some churches had a large choir-screen of wood, wrought iron or stone that virtually hid the officiating priest and his assistants from view; in a few Italian churches a transverse wall (*tramezzo*) across the nave blocked the entire altar space from the view of those standing in the nave.

The spectrum of opinion among the Reformers about new patterns of worship was wide indeed. Luther proceeded cautiously, maintaining that he had no intention of abolishing the Mass but of reforming it. He recognized the value of congregational song, and his various orders of worship provided for frequent singing in the vernacular by pastor, congregation and choir. The Swiss Reformers Ulrich Zwingli and Jean Calvin created new orders of service for, respectively, the German- and French-speaking parts of Switzerland. Zwingli, though well-versed in music and its performance, made no provision for music in the Reformed service he designed for Zürich. Calvin permitted only unison congregational singing in the vernacular.

The Roman Catholic Church could not ignore the profound changes that had taken place in the way people worshipped and in the music used for worship in the Reformed Churches, but this subject did not receive formal consideration until the Council of Trent, which met intermittently between 1545 and 1563, had nearly completed its work. Apart from resolutions affirming the use of Latin as opposed to the vernacular, the primacy of Gregorian chant and the use of polyphonic music (see §I above), the Council made few detailed decisions about the future course of Catholic church music. Provincial councils and local synods retained their authority to determine specific guidelines 'according to the custom of the country'. Anything redolent of secular music was strictly forbidden, as was music intended merely to give pleasure ('inanem aurium oblectationem') to the listeners.

Intelligibility of the words in polyphony ('ut verba ab omnibus percipi possunt') was paramount, but this expectation had been the norm for decades in secular genres such as the frottola and the madrigal. While ecclesiastics would have memorized the texts to which many motets were set (not to mention the text of the Ordinary of the Mass), comprehensibility could be thwarted if all the voices sang different words simultaneously. (See ex.1, bars 12–16; by this point in the piece, however, the three text fragments would have already been clearly declaimed.)

One of the primary goals of the Tridentine liturgical regulations was uniformity in the celebration of the Mass and the Divine Office throughout the Roman Catholic Church: 'typical' editions of the reformed breviary (1568) and missal (1570) were printed and made obligatory. Spain enjoyed a special dispensation from the imposition of the Roman books, as did liturgical uses that could

claim an antiquity of 200 years or more. (Under these provisions the Dominican Order was able to preserve its special Mass ritual until the 1960s.) Pope Sixtus V charged the Congregation of Rites, which he established in 1588, with the task of ensuring that the liturgy prescribed in these books was observed and of adjudicating whatever questions might arise.

2. THE POLYPHONIC MASS AND MOTET. The masses and motets composed during the latter half of the 16th century generally avoided the complex contrapuntal artifices (e.g. canons, abstract cantus firmi and complicated proportional schemes) of the earlier part of the century in favour of polyphonic transparency and formal clarity. The music flows naturally from points of imitation into homophonic passages designed to produce a clear rhythmic and melodic declamation of the text. The two techniques were made to blend almost imperceptibly, creating a seamless web of sound, as in the motet *Exaltata est* (ex.1) by Giammateo Asola (*c*1532–1609). The music of Palestrina (1525/6–94), which represented for succeeding generations the epitome of the sacred in music, reconciled the demands of linear elegance, harmonic clarity, contrapuntal mastery, control of dissonance and clarity of textual declamation in a music of rich sonority.

Although Palestrina dominated the Roman school of polyphony, his was not the only style cultivated in the latter half of the 16th century. A leading figure in Spain, Francisco Guerrero (*c*1528–99), a student of Cristóbal de Morales (*c*1500–53), was for 50 years associated with Seville Cathedral. His works are much more strongly flavoured by dissonance and the use of voice spacings generally avoided by Palestrina and his followers. Guerrero influenced the leading composer of Spanish sacred music in the 16th century, Tomás Luis de Victoria (1548–1611). Often compared with Palestrina, Victoria cultivated a sober style, expressive harmonic language, careful text declamation and a subtle use of 'madrigalisms' to illustrate the text. His music and that of other Spanish composers was transmitted to the Americas in the 16th century.

The prolific Orlande de Lassus (1532–94), Kapellmeister of the Bavarian ducal court at Munich, produced large quantities of Latin sacred music of all types: masses, motets (as many as 1200), offertories, psalms, hymns, passions and litanies in settings ranging from duets to large-scale polychoral works in the Venetian style. Lassus mixed polyphonic and homophonic textures freely, resulting often in a strongly individual interpretation of the text. The same features are found in the music of his student Gregor Aichinger (1564/5–1628), who later studied with Giovanni Gabrieli in Venice. Aichinger, inspired by Lodovico Viadana (*c*1560–1627), also cultivated the sacred concerto for one or more voices with basso continuo, a genre that came into vogue in the early years of the 17th century. His contemporary, Hans Leo Hassler (*c*1564–1612), a pupil of Giovanni's uncle Andrea, had little interest in the modern italianate innovations that fascinated his German colleague; even his many polychoral works eschew the colourful Venetian instrumental practice that he knew so well. In Augsburg, where both composers worked – one a Catholic priest (Aichinger), the other (Hassler) a Protestant writing for the Catholic Church – a confessional détente had been reached.

Religious tolerance in England was notably less relaxed than on the Continent. Repressive measures were taken against Catholics ('recusants'), some of whom were members of aristocratic families which had remained faithful to Rome. Attendance at a clandestine Mass could bring serious reprisals, and there could be no question of cultivating liturgical music in a way that might attract undesired attention. England's leading composer, William Byrd (1543–1623), was a Catholic, but since he enjoyed the singular favour of Queen Elizabeth I, he was permitted to publish music patently intended for Catholic worship. Neither Byrd's Propers for the major feasts of the liturgical year contained in the two *Gradualia* volumes (1605 and 1607) nor his three settings of the Mass Ordinary make reference to chant themes. Byrd's choice of texts implies a departure from the traditional English Sarum rite in favour of Roman use.

3. THE REVISION OF CHANT. In the 'typical' editions of liturgical books that appeared after the Council of Trent, the chant texts were only slightly emended and would therefore have required minimal changes to the melodies. The work of adaptation was entrusted by Pope Gregory XIII (pontificate 1572–85) to Palestrina and Annibale Zoilo (*c*1537–92), a member of the papal chapel. They embarked on a comprehensive revision of the traditional melodies according to humanistic principles, which conflicted with the aesthetic of medieval chant. The general concepts that guided Palestrina and Zoilo had already been promoted in the 16th century and were embodied most notably in Giovanni Guidetti's influential *Directorium chori* (1582), in which rhythmic values were assigned to each note of a chant melody according to the long (i.e. accented) and short (unaccented) syllables of the text. In practice this process led to the truncation or elimination of melismas on weak or final syllables, the abbreviation of some melismas falling on accented syllables, and the rearrangement of the text under the neumes. When it became known how radically the two revisers intended to transform the melodies, work on the project was halted.

After Palestrina's death, his son Iginio tried to publish his father's revision of the chants of the *Temporale* (and not incidentally to profit therefrom), but in attempting to pass off as Palestrina's work a forged revision of the *Sanctorale* he became involved in legal proceedings. Two other Roman musicians, Felice Anerio (*c*1560–1614) and Francesco Soriano (1548/9–1621), finally undertook to revise the melodies on the basis of guidelines (allegedly promulgated by Pope Paul V) stipulating that only 'faults that might possibly damage the melodies' were to be corrected. Anerio and Soriano went further than this, however, and incorporated some of the methods applied by Palestrina and Zoilo; their Gradual, essentially a private, publisher's edition of the chants, was printed by the Medici Press at Rome in 1614–15. Although identified on the title page as 'reformed by order of Pope Paul V', the pope refused to endorse the imposition of the Medicean Gradual as the 'typical' edition of the Church's plainchant repertory. (This Gradual was revived in the 19th century and for a while did become the official version of the chants; see §V, 6 below.) During the 17th and 18th centuries many dioceses and religious congregations printed their own chant books. Consequently, chant in the Catholic world never attained the same degree of uniformity imposed on the spoken texts and

Ex.1 Giammateo Asola: *Exaltata est sancta Dei genetrix*

ceremonies by the printed books, all of which had to receive Rome's official approbation.

New melodies were composed that could be presented as 'chant' merely because they used the traditional note shapes and were unharmonized. Editions of chant, including some new pieces, were published in mensural notation (*cantus fractus*), many provided with a (sometimes optional) basso continuo accompaniment.

Interest in plainchant as a living tradition was strong in France throughout the 17th and 18th centuries: it even displaced the king's favourite *grand motet* on Sundays in the chapel at Versailles. The long chant melismas and 'defective' accentuation did not suit the humanistic literary tastes of the time in France any more than they did in Italy. Accordingly, the melodies were revised, adapted to the principles of tonal music with the introduction of leading notes and so forth, and set to modern rhythms (*plain-chant mesuré*). This step having been taken, it was perhaps only logical that an entirely new repertory of essentially syllabic chants would be composed. Henry Du Mont's *Cinq messes en plein-chant* (1669) immediately achieved great success and continued in use for centuries.

4. Polychoral music at Venice and Rome. The polychoral psalms, masses and motets of the late 16th and early 17th centuries aimed for sheer splendour of musical sonority. The first works for two choirs (*cori spezzati*) have been traced to north Italian composers working in Padua, Treviso and Bergamo, but the ultimate flowering of the polychoral idiom on a grand scale occurred at Venice and Rome.

The dazzling Byzantine opulence of the Basilica di S Marco in Venice served as a fitting backdrop for the realization of the ingenious works of the Gabrielis. Galleries above the main floor of the church allowed for the spatial dispersion of vocal, instrumental and mixed choirs of voices and instruments that often contrasted in range. (It has been argued, however, that double-choir psalms were performed with both ensembles standing together in the 'pulpitum magnum cantorum' outside the chancel.) Venetian polychoralism made effective use of short rhythmic motifs either repeated by a single choir or echoed by a second or third choir in dialogue, a stylistic device that was to have powerful influence on succeeding generations of composers.

Venetian church music was first raised to a level of international renown by the South Netherlandish composer Adrian Willaert. Engaged as *maestro di cappella* at S Marco in 1527, he introduced polychoral music in the 1540s, but it was not until two decades later that polychoralism began to flourish in Venice. One of Willaert's successors, Andrea Gabrieli (1532/3–85), created works for multiple choirs of voices and of instruments, the quintessential hallmark of Venetian music. Many were psalms and *Magnificat* settings designed to enhance Vespers on the great feast days celebrated as magnificent religious and civic occasions. Giovanni Gabrieli (1553–1612), Andrea's nephew, published representative examples of his polychoral music in two volumes of *Symphoniae sacrae* (1597 and 1615). Two other composers who added to the musical lustre of 16th-century Venice were Claudio Merulo (1533–1604) and Giovanni Croce (*c*1557–1609). The former, well known for his brilliant organ toccatas and intonations, was organist at S Marco between 1557 and 1584, while the latter was appointed *maestro di cappella* in 1603.

Composers in Rome carried the polychoral idiom far into the 17th century. Though harmonically and rhythmically more conservative than the Venetians, they disposed multiple choirs around the galleries of the large Roman churches, thus creating for listeners the overwhelming impressions that gave rise to the label 'colossal Baroque'. The most celebrated representative of this phenomenon was Orazio Benevoli (1605–72), a Roman by birth. Although he wrote smaller works for general use, his reputation rests on the grand masses and psalms composed for uncommonly large ensembles. A polychoral mass for 48 voices divided into 12 choirs (now lost) was performed at the dedication of the new cathedral in Salzburg, a building modelled after the earliest Baroque churches of Rome. (The famous mass for 54 voices previously attributed to him has been provisionally dated 1682 and assigned to the Salzburg composer Heinrich Ignaz Franz von Biber.) The 'colossal Baroque' style was cultivated by other Roman composers, among them Giacomo Carissimi (1605–74) and G.O. Pitoni (1657–1743). Even Palestrina's esteemed *Missa Papae Marcelli* fell victim to the Roman fascination for full sonority: it was arranged for double choir by the composer's pupil Francesco Soriano.

In Germany both Catholic and Lutheran composers who enjoyed access to the necessary resources emulated the works that made Venice shine in the musical firmament. Music for multiple choirs was thus not emblematic of the Counter-Reformation, as has been sometimes maintained. It passed easily over confessional barriers and inspired some of the greatest music of Heinrich Schütz, for three years a student of Giovanni Gabrieli, and Michael Praetorius.

III. The 17th century

1. The Baroque spirit. The bishops who assembled at Trent could hardly have forseen that Renaissance polyphony, on which the conciliar decisions about music were predicated, stood on the threshold of a massive disruption engendered by the double impact of expressive secular monody and the new combinations of voices and instruments known as the 'concertante style'. Prelates concerned mainly about the intelligibility of the prescribed text would have found their expectations realized, but in a way that none of them could have anticipated. The grandeur of Baroque music fulfilled to an eminent degree one of the purposes of sacred music – to give glory to God. That glory was rendered palpable by extravagant displays of voices and instruments assembled in the great churches and court chapels of Catholic Europe for important festivals. To an age that exalted the earthly dignity of secular rulers, it seemed only self-evident that similar honours were due the King of kings and Lord of lords, whose angel musicians created sounds of ravishing beauty in his presence.

The Baroque era unfettered the expression of emotions in literature, music and the visual arts. Church interiors bombarded the senses with their richly coloured marbles, opulent decoration, animated statues and paintings, the whole surmounted by a magnificent dome or a visionary ceiling painting. The heightened pathos associated with new musical idioms, the triumphant pomp of Counter-Reformation Catholic worship and the excitement associated with instrumentally accompanied church music drew the believer irresistibly into a sensuous realm of religious experience.

Ex.2 Giacomo Carissimi: *Domine, Deus meus*

Vast quantities of sacred music, including vespers psalms, *Magnificat* settings, masses, motets and non-liturgical works for all combinations of voices and instruments, were published during the 17th century; still more exists (or once existed) in manuscript. Modern editions (such as those by Ann Schnoebelen, Jeffery Kurtzmann, Jerome and Elizabeth Roche) have revealed, usually for the first time, the extraordinary richness of these repertories. The settings range from short motets or monodies for one solo voice or several voices to works for multiple choirs with or without obbligato instruments, and the vocal demands run the gamut from virtuosity to simple homophony.

For a discussion of the oratorio, a genre with important ties to Catholic liturgical music, *see* ORATORIO.

2. MONODY AND THE SMALL-SCALE SACRED CONCERTO. Monody originated towards the end of the 16th century in Florentine literary and musical circles, whose members rejected the 'confusion' of polyphony as an impediment to the effective communication of the meaning of the text, particularly as regards its affective, emotional nuances. Composers sympathetic to these new principles wrote monodies: solo 'madrigals' and strophic songs for single voice with a chordal accompaniment (basso continuo) provided by lute or harpsichord. This unobtrusive background, at first unrelated motivically to the melodic line, accompanied the declamation of texts whose affective content was more important than their musical garb. In 1601, the same year in which the first collection of monodies and strophic songs – *Le nuove musiche* by the singer and composer Giulio Caccini (1551–1618) – was published, there also appeared the first in a series of three volumes of *Salmi passagiati* by G.L. Conforti (*c*1560–*c*1607), a member of the Cappella Sistina. These were *falsobordone* settings for a single voice with virtuoso embellishments of the vesper psalms for Sundays and feasts. They have been called the earliest sacred 'monodies', but they possess none of the emotive quality of Caccini's music.

Severo Bonini (1582–1663) contributed to the nascent repertory of sacred monodies with a volume of *Madrigali e canzonette spirituali* in 1607; *Il secondo libro de madrigali e mottetti a una voce sola* followed in 1609, and a collection of *Affetti spirituali* in 1615. Most of the pieces in the *Arie devote* (1608) of Ottavio Durante (*fl* 1608–18) are Latin monodies with written-out vocal ornamentation in the spirit of Caccini. Monteverdi (1567–1643) inserted sacred Latin monodies in the famous 1610 publication of his liturgical music known as the 'Vespers'. Sacred monodies and duets by Monteverdi were also included in anthologies published during his lifetime, and in 1641 he devoted a retrospective collection to his sacred music, the *Selva morale e spirituale*. Despite its late date, *Dominus Deus meus*, a sacred monody by Giacomo Carissimi published in 1663, exemplifies the affective interpretation of the text and the flights of vocal virtuosity characteristic of earlier monodies (ex.2). Both secular and sacred monodies could appear in the same publication, as in *Il primo libro delle musiche* (1618) of Francesca Caccini (1587–1641). Since the musical treatment did not differ, it was also a simple matter to convert secular pieces to sacred use merely by replacing the original words.

In addition to affective monodies, another repertory of music for one or more voices and basso continuo flourished in the early decades of the 17th century. The 'concerti' for one to four solo voices with basso continuo published by the Franciscan friar Lodovico Viadana (*c*1560–1627) in his *Cento concerti ecclesiastici* (1602)

have attracted the attention of music historians, although this collection was not the first of its kind: Gabriel Fattorini's *I sacri concerti a due voci* (some for larger ensembles) had appeared two years earlier. Neither publication owed much to the monodic style; their roots lay in the 16th-century practice of replacing missing voices in vocal polyphony with an organ accompaniment. The closing bars of Viadana's solo motet *Veni Domine* (ex.3) reveal the closeness of the idiom to the prevailing style of polyphony. Text phrases are repeated in a kind of pseudo-imitation to simulate the effect of a multi-voiced motet. In these solo motets (45–60 bars in transcription) syllabic passages are mixed with florid *passaggi* borrowed from the repertory of improvised ornamentation applied by accomplished singers.

The vogue for liturgical 'chamber music' initiated by Viadana quickly spread beyond the borders of Italy. Gregor Aichinger published a collection of three-voice *Cantiones ecclesiasticae* in 1607. He had undoubtedly heard Viadana's works in Rome in about 1600 and gave credit to the Italian master in the preface to his own collection.

Division of the text into a number of sections contrasting in tempo, metre and melodic style became a central feature of both the small sacred concerto for a few voices with organ accompaniment and (on a more ample scale) the large concerto for soloists, chorus and obbligato instruments. As each section of the solo motet increased in length, there emerged two principal soloistic styles: recitative and arioso. These became more sharply differentiated as the century progressed, finally leading to the sacred cantata, a multi-movement composition for one or more voices, with alternating recitative and aria or arioso and, on occasion, independent instrumental sinfonias. A solo motet for Christmas, *Gaudia, pastores, dicite* by Bonifatio Gratiani (1604/5–64), consists of six short movements: (1) arioso with recitative, (2) arietta in 6/8, (3) recitative, (4) arioso, (5) arioso, and (6) aria on the

Ex.3 Ludovico Viadana: *Veni Domine* from *Cento concerti ecclesiastici*

exclamation 'noe'. A vespers psalm by Maurizio Cazzati (1616–78), *Confitebor tibi, Domine* (1653) for alto and bass soloists with basso continuo (ex.4), illustrates the mid-century technique of combining voices in the small-scale concerto.

The new Italian developments spread to courts and churches in other Catholic regions north of the Alps: to Vienna under Emperor Ferdinand II (1619–37) and to Salzburg. In France it was not until after the middle of the century and the arrival of the Netherlander Henry Du Mont that they gained acceptance. The solo motet continued to be cultivated in France into the next century with the works of composers such as André Campra (1669–1744) and Sébastien de Brossard (1655–1730). Some motets were intended as *élévations* for performance at Mass when the priest held up the host and chalice to be venerated by the faithful. In Germany the vogue for the solo or few-voiced motet was not restricted to Catholic centres; it flourished in the *geistliches Konzert* of Lutheran cantors such as Praetorius, Schein, Schütz and Buxtehude.

3. 'STILE ANTICO'. The 'perfect art' of Renaissance polyphony was not abandoned but continued to be cultivated as an archaic, churchly style known as the *stile antico*. Since this style suited liturgical contexts that demanded solemnity, it was preferred during penitential seasons, but it could also be introduced for contrast in larger works. The *stile antico* of the 17th century departed from strict adherence to the polyphonic techniques exemplified in the works of Palestrina and his Roman followers; expressive techniques derived from the madrigal and monody were exploited in conjunction with the melodic ductus and rhythmic intensification typical of the concertante style. An extraordinary degree of expressive chromaticism is found in the music of Antonio Lotti (1666–1740), as illustrated in the conclusion of his psalm motet *Miserere mei, Deus* (second version; ex.5). Alessandro Scarlatti (1660–1725), one of the most successful opera composers of his generation, extracted from the *stile antico* music of singular intensity. North of

Ex.5 Antonio Lotti: *Miserere mei, Deus*

the Alps the style was cultivated by Catholic and Lutheran composers alike. One of the most masterly 17th-century collections of *stile antico* polyphony is the *Geistliche Chor-Musik* (1648) of Heinrich Schütz.

4. Concerted vesper psalms and the Ordinary of the Mass. Both the innovations of the monodists and the multi-section motet for one or more voices with basso continuo were transferred to large-scale liturgical works involving soloists, one or more choirs, and obbligato instruments with organ continuo. This offered many options for combining voices and instruments and exploiting tutti–solo contrasts, thus ushering in one of the most brilliant (though still insufficiently appreciated) periods in the history of Catholic church music. The collections that appeared in great number during the first three decades of the 17th century are dominated by vesper psalms and *Magnificat* settings, but there are also pieces suitable for Compline, as well as motets, antiphons, hymns and settings (in whole or in part) of the Ordinary of the Mass.

To entice churches with smaller forces to purchase their music, composers took care to indicate on title pages or in the introductions to printed editions that performing requirements were flexible. Some voices were essential to the continuity of the piece, while others could be omitted if necessary. That fewer editions of this repertory were published after the 1650s by no means indicates a decline in its popularity. The relatively few churches that were capable of mounting musical performances requiring large vocal and instrumental resources and the presence of virtuoso soloists relied on local production and manuscript transmission.

Both the Ordinary of the Mass and psalm texts were divided into sections and treated either as a series of concertante, homophonic or *stile antico* choruses, solos or duets set according to the prevailing operatic norms, or as concerto-like combinations of soloists and chorus. The orchestra (mainly strings in Italy but more varied in German-speaking lands) or continuo maintained a constant rhythmic flow animated by motivic repetition. Words were repeated many times over to fill out the demands of the musical form. By the end of the century instrumental ritornellos and independent sinfonias had become integral components of the large-scale sacred concerto. It would not be exceptional for a single psalm such as *Dixit Dominus* (Psalm cix), the first psalm of Vespers and the most frequently set psalm text, to require 20 minutes or more in performance. Handel's spectacular setting of this psalm (1707) represents the genre well (as it does the composer's swift assimilation of italianate taste).

In addition to voices in dialogue with each other – a staple resource of the vocal concertato – voices could be answered by instruments, as in the psalm setting *Laetatus sum* (1698) by Isabella Leonarda (ex.6; the alternative text turns the psalm into a motet for general use). As an indication of the quantity of Catholic church music published in 17th-century Italy, Leonarda (1620–*c*1700), a nun who lived in Novara, saw 20 collections of her own music through the press from the 1660s to the end of the century.

One of the most important centres for concerted church music in northern Italy was Bologna, not only because of the presence of the prestigious Accademia Filarmonica but also because of the splendid music performed at the church of S Petronio. Psalms for multiple choirs and instruments were crowned by the high trumpets for which S Petronio was famous during the time of Giuseppe Torelli (1658–1709) and Domenico Gabrielli (1659–90). The presence of so many instrumental virtuosos in the cathedral's musical establishment made instrumental music (sonatas, sinfonias and concertos) a significant part of liturgical observances.

The concerted *motet à grand choeur* (*grand motet*) enjoyed great esteem in France, not least of all because of

Ex.6 Isabella Leonarda: *Laetatus sum*

court favour during the reigns of Louis XIV and Louis XV. At a Low Mass the king preferred to listen to concerted motets in Latin rather than follow the spoken prayers of the priest. The *grand motet* for soloists, chorus and orchestra, a genre apparently created by Henri Du Mont (*c*1610–84), Pierre Robert (*c*1618–99) and J.-B. Lully (1632–87), often had a psalm text. The verses assigned to solo voices used the declamatory-lyric style derived from the operas of Lully and Rameau; verses for the chorus were generally homophonic. Stateliness was preferred to Italian exuberance, and the role of the chorus was far greater than in contemporary Italian church music. The heyday of the *grand motet* came at the end of the century in the works of M.-A. Charpentier (1643–

1704) and, especially, M.-R. de Lalande (1657–1726), and in the first decades of the 18th century with Henri Desmarets (1661–1741) and André Campra (1660–1744).

5. Organ music and the liturgy. The liturgical role of the organ was recognized by the Council of Trent, and its practical use in the liturgy was further defined in the *Caeremoniale episcoporum* (Rome, 1600) and by local custom. Organ music, often improvised, solemnized the entrance of the bishop or high ecclesiastical dignitaries and generally created a festive atmosphere at the beginning and end of Mass. (Full organ seems to have been expected.) At a pontifical Mass the organ was permitted to play 'graviori et dulciori sono' during the Elevation (*Caeremoniale episcoporum*, 1.28). Use of the organ was forbidden during Lent and at the Mass and Office of the Dead. Although the *Caeremoniale* prohibited the use of other instruments with the organ, that ruling was almost universally disregarded, nowhere more flagrantly than in Rome itself, and it was subsequently modified.

Small choir organs placed near the altar might accompany the chant, play in alternation with plainchant or polyphony (e.g. hymn or psalm verses), or substitute for missing voices in a polyphonic composition. Large organs occupied their own galleries, perhaps to the side of the altar, somewhere in the nave, or at the west end of the church facing the altar. Organ design (the number and tonal quality of stops, number of manuals, importance of the pedal etc.) depended largely on regional traditions and influenced the repertory composed for the instrument.

A corpus of solo organ music, whose precise liturgical function is not always immediately apparent, began to take shape in the 17th century. The specifically liturgical part of the repertory consisted primarily of versets to be played in alternation with chanted verses of the psalms or canticles (e.g. *Magnificat*), hymns, or sections of the Mass Ordinary; this is known as *alternatim* practice. While the organ verset was played, the choir or the priest recited quietly the prescribed text. The appropriate chant melody might appear as a cantus firmus in long note-values or rhythmically altered; versets were also freely composed. Among the earliest printed collections of organ music are the *Intabulatura d'organo cioe misse, himni, Magnificat* (?1543) and *Intavolatura cioe ricercari, canzoni, hymni, Magnificat* (1543) of Girolamo Cavazzoni (*fl* 1542–77), consisting of three organ masses (*apostolorum, dominicalis, de Beata Virgine*), eight hymns and four sets of versets for the *Magnificat*. The *Fiori musicali di diverse compositioni* (1635) of Girolamo Frescobaldi (1583–1643) includes three organ masses (for Sundays, double feasts and feasts of the Virgin), organ pieces intended to replace the gradual (*Canzon dopo l'epistola*) and the offertory (*Recercar dopo il Credo*), and meditative toccatas to be played at the Elevation.

Comparable collections of organ music were published in Germany and France. The *Modulatio organica super Magnificat octo ecclesiasticis tonis respondens* (1686) of J.C. Kerll (1627–93) provides the organist with brief versets (about a dozen bars) for the odd-numbered verses of the *Magnificat* in each of the eight church modes. The short pieces (marked 'fuga') in the *72 Versetl samt 12 Toccaten* (1726) by Gottlieb Muffat (1690–1770) are divided into 12 groups of six, each preceded by a toccata.

Jehan Titleouze (1562/3–1633) published two collections of organ versets: *Hymnes de l'église pour toucher sur l'orgue* (1623) and *Le Magnificat ou cantique de la Vierge pour toucher sur l'orgue* (1626), in which the plainchant melodies or psalm tones are treated in the manner mentioned above. Guillaume Nivers (*c*1632–1714) continued the tradition in his three books of pieces in the church modes (1665, 1667, 1675); these were intended to substitute for sung parts of the Mass, although the exact destination of the pieces is not specified. Each movement in the *Livre d'orgue contenant cinq messes* (1688) of André Raison (*fl* 1665–1719) is, however, precisely labelled for *alternatim* performance; like the pieces in Nivers' collections, they are cast in the traditional forms of French organ music (*récit, dialogue, trio, tierce en taille, grand jeu* etc.) and profusely ornamented. Two particularly fine examples of organ masses are those by François Couperin (i) (1668–1733), one 'à l'usage ordinaire des paroisses', the other 'propre pour les couvents de religieux et des religieuses' (1690).

Spanish liturgical organ music of the 17th century remained conservative, inspired by vocal models and enlivened by ornamentation. A genre entitled 'falsas', featuring chromatic linear movement, unusual harmonies and suspensions, resembles the Italian toccatas 'di durezze e ligature'. The liturgical organ music of Antonio de Cabezón (*c*1510–66) includes versos on psalm tones and hymns in this style together with many ornamented *fabordónes*.

IV. The 18th century

1. The role of music in the liturgy. 2. *Missa solemnis* and *missa brevis*. 3. Vienna. 4. Salzburg and the church music of Mozart. 5. The masses of Joseph Haydn. 6. The *Landmesse*. 7. German hymnody.

1. The role of music in the liturgy. The encyclical letter *Annus qui* of Pope Benedict XIV (pontificate 1740–58), written on the eve of the Holy Year 1750, is one of the comparatively few papal pronouncements that take up the role of music in the liturgy of the Catholic Church. The pope feared that visitors from north of the Alps might be scandalized by the condition of the churches in Italy and by the kinds of music performed at divine services. (In fact, the published memoirs of travellers reveal that they often were.) While asserting that music in church must first serve the glory of God, the pope also stressed the value of music for the edification and spiritual enrichment of the faithful – an important, hitherto unemphasized distinction that was to have a profound effect on the history of Catholic church music in the second half of the 18th century and beyond. Benedict limited the use of instruments 'exclusively to uphold the singing of the words, so that their meaning be well impressed on the minds of the listeners and the souls of the faithful moved to the contemplation of spiritual things'.

The compositional and stylistic models of church music established in the 17th century persisted, intensifying the tension between the churchly *stile antico* and the fascinating 'light airs and turbulent accompaniments' (Charles Burney) imported from Italian opera complemented later in the century by new formal techniques derived from symphonic music. The 18th century was the last great age of Catholic church music, culminating in the remarkable masses that Joseph Haydn composed between 1796 and 1802. The orchestral masses and the vespers settings of this age still make a profound effect when performed

liturgically, as happens, for example, in the Catholic regions of southern Germany and Austria.

2. 'MISSA SOLEMNIS' AND 'MISSA BREVIS'. By the early 18th century the Ordinary of the Mass was customarily divided into a series of separate, self-contained musical units, some of them considerably extended, that displayed a wide variety of musical styles ranging from bravura and sentimental arias to concertante choruses and *stile antico* polyphony. (The term 'cantata mass', frequently applied to multi-sectional orchestral masses of the 17th and 18th centuries, is both confusing and inaccurate.) Although opera was a determining influence on Mass composition, simple transference from the operatic stage to the sanctuary was unfeasible. Recitative suited none of the texts of the Mass particularly well, and choral singing – one of the most venerable aspects of church music – had virtually no place in contemporary Italian opera. The music of a late 17th- and early 18th-century *missa solemnis* demanded a large orchestra with trumpets and drums. Certain broadly defined conventions guided the setting of each subdivision of the text. The following is but one possible sequence:

Kyrie I: an imposing concertante movement for chorus and soloists (a slow introduction was optional).
Christe: a lyrical contrast (solo or duet), or a chorus in a style different from the preceding
Kyrie II: a contrapuntal section (often a fully developed fugue) or a repeat of Kyrie I
Gloria: possibly as many as 11 sections 'Gloria', 'Laudamus te', 'Gratias', 'Domine Deus', 'Domine fili', 'Qui tollis', 'Qui sedes', 'Quoniam', ('Jesu Christe'), 'Cum Sancto Spiritu', 'Amen'. 'Gloria' was a festive choral setting of the priest's intonation; 'Laudamus te' was reserved for one or more soloists; the choral 'Gratias' adopted a slower tempo, etc.; an extended fugue on 'Cum Sancto Spiritu' or 'Amen' concluded the Gloria
Credo: often three large sections because of the length of the text and the lack of 'affect' in its doctrinal language. 'Et incarnatus' – 'Crucifixus' served as a central slow movement for soloists or chorus; the word 'credo' could be interjected several times during the course of the movement (a particularly popular device in the Austrian mass tradition); the closing fugue (on 'et vitam venturi saeculi') might be less extended than the one at the end of the Gloria
Sanctus and Benedictus: the Sanctus might be composed as a grand acclamation or in a mood of hushed reverence, the latter nearly always the case with the Benedictus; both closed with the same choral 'Hasanna in excelsis'; sometimes a motet or a piece of instrumental music occupied the time required for the priest to recite the Canon silently
Agnus Dei: the three invocations could be structured as an extended solo followed by a fugue on the words 'done nobis pacem'; alternatively the composer might repeat earlier music to these words. Sometimes the Agnus Dei was so lengthy that it served as music for communion

The greatest *missa solemnis* of the 18th century was not written by a Catholic composer but by J.S. Bach (1685–1750). The so-called Mass in B minor (BWV232) was completed in the early 1740s, when Bach added to a Kyrie and Gloria he had presented to the Saxon court in 1733 the remaining sections of the Mass (Credo, Sanctus, Agnus Dei). As was Bach's practice, some of the movements were derived from earlier works; others (e.g. Credo and Confiteor) reflect his renewed study of the *stile antico*.

Less expansive than the *missa solemnis* was the *missa brevis*. This, too, involved soloists, chorus and orchestra, but the instrumental complement was reduced in size, perhaps just a Kirchentrio of two violins, bass and organ. With the exception of the Benedictus and Agnus Dei, solo passages were kept to a minimum and the interventions of the solo quartet were integrated into the forward flow of the movement in the form of solo–tutti contrasts with the chorus. Constant orchestral figuration accompanied the choral declamation of the text, which was occasionally enlivened by incidental imitations. The conclusion of the Gloria and Credo might mirror on a smaller scale that of the *missa solemnis*, and tempo contrasts (fast–slow–fast) created a tripartite structure for these longer movements. A desire for further abbreviation led to the simultaneous singing of four different portions of the text by the four voices. (A mass once considered a youthful work of Joseph Haydn dispenses with the entire Gloria text in a mere nine bars.) A category intermediate between the lavish *missa solemnis* and its more modest relative was the *missa brevis et solemnis*, in which the larger orchestra of the *missa solemnis* was employed, but multiple text divisions and independent movements were eschewed in favour of the more integrated approach of the *missa brevis*. The vesper psalms could be treated like the longer movements of the *missa brevis*, as is the case, for example, in Mozart's two settings of Vespers (K321 and 339), in which only the short psalm *Laudate Dominum* is singled out for more expansive solo treatment.

3. VIENNA. The leading figure at the court in Vienna during the first half of the 18th century was J.J. Fux (1660–1741), Hofkapellmeister from 1715 until his death. The conservative musical tastes of the court during the reign of Charles VI matched Fux's commitment to abstract polyphony and Baroque pathos, although he was quite capable of exploiting the latest italianate musical fashions. While his pompous, ceremonial musical language (trumpets were not spared) fulfilled the requirements of courtly pageantry, Fux knew how to combine the grand manner with impeccably crafted movements in vocal chamber style. Antonio Caldara (*c*1670–1736), vice-Kapellmeister from 1716 until his death, shared some of Fux's values and composed music grand enough for the most solemn sacred occasions, yet he too incorporated in his church music both affective text setting and *galant* traits suggestive of the Italian chamber cantata. (Bach admired Caldara's *Stabat mater* and adapted it for his own use in German translation.) Until about the mid-18th century the multi-movement italianate *missa solemnis* dominated Viennese mass composition, but musical values in Vienna changed quite abruptly with the death of Charles VI (in 1740) and of his Kapellmeister Fux the following year. Instrumentally accompanied church music continued to flourish during the long reign of Maria Theresa: more than 540 orchestral masses were composed in Vienna between 1741 and the imposition of restrictions in 1783 by Emperor Joseph II (see MacIntyre, 1986).

Georg Reutter the younger (1708–72), Kapellmeister of both the imperial court and the Stephansdom, had been a pupil of Caldara, but he gradually adopted the elegant, *galant* style coming into fashion during the second third of the century. A prolific composer for the stage, he also wrote more than 500 sacred works, among which were 80 masses. Aesthetic judgment of his church music has been mixed; critics found his choral writing unimaginative and little helped by aimless, agitated violin figuration (the frequently excoriated, but nevertheless imitated, 'rushing violins à la Reutter').

F. L. Gassmann (1729–74) favoured masses in which the longer sections (Gloria and Credo) interlocked over

the fragmentation of the traditional *missa solemnis* – a progressive tendency that was to dominate Austrian mass composition in the last few decades of the 18th century. A reduction in the number of sections into which the Gloria and Credo were divided and the incorporation of solo passages within the choral texture contributed to a stronger sense of formal and tonal unity.

4. SALZBURG AND THE CHURCH MUSIC OF MOZART. A series of distinguished musicians served the Salzburg court in the 18th century: in addition to Mozart and his father they included K.H. Biber (1681–1749), J.E. Eberlin (cathedral organist from 1726, court and cathedral Kapellmeister from 1749 until his death in 1762), A.C. Adlgasser (cathedral organist, 1750–77) and Michael Haydn (1737–1806), the younger brother of Joseph Haydn. From 1763 Michael Haydn held the post of court Konzertmeister and was named organist after Mozart took up residence in Vienna. Even the generally disapproving Peter Wagner (1919) praised Haydn's church music for its seriousness and judicious employment of the orchestra.

In Michael Haydn's church music (more than two-thirds of his 800 surviving works), the ingratiating, folklike melodiousness that made him the most admired church composer of his day is easily identifiable. He occasionally incorporated chant themes and intonations in his concertante church music, cleverly unifying the Gloria and Credo of the *Missa Sancti Aloysii* (1777) with intermittent citations of the priest's intonation. He also wrote simply harmonized settings of chant melodies to meet the practical needs of churches in small towns and villages. In his *Missa in Dominica Palmarum*, Haydn used astonishingly chromatic harmonizations (ex.7), alternating with a loosely polyphonic treatment of the chant melodies. If his church music has a defect, it is that Haydn at times seems unable to free himself from the 'rushing violins' of Reutter, who had been Kapellmeister of the imperial choir when Michael was a boy chorister.

Mozart (1756–91) began to compose church music at an early age. While his boyhood efforts not infrequently lapse into unseemly frivolity, one of them, the *Waisenhausmesse* K139 (47*a*) is a miraculous achievement for a child of 12. None of the self-contained movements of this *missa solemnis* is excessively extended, but the fluency of invention, sureness of harmonic and formal control, and mastery of counterpoint must have excited considerable amazement when the work was first performed in Vienna in December 1768.

Mozart's masses written for Salzburg conformed to local requirements for a succinct treatment of the Mass text; the young composer would have found models in the *missae breves* of Adlgasser, Eberlin and Michael Haydn. Archbishop Hieronymous Colloredo, Mozart's sovereign and employer in the 1770s, insisted that services not be prolonged unduly by the music – no more than three-quarters of an hour from start to finish, according to a letter written to Padre Martini in 1776 (although the letter signed by Mozart containing these comments is in the hand of his father, Leopold).

In 1773 Mozart composed a mass for chorus without soloists but with trumpets and drums, the *Missa in honorem SS Trinitatis* K167. Both the Gloria and the Credo are unified by insistent string figuration that is not dissimilar from one movement to the next. Three masses, all in C major and all *missae breves et solemnes* with trumpets and drums, date from the end of 1776 (K257–9). They combine solemnity with urgent forward motion, interrupted infrequently by moments of lyrical tranquillity ('Et incarnatus est', 'Crucifixus') that restrain the festive excitement. K257 belongs to a genre known as the 'Credo mass', so called because of rondo-like repetition of that word (a similar technique unifies the Benedictus of K258). The Benedictus of K259 has an obbligato organ part, which accounts for the epithet 'Orgelsolo-Messe'. A more charming beginning than the Kyrie of Mozart's next mass (K275 in B♭) can hardly be imagined, and Mozart eschews the customarily brilliant 'Gloria' acclamations in favour of a stillness unusual for these words. The last two masses for Salzburg (K317 and 337) date from the period after the fruitless trip to Paris and Mannheim in 1777–8. A

Ex.7 Michael Haydn: 'Et incarnatus est', *Missa in Dominica Palmarum*

greater sophistication and subtlety of orchestration is only one aspect of a stronger dependence on the structure of symphonic models.

Among Mozart's Salzburg church compositions are two litanies in honour of the Blessed Sacrament (K125 and 243) and two in honour of the Blessed Virgin (*Litaniae Lauretanae* K109/74*e*, and K195/186*d*). The second, *Litaniae de venerabili altaris sacramento*, is an especially fine work in the italianate manner that ranges from frankly operatic coloratura to solemn counterpoint. 17 single-movement works, mostly for two violins, bass and organ continuo, sometimes called 'church sonatas', were written by Mozart for performance between the chanting of the Epistle and the Gospel.

Mozart composed two settings of the five psalms and the *Magnificat* required for the celebration of solemn Vespers. Despite the different names applied to them – *Vesperae de dominica* K321 (1779) and *Vesperae solennes de confessore* K339 (1780) – the psalms are festal and either Vespers would be suitable for many feasts of the Lord, the Virgin or other saints. The quantity of text to be set far exceeds that of the Mass, and solo episodes are thus kept to a minimum, after the manner of the *missa brevis*. Here again, Michael Haydn could have provided the model. Neither Mozart's Vespers nor the multi-movement litanies display the unity of key that prevails in the masses.

Mozart settled in Vienna in 1781, shortly before the restrictive regulations of Emperor Joseph II virtually banning elaborate church music took effect. Joseph was determined that his wishes would not be thwarted, hence he confiscated the wealth of churches and abbeys that supported ambitious musical programmes. The only major piece of church music Mozart began in the 1780s was the C minor Mass K427/417*a*, planned as a spectacular work in the italianate *missa solemnis* vein but never completed.

Few other works in musical history have aroused as much curiosity as the Requiem Mass K626, left incomplete by Mozart at his death. The portion of the mass that exists in Mozart's own hand can be accurately determined, but the circumstances surrounding the production of a complete score within three months of Mozart's death will never be fully clarified. Three composers worked on the project finally brought to conclusion by F.X. Süssmayr, with whom Mozart may have discussed the work's completion.

Mozart wrote a few solo motets in Italy, the most famous of them *Exsultate, jubilate* K165/158*a* for the castrato Venanzio Rauzzini in 1773. The admired eucharistic motet *Ave verum corpus* K618 (1791), for chorus and strings, could not be more different. It has been suggested that this modest work indicates a new direction in sacred composition that Mozart might have followed had he succeeded, as he hoped to do, to the position of Kapellmeister at the Stephansdom.

5. THE MASSES OF JOSEPH HAYDN. The masses written by Joseph Haydn (1732–1809) late in his career (between 1796 and 1802) represent the summit of Catholic church music in the 18th century: they virtually created a new genre of mass composition beyond the conventional 'solemnis' and 'brevis' categories. Haydn's first large-scale mass was a grand *missa solemnis*, the *Missa Cellensis in honorem BVM* HXXII:5 (also known as the 'Cäcilienmesse'). Composed in 1766, it was most likely a votive offering to the Virgin for the composer's good fortune in being named Kapellmeister at the court of Prince Nicholas Esterházy in that year. Both the Gloria and the Credo are crowned with fugues that bring the movements to spectacular conclusions. Another mass in honour of the Virgin, HXXII:4 (the 'Missa Sancti Josephi' or 'Grosse Orgelmesse', so called from the obbligato organ parts in the Kyrie and Benedictus) was written a few years later (?*c*1768–9).

The pastoral lyricism of the Kyrie of the *Missa Sancti Nicolai* HXXII:6 (1772) identifies it as a mass in the 'Volkston', a popular idiom in late 18th-century Austria and one that Joseph's brother Michael exploited with success. (The work has moments of high emotion for soloists at 'Crucifixus' and for chorus in the Agnus Dei, although Haydn renews the good spirits of the opening by repeating music from the Kyrie at 'Dona nobis pacem'.) A relaxed vein marks the *Missa brevis Sancti Joannis de Deo* HXXII:7 ('Kleine Orgelmesse', ?*c*1773–7) in honour of the founder of the Brothers of Charity. It ends not with the conventional brisk 'Dona nobis pacem', but with a quiet *perdendosi*. The *Missa Cellensis* HXXII:8 ('Mariazeller Messe', 1782) was composed on the eve of the imperial regulations curtailing the performance of concerted church music in Austria. This would have made little difference at the Esterházy court had Prince Nikolaus shown an interest in orchestral church music, but his fancy revolved around the court opera house rather than the court chapel.

Haydn returned to the composition of masses between 1796 and 1802, when he wrote six works to celebrate the name day of Princess Maria Hermenegild, wife of Prince Nikolaus II Eszterházy. Although founded on the traditions of Austrian Mass composition, they draw on the range of symphonic and formal techniques brought to perfection in the 12 'London' symphonies. The ceremonial pomp of the works excludes neither profound feeling nor joviality; their rich and varied orchestration is most strikingly evident in the last of the series, known as the 'Harmoniemesse' HXXII:14 (1802) because of the prominence given to the winds.

6. THE 'LANDMESSE'. The technical demands of orchestral masses and settings of Vespers were quite beyond the reach of modest parish churches. In the first decades of the 18th century the *Landmesse* ('country Mass'), a genre of Mass composition in Latin (thus permissible at a High Mass) and destined for performance by amateur choirs of a few singers (or even one), was created. (The concept was, of course, not new: Italian and German composers had published collections of masses for one or two solo voices and basso continuo in the 17th century.) The essence of the genre – very modest vocal demands and flexiblity in the use of voices and instruments – is clear from the title of an early publication of such works, *Missale tum rurale tum civile a 1 vel 2 vocibus necessariis cum aliis vocibus ad libitum, & violinis partim obligatis, partim ad libitum* (1733) by J.V. Rathgeber (1682–1750). This title also suggests that the appeal of the *Landmesse* was by no means restricted to the countryside. An organ accompaniment would suffice, but if instruments were available – usually two violins – the performance could be enhanced accordingly. On occasion, only a single voice might be called for, as in Bruckner's 'Windhaager-Messe' (*c*1842) for alto, organ and two horns. Publishers' catalogues indicate that the *Landmesse* continued to enjoy

remarkable currency up until the first half of the 20th century.

The unpretentious *Landmesse* marked a decisive stage in the history of Catholic Church music. No longer was the performance necessarily reserved for professionals, whose principal interest (much to the consternation of those clergy and church musicians concerned with the 'purity' of sacred music) lay outside the Church. Now members of the congregation, often under the direction of the schoolmaster, could provide their own music, either from published masses and motets or from locally produced works circulating in manuscript.

7. German hymnody. In the encyclical *Annus qui* Pope Benedict XIV defined the edification and moral improvement of the faithful as one of the purposes of Catholic church music, a view that would have been shared by clergy formed according to the principles of the Enlightenment. Recommendations that the Mass be celebrated in the language of the people were rejected. As an alternative both devotional and didactic, German Catholic hymnals were published in the late 18th century in the conviction that 'after the Bible good hymns in the vernacular are one of the most eminent means of making public worship edifying and advantageous to the awakening of religious feelings', as Archbishop Colloredo of Salzburg maintained in a pastoral letter (1782). In the end, both orchestral masses and vernacular hymnody coexisted. The laity might well enjoy singing hymns at Mass, but they were ambivalent about sacrificing the more sophisticated forms of church music to which they had become accustomed.

Lay participation in the Mass was also fostered by the 'deutsche Singmesse' (*Liedmesse*), a sequence of German texts, generally naive in expression (and not necessarily sung by the congregation), referring to the parts of the Mass – Kyrie, Gloria, Credo, Offertory, Sanctus, Benedictus, Communion – at which the hymns were intended to be sung. A favourite text sequence, set by Michael Haydn and many later composers, was 'Hier liegt vor deiner Majestät'. Haydn's setting is described in the preface to the second edition (Haslinger, 1827) as being 'im Volkstone', a congenial Austrian folk idiom characterized by simple harmonies and short, regular phrases. Franz Schubert (1797–1828) composed an unpretentious mass of this type (D872, 1827), movements of which are included in some modern Catholic and Episcopal hymnals in the USA. Franz Gruber (1787–1863), composer of *Stille Nacht*, also contributed a number of attractive works to this repertory. Particularly popular were the so-called 'pastoral' masses, some quoting Christmas carols, in which the bucolic tone was even more pronounced; the tradition goes back to the French Christmas masses based on noëls, M-A. Charpentier's *Messe de minuit* (early 1690s) being the best-known example.

V. The 19th century

1. Catholic church music and the Romantic aesthetic. 2. Austria and Germany. 3. France. 4. Italy. 5. Reform: (i) The Cecilian movement (ii) The restoration of Gregorian chant.

1. Catholic church music and the Romantic aesthetic. During the 19th century Catholic church music came under the spell of the Romantic aesthetic despite its separation from the mainstream of Romantic composition, which was more concerned with orchestral music, opera, 'programme' music, music for piano, and the solo song. The focus of musical development shifted decisively away from the altar to the stage and concert hall. Court musical establishments, which in earlier times would have supported chapel musicians, all but disappeared. After Schubert, Anton Bruckner was the only composer of significant rank in Austria or Germany who wrote music expressly for the Catholic liturgy. (Franz Liszt occupies a special position.) In France composers concentrated their attention not on the creation of liturgical music but on the sacred oratorio, which conspicuously incorporated elements from the Catholic liturgical tradition.

This isolation from the mainstream of musical Romanticism was in part deliberate. The conviction that a reform of Catholic church music was urgently needed to purify it from the corruption of secular influence and triviality resonated widely in 19th-century Europe. It continued well into the 20th century, spreading to British colonies with significant Catholic populations and to the USA. Influenced by 19th-century historicism, many Catholic church musicians looked to the past for principles to guide the reform. The essayist and composer E.T.A. Hoffmann argued that genuine church music should permit the spirit 'to participate in the promised bliss even here below' ('Alte und neue Kirchenmusik', *AMZ*, xvi, 1814). From this perspective he did not spare even Haydn and Mozart from accusations of frivolity ('Leichtsinn'), making an exception only for Mozart's Requiem, which Hoffmann proposed as the ideal model to be emulated by composers of sacred music. Reacting against what they regarded as the ostentation and theatricality of orchestral masses and Vespers, the 19th-century reformers idealized Gregorian chant and 16th-century polyphony as the twin paragons of true Catholic church music. Enthusiasm for the medieval and Renaissance musical past paralleled the enthusiasm of Romantic artists and architects for the construction of 'romanesque' churches and 'gothic' cathedrals.

2. Austria and Germany. In 1807 Beethoven (1770–1827) composed a mass for the name day of the same Princess Esterházy for whom Haydn had composed his late masses. Though by then an established master, Beethoven did not attempt to compete directly with the aged Haydn. His Mass in C op.86 (1807) places stronger emphasis on the chorus and the ensemble of soloists – alternately lyrical and declamatory – than on the symphonic dimension so perfectly realized by Haydn in his late masses. Beethoven's only other setting of the mass, the *Missa solemnis* in D op.123 (1819–23), was intended to be sung at a Mass celebrating the elevation of his pupil and patron Archduke Rudolph to the cardinalate; it grew far beyond the reasonable bounds of such use and became essentially an independent concert work.

Between 1814 and 1816 Schubert composed four masses (D105, 167, 324, 452) in the Viennese orchestral tradition. Two later masses (in A♭ D678, 1819–22, and E♭ D950, 1828) manifest a more individual stamp with regard to the lyricism of their musical language, treatment of form and text interpretation. The prominent use of horns and woodwinds colours the orchestral accompaniment of the E♭ Mass, in which Schubert abandoned some of the inherited conventions of the orchestral mass, imposing a symphonic conception featuring recurrent refrains on the longer movements. The tripartite Gloria is a da capo movement, the first section of which replicates

the *ABA* form on a smaller level, while making singular use of 'gratias agimus tibi' as a refrain. The closing fugue takes up nearly half the movement. The Agnus Dei juxtaposes contrapuntal passages based on an angular subject in C minor with homophonic interludes in the relative major.

Carl Maria von Weber (1786–1826) studied the composition of sacred music with Michael Haydn. His two masses (1817–18, 1818–19) stand in the tradition of Joseph Haydn's late masses but are tinged with the lyricism and warm colours of nascent Romanticism. The presence of a popular, 'folklike' character distinguishes parts of Weber's masses, both of which contain echoes of the composer's successful opera *Der Freischütz*.

Franz Liszt (1811–86) proclaimed a strongly personal vision of church music in a youthful essay, *Über die zukünftige Kirchenmusik* (1834). He insisted that the qualities of holiness, simplicity, solemnity and gravity should be combined with drama, splendour, intensity and brilliance in a grand synthesis unifying theatre and church. He seems to have abandoned at least the last part of that idea by the time he began to write church music. His mass for male choir and organ composed in 1848 (second version 1869) makes use of the most modern harmonic resources. It is not without drama: the Sanctus concludes on an inverted dominant 7th chord, resolved only at the beginning of the Benedictus (marked 'post elevationem'). The later *Missa choralis* (1865) for mixed choir is based on Gregorian themes and is more homophonic, a texture employed also in a *Te Deum* for choir, organ and (sparingly used) brass (*c*1859).

Liszt's largest liturgical works, the *Missa solemnis* for the consecration of the cathedral at Esztergom in 1855 and the *Hungarian Coronation Mass* (1866–7), are remarkable examples (albeit on a scale that makes them impractical for ordinary liturgical use) of Romantic rhetoric and religious fervour. The Credo of the Esztergom mass has been called a 'symphonic poem for soli, chorus and orchestra' for its use of Liszt's favourite device of thematic transformation within the framework of a sonata-form movement. In the *Coronation Mass* Liszt eschewed a large symphonic Credo for a Credo melody from one of the *messes royales* of Du Mont. He placed it in an austere setting – mostly unison chorus with an organ accompaniment that merely doubles the voices about one-third of the time. The long violin solo preceding the Benedictus, modelled in part after Beethoven's *Missa solemnis* and in part after Hungarian (i.e. gypsy) music, precedes a chorus that brings the movement to exalted heights. Liszt also produced many short liturgical works, most with organ accompaniment, including a series of harmonized responsories for Christmas, Holy Week and the Office of the Dead.

The masses and motets of Bruckner (1824–96) rank among the greatest works composed for the Catholic liturgy in the 19th century. Bruckner spent his early career as a church musician near his birthplace in Upper Austria, composing sacred and secular choral works of no particular distinction. The Requiem in D minor (1848–9), over which the shadow of Mozart hovers, and the *Missa solemnis* in B♭ minor (1854), indebted to Joseph Haydn, indicate the greatness of what was to come. In the early 1860s Bruckner began to discover his path as a symphonist, and in the three orchestral masses of that decade (D minor, 1864; E minor, 1866; F minor, 1867–8) a new mastery manifested itself. The first and third are anchored in the traditions of Austrian mass composition, exploiting all the expressive resources of late Romanticism. The E minor Mass for eight-part choir and winds must be regarded as the century's most creative realization of sacred music inspired by the ideals of Renaissance polyphony. Bruckner also composed about a dozen motets ranging from the acclamatory *Ecce sacerdos magnus* (1885) for mixed chorus and brass to the exquisitely devout *Vexilla regis* (1892) and the austere phrygian *Pange lingua* (1868) for *a cappella* choir. Bruckner's liturgical music drew its strength from his own simple and fervent piety: more than any other composer of the century he placed his talents unreservedly at the service of the divine.

Joseph Rheinberger (1839–1901), a composer of distinction who served as Hofkapellmeister in Munich from 1877 to 1894, wrote 13 mostly homophonically orientated masses, the majority either for *a cappella* chorus or chorus with an independent organ accompaniment. Their lyricism and seriousness of tone were not inconsistent with the aims of the Cecilian reformers (see §V, 4 below), but Rheinberger remained aloof from their circle.

The best-known works composed to liturgical texts by Antonín Dvořák (1841–1904) – the *Stabat mater* (1876–7), the Requiem (1890) and the *Te Deum* (1892) – were not intended primarily for liturgical use but for the concert stage. The *Stabat mater*, a personal statement of grief occasioned by the death of his children, interprets the liturgical sequence text as a chain of contrasting solo and choral movements. The composer's ambitious Mass in D (first version, with organ accompaniment, 1887; orchestrated, 1892) manifests the hand of the symphonist in the motivically unified larger movements; the mystical-adorational atmosphere of the 'Benedictus' culminates with ecstatic 'hosannas'. Dvořák's *Te Deum*, composed for the American celebration of the 400th anniversary of Christopher Columbus's arrival in the New World, is a lesser work whose musical language would not seem out of place at a festival in the composer's Bohemian homeland.

3. France. The French Revolution, the ensuing Napoleonic era and the secularization of society caused profound disruptions in the cultivation of sacred music in France. Genres such as the *grand motet*, closely associated with the *ancien régime*, survived only in concert performances. The widespread confiscation of ecclesiastical property left the Church with few resources for ambitious musical programmes. It was partly due to such factors that Gregorian chant and *plain-chant musical* continued to be more widely cultivated in France than elsewhere.

Napoleon's taste inclined towards Italian music, and it was not surprising, therefore, that he should have named Giovanni Paisiello (1740–1816) his chapel composer (1802). Most of Paisiello's sacred compositions seem to have been written late in his career. In 1804 he wrote a five-voice mass 'for the proclamation of his Imperial Majesty'. With the restoration of the Bourbon monarchy in 1816, a more serious style of church music represented by Luigi Cherubini (1760–1842) came to the fore. Cherubini's first sacred composition under the new government was the Requiem in C minor (1816) for mixed voices to commemorate the anniversary of the death of Louis XVI. This celebrated work won the admiration of many 19th-century composers, Beethoven and Berlioz among them. Three years later, Cherubini

was commissioned to write a mass to celebrate the coronation of Louis XVIII. Since that event never came to pass, his monumental Mass in G for chorus (without soloists) remained unperformed and unpublished during his lifetime. Cherubini's masterpiece of liturgical music may well be the Requiem in D minor (1836) for male choir and orchestra. The former opera composer does not stint on drama where it is called for, as in the 'Dies irae', but the prevailing mood remains one of reverent and solemn gravity.

Louis Niedermeyer (1802–61) stimulated the study and practice of Catholic liturgical music with the establishment in Paris in 1853 of the Ecole de Musique Religieuse et Classique (later named after him the Ecole Niedermeyer), at which students were schooled in Gregorian chant, the music of Palestrina and organ music, especially that of Bach. The most notable graduate of the school was Gabriel Fauré (1845–1924), whose Requiem op.48 is universally admired for its profound prayerfulness and sensitivity. Another Parisian musical institution offering an alternative to the official Conservatoire was the Schola Cantorum founded in 1894 by Charles Bordes (1863–1909), Alexandre Guilmant (1837–1911) and Vincent d'Indy (1851–1931). The very name of the school revealed its conservative bent, and its courses of study corresponded generally with those of the Ecole Niedermeyer. Bordes, conductor of the Chanteurs de St Gervais gave a series of Parisian concerts that revealed the riches of Renaissance sacred music.

Rather little of Cherubini's reserve is found in the sacred works of Hector Berlioz (1803–69). An early *Messe solennelle* (1824, rediscovered only in 1992), gives evidence of his melodic gifts and distinctive orchestral flair. (Several passages from this Mass reappear in better known works: the jolly 'Laudamus te' figures in the carnival scene of *Benvenuto Cellini*.) The celebrated *Grande messe des morts* (1837) and the magnificent *Te Deum* (1849) for three choirs, tenor solo, organ and orchestra were intended for great occasions of state: the resources they require would in any case have limited them to such events. By contrast, Berlioz summons up a spirit of intimate reverence in the three tableaux comprising *L'enfance du Christ* op.25 (1850–55).

The eclectic church music and oratorios of Charles Gounod (1818–93) reveal not only the composer's esteem for Palestrina but also his awareness of theatrical effect. His *Messe solennelle de Ste Cécile* (1855) for soloists, chorus and orchestra once enjoyed enormous popularity; it owed its success to a broadly conceived lyricism, formal clarity, effective harmonic shifts and uncomplicated choral writing. His oratorios *La rédemption*, incorporating the Gregorian melodies 'Vexilla regis' and 'Stabat mater', and *Mors et vita* were written for the Birmingham festival in England (1882 and 1885 respectively).

César Franck (1822–90), though a church organist, composed few strictly liturgical works. The *Messe à trois voix* op.12 (1860), contains many warmly lyrical moments, but only the famous *Panis angelicus*, inserted in the 1872 revision of the mass as a motet for the elevation of the host and chalice, has remained in the repertory. Franck's organ music, some of it undoubtedly based on the improvisations that held listeners spellbound at the church of Ste Clotilde in Paris, has no explicit relationship to the liturgical service, but works such as the *Prière*, the *Cantabile* and the *Trois chorals* are striking for their profound spirituality. More ambitious than Franck's specifically liturgical works are the sacred oratorios *Les béatitudes* (1869), *Rédemption* (1871–2) and *Rébecca* (1880–81). Franck and his younger colleague Charles-Marie Widor (1844–1937), composer of a number of motets, a mass for double choir and ten remarkable organ symphonies, were influential as teachers of the next generation. The renowned French organ virtuoso Alexandre Guilmant (1837–1911) published many pieces based on chant themes that he treated within a 19th-century harmonic framework; *L'organiste liturgiste* op.65 is devoted exclusively to such pieces (it contains a syncretistic *élévation* on the Latin hymn *Adoro te* ('dans le style de J.S. Bach'). Guilmant edited numerous volumes of 17th- and 18th-century French organ music.

Many French composers were strongly drawn to religious works intended for the concert hall – the oratorio, *légende* and *mystère* – in which elements evocative of Catholic liturgical music, such as chant, psalmody and *stile antico* polyphony, were incorporated. Camille Saint-Saëns (1835–1921) composed two successful oratorios, the *Oratorio de Noël* (1858) and *Le déluge* (1875), the latter written under the influence of the Lisztian symphonic poem. Théodore Dubois (1837–1924) in *Les sept paroles du Christ* (1867, in Latin) conflated meditations on the words spoken by Jesus on the cross with a dramatization of the Passion; its modest technical demands and sentimental lyricism ensured its popularity with church choirs well into the 20th century. Religious themes could, however, be exploited in ways that were anything but religious. In the next century Debussy's *Le martyre de Saint Sébastien* (1911), a *mystère* in five acts on a poem of Gabriele d'Annunzio, was so imbued with eroticism, oriental sensuality and neo-pagan motifs that the archbishop of Paris forbade Catholics to attend the performances.

4. ITALY. The leading Italian composers of the 19th century enjoyed their greatest successes on the operatic stage. Only intermittently were they engaged in writing for the Church, and when they did so they saw no reason to depart from the tested manner that gave pleasure to their public in the theatre. Some movements of the first version of Rossini's *Stabat mater* (1832) had to be 'ghost written' because of the composer's illness, but Rossini (1792–1868) revised and completed the work ten years later. Although it departs from Rossini's customary operatic language, the work is still a curious mixture of the nobly reverent, the sentimental and the trivial (some of the worst offences occur in the *a cappella* sections). Rossini treated most of the verses as solo arias, some of which ('Cujus animam' and 'Inflammatus', but without the dramatic choral interventions) became popular solos in their own right. Rossini's *Petite messe solennelle* for soloists, choir, two pianos and harmonium (1863; version with orchestral accompaniment, 1867) can be regarded as a logical extension of the musical language of the *Stabat mater*. Like the old *missa solemnis*, the Gloria is divided into six 'numbers', each with a long instrumental introduction. The last section, 'Cum Sancto Spiritu', is marked 'Allegro a cappella' in deference to its antiquarian character.

Rossini's contribution to sacred music was overshadowed by the Requiem of Giuseppe Verdi (1813–1901). The work originated in a project organized by Verdi to prepare a collective Requiem by leading Italian composers

as a tribute to the deceased Rossini. Nothing came of the plan, but Verdi finally incorporated his 'Libera me' in a complete *Messa da Requiem* (1874) in memory of the author Giuseppe Manzoni. The Requiem received church performances, but Verdi considered it a concert work, which he conducted on tour. After the completion of *Otello*, Verdi turned his attention once again to sacred music and between 1889 and 1897 wrote four works of contrasting character and scope: *Ave Maria*, using a peculiar 'scala enigmatica' (which he had discovered in a musical journal) as a strict cantus firmus in a style resembling that of Palestrina, a composer for whom Verdi had the greatest admiration; *Laudi alla Vergine Maria*, an *a cappella* setting for female voices of a text from the final canto of Dante's *Paradiso*; *Te Deum*, a larger-scale piece (written after he had completed *Falstaff*), in which the varying moods of the ancient text are closely followed, the grandeur of its acclamations yielding to a suppliant conclusion as a lone soprano sings 'in te, Domine, speravi'; and *Stabat mater*, a restrained and sensitive setting of a strongly emotional text. All four works were published together in 1898 as *Quattro pezzi sacri*.

5. Reform.

(i) The Cecilian movement. The earliest stimulus leading eventually to what would be known as the 'Cecilian movement' came from Munich, where Caspar Ett (1788–1867), director of the court church music, promoted the music of Palestrina and Lassus. In his own modest compositions he strove to bridge the gap between these historical models and contemporary musical styles. Ett inspired his many pupils with the reform doctrines and encouraged Johann Michael Sailer, author of *Von dem Bunde der Religion mit der Kunst* (1808), to initiate reforms in the diocese of Regensburg after his installation as bishop.

Carl Proske (1794–1861), an indefatigable collector of Renaissance music (more than 1200 prints and manuscripts comprising 36,000 works), had turned from medicine to embrace a priestly vocation. He undertook extensive research trips to Italy and cultivated the friendship of the papal *maestro di cappella* Giuseppe Baini (1775–1844), who shared his enthusiasm for the old masters (Baini was the author of a two-volume biography of Palestrina). In 1853 Proske began to publish in the series Musica Divina selections from the repertory he had collected (4 vols., 1853–64; continued by Schrems and Haberl with a further 4 vols.). Proske's endeavour was paralleled by Franz Commer's Musica Sacra (1839–87) and R.J. van Maldeghem's Trésor Musicale (29 vols., 1865–93/*R*). These publishing activities made available to choirs of limited resources hundreds of practical editions of works mainly by Italian composers of the 16th and early 17th centuries.

German reform activities culminated in 1868 with the founding of the Allgemeiner Deutscher Cäcilienverein by Franz Xaver Witt (1834–88). The society received papal approval two years later, although the nebulous curial letter that confirmed its work does not suggest that the far-reaching aims of the German Cecilians were well understood by Rome. Armed with approbation from the highest levels of church authority, Witt disseminated the principles of the Cecilian movement in the journal *Musica sacra*. Cecilian associations throughout Catholic Germany, by their intensive organizational efforts, journalistic activities, music editions and congresses, promoted the revival of Gregorian chant and Renaissance *a cappella* polyphony, the creation of original compositions inspired by the Renaissance repertory, the cultivation of congregational hymnody and dignified organ music. The Cecilians never quite addressed the issue of quality; thus their programme of reform tended to stress the absence of objectionable features rather than the presence of aesthetically outstanding ones.

An important vehicle for the dissemination of reform principles was the Kirchenmusikschule founded by F.X. Haberl at Regensburg in 1874. Like the curricula of the Ecole Niedermeyer and the Schola Cantorum in Paris, its three principal subjects were Gregorian chant, classical polyphony and organ music. Regensburg served as a practical model for the founding of similar institutions in other countries. Ironically, Regensburg was also the home of the notoriously corrupt Ratisbon editions of Gregorian chant prepared by Haberl (see §V, 5(ii) below).

Awareness that the music in Catholic churches stood in need of reform was not restricted to Germany. Questions of quality and appropriateness were addressed in a memoir on the condition of church music in Rome prepared by Gaspare Spontini (1774–1851) at the behest of Pope Gregory XVI (pontificate 1831–46). Spontini denounced musicians who performed music from operas to which liturgical texts had been supplied, and the organists who regaled their congregations with potpourris of popular operatic tunes fared no better. He recommended that the punishments imposed by Alexander VII as long ago as 1665 be meted out to the offenders: fines, removal from office, and even corporal punishment. Spontini presented Gregory XVI with a series of far-reaching and enlightened recommendations to improve the state of church music in Rome. Theatrical music must be banned immediately and replaced not by the banal or trivial but by music that is 'beautiful, consoling, noble, grandiose and full of religious feeling'. He recommended the music of Italian masters of the 16th and 17th centuries and the creation of a 'select library of classic and able composers of our own days'. Music would be sold at modest prices to ensure that every church, over the course of a few years, could build up its own library of music from all periods and countries according to its needs. Unfortunately, nothing ever came of Spontini's prudent programme of reform.

An important moment in the reform of church music in Italy was the founding of an Associazione Italiana di Santa Cecilia and the initiation of the journal *Musica sacra* in 1877 by Ambrogio Amelli (1848–1933), who also edited the 18 volumes of the Repertori di Musica Sacra per Canto e Organo. As in Germany, strict adherence to 'Cecilian' principles produced works that were free of profane influence but could be unremittingly dull. Among the composers committed to the creation of a more churchly style for Italian liturgical music, though not necessarily Cecilians, were Luigi Bottazzo (1845–1924), Oreste Ravanello (1871–1938), Licinio Refice (1883–1945) and Lorenzo Perosi (1872–1956). The latter was an admired composer of oratorios and masses, a skilled contrapuntist, musical adviser to Pius X and for nearly six decades director of the choir of the Cappella Sistina. Rafaello Casimiri (1880–1943), choirmaster at the Lateran basilica in Rome, carried on an active career as scholar, editor (of the complete works of Palestrina), organizer and composer.

The Cecilian reform spread to Switzerland and to those parts of North America with important populations of German immigrants. In 1873 an American branch of the Cecilian Society was founded at Milwaukee (Wisconsin) by John Baptist Singenberger (1848–1924), who had studied at Regensburg. He promoted the Cecilian ideals tirelessly through the journal *Caecilia*, which he founded in 1874. His own compositions in the 'reform' style continued to be sung in the USA during the first half of the 20th century (see §VI, 2 below).

An anonymous English author, writing in 1823, remarked that Gregorian chant 'has been gradually disappearing during the last forty or fifty years, and is now almost wholly discontinued in England' (*Quarterly Musical Magazine and Review*, v, 1823, p.204). Nevertheless, plainchant had not been entirely forgotten. More than ten years earlier, in fact, Vincent Novello had issued in London *A Collection of Sacred Music as Performed at the Royal Portuguese Chapel*, consisting of chant melodies in four-part harmonizations – the first in a series of publications containing similar arrangements (for examples see Zon). Various continental sources provided the material for other 19th-century British collections of chant, harmonized or with organ accompaniment. Interest on the Anglican side was not insignificant. John Stainer, a musician and composer with scholarly attainments to his credit, published chant harmonizations that mixed modal sensitivity with frankly modern progressions. By the end of the century the restored version of the melodies from Solesmes began to make headway in England among both Catholics and 'high-church' Anglicans. An eminent British liturgical scholar, W.H. Frere (1863–1938), published facsimile editions of the gradual and antiphoner of the best-preserved English medieval tradition, the rite of Sarum.

Although original music emanating from the Cecilian reform scarcely rose above a workmanlike level, the effects of the movement itself on the history of Catholic church music were far reaching. Higher standards of training for church musicians were encouraged, editions of Renaissance polyphony were made available to parish choirs, and a sense of reverence for the sacred was instilled in those who performed liturgical music.

(ii) The restoration of Gregorian chant. The steady stream of chant instruction manuals from the Renaissance onwards attests the vitality of the Church's oldest musical tradition. Alexandre Choron (1771–1834), an important figure in the recovery of Renaissance polyphony, stimulated French interest in genuine Gregorian chant (as distinct from the 17th-century *plain-chant musical*). The first abbot of St Pierre de Solesmes, Prosper Guéranger (1805–75), advocated discarding all the Gallican diocesan liturgies with their chant traditions and replacing them with the Roman rite and its chant. The publication of the *Dictionnaire liturgique, historique et théorique de plain-chant et de musique d'église* (Paris, 1853/*R*) by Joseph d'Ortigue (1802–66) marked the revival of interest in the Catholic musical tradition in France. A number of periodicals kept alive a discussion that was simultaneously antiquarian and practical but without serious concern for the authentic medieval tradition of the melodies.

A pioneering effort to awaken interest in the medieval chant manuscripts was carried out by Louis Lambilotte (1797–1855) with the publication of a diplomatic edition of the manuscript *CH-SGs* 359 as *Antiphonaire de Saint Grégoire* (1851). The 10th-century source did not deserve this title, but Lambilotte believed that he was looking at a gradual sent by Pope Hadrian I (pontificate 772–95) to Charlemagne. Despite this historical error, the publication foreshadowed the direction that the recovery of the medieval melodies would take.

Many particular uses inherited from the past remained vigorous in France. A commission established in 1846 to reform Parisian church music was reminded by Théodore Nisard (1812–88) in a public letter (*Du plain-chant parisien*, 1846) that only a revival of chant on a unified basis would have pastoral value: 'a manner of singing [chant] cannot be popular unless it is the same everywhere'. Nevertheless, chant editions with different versions of the melodies (Digne, 1850; Dijon, 1858; Rennes, 1853; Reims-Cambrai, 1858) gained the allegiance of groups of French dioceses. The Rheims-Cambrai gradual relied on the evidence of medieval manuscripts (mainly the 11th-century tonary-gradual *F-MOf* H159 preserved at Montpellier), although not all the neume shapes (liquescence, quilisma etc.) were adequately reproduced. A congress was held in 1860 to consider the restoration and performing practice of Gregorian chant in the context of general discussions about church music in France. Those promoting liturgical unity with Rome perceived that agreement on a single version of the 'original' melodies, supposedly the work of Pope Gregory I, would be a strong weapon in the ultramontane rapprochement with Rome.

Some German church musicians and church authorities campaigned for a definitive edition of the chants, possibly based on one of the French editions. Others saw in the 17th-century Medicean gradual, then regarded as a 'Roman' version of the chant, the basis for such an edition. Loreto Jacovacci, rector of the Roman College of the Propaganda, communicated in 1867 with the bishops of the world who had been summoned to Rome for the council called by Pius IX. Jacovacci encouraged them to endorse the publication of a 'new and corrected edition of all the books of chant' on the basis of the Medicean edition. Despite stiff opposition from those who had been studying the medieval form of the melodies and without waiting for a discussion at the First Vatican Council, the publisher Frederick Pustet of Regensburg (Ratisbon) succeeded in obtaining a papal privilege to print a new edition of the hitherto obscure Medicean gradual.

This edition was prepared by F.X. Haberl (1840–1910), and Pustet moved with great energy to secure a privilege that would give him exclusive rights to publish the book for 30 years. He schemed successfully to have the Sacred Congregation of Rites declare the Ratisbon edition the 'authentic' version of the Church's chant and to recommend its adoption to the bishops. Pius IX made Pustet a papal knight and strengthened his monopoly still further by allowing him to print a signed letter of appreciation from the pope in all editions of the gradual. Many chant scholars, including the Benedictine Anselm Schubiger (1815–88), denounced the deficiencies of the Ratisbon edition, but the Congregation of Rites continued obstinately to defend the 30-year privilege awarded to Pustet. The Congregation accepted the specious arguments of the publisher concerning its authority, and in the forlorn hope of quashing further discussion it used those arguments to condemn anyone opposed to the Ratisbon edition. Pustet also published an *Antiphonale*

based on editions printed at Venice in 1585 and Antwerp in 1611.

Meanwhile, at the abbey of Solesmes, palaeographical studies of the chant manuscripts were proceeding. Dom Joseph Pothier (1835–1923) supervised the preparation of a new gradual (1868) and published a comprehensive study, *Les mélodies grégoriennes d'après la tradition*, in 1880 (2/1890/*R*). The facsimile edition of *CH-SGs* 339 inaugurated in 1889 the monumental series Paléographie Musicale (*see* SOLESMES, §4), conceived by Dom André Mocquereau (1849–1930). The days of the (admittedly very profitable) Pustet monopoly were numbered. Solesmes had already prepared editions of various parts of the Gregorian repertory, including its own compilation of the most used chants of the liturgical year, the *Liber usualis missae et officii* (1896, and many subsequent editions until the Second Vatican Council). Even the choir of the Cappella Sistina adopted this monastic, 'unofficial' critical edition of the Gregorian melodies. Pope Leo XIII finally commended the work of Solesmes and withdrew the Pustet monopoly (1899). (*See also* PLAINCHANT, §11.)

VI. Music outside the European orbit

1. Introduction. 2. Africa and Asia. 3. The Americas: (i) Central and South America (ii) North America.

1. INTRODUCTION. When Catholic or Protestant missionaries endeavoured to convert indigenous peoples to Christianity, it was assumed that European-style church music was part of the evangelization process. European missionaries learnt the languages of the countries to which they were sent, but they rarely immersed themselves in the local musical culture – almost invariably oral – to the extent that they could adapt it to the Catholic liturgy. While texts could be translated with a reasonable degree of approximation, the imposition of diatonic, equal-tempered music on cultures with musical systems based on, for instance, pentatonicism, or the introduction of harmonized music in exclusively monophonic traditions presented challenges. Among Amerindian tribes, for example, missionaries encountered rather uncomplicated musical practices, yet African music could reach a bewildering rhythmic complexity while remaining relatively undeveloped melodically. In Africa dance and rhythmic movement were inseparable from music – a perspective distinctly foreign to the Roman liturgy.

2. AFRICA AND ASIA. Music was an important evangelizing tool in the missionary activity of the Jesuits in China, Japan, south-east Asia and India. Francis Xavier, in the 16th century, taught simple catechetical songs to children and had equal success in teaching adults to memorize Catholic belief with the aid of music and rhyme. A solemn Mass with music accompanied by an organ and other instruments was celebrated in the Portuguese colony of Goa as early as 1567. Students who attended the Collegio Puerorum in the colony received training in music and were capable of performing polychoral compositions. Wind instruments were favoured, partly because these could be mastered more quickly than string instruments and partly because some of the instrumentalists came from the ranks of military musicians. Other members of these orchestras were either talented local residents or individuals with ties to the colonial administration.

The process of conversion in the Pacific area was accomplished most thoroughly in the Philippines, where even today more than 80% of the population belongs to the Catholic Church. A Franciscan music teacher and composer, Geronimo Aguilar, is named as early as 1586. In the 17th century the first orchestras were established in the Philippines to enhance the solemnity of divine worship. At about this time are recorded the names of the first important native musicians, graduates of the training institutes founded by Spanish authorities. The concept of the European choir school was transferred to the Philippines in the second half of the 18th century with the founding of the Colegio de Niños Tiples at the cathedral of Manila, and orchestral masses flourished in the leading churches of the capital. In the 19th century the Cecilian movement put down roots in the Philippines, leading to the foundation of a Sociedad Musical Filipino de Santa Cecilia in 1880. Reform tendencies had some impact after the liberation of the Philippines from Japanese occupation at the end of World War II, and native composers began to produce liturgical compositions using languages indigenous to the Philippines.

In Africa not just the traditional religions of the continent but all the rituals of human existence – birth, puberty, death, planting, harvest, war, daily domestic activity – are permeated with music that is inseparable from the ritual itself. In the absence of notation a wide range of flexibility is left to musicians – a problem within a Western liturgical context and its traditional desire for fixity. In addition, the suspicions of early missionaries that many African rituals were linked with pagan superstition engendered an attitude that what could not readily be understood should be kept at a distance. This insensitivity to indigenous culture did not seem problematical at the time: many Africans regarded the exposure to European ways as a welcome move towards a more cosmopolitan existence.

3. THE AMERICAS.

(i) Central and South America. According to the reports of missionaries, music proved to be an extraordinarily effective tool in the conversion of the inhabitants of Central and South America. Children, who attended the schools that were an essential part of the evangelizing effort, quickly learnt chants and hymns. Both Spanish and native languages were used. In 1583 Bernardo de Sahagún published *Psalmodia christiana*, a collection of hymn texts in the Aztecan Nahuatl language intended to be sung to indigenous melodies no longer extant. In the New World, most of which fell to Spain by the Treaty of Tordesillas (1594), musical and liturgical practice followed the rite of Seville. Missionaries also encouraged the construction of musical instruments; a few, such as Fray Garcia de San Francisco, a missionary in what is now the state of Texas, were organ builders.

The works of the great European masters, especially the Spaniards (Victoria, Guerrero, Morales), were soon heard in the New World. As early as the mid-1520s, Peter of Ghent (Pedro de Gante, *c*1480–1572), a Franciscan missionary and relative of Emperor Charles V, founded a school at Texacuco in which the teaching of academic subjects was supplemented by instruction in music. He wrote back to Spain in glowing terms about the skill of the singers he had trained. Some native choirs were capable of rendering the complex music of Spanish and Franco-Flemish masters. Most of the manuscripts and printed editions from which they sang chant and polyphony have disappeared, but as recently as 1963 nine volumes of polyphony prepared for pueblos in Guatemala

came to light. These volumes also contained sacred villancicos by local composers. It has been estimated that six or seven volumes would be needed for a complete edition of surviving neo-hispanic music composed before 1650. Vernacular hymns (*alabados*) modelled after the Spanish *romanza* were popular, as were *autos sacramentales*, religious plays with music that owed much to the Latin oratorio. Polyphony was not printed in the Spanish colonies, but liturgical books containing music were, the earliest at Mexico City in 1556.

The first important Spanish composer to take up a career in the New World was Hernando Franco (1532–85). A native of Segovia, he came to the western hemisphere in 1554 and worked in Guatemala before being appointed *maestro de capilla* at the cathedral in Mexico City, where he spent the last ten years of his life. A quantity of his works, all in the style of contemporary Iberian polyphony, survives in an elegantly prepared manuscript known as the Franco Codex. Two pieces set to texts in Hahuatl are attributed to him. Sacred music tended to be more conservative in the colonies than in the homeland. Composers such as Juan Gutiérrez de Padilla (*c*1590–1664) and Francisco López Capillas (*c*1615–73) held tenaciously to the *stile antico*, so much so that the latter has been called 'the Ockeghem of Mexico'. Another important musician of this generation was Gaspar Fernandes (*c*1570–1629), organist of Puebla Cathedral from 1606 until his death. The polyphonic hymns of Antonio de Salazar (*c*1650–1715), *maestro de capilla* at Mexico City, have been admired. Gutierre Fernández Hidalgo (*c*1547–*c*1623), like many of the peripatetic European composers of the Renaissance, worked as a cathedral musician in Colombia, Ecuador, Bolivia and Peru.

Towards the end of the 16th century the number of organs in the Spanish and Portuguese colonies multiplied. More popular than these expensive and difficult to maintain instruments, however, were the church 'orchestras' to which contemporary documents often refer. So many Mexican converts to Christianity became church musicians (singers and instrumentalists) that church authorities sought to limit their number.

In the 18th and early 19th centuries, Spanish taste continued to dominate Catholic church music in Latin America. This meant the importation and local composition of works in an overtly secular style, often with orchestral accompaniment, if such could be provided. Local composers emulated contemporary European styles, which were mainly of Italian origin. Manuel Zumaya (*c*1678–1755) was not only the first native-born *maestro de capilla* of the cathedral in Mexico City but also the composer of what has been called the first opera produced in the New World, *La Partenope* (1711).

(ii) North America. The earliest Catholic missionaries to the North American continent were Spanish (active in the south-western states of the USA and in California) and French (active in parts of Canada and Louisiana). Doctrines were communicated through hymnody that made use of both native and European tunes, not infrequently with texts in one of the Amerindian dialects. The most ambitious musical programmes were developed in the California missions, where the Franciscans organized choirs and orchestras according to the resources available at the 21 missions they staffed. Some of the friars, including the founder of the California mission, Fra Junipero Serra (1713–84), had studied music in Spain and were capable of training native musicians and directing ensembles as well as arranging and composing music for their use. The Franciscans and their native choirs performed Gregorian chant and rudimentary polyphonic music. Participation of instruments in both of these repertories seems to have been taken for granted. Some of the instruments were shipped from Spain, but others must have been fashioned by the performers themselves. The native Californians learned music quickly, and visitors were invariably impressed with the results. Nearly four dozen manuscript sources of music survived the secularization of the California missions by the Mexican government in 1833.

Native inhabitants of what is now Canada admired the music they heard performed by the first explorers, led by Jacques Cartier, in 1534–5. Amerindians proved susceptible to the attraction of European music, in the performance of which they became quickly proficient. About 1641, Jean de Brêbeuf wrote a Christmas carol in the Huron dialect, *Jesous Ahatonhia*, to the tune of 'Une jeune pucelle'; it remains widely known in North America. Extensive information about music in Quebec can be gleaned form the series of reports known as the *Jesuit Relations*. Both male and female members of religious communities taught music, and viols were used to accompany church music in the 17th century. The first organ in Montreal was not installed until about 1700. It is difficult to trace the history of Catholic church music in the unsettled times of the 18th century. The dichotomy between French-speaking, predominantly Catholic Quebec and the rest of Canada, predominantly Anglican, produced divergent musical practices that still persist.

The first collection of music to supply the needs of American Catholics in the former English colonies of North America was John Aitken's *A Compilation of the Litanies and Vesper Hymns and Anthems as they are Sung in the Catholic Church* (Philadelphia, 1787). The title gives a hint of the eclectic nature of the contents: a heterogeneous and apparently disorganized collection of music in Latin and English derived from Catholic and Anglican sources. Aitken, not a Catholic, included many English anthems, but the music for the Catholic liturgy is peculiarly incomplete. In the *Holy Mass of the Blessed Trinity* plainchant accompanied by a bass line is juxtaposed with stylistically incongruous organ interludes.

Another important collection of Catholic church music of the post-colonial period was due to the initiative of Benjamin Carr, a church musician who had emigrated to the new United States in 1793, settling in Philadelphia, where he established a publishing house and engaged in numerous musical activities. Although a Protestant, he served St Augustine's Catholic church as organist from 1801 until his death in 1831. From the repertory he assembled to discharge this office, he published in 1805 *Masses, Vespers, Litanies, Hymns, Psalms, Anthems & Motets*, a collection dedicated to John Carroll, first Catholic bishop of the United States. Carr apologized for the limited nature of the collection but advised purchasers that works of Samuel Webbe, published in London, could be acquired to supplement the repertory.

Some idea of the character of the music encountered in Catholic churches of the period may be gained from Carr's encouragement of the purchase of anthems from Britain and his recommendation of Handel's *Messiah* – 'a library in itself, that would furnish appropriate pieces for

almost every particular day throughout the year, for any Christian church of whatever denomination'. One of Carr's own compositions, a *Mass in Three Parts*, has been called 'the first important Mass setting written in the United States' (DeVenney).

VII. The 20th century: up to the Second Vatican Council

1. The *motu proprio* of Pope Pius X. 2. Continued reform. 3. Liturgical and other sacred music. 4. Organ music and its composers.

1. The 'motu proprio' of Pope Pius X. The efforts of 19th-century reform movements were confirmed by Pope Pius X (pontificate 1903–14). As a seminarian and priest, Giuseppe Sarto had busied himself with practical music-making and had familiarized himself with the work of the monks of Solesmes. As bishop of Mantua he saw to the musical education of his seminarians and the reform of church music in his diocese, an endeavour he continued as patriarch of Venice and finally as pope. Pius wasted little time in promulgating a *motu proprio* (i.e. a document issued on his own initiative) on the subject of sacred music. This document, *Tra le sollecitudini* (1903), was based in large measure on the principles he had developed over the previous two decades.

The pope emphasized the role of music as an 'integral part' of the liturgy intended to rouse the devotion of the faithful. He assigned highest place to Gregorian chant, then to Renaissance polyphony ('especially that of the Roman school'), and finally to modern compositions, provided that 'nothing profane be allowed, nothing that is reminiscent of secular pieces, nothing based as to its form on the style of secular composition'. (From an earlier version of this passage it is clear that the pope had in mind forms associated with opera: aria, cavatina, cabaletta and recitative.) Pius reiterated the prohibition against singing in any language other than Latin at a solemn Mass, banned the participation of women in church choirs and forbade the use of the piano and 'all noisy and irreverent instruments' (i.e. percussion). The *motu proprio* condemned masses 'made up of separate pieces, each of which forms a complete musical composition', and laid down specific guidelines for the singing of psalms (chant, *falsobordone* and more elaborate figured music were all acceptable) at Vespers. Finally, the pope encouraged seminary training in Gregorian chant for all clerics and the establishment of choir schools in larger churches.

Pius X settled once and for all the sometimes rancorous debate over the form in which the Gregorian melodies should be sung. He decided that the new editions should be based on scientific principles, although, according to Peter Wagner (1919, p.50), he did not favour a 'radikal archäologische Restauration'. Solesmes was in the best position to present such a restoration, but the other members of the Vatican commission, which included Peter Wagner, made their own proposals. Solesmes withdrew from the project in 1905. Pius X appointed Dom Joseph Pothier, abbot of St Wandrille (formerly of Solesmes), to head the commission charged with developing the new chant books. The Mass chants were based on the second edition (1895) of Pothier's *Liber gradualis*, and Pothier himself composed chants for new feasts. A *Kyriale* (1905), *Graduale* (1908) and *Antiphonarium pro diurnis horis* (1912), all edited by Pothier, were eventually published in the Vatican edition. Solesmes produced parallel editions furnished with the editorial 'rhythmic signs' related to the (now essentially discredited) rhythmic theories of Dom André Mocquereau.

Pius X approved and took a personal interest in the Scuola Superiore di Musica Sacra, established on Cecilian principles in Rome in 1911 by the Associazione Italiana di Santa Cecilia. The status of this institution was later raised by Pius XI to that of a Pontificio Istituto di Musica Sacra, thus permitting the award of degrees up to the doctorate. A series of illustrious scholars served as presidents: the Benedictine abbots Paolo Ferretti (1921–38) and Gregory Suñol (1938–46), succeeded by the renowned scholar of Catalan and Spanish music Higini Anglès (1947–69).

2. Continued reform. In the immediate aftermath of Pius X's initiative and with the support of his successors, massive efforts were made to make Gregorian chant, particularly the chants of the Ordinary, familiar to congregations throughout the Catholic world. To involve the laity more actively in the central act of the Church's worship, the Mass, was one of the main aims of the 'liturgical movement' that developed in the first half of the 20th century. Benedictine abbeys (Solesmes in France, Mont César and Maredsous in Belgium, Beuron and Maria Laach in Germany, and St John's, Collegeville, Minnesota, USA) stood in the forefront of both theory and practical implementation. Pius Parsch, an Augustinian canon, made Klosterneuburg (Austria) an international centre of liturgical renewal.

One of the wishes expressed by Pius X – that choir schools for boys be founded both in urban and rural areas – fell on receptive ears in Europe and North America. Following the European model, the North American schools were sometimes official diocesan institutions attached to cathedrals. Such was the case with St Michael's Choir School founded in 1926 by John E. Ronan in Toronto. Elsewhere, parishes undertook the responsibility for their foundation, drawing choristers from outside the parish boundaries. The Boston Archdiocesan Choir School, founded in 1963 by Theodore Marier at St Paul's Church in neighbouring Cambridge, Massachusetts, was such an institution. Both men were composers and advocates for music worthy of the liturgy, and both propagated the performance of Gregorian chant according to the Solesmes principles. Ronan had studied with André Mocquereau at Solesmes, while Marier promoted the Ward Method, a set of pedagogical principles that used Gregorian chant as the basis for music education.

Educated laity were encouraged to carry their bilingual missals with them to church every Sunday and on feast days, but the majority of Catholics were still quite detached from the Latin liturgy carried on at the altar by the priest-celebrant and his assistants. Congregations either retreated into private devotions, joined in the communal recitation of the rosary, or sang hymns that might have no connection with the liturgy whatsoever. German Catholics had the *Singmesse* and could draw on the rich traditions of Catholic and Evangelical hymnody, a portion of it pre-Reformation. England had its own traditions (see §VI, 3 below), but in the USA the favoured repertory consisted generally of sentimental ballads ('Mother at your feet is kneeling', 'On this day, O beautiful mother', 'O Lord, I am not worthy', 'Little white guest' – a reference to the Communion host), whose musical language was not dissimilar to the popular ballads

so dear to the hearts of Irish immigrants, who brought few liturgical traditions of their own from their homeland.

The Cecilian movement exerted its influence also in America. John Singenberger drew up a 270-page *Guide to Catholic Church Music* (St Francis, WI, 1905, suppl., 1911), listing settings of the Ordinary and Proper of the Mass, motets and organ music that he considered to be in conformity with Cecilian principles. Another group, dedicated to the same ideals, the Society of St Gregory of America, was founded in 1914 under the leadership of Nicola A. Montani (1880–1948). It published both a 'white list' of approved music and a 'black list' of works deemed unacceptable. Montani edited *The St Gregory Hymnal and Catholic Choir Book* (Philadelphia, 1920, rev. and enlarged 2/1940), an estimable compilation that provided a comprehensive repertory of English hymns, Gregorian chant, and Latin liturgical music drawn from many sources. Montani arranged much of the material in the book and contributed many compositions of his own. The dominance of the *St Gregory Hymnal* was challenged only in 1953 with the appearance of The *Pius X Hymnal*, a publication of the Pius X School of Liturgical Music (Manhattanville, NY). In 1964 the Cecilians and the Society of St Gregory came together as the Church Music Association of America. The largest organization of Catholic church musicians in the USA since the late 20th century is the National Association of Pastoral Musicians, although many Catholic organists in North America also belong to the interdenominational American Guild of Organists or Royal Canadian College of Organists.

3. Liturgical and other sacred music. Pius X encouraged the composition of new liturgical music that respected the Church's traditions and excluded everything redolent of the secular. The musical language of the 20th century was changing so rapidly and embarking on so many separate paths that adaptation to the requirements of the Catholic liturgy proved difficult. Moreover, the musical techniques of many composers would have presented exceptional technical challenges that few choirs could have surmounted. All but an infinitely small number of congregations would have rebelled against some of the 'abstruse' musical languages (e.g. dodecaphony) with which they would have been confronted.

In the early part of the 20th century 'new' works in the catalogues of Catholic publishers perpetuated a conservative harmonic idiom derived from Mendelssohn and Rheinberger. Recognizing the growing insistence on the participation of the laity in worship, composers began producing simple 'people's masses', either unison settings with organ accompaniment or settings that integrated the congregation's role with more ambitious music for choir, organ and other instruments. In the 1950s a number of Catholic composers who cultivated contemporary idioms rose to prominence in the USA, among them Alexander Peloquin, Sister Theophane Hytrek and Russell Woollen. Whenever organ accompaniment of Gregorian chant was deemed necessary, the heavy-handed methods of the past, whereby almost every pitch was separately harmonized in a manner that forced the melodies into a tonal framework, were abandoned in favour of the judicious placing of harmonic changes, the use of suspensions and appoggiaturas, and the avoidance of leading notes and dominant effects.

Amid the competing musical styles of the 1920s and 30s, the amalgam of techniques known as 'neo-classicism' proved to be one of the most flexible and desirable for the composition of sacred music. Catholic and Lutheran composers in Germany cultivated a pervadingly polyphonic, pan-diatonic harmonic language that incorporated considerable dissonance. Their music tended to be anti-lyrical and unsentimental, depending for its effect on the fluent contrapuntal combination of melodic lines in a rhythmically regular framework.

Several leading 20th-century composers wrote sacred works which, while often regarded as intended for concert performance, deserve mention in any survey of 20th-century Catholic church music. The Czech composer Leoš Janáček (1854–1928) in his *Glagolitic Mass* (1926) set the five items of the Ordinary translated into Old Church Slavonic. The *Missa brevis* of Zoltán Kodály (1882–1967) treats the text in a powerfully communicative way consistent with the spirit of the liturgy; originally an organ mass, it was later adapted by the composer for choir and organ (1944) and subsequently for chorus and orchestra. Karol Szymanowski (1882–1937) produced settings of several liturgical texts: *Stabat mater* op.53 (1925–6), *Veni Creator* op.57 (1930) and the *Litany to the Virgin Mary* op.59 (1930–33). Another Polish composer, Krzysztof Penderecki (*b* 1933), created what is perhaps the most significant corpus of Latin church music in the second half of the 20th century. Among his most important works using contemporary techniques with dramatic effect are the *St Luke Passion* (1963–5), *Dies irae* (1967), a *Magnificat* (1974) and a *Te Deum* (1979).

Igor Stravinsky (1882–1971) wrote only one work specifically for the Catholic liturgy, the Mass for voices, wind and brass instruments (1944–8), which has been admired as a model of liturgical propriety in a 20th-century idiom. His settings of the *Pater noster* and *Ave Maria*, originally composed for the Russian Orthodox liturgy (1926 and 1934 respectively), were subsequently (1949) supplied with Latin texts. Francis Poulenc (1899–1963), after his return in mid-life to the Roman Catholic faith, produced a number of important choral works, including the small-scale *Litanies à la vierge noire* (1936) for female voices and organ, a Mass for unaccompanied choir (1937), two cycles of unaccompanied motets (1938–9, 1951–2), and the larger-scale *Stabat mater* (1950), *Gloria* (1959) and *Sept répons des ténèbres* (1961).

One aspect of the revival of Catholic liturgical life in England in the 19th century focussed on the Latin church music of the 16th century. The choir of Westminster Cathedral, directed by R.R. Terry (1865–1938), attracted wide attention for its performance of this repertory. Terry was the editor of the *Westminster Hymnal* (London, 1912), the authorized Catholic hymnal widely used in Great Britain until the Second Vatican Council. English composers enriched the Anglican liturgy, but few wrote for the Catholic Church. Apart from a few Latin motets, Edward Elgar, a Catholic, composed nothing for the Roman liturgy, although his oratorio *The Dream of Gerontius*, 1900, with its text by J.H. Newman, inhabits a deeply Catholic spiritual world. Ralph Vaughan Williams (1872–1958), editor of the (Anglican) *English Hymnal* (1906), composed a Latin Mass in G minor (1920–21). Edmund Rubbra (1901–86), a convert to Catholicism in 1948, was an important writer of masses and motets. Most of the sacred music of Benjamin Britten (1913–76) was conceived either for use in the Anglican service or for concert performance; he did, however, write

a Latin *Missa brevis* in D op.63 (1959), for boys' voices and organ.

4. Organ music and its composers. In writing for the organ, Lutheran composers such as Hugo Distler and Ernst Pepping (*Grosses Orgelbuch*, 1939) enriched the repertory of chorale settings, while Catholic composers such as Joseph Ahrens (*Das heilige Jahr*, 1948–50) and Georg Trexler (*Gregorianisches Orgelwerk*, 1958–61) naturally gravitated towards plainchant; both types of work depended on the transparent tonal qualities of organs built according to the principles of the Orgelbewegung. One of the most prominent composers of the period, J.N. David (1895–1977), wrote for both confessions. The music of Hermann Schroeder (1904–98), founded on a fluent technique reminiscent of Hindemith, combines unflagging rhythmic vigour, contrapuntal flair and an inclination to exploit organum-like effects; among his works based on Gregorian themes are *Die Marianischen Antiphonen* (1954), an *Orgel-Ordinarium* (1964) and a *Te Deum* for organ (1973) to commemorate the rededication of the cathedral at Trier. Anton Heiller (1923–79) composed a number of liturgical works amalgamating a broad range of influences from chant to 12-note techniques. The Belgian organist, composer and teacher Flor Peeters (1903–86) also left an impressive legacy of choral works, including several masses and numerous motets, as well as organ pieces influenced by Gregorian melodies, Flemish folktunes and Renaissance polyphony.

In France Charles Tournemire (1870–1939), Franck's successor as organist at Ste Clotilde in Paris, carried forward in a liturgical vein the art of his celebrated *maître*. Tournemire's masterpiece is the vast series of impressionistic 'suites' for organ, *L'orgue mystique* (1927–32), paraphrasing Gregorian themes; they are designed to be played as organ masses for all the Sundays and important feasts of the liturgical year. The leading French organ virtuoso, Marcel Dupré (1886–1971), wrote two large-scale organ works on religious themes: the *Symphonie-Passion* op.23 (1924) and 14 meditations on *Le chemin de la croix* op.29 (1931). His few organ works for liturgical use include the 15 pieces of the *Vêpres du commun des fêtes de la Sainte Vierge* op.18 (1919–20), of which 11 versets (to the psalms and *Magnificat*) cleverly paraphrase the Gregorian melodies; the hymn versets quote more directly the hymn *Ave maris stella*. Maurice Duruflé (1902–82), a student of Tournemire and the organist and composer Louis Vierne (1870–1937), produced a comparatively small but significant number of organ pieces, but he is equally known for his choral works, particularly the Requiem op.9 (1947) in the tradition of Fauré, which paraphrases and elaborates the chant melodies of the Mass for the Dead. His *Quatre motets* op.10 (1960) and the *Messe 'cum jubilo'* op.11 (1966) are largely based on Gregorian themes.

Olivier Messiaen (1908–92) mingled devotion to the liturgy with personal mysticism and imposed his religious experiences even on works destined for the concert hall. Apart from an intensely moving eucharistic motet, *O sacrum convivium*, Messiaen neglected sacred vocal music in favour of music for the organ. From his earliest compositions for organ, *Le banquet céleste* (1928) and *Apparition de l'église éternelle* (1932), the presence of a unique creative personality was evident, an impression confirmed by the imaginative suite *L'Ascension* (1934, originally for orchestra), the cycle of meditations *La nativité du Seigneur* (1935) and the later organ mass, *Messe de la Pentecôte* (1950). Messiaen prefaced his works with biblical quotations signifying the source of his inspiration and the spirit that should guide the performer's interpretation. Although he improvised on Gregorian themes, he did not make use of them in his published organ music. Jean Langlais (1907–91), though blind, pursued an active international career as a concert organist and improviser. He composed a *Messe solennelle* for choir and organ (1951), but most of his liturgical music was written for organ. He frequently used chant themes, as in the *Trois paraphrases grégoriennes* (1933–4), the *Rhapsodie grégorienne* (1945) on eucharistic hymns and the *Suite médiévale* (1947) in the form of an organ mass.

VIII. The 20th century: from the Second Vatican Council

1. Conciliar reform. 2. Post-Conciliar liturgical music.

1. Conciliar reform. The Second Vatican Council, summoned by Pope John XXIII, met between the years 1962 and 1965. The Constitution on the Liturgy adopted by the Council took up the subject of liturgical music (chap.6), and in September 1964 an *Instructio* was issued to clarify questions raised by the conciliar decree. One of the strongest themes of both documents was the requirement that the laity be granted opportunity for 'actuosa participatio' in the liturgy. Although the term meant different things to different people, it was by no means a new idea. The same goal had been envisaged by Pius X, promoted by the 'liturgical movement' and strongly encouraged by Pius XII in his encyclicals *Mediator Dei* (1947) and *Musicae sacrae disciplina* (1955). Throughout the first half of the 20th century, in hundreds of dioceses, children and adults learnt to sing the chant Ordinaries, and church choirs were established in cathedrals and parishes to perform the Church's heritage of polyphonic music.

The moderate tone of the statements about liturgical music in the official documents of Vatican II did not adumbrate the upheaval that took place subsequently in many countries. Even though the Council fathers spoke respectfully of the Latin rite handed down for centuries and held in affection by many Catholics, it was eliminated virtually overnight and replaced by a revised eucharistic rite in the vernacular. (Pius XII's warning about 'those who wish to go back to ancient rites and customs, repudiating new standards which have been introduced under the guidance of Divine providence' was quickly forgotten in the rush to modify the traditional liturgy.) Late antiquity, rather than the Middle Ages, was now regarded as the 'springtime of the liturgy' and hence worthy of emulation.

Although the Vatican Council encouraged the promotion of church choirs, many reformers argued that they deprived the congregation ('assembly') of its right to participate actively, as 'actuosa participatio' was literally interpreted. (Others argued that it was possible to participate 'actively' through listening.) Despite the fact that some chants of the Ordinary of the Mass were known by millions of Catholics, they were discarded because they were in Latin rather than the vernacular. The repertory of devotional, sentimental hymnody sung in Catholic churches before the Council was, moreover,

small and ill-suited to genuine liturgical needs. Given these conditions, a new musical repertory had to be produced virtually overnight, but traditionally trained church musicians and composers were either unprepared for the changes or felt discouraged about applying their talents to meet the new requirements.

2. Post-Conciliar liturgical music. Possibly the first mass to be published in English was Gerald Phillips's *Mass in the Vernacular* (1963), but this type of setting was to have few successors. Into the vacuum moved a genre of church music that had been growing in popularity among young Catholics. Although generally identified as 'folk music', neither its melodic style nor harmonic language bore any relationship to the historical tradition of British or American folksong or folk hymnody. The 'folk' epithet derived from the term used by Geoffrey Beaumont for his *20th Century Folk Mass* (1956), a work that emerged from the activities of the British Church Light Music group of the 1950s. Beaumont intended the term 'folk music' to mean whatever people happened to be singing as their favourite popular music at any given time. He argued that this should be accepted by the Church for its own use.

In the English-speaking world during the 1960s groups of Catholics gravitated towards informal masses with much guitar strumming to songs such as *Michael, Row the Boat Ashore* and *Kumbaya, my Lord, Kumbaya.* A song repertory that catered for this taste was published in *Glory and Praise* (1979), one of the most popular American Catholic songbooks, which excluded virtually all music (except Christmas carols) composed before the 1960s. A similar repertory was represented in the first edition of *Gather* (1988), but the second edition (1994) went beyond the original 'folk' hymnody to include music for the liturgy, a few traditional hymns, and hymns from other cultures. In Great Britain, *Celebration Hymnal* (1976–81), containing a mixture of traditional hymns (drawn from different denominations) and modern worship songs, found widespread use in Catholic parishes (a revised and expanded edition was published in 1990). Catholics in the USA have no national hymnal comparable to that of other denominations, but *Worship*, a comprehensive and eclectic collection of mostly traditional hymnody, with a large selection of service music, responsorial psalms for use at Mass and music for the Liturgy of the Hours, is probably the most widely used. First published in 1971 (3/1986), its contents and layout would be familiar to many mainline Protestants, who would not, however, always find the same texts associated with well-known tunes. It contains masses for choir and congregation, one of the liturgical forms that bridged the gap between pre- and post-Vatican II liturgy. The publisher of *Worship* and *Gather* (GIA, Chicago) has also issued *Lead Me, Guide Me*, a hymnal for black American Catholics.

Many hymns in pop style were conceived as vocal solos and present difficulties to groups of untrained singers. Large melodic leaps, long-held notes and rests in the melodic line, chromaticism, complex rhythms and the deliberate accentuation of unaccented text syllables are frequently encountered in this idiom. Successive stanzas can have different numbers of syllables per line, thus requiring adaptation of the melody for each verse. The rhythmic impulse provided by simple, broken-chord piano accompaniment or guitar strumming helps to overcome the rhythmic problems. (See ex.8.)

Some composers write their own words in a perhaps intentionally unpretentious, prosaic language, which may or may not include end rhyme. Many of the most popular song texts emphasize personal salvation and dialogue with God over the corporate expression common to liturgical worship. The number that begin with 'I' is striking. One critic (Thomas Day) has pointed to a category of what he calls 'voice of God' hymns, in which the congregation assumes in some sense the role of God: *I have loved you with an everlasting love*, *When you seek me*. Refrain forms are extremely popular, reflecting the prominent role of the song leader (cantor) in the modern Catholic liturgy. Unlike most of the traditional hymnody of the Western Church, many of the newest songs composed for Catholic use assume the presence of a leader who sings the verses to which the congregation responds. More ambitious works for cantor, congregation and choir adopt the same configuration.

In addition to traditional hymnody, works in different styles for the Ordinary of the Mass, and songs in a popular idiom, two distinctively French styles – Gelineau psalmody and music from Taizé – have been widely accepted. Even before the liturgical reforms introduced by the Second Vatican Council, Joseph Gelineau (*b* 1920), a biblical and liturgical scholar, had devised a style of psalmody admired for the flexibility it allowed in the chanting of the biblical text. Gelineau composed modern 'psalm tones', in which sustained, quasi-modal chords support the chanter, who sings from one to four syllables (depending on the distance between accents) to each harmony. When used liturgically for the responsorial psalm between the scripture readings at Mass, the psalm is associated with a short choral antiphon. For the ecumenical community at Taizé in France, composer Jacques Berthier (1923–94) created a style founded on the old technique of ostinato harmonies: a brief succession of chords provides the foundation over which new melodies and optional instrumental obbligatos are imposed. This allows a congregation or choir (once the simple chordal foundation has been mastered) to collaborate with a more highly trained soloist.

Two developments in the field of scholarship may have an impact on a 'neo-Cecilian movement', should one arise during the 21st century. Thanks in part to the stimulus provided by 19th-century Cecilians, the corpus

Ex.8 Rory Cooney: 'Do not fear to hope' *Gather* (Chicago, 2/1994), no.420

of Renaissance liturgical polyphony has been published in modern scholarly performing editions. Much more is now known about the performing practice of Renaissance polyphony, as exemplified by the constant flow of recordings. Gregorian chant studies have reached a new plateau, building on the researches begun at Solesmes in the 19th century. Although the 'Solesmes method' of performance devised by André Mocquereau has been abandoned as unhistorical, the many recordings of chant that followed his principles will continue to exert an influence. For choirs willing to make an effort to recover the rhythmic tradition preserved in manuscripts from Laon and the abbey of St Gallen, the possibilities of new and vital revelations have been suggested by a number of late 20th-century recordings. Of invaluable assistance is the *Graduale triplex* (1979), inspired by the earlier *Graduel neumé* of Eugène Cardine, which presents the neumes of the manuscripts *F-LA* 239 and *CH-SGs* 359 (and other manuscripts of the St Gallen family) above and below the square notation of the *Graduale romanum* (1974), published by the monks of Solesmes for the post-Vatican II revision of the liturgical calendar. The Gregorian *Missal for Sundays* (1990), also containing chants for the feasts of the Lord and and for a few feasts of saints, includes translations of the chants and prayers together with scripture references.

The rapid changes in liturgy and music have inevitably led to polarization. Questions of musical quality and aesthetic judgment continue to be debated, even though in the USA, for example, the National Council of Catholic Bishops rejected such considerations: 'musical judgment really says nothing about whether and how this music is to be used in this celebration' (*Music in Catholic Worship*, 2/1983). According to this view, 'pastoral judgment' rather than an assessment of musical quality is the decisive factor in determining the appropriateness of music for the liturgy. In his encyclical *Dies Domini* (1998) Pope John Paul II took a different view, defending the principle that excellence was to be demanded of text and music, both of which should be 'worthy of that ecclesiastical tradition that, with respect to sacred music, lays claim to a patrimony of inestimable value'.

In the late 20th century the creation of music for worship that was genuinely Catholic yet open to indigenous musical cultures throughout the world was frequently a focus of concern. At the time Pius XII wrote the encyclical *Musicae sacrae disciplina* (1955), a greater sensitivity to the inherent worth of indigenous musical traditions began to prevail. The pope encouraged missionaries to make full use of these traditions to create a liturgical music that genuinely reflected the musical richness of local cultures. But exactly how this 'acculturation' of the liturgy was to be practically implemented has proven to be a thorny question.

In Japan, Korea, Vietnam and parts of China members of the upper classes had been educated along European lines, and they quite readily adopted Western musical tastes as a symbol of upward social mobility. Indeed, many Catholic, Protestant and Pentecostal worshippers still remain comfortable with a Western musical idiom in vogue more than a century ago. In Japan various attempts were made to reach back to a 1000-year-old court music tradition (gagaku), to adapt and contrafact secular songs of the remote past, and to recover ancient temple music for Christian use. Such endeavours require sensitive judgment as to whether or not an older musical tradition has lost its former associations and has ceased to be a living practice. (The same problem had to be faced in the West in the 16th century when secular songs were contrafacted as chorales: the derivation of the Passion chorale *O Haupt voll Blut und Wunden* from a love song by Hassler being the most famous example.) Catholic priests in the American Southwest have incorporated some Amerindian rituals into the liturgy, and a hymnal has been compiled in the Crow language.

The use of exotic musical idioms in settings of the mass was seen in the Argentinean *Misa criolla* (1965), a 'folk mass' by Ariel Ramirez, the African-inspired *Missa Luba* in Latin and Swahili, which became exceptionally popular after the release of a notable recording in the 1960s, and the *Misa flamenca*, with music written and adapted by R. Fernandez de Latorre and later recorded by leading flamenco artists. In Central and South America today the musical ensemble that provides accompaniment for music at Mass may consist of one or more guitars or guitar-like instruments combined with indigenous percussion (maracas, claves, guiro, drums etc.). Young people are often the performers, and they easily transfer to the liturgical environment the popular idioms with which they are familiar. While the oldest traditions of folk music have not been drawn upon, the resulting style is often modal with frequent use of ostinatos. Urban practice does not necessarily differ from that encountered in the villages, but wealthier parishes might elect to follow a more European style of church music. The congregation sings largely from memory, but in some countries substantial printed booklets containing the fixed and variable portions of the liturgical year, responsorial psalms and brief refrains are available. Old mission traditions continue in the brass bands that participate in religious festivities. The vast gap that separates rich and poor in Latin America accounts for the many organs that have been abandoned to a state of disrepair. Even new churches do not necessarily make provision for the instrument, since synthesizers and electronic keyboards are readily available, inexpensive substitutes.

A few decades have passed since the Vatican Council's Constitution on the Sacred Liturgy, yet many parishes, particularly in Europe and the USA, continue to experience a low level of musical participation by the congregation at Sunday liturgies (at weddings and funerals it is virtually nonexistent). This can be explained as the heritage of a culture of non-participation that developed over generations; and it is a problem that even the most energetic organists and directors of music find difficulty in overcoming. Some congregations have become strongly divided over the music they are asked to sing (or hear, if some members choose just to listen to the amplified voice of the cantor). Large Catholic parishes, split by the conflicting musical and liturgical 'tastes' of their membership (often a matter of age or ethnic origin) schedule multiple liturgies to cater to their needs. It is indeed ironic that the very elements that some Catholics find irritating and alienating are seen to be associated with the Church's ultimate unifying act – the liturgy.

Nevertheless, church musicians such as Colin Mawby, a composer and choral conductor working in England (master of music at Westminster Cathedral, 1961–76) and Ireland, and various composers at some time associated with the St Thomas More Group in London,

among them Christopher Walker, Paul Inwood, Bernadette Farrell and Stephen Dean, have produced a significant output of new music that has found wide acceptance in Catholic and non-Catholic congregations in Britain, Ireland, the USA and Australia. The St Thomas More composers in particular have explored new forms of liturgical participation while working within the sphere of English, Scottish and Celtic traditional music. *Laudate*, a hymnal containing many mass settings, including the best of the plainchant and modern traditions as well as some new compositions, and a similar variety of hymns, was published in 1999; it provides liturgical material of quality for the Church at the start of the new millennium.

As the 21st century advances the music of the Catholic Church will certainly not stand still, but leadership remains a critical factor. Many Catholic churches are large enough to be able to offer attractive salaries to church musicians possessing the comprehensive range of skills needed to meet the musical needs of parishes and cathedrals. Unfortunately, the opportunities coincide with a period during which there has been a steep decline in the numbers of young people choosing church music as a career.

JOSEPH DYER

Romance (Fr. and Sp.; It. *romanza*; Ger. *Romanze*). From the 15th century, *romance* in Spain and *romanza* in Italy

have nearly always signified a ballad; the narrative *romance* was, next to the villancico, the most popular song type in Spanish-speaking countries. In France and Germany the term came to indicate an extravagant, sentimental or 'romantic' tale in either prose or strophic verse. Since the 18th century vocal and instrumental settings entitled 'romance' have continued to express these 'romantic' and lyrical qualities (in this sense, the appropriate Spanish word is 'romanza').

1. Spain. 2. Latin America. 3. The vocal romance in other countries: (i) France (ii) Germany (iii) Other countries. 4. The instrumental romance.

1. Spain. As in other countries, Spanish *romances* (ballads), though probably story-songs at root, often dwell on a single situation taken from a story, the effect being rather more often a heightening of the dramatic tension than of lyricism. There is controversy about their origins. Menéndez Pidal has argued persuasively that *romances* are unique in European balladry in that they began as fragments of longer epic poems, and, though developing variants by transmission through oral tradition, have been preserved longer and more authentically than have ballads in other countries. Some objections to this theory (see Entwistle, Sage) are these: there is no evidence that Spanish epics preceded the *romances* they are presumed to have engendered, nor that epic ballads came earlier than other types of ballad; the earliest surviving texts are related not to any uniquely Spanish epic but rather to Carolingian, Arthurian and other cycles well known in European balladry generally, as well as to Spanish history (notably about border incidents involving the Moors or about King Peter the Cruel); and the earliest surviving tunes do not suggest an affinity with the postulated chant or recitation of epics. There is, however, general agreement that *romances* may be seen as folk-songs, not in the sense that they were originally created by or for common people, but rather that they were adopted and continually adapted by common people.

There is strong evidence that, in the 14th century or even the 13th, *romances* were sung by professional musicians (perhaps *jongleurs*) for the entertainment of courtly, aristocratic and possibly urban customers. By the middle of the 15th century, though still in demand at court, they seem to have been taken up by amateur singers in other walks of life. By the middle of the 16th century, old ballads had become sufficiently plebeianized for cultured poets and musicians, while often imitating them in new ballads of a more artful kind, sometimes to speak disparagingly of them. On the whole, though, ballads clearly met with more favour in Iberian cultured circles of the 15th and 16th centuries than they did in other countries. Thanks to this patronage, ballads with their music were set down in manuscripts in Spain a century earlier than in most other countries. The poetic form of these early *romances* was based on an octosyllabic quatrain with assonance (vowel-rhyme) in alternate lines, though some of the more cultured *romances* from the later 15th century have full rhyme. Menéndez Pidal maintained that the earliest form was the couplet of 16 or even eight syllables; however, none of the earliest extant ballad tunes has a two-phrase musical structure. With some exceptions, such as some versions for voice and vihuela of the famous ballad on the taking of Alhama which interpolate a recurring lament '¡Ay de mi Alhama!' (ex.1), Spanish ballads up to 1550 or so never had a

Ex.1 L. de Narváez: *Los seyos libros* (1538)

refrain; by the 17th century they often had one, a change brought about not so much by the re-creative process of oral tradition or poetic fashion but rather by musicians in their search for expressiveness (see Montesinos).

The Cancionero Musical de Palacio (*E-Mp* 1335; ed. in MME, v, x, xiv, 1947–51, 1965; *see* Cancionero), compiled between 1505 and 1520, contains over 40 *romances* set for three or four parts. If one can assume that historical ballads were composed in the year of the event they describe, the earliest, *Alburquerque, Alburquerque*, dates from 1430 (ex.2). Others that can be dated in this way are *Pascua d'espíritu santo* (1435) and *Sobre Baça estaba el Rey* (1489). Most of the ballads in this cancionero and others of about 1500 show every sign of being arrangements by court composers (including Juan del Encina, Juan de Anchieta and Francisco de la Torre among others both named and anonymous) of pre-existing tunes for performance by musicians in the court's employ. Over 50 of these *romance* tunes have survived in arrangements made during the period from about 1450 to 1550. Francisco de Salinas (*De musica libri septem*, 1577) implied that a single ballad tune served a variety of texts, a contention that conflicts strangely with the musical evidence, for, though there is certainly a remarkable homogeneity about these 50 tunes, every melody – Salinas's examples apart – is distinct in its own right. The homogeneity of these tunes (almost certainly the superius in most cases) derives from several factors: they are all remarkably restrained, moving normally by step and jumping rarely by more than a 3rd; they all consist of four balanced phrases (*ABCD*), exactly matching the octosyllabic quatrain; they hardly ever indulge in any repeated or imitative passages or refrains; each phrase ends with a

Ex.2 Anon., Cancionero Musical de Palacio, no.106

Al - bur - quer-que, Al - bur - quer - que,
me - re - çí - a ser on - ra - do; en ti es -
- tán los dos in - fan - tes, fi - jos del rey
Don Fer - nan - - - - do.

cadence often marked by a fermata; duple metres are used exclusively whereas other Spanish songs of the period indicate a variety of metres; most syllables are sung to one note, yet there is an equally characteristic fondness for expanded phrases, especially at cadences, of up to 12 notes per syllable. The striking similarity between these melodies and modern chorales (*Stevenson SM*, p.206) or hymns lends support to the theory that there were common roots between Iberian popular song and church music in medieval times. Almost as striking is the similarity to early English songs of popular type, such as *Three Ravens* in Ravenscroft's *Melismata* (1611) or *Western Wind* and *Cull to me* in their duple-time forms of the 15th or 16th centuries (see J. Ritson: *Ancient Songs and Ballads*, London, 1829). This resemblance suggests that the lost music for English ballads of the 15th and 16th centuries may have shared at least some of the above characteristics with their Iberian counterparts, especially since there are obvious parallels, in the growing addiction to triple time and refrains, between the balladry of both countries in the 17th century.

The evidence about performance of the early Spanish *romances* indicates that there was no set way of presenting them, but that up to about 1550 they were most often sung in court as three- or four-part homophonic choruses. In most cases one part only is underlaid in the manuscripts, and this has led some students to conclude that such pieces would be performed by a solo voice singing the underlaid part to an instrumental accompaniment. Certainly at times in the 15th century ballads were sung to lute accompaniment apparently played by the singer himself (Menéndez Pidal, 1953, pp.19, 72); it seems reasonable to conclude that the pre-existing tunes were performed also as unaccompanied solos. The qualities most often praised in ballad-singing in this period were sweetness and intense emotion; there is barely a hint of any rough 'folklike' singing.

After 1520 the only known sources for old ballad tunes are the vihuela books from Milán's *El maestro* (Valencia, 1536) to Esteban Daza's *El Parnaso* (Valladolid, 1576), where they are adapted for solo voice and vihuela accompaniment, and two madrigals by Juan Vásquez in his *Recopilación de sonetos y villancicos* (Seville, 1560; ed. in MME, iv, 1946, nos.28, 44). The indisputable similarities between the melodies of particular ballads in these settings and those of the Cancionero Musical de Palacio and other collections of about 1500 (ex.3) may be attributed to common traditional sources or to the desire of 16th-century composers to re-create tunes taken directly from courtly songbooks collected as much as a century earlier. Milán advised singer and instrumentalist alternately to embellish ('glosar') some of these ballads and later vihuelists also recommended judicious ornamentation; this should be seen, perhaps, not as an innovation but as another stage in the traditional re-creation of the cadential flourishes found in the ballads of the Cancionero Musical de Palacio (ex.3*b*). Possibly the insertion of instrumental interludes at the ends of phrases and between strophes also reflects this re-creative process, though the vihuelists were clearly more concerned with providing opportunities for the exercise of vihuela technique than with preserving authentic traditions. *Romance* tunes of the older type appeared less and less frequently as the century progressed. They may be detected occasionally in the works of 16th-century composers such as Morales

(*Missa 'Desilde al cavallero'*) and Gombert (*Dezilde al cavallero*, a madrigal based on the same tune, as is *Por vida de mis ojos* by Juan Vásquez and Cabezón's organ variations *Diferencias sobre 'El caballero'*). During the latter half of the century the old tunes seem to have been subjected to such a degree of re-elaboration by oral transmission or cultured refinement, or both, that they are barely recognizable as derivatives of the older type. In the Cancionero Musical de Medinaceli (*E-Mmc* 13230), for example, these apparently new types have music in a variety of duple and triple rhythms and forms (*ABCDD*, *ABCDCC*, *ABCDEFG* etc.). By 1600 published ballads suggest that either the old type of tune had been altered practically out of recognition, or it had been replaced by a categorically 'new' type.

A consistent characteristic of the 'new' *romance* was the addition of a refrain. The ballads in a collection from the early part of the century, *Romances y letras a tres vozes* (*E-Mn* 1370–72; ed. in MME, xviii, 1956), appear with refrains (called 'estribillo', 'buelta' or 'letra'). Musically these are given prominence over the quatrains, which are often set in a new quasi-recitative style with repeated phrases and agitated rhythms. The refrains are more melodic, use more imitation, are often in a different metre and are up to ten times as long as the strophes, even when the refrain texts are short. The refrain was often printed after each strophe, but it seems to have been sung increasingly at the beginning. By 1630, then, in the Cancionero Musical de la Sablonara (ed. J. Etzion, London, 1996) for example, the *romance* had become, from a musical point of view, virtually indistinguishable from the villancico. Later in the century different verses were frequently provided with different music, and the refrains were set for eight to 12 parts in contrast to the

three or four parts of the strophes. They were accompanied by organ, harp and continuo.

In poetry, however, the *romance* form outshone the refrain song during the 17th century and beyond. Manuscript collections (see Wilson) occasionally contain ballad texts with guitar cyphers (at first numbers, later an 'alphabet') over the words, indicating chords to be strummed to a known tune. Such evidence shows that ballads were sung to guitar accompaniment in at least some households. Most 17th-century composers (e.g. Juan Blas de Castro, Juan de Palomares, Juan del Vado, Carlos Patiño, Manuel Machado, J.-B. Comes, Juan Hidalgo) set the new *romances* with their refrains to music for performance both in aristocratic circles and in the public theatre. Indeed, some of these cultured *romances* became very popular, especially when incorporated into musical interludes (*bailes*) in the theatre.

Thousands of sacred so-called *romances* for three to six voices and accompaniment are extant; they were sometimes interpolated into Matins and sung at the end of a Nocturn in place of the responsory.

There is little evidence to suggest that any kind of *romance* enjoyed a comparable vogue as a song in the 18th century. Works called *romances*, but properly more like villancicos, took on the appearance of cantatas, normally consisting of an instrumental introduction, recitatives, arias and choruses. In the first half of the century the accompaniment was predominantly the organ, basso continuo and two violins; later oboe, horn and other instruments were added. Composers of these cantata-like *romances*, mostly representatives of the Valencian school, include José Pradas Gallen, Pedro Rabassa, Pascual Fuentes and Francisco Morera. Estébanez Calderón, writing in 1847, named 'un romance o corrida' as one of the (presumably traditional) gypsy songs he had heard and seen performed; *romances* sung in 20th-century flamenco style, however, seem to bear no musical relationship to the old type of tune of the Cancionero Musical de Palacio. 20th-century Iberian ballads often have texts that go back as far as the 15th century, though their tunes, with the intervals, rhythms, triplets and cadences characteristic of other 20th-century folksong in the peninsula, are far removed (*see* SPAIN, §II, 3). There are many variants and versions of these 20th-century tunes, which can be grouped into families with interrelationships rather as they can in English balladry. The verse form is still predominantly the octosyllabic quatrain, though the *romancillo* with shorter lines (six syllables or even seven and five) is more in evidence. They are probably as often performed by choirs as by solo voice with guitar accompaniment. *Romances de ciegos* (sung and/or accompanied by a blind man or woman) sometimes retain something of the balanced shape and restraint of the old ballad.

In recent years many ballads have been collected from communities of Sephardi Jews, a people banished from Spain in 1492. The texts are, again, interesting derivatives of 15th- or 16th-century *romances*, yet the tunes are so far removed from the early melodies and so akin to modern Iberian folksong that they point once more to the conclusion that musical traditions are more volatile than literary traditions.

2. LATIN AMERICA. The *romance* was taken to the New World by the first explorers and colonists, and retained its roots in the Spanish form. Many *romances* such as *Delgadina*, *Estaba Catalina* and *Muérete de Elena* survive, and were performed by travelling fiddlers or *payodores* who accompanied themselves on the *guitarrón* (large guitar). Versions of traditional ballads are still sung by the Spanish population in the south-west USA, as are the *décima* (a type of *romance* that uses the octosyllabic verse in ten-line stanzas) and the canción. Variants have been collected in Mexico, Colombia (see Beutler), Venezuela, Argentina, Chile (see Danneman) and Uruguay. Like the old Spanish *romances*, Latin American *romances* often celebrate important events, both sacred and secular, although the religious *romance* prevails today, albeit in a fragmentary manner. The Mexican type shows both a literary and a musical affinity with the Spanish, especially the Andalusian with which it shares the name 'corrido'. Although there are many metrical variants of the Mexican *corrido*, the octosyllabic quatrain is the most common, often with an added refrain (*estribillo*). The major modes are more in evidence than in Spanish ballads, but the melodic structure retains the same resemblance to older liturgical models. In both the Mexican and Andalusian types ternary rhythms are prevalent. The *corrido* is accompanied usually by the guitar, often the harp and, in Jalisco, an instrumental ensemble (*mariachi*) that includes violins. Late 20th-century studies show that the Spanish *romance* tradition is reflected not only in the song repertory of direct descendants of the Spanish population, but also in that of black rural communities that have appropriated the *romance* and incorporated it into their festive traditions (see Friedmann, 1996).

See also CANCIONERO.

3. THE VOCAL ROMANCE IN OTHER COUNTRIES.

(i) France. The French used the term 'romance' in the first half of the 18th century to denote a strophic poem recounting an ancient story of love and gallantry. Essential to the genre were the qualities of naturalness, simplicity and naivety. The earliest definition (*Nouveau dictionnaire de l'Académie françoise*, 1718) suggests a link to the Spanish *romance*: 'Mot tiré de l'Espagnol, et qui signifie une sorte de Poésie en petit vers, contenant quelque ancienne histoire'. In the 1750s the works of the poet F.A. Paradis de Moncrif established the defining features of the genre; his most famous *romance*, *Les constantes amours d'Alix et d'Alexis*, accompanied by a simple, modal 'air languedocien', was cited as a model for the genre by J.-J. Rousseau (*Encyclopédie*, 1765). Rousseau (*Dictionnaire de Musique*, 1768) presented the first primarily musical definition of the term, suggesting that the melody should reflect the qualities of the poem: 'point d'ornemens, rien de maniéré, une mélodie douce, naturelle, champêtre'. One of the most important examples of the new genre is Rousseau's 'Dans ma cabane obscure' from *Le devin du village* of 1752 (ex.4). The strophic form, recurring three-bar phrases, thin texture and narrow range reflect the naive, natural state of the young peasant. Rousseau creates a sentimental mood through expressive devices such as the sudden expansion of the melodic range in the second half and the fuller texture and chromatic harmonic shifts near the final cadence. Mondonville's *Titon et l'Aurore*, composed in the same year, includes a *gavotte en musette* that alternates between major and minor, a common practice in the later *romance*.

The *romance* grew enormously in popularity during the next three decades. The genre's strophic form, unadorned melody, subordinate accompaniment and

Ex.4 J.-J. Rousseau: *Le devin du village*, 1752

simple expression were ideally suited to exploit the vein of sentimentalism in *opéra comique*. *Romances* were composed by the leading *opéra comique* composers of the time, including F.-A. Philidor (*Le sorcier*, 1764), Monsigny (*Le roi et le fermier*, 1762) and Grétry (*L'amitié à l'épreuve*, 1770).

The *romance* also continued to appear in collections for drawing-room performance. In the first printed set, *Recueil de romances historiques, tendres et burlesques tant anciennes que modernes avec les airs notés* (1767), Charles de Lusse distinguished between three types: *romances historiques*, *romances tendres* and *romances burlesques*. Other notable collections include *Romances d'Arnaud Berquin mises en music par de Blois et Gramagnac* (1776) and *Consolations des misères de ma vie ou Recueil d'airs, romances et duos de J.-J. Rousseau* (1781). These works are distinguished from opera *romances* by their limited accompaniment (unaccompanied or basso continuo only) and by the frequent use of eight or more stanzas (Rousseau's *Pour quoi vompre* has 29). J.-P.-G. Martini's *Plaisir d'amour* (1783/4) is often cited as a landmark in the development of the *romance*: it has a realized accompaniment, and the normal strophic form is replaced by a rondo pattern, which became increasingly popular in the 19th century. By the end of the 1780s the sentimental *romance* was very fashionable, especially at the court of Marie Antoinette, who is credited with the composition of the *romance Ah s'il est dans mon village*.

With the advent of the Revolution the *romance* changed rapidly. The charm and sentimentality of Rousseau's conception were replaced by patriotism (Gossec's *Ode sur l'enfance*), reflection of current events (François Devienne's *Romance patriotique sur la mort du jeune Bara*), tragedy (*Marie Stuart*, by Martini) and terror (*La mort de Werther*, by L.-E. Jadin). A new and freer lyricism developed, and the accompaniment, generally indicated for 'piano, harp or guitar', became more elaborate. By the turn of the century there was a continuous flow of these songs, affirming their immense popularity. Leading composers of the genre include Gossec, Méhul, Rodolphe Kreutzer, C.-H. Plantade, P.J. Garat and Boieldieu. One indication of the extent of *romance* production is the appearance of ten volumes of *romances* entitled *Collection de morceaux de chant, extraits des meilleurs acteurs avec accompagnement de guitare* published in Paris in the early 19th century. Although the *romance* was well received by the general public, many contemporary critics held the genre in complete contempt. The *romance* continued to appear in *opéra comique*, especially in the works of Méhul (*Joseph*, 1807, contains two excellent examples), Cherubini, Boieldieu and Auber. As the century progressed operatic settings became more elaborate, often including choruses and exploiting orchestral colour. The extensive ornamentation in Rossini's 'Sombre forêt' from *Guillaume Tell* (1829) exemplifies an attempt to dramatize the *romance*.

After 1830 the *romance* as a song type began to give way to the more dramatic *mélodie*. Several attempts to dramatize the *romance* (such as *Le songe de Tartini* which contains a virtuoso violin part) were unable to revitalize the genre. The most successful composers during this period were Antoine-Joseph Romagnési, Pauline Duchambge, Auguste Panseron, Loïsa Puget and Francesco Masini. In 1846 Romagnési suggested the following classifications for the *romance*: *romances sentimentales*, *mélodies reveuses et graves*, *chants héroique et fortement rhythmés*, *romances passionnées et dramatiques* and *chasonettes*. The broadening application of the term during the Second Empire (1851–70) meant its dissolution as an independent genre, and the term 'romance' soon became interchangeable with 'chanson' and 'mélodie'. Of the composers who continued to produce these works in quantity, Lamartine and Monpou were the most outstanding. Other leading 19th-century composers who used the term include Berlioz, Gounod, Bizet, Saint-Saëns, Lalo, Duparc and Fauré. Since 1870 the term has been applied to a variety of works with no common form or expression, but characteristic traits (such as references to the troubadours, old Spanish or pre-revolutionary French settings, amorous adventures, simplicity and lyricism) survive.

(ii) Germany. French influence on the German Romanze in the 18th century was considerable; the earliest German examples imitated the strophic form, simple melodies, phrase structure and harmonies of the Parisian models. Elements of folksong were also assimilated, the Romanze giving a distinctive German character. The term 'Romanze' was introduced in 1756 with the publication of three poems by J.W.L. Gleim. The earliest published collections of poems, *Romanzen mit Melodien, und einem Schreiben an den Verfasser derselben* (Friedrich Lowen, 1762) and *Romanzen mit Melodien* (Daniel Schiebeler,

1767) were both set to music by J.A. Hiller. Other 18th-century Romanze composers include Johann André, G.W. Gruber, F.W. Weis, C.G. Neefe and E.J.B. Lang. The folk quality of the Romanze was ideal for expressing simple sentiments, and it soon became a standard feature in Singspiel, as in Hiller's popular 'Als ich auf meiner Bleiche' in *Die Jagd* (1770), which attained an extraordinary level of popularity. After 1770 most German comic operas contained between one and three Romanzen, although they were less common in Viennese comic opera. Romanze texts often suggested ancient or exotic places. Mozart exploited this element in Pedrillo's Romanze in *Die Entführung aus dem Serail* with its modal features and pizzicato accompaniment, suggesting a Spanish guitar.

Many of the leading German poets, such as Herder, Goethe, Schiller and Tieck, provided Romanze texts, and settings of their works often appeared in collections, such as *Göthe's Lieder, Oden, Balladen und Romanzen* by J.F. Reichardt (1809) and *Lieder, Balladen und Romanzen von Göthe* by Peter Grönland (1817). The terms 'Romanze' and 'Ballade' were frequently interchanged, and even contemporary theorists had difficulty in differentiating them. One proposed distinction was a matter of emphasis: the Ballade maintained an epic character, as the story was the essential feature; the Romanze, though less dramatic and lyric than the lied, placed more emphasis on musical elements, especially the vocal line. The Ballade also had the character of a gloomy, northern European work, while the Romanze had that of a warm love poem from southern Europe. Settings of *romances* with French texts and Romanzen with both French and German texts were published sporadically throughout the 19th century. Among the works bearing these designations are Beethoven's *Que le temps me dure* (text by Rousseau), Schubert's *Sah' ein Knab* and *Das Wasser rauscht*, and Wagner's *Mignonne, allons voir* and *Adieux de Marie Stuart*. Many 19th-century stage works contain two or three Romanzen. A common feature is the alternation of major and minor sections, as exemplified in Schubert's 'Die Vollmond strahlt' from *Rosamunde* (1823). Gruesome texts ('Ein Vampyr nimmt wohl die Gestalt von jedem Menschen auf' in Lindpainter's *Die Vampyr*, 1828) and effective use of orchestral colour ('Nero, dem Kettenbund' in Weber's *Der Freischütz*, 1821) also became prevalent characteristics of the operatic Romanze. Like the French *romance*, the term 'Romanze' lost any specific formal meaning in the 19th century: strophic, rondo, *ABA* and through-composed patterns were all common.

(iii) Other countries. The term appears frequently in Italy and Russia. In Italian tragic operas of the early 19th century, 'romance' was a common title for short arias in a slow tempo. Examples can be found in the works of Bellini (*I puritani*, 1835), Donizetti (*L'elisir d'amore*, 1832) and Verdi (*Il trovatore*, 1853). Expanded *romances* appeared in later works by Verdi, Ponchielli and Puccini before the genre vanished with the advent of the continuous musical flow of *verismo*. At St Petersburg, where Parisian manners were much admired, the *romance* was cultivated in the 18th century both in French comic operas and as a song type. In the 19th century settings of poems by Pushkin were common, and composers in the genre included Glinka. Because of the loose application of the term it is difficult to specify how many works were composed, but in general, lyricism and folk qualities were important elements. Many later Russian composers, including Tchaikovsky, Rachmaninoff and Shostakovich, continued to use this title. English composers, preferring 'ode' and 'ballad', rarely employed the term.

4. The instrumental romance. The simplicity, lyricism and form of the vocal *romance* were easily adapted to instrumental composition. In the 18th century the term was most frequently applied to slow movements with a rondo, *ABA* or variation structure. Gossec's Symphony in E♭ op.5 no.2, written for Paris in 1761 or 1762, contains the first known appearance of such a movement in a symphonic work; Dittersdorf is credited with introducing it to Vienna in his Symphony in E♭ op.7 no.1 (1773). The variation structure, as exemplified in Haydn's Symphony no.85 in B♭, 'La reine', was most popular in French symphonies and in the *quatuor concertant*. In Germany, instrumental Romanzen in *ABA* and rondo forms were common and appeared in a variety of genres: Hoffmeister's String Quartet op.14 no.2, Mozart's Serenade K525 (*Eine kleine Nachtmusik*) and, in the 19th century, Schumann's Symphony in D minor.

The first solo instrumental *romance* was composed by the violinist Pierre Gaviniès in about 1760, and the term became a common title for the slow movements in his sonatas and concertos. The genre flourished in the violin and cello schools centring on Paris well into the 19th century, with numerous examples composed by violinists including Viotti, Rode and Kreutzer. Beethoven employed this form in three single-movement works, *Romanze cantabile* for piano, flute, bassoon and orchestra and two Romanzen for solo violin and orchestra, opp.40 and 50. The latter works, both in rondo forms, are models of the balance between lyricism and virtuosic display that can be found in later works, such as the slow movement of Wieniawski's Violin Concerto no.2. Both European and American violinists continued to cultivate the genre up to the end of the century.

The earliest Romanzen for piano solo are the simple tunes in D.G. Türk's *Handstücke für angehende Klavierspieler* (1792–5) and Reichardt's *Kleine Klavier- und Singstücke* (1783). More elaborate settings appeared in southern Germany during the late 18th century, using *ABA* or rondo structures. Variations on a Romanze theme, such as Hummel's *Thèmes variés* and Clara Wieck's *Romance variée*, appeared occasionally in the 18th and 19th centuries. Mozart used the term for the slow movement of his Piano Concerto in D minor K466; its rondo-like structure is highlighted by the return of the simple, unadorned tune after a contrasting section of stormy virtuosity. Other concertos with movements of a similar construction include one of Haydn's for two *lire organizzate* (the movement later reappears in the 'Military' Symphony, no.100), several of Mozart's horn concertos and Chopin's Piano Concerto in E minor. The most frequent application of the term in the 19th century was to small character-pieces with no common formal pattern, for example Schumann's *Drei Romanzen* op.28. In such works the Romanze bears connotations of love or antiquity and is predominantly lyrical. It is this last feature that has remained constant in the wide variety of instrumental Romanzen.

Roman de Fauvel. *See* FAUVEL, ROMAN DE.

Romanelli, Luigi (*b* Rome, 21 July 1751; *d* Milan, 1 March 1839). Italian librettist. He was brought up in Rome and as a young man published verse in the Arcadian tradition.

Having had to leave Rome towards the end of the 18th century, he embarked on a period of travel. He settled in Milan, where he became librettist at La Scala, a position he retained for nearly 30 years. During this time he produced nearly 60 librettos; except for a short period (1816–19) during which he wrote five librettos for other theatres and cities, all his works were written for La Scala. Unique among contemporary librettists, he published a collected edition containing most of his texts, eight volumes in all (1832–3). In these he added lengthy prefaces, dealing with his treatment of themes in *melodramma* and the problems he encountered. He served for many years as professor of declamation at the conservatory in Milan.

Many of Romanelli's earlier librettos are comedies and, except for *La pietra del paragone* (1812, Rossini), they tend to be heavy-handed. He responded to the demand for *semiseria* operas in the early 1820s, and in this awkward genre he was rather more successful (e.g. *Elisa e Claudio*, 1821, Mercadante). In his serious work he was typical of the post-Metastasian school in modelling his approach on his illustrious predecessor while lacking that essential clarity and elegance of style. *Fedra* (1820, Mayr) and *La vestale* (1823, Pacini) were among his most successful serious texts. A traditionalist, he inveighed against the use of Romantic plots, particularly those from abroad, but when he himself essayed librettos on such sources, as in his last libretto, *Saladino e Clotilde* (1828, Vaccai), the results were less than satisfactory. His texts are longwinded and cannot always have been gratifying to set; it is interesting that he complained vigorously about the way composers treated his verses.

JOHN BLACK

Romanesca. A melodic-harmonic formula used in the 16th and 17th centuries as an aria for singing poetry and as a subject for instrumental variations. Ex.1 shows the

Ex.1 Hypothetical reconstruction of the romanesca formula

structural notes of the romanesca pattern: a descending descant formula supported by a standard chordal progression whose bass moves by 4ths. This scheme is to be viewed as a flexible framework, rather than as a fixed tune; it provided, though often disguised by elaborate ornamentation, the melodic and harmonic foundations for countless compositions labelled 'romanesca'.

The origin of the romanesca is uncertain. Although the name would seem to suggest a connection with Rome, the earliest extant musical examples are found in non-Italian sources. The term appears for the first time in 1546, in Alonso Mudarra's *Tres libros de musica en cifra para vihuela* (*Romanesca, o Guárdame las vacas*) as well as in Pierre Phalèse's *Carminum pro testudine liber IV*. A set of variations on *Guárdame las vacas*, with no mention of 'romanesca', had appeared earlier in Narváez's *Los seys libro del Delphin* (1538). In 16th-century Spanish collections of instrumental music, the romanesca remained associated with the text *Guárdame las vacas*, the first line of a popular *villancico*, at times indicated simply as *Las vacas* (e.g. Valderrábano, *Libro . . . intitulado Silva de sirenas*, 1547; Pisador, *Libro de musica de vihuela*, 1552; Venegas de Henestrosa, *Libro de cifra nueva*, 1557; Antonio de Cabezón, *Obras de música*, 1578). In Italy, instrumental settings and variations on the romanesca began to appear in the second half of the 16th century, in Antonio di Becchi's *Libro primo d' intabolatura de leuto* (1568), in Antonio Valente's *Intavolatura de cimbalo* (1576) and in various manuscripts, including pieces by Vincenzo Galilei and Cosimo Bottegari (see Palisca, 1969, and Apfel, 1976 and 1977). The relationship between Spanish and Italian traditions has never been adequately explained. For Francisco de Salinas, the melody that the Spanish called *Las vacas* and the melody that the Romans used to sing stanzas commonly called 'romaneschae' differed in metre only (*De Musica libri septem*, 348). The two descant tunes cited by Salinas are identical except for their rhythm; it is likely that the variants are due to the practice of accommodating the romanesca formula to different texts (*Bella citella de la magiorana* in Salinas's example).

Although our knowledge of the 16th-century romanesca depends almost exclusively on surviving examples of instrumental music, in Italy the romanesca seems to have been primarily an aria for singing poetry, especially stanzas in *ottava rima* (the metre favoured for epic poetry), to the accompaniment of the lute or a bowed instrument. Scholars have debated for many years whether the *aria di romanesca* was an ostinato bass or a descant tune. The scant testimonies of the theorists appear to support the descant-tune hypothesis. Like Salinas, Galilei treated the romanesca as a melody by mentioning it among other popular airs, the soprano of which 'principally provides the air, even when six or eight others are singing in harmony' (*Dubbi intorno a quanto io ho detto dell'uso dell'enharmonio*, *I-Fn* Gal.3, trans. Palisca, 1960).

The chord progression of the romanesca is virtually identical to that of the *passamezzo antico* (*see* PASSAMEZZO), with the exception of the opening chord (usually III in the romanesca and i in the *passamezzo antico*). This has generated some confusion about the nature of such formulae, confusion also fostered by the fact that there has been a tendency in modern scholarship to equate these formulae with their bass progressions. In all probability the romanesca, like many other stock tunes and dances of the Renaissance, was defined not by a simple chord sequence but by a complex of elements including metric patterns, reference pitches, characteristic melodic and rhythmic gestures and stylistic conventions tied to performance practice. Although deceptively similar in their bass lines, the romanesca and the passamezzo must have differed in other respects, equally vital to the identification of the genre. A clue may be found in Galilei's *Primo libro della prattica del contrapunto* (1588–91), where the excited sound of the romanesca is compared with the quiet one of the passamezzo. The bass traditionally associated with the romanesca probably represents the standard accompaniment that the tune acquired over the years. It is not to be confused with the aria itself, however. Unfortunately, because of the improvisatory

nature of the solo singing over discant formulae, no written examples of this vocal practice are extant.

At the beginning of the 17th century the unwritten romanesca tradition entered a new phase. Most of the composers cultivating the new monodic style began publishing solo songs and duets on the romanesca formula, continuing to set stanzas in *ottava rima* (*AB AB AB CC*). Ex.2 shows the first two lines of a romanesca by Antonio Cifra. Each of the four couplets forming the *ottava rima* coincides with a statement of the romanesca formula. Thus the music unfolds as a series of strophic variations, each of which is entrusted with the declamation of two lines. The articulation of the text is further emphasized by the repetition of the second line of each couplet.

Unlike 16th-century instrumental examples, which are characterized by a clear ternary rhythm, 17th-century romanescas are usually noted in duple time. They tend to exhibit some rhythmic ambiguity, however: the phrase structure at times suggests different metrical groupings and the diminutions are often irregular in rhythm (Silbiger). Romanescas for one or two voices appear in most Italian songbooks of the first half of the 17th century, including pieces by Giulio Caccini (1601/2, 1614), D'India (1609), Cifra (1613, 1615, 1617, 1618), Pietro Pace (1617), Francesca Caccini (1618), Puliaschi (1618), Filippo Vitali (1618, 1622), Monteverdi (1619), Stefano Landi (1620), Rontani (1622), Banchieri (1626), Severi (1626), Frescobaldi (1630) and P.F. Valentini (1657). Sporadic examples for three and four voices may be found in Cifra (1613), Pietro Pace (1615 and 1616) and Giovanni Valentini (1621). Many of these pieces are titled *aria di romanesca* even though in some cases the vocal part does not seem to follow the romanesca tune. The tendency to isolate and use only the bass line in ostinato fashion may be observed in Sigismondo D'India, who explicitly names one of his songs 'Musica sopra il basso della romanesca' (*Le musiche da cantar solo*, 1609). Sets of variations for keyboard were composed by Ercole Pasquini (*I-RAc* 545), Mayone (1609), Frescobaldi (1615–37), Michelangelo Rossi (1657), Bernardo Storace (1664) and Gregorio Strozzi (1687); for guitar by Domenico Pellegrini (1650); for ensemble by Biagio Marini (1620), Salomone Rossi (1622, 1623) and Buonamente (1626); and for chitarrone by Kapsberger (1604). Anonymous lute and keyboard sets also survive in several Italian manuscripts (see Apfel, 1976 and 1977, and Silbiger).

Many dances of the 16th and early 17th centuries (in particular gaillards, pavanas and passamezzos, beginning with a gaillard in Attaingnant's *Dixhuit basses dances*, 1530) are structured according to a scheme similar to that of the romanesca. The same scheme occasionally appears also under different titles such as la FAVORITA, FANTINELLA, *La gasparina*, *Ballo del fiore*, *La canella*, *La comadrina*, *La desperata*, *L'herba fresca*, *El poverin*, *Il todeschin* (or *La todeschina*), *Tre damme alla francesa*, *La monella* and *El traditor*, and, in England as *Greenleeves*, *Hewyn anf earth*, *Queen Marie's Dompe* (or simply *Dompe*; *see* DUMP). These may not have been associated with the romanesca, although scholars today tend to connect them. The chordal progression that forms the bass of ex.1 is widely used in the music of the Renaissance and cannot be considered exclusive to the romanesca formula.

Ex.2 A. Cifra: *Aria di Romanesca* (*Li diversi scherzi*, libro v, 1617)

GIUSEPPE GERBINO

Romani, (Giuseppe) Felice (*b* Genoa, 31 Jan 1788; *d* Moneglia, 28 Jan 1865). Italian librettist. Born into a bourgeois family, he received an excellent legal and literary education in Pisa and Genoa. When it became clear that he would not be appointed to a post at the University of Genoa, he seems to have travelled to France, Spain, Greece and Germany before settling in Milan, probably between 1812 and 1813. His first efforts as a librettist in partnership with J.S. Mayr (in Genoa and Naples, 1813) met with success, and from then on Romani became established as a competent writer of the second rank in the expanding publishing market in Milan during the Restoration. Although he had hardly any contacts with major men of letters, he gained a reputation among musicians and the general public primarily as a librettist, but also as a writer for the classical faction and for various periodicals – until he engaged in fierce polemics with Grossi and Manzoni (1826–7). Between 1823 and 1825 he also had some share in opera management.

During the years 1827–30 Romani's librettos were performed mainly in theatres outside Milan, thanks in part to the widespread and successful productions of operas composed on his texts by Bellini – notably *Il pirata* and *La straniera*. It was in Milan, however, that his collaborations with Donizetti and Bellini in the carnival season of 1830–31 at the Teatro Carcano (*Anna Bolena* and *La sonnambula*) launched the busiest stage of his career. Although he had binding contracts with the impresarios of the principal Milan theatres (first Crivelli, then Gottardi and Visconti di Modrone) in the years 1831–4, Romani accepted a great many of the requests he received from major theatres elsewhere in Italy, setting himself absurd work schedules, on average five or six new librettos a year, which often led to delays, missed deadlines, and quarrels with impresarios and musicians.

Although his earnings as a librettist increased proportionally at that time, the post he accepted late in 1834 at the Savoy court in Turin increased his earnings by 50% and was much more secure: he became chief editor and writer for the ministerial paper *Gazzetta ufficiale piemontese*. This soon prevented him from continuing in his career as a librettist, although he must have thought otherwise when in 1835 he took on commitments which he was then unable to fulfil. After marrying in January 1842 the young Milanese Emilia Branca (later his biographer, often a reliable one in spite of her tendency towards hagiography), he lost his post at the *Gazzetta* in 1849, due to a journalistic mishap on a political level; he later obtained with difficulty a partial reinstatement and the lifelong pension stipulated in his 1834 contract. In the meantime (1850–55) he had revived or written the librettos for three new operas. Increasingly esteemed as the major librettist of his time, he died in 1865 without, however, realizing the project he had many times entertained of a complete edition of his opera librettos.

Among the 34 musicians for whom Romani wrote his 90 known librettos were all the contemporary composers of standing in Italy, including Rossini, Donizetti, Bellini, Meyerbeer, Mayr, Mercadante, Pacini and Vaccai. This was partly due to the fact that opera composers had to succeed in the theatres of Milan, where Romani mainly worked, but it was due mainly to the quality of his libretto structures (clear plots, effective placing of situations, mastery of dramatic tension) and his versification (pithy language, variety of expression, metrical rhythms conducive to musical setting). They outshone the librettos of such contemporaries as Romanelli, Tottola or Rossi and were soon recognized and sought after by impresarios and musicians (as evidenced in records from 1819–23). This would also explain why more than half of his librettos were adapted for new operas, although seldom by Romani himself. For example, there were 11 settings of *Francesca da Rimini*, nine of *Caterina di Guisa*, and eight of *Colombo*.

As was the custom, Romani generally used existing sources as subjects for his librettos – plays, stories from ballets, novels etc. – drawing, almost always, on the French repertory. His texts therefore reflect the successive theatrical and literary fashions current during this period: apart from the tradition of *opera buffa* (gradually declining but still in vogue on Italian stages of the time), Romani used models from 17th- or 18th-century *tragédie* (Corneille, Voltaire), classicized versions of Calderón de la Barca and Shakespeare (*Mennone e Zemira*, 1817; *Rodrigo di Valenza*, 1817, from *King Lear*; *Amleto*, 1822), *mélodrames* from Parisian boulevard theatres (particularly for *semiseria* operas: *Margherita d'Anjou*, 1820, from Pixérécourt; *Amina, ovvero L'innocenza perseguitata*, 1824, from Ducange), and historical and sensational works by Romantic authors (Hugo, Byron, Bis, D'Arlincourt). However, his classically based literary ideas never changed. The modifications required by operatic conventions of the early 19th century – the pre-eminence of the major characters and strong solo or ensemble situations – married well with Romani's narrative and dramatic conceptions. These always centred on the need to imitate 'beautiful nature' and illustrate 'human dignity' in works based on great characters, situations and passions, underpinned by well-thought out and elevated 'main action'. It was no coincidence that Romani

praised the historical novels of Scott while denigrating Manzoni's *I promessi sposi* on account of its lower-class leading characters and loose structure.

Romani vainly and confidently advertised himself as a high-class poet (in short, as a new Metastasio), but his work papers show just how competent he was as a librettist, ready to comply with the changing requirements which any new production involved. As he usually drew up his contracts directly with the impresarios (for single librettos or for longer assignments, but hardly ever as a *factotum* poet in residence), for him as for other librettists of the time the structure and characteristics of the group of singers hired, rather than the wishes of the composer, influenced both the choice of plot and the verse-setting itself. At many points in Romani's career we see him shaping the libretto to enhance the movement, gestures and costumes of the singers, and consequently the overall effect of the opera.

Given these customs, the creative relationship between Romani and his musicians was often more distant than is usually thought. In the great majority of cases he provided an accomplished libretto for the composer, usually delivering the text one scene or act at a time. Even major composers such as Donizetti, Mercadante or Vaccai at first did little more than agree the subject with Romani; often engaged elsewhere until a few weeks before the première, they then worked around structural features laid down by the poet. These features would eventually become a live musico-dramatic whole, but even the most brilliant composers (with the exception of Rossini, not to mention more minor ones), were unable to deviate far from the structure.

The close collaboration that Meyerbeer and Bellini chose to have with Romani in the writing of his librettos therefore seems to have been a significant exception. There are indications in Romani's letters from 1821–2 regarding *L'esule di Granata* which suggest that Meyerbeer exerted firm control over the plot of scenes and their internal structure; there are similar indications in letters of the same period between Meyerbeer and Rossi. Documents show that librettos written for Bellini were often the result of shared ideas, even of joint efforts: a comparison of the first edition and autograph excerpts from the libretto of *Norma* (*I-Sac*) shows that both musician and librettist agreed on a number of adjustments to the plot, some structural decisions about the text (some in Bellini's own hand, for example in the first duet between Norma and Adalgisa), and various subsequent alterations to the metre and poetic quality of certain verses.

A large part of the success, both immediate and posthumous, of Romani and Bellini depended on this intensive creative cooperation. It is significant that they quarrelled publicly when their collaboration sank to a more everyday level (over *Beatrice di Tenda*, 1833, because of overwork on the part of Romani), but also that they were reconciled two years later, recognizing their strong artistic links. Destiny dictated that after Bellini's death, the journalist Romani was to live to see some of the librettos written during the last six or seven years of his career consolidating as part of an emerging repertory of durable operas, librettos which gradually became, because of their quality and the music of Bellini and Donizetti, exemplars of a glorious era in the history of Italian opera.

ALESSANDRO ROCCATAGLIATI

Romani, Stefano (*b* Pisa, 2 Feb 1778; *d* after 1850). Italian composer. He studied composition at the Turchini Conservatory, Naples, with Tritto and Sala. In Carnival 1800 his opera *Il fanatico per la musica*, a one-act *dramma giocoso*, was performed at Florence, and later he composed two others, *I tre gobbi* (Pisa, *c*1810) and *L'isola incantata* (Livorno, 1815). From 1812 until his retirement on 31 May 1850 he was *maestro di cappella* at the church of the Cavalieri di S Stefano, Pisa, where some of his sacred music is preserved, including eight masses, a requiem (1824) for four voices and orchestra, seven responsories, three Lamentations, hymns, versets, graduals and motets. Two masses in concerted style for voices and instruments, one dated 1819–23, are divided into numerous sections to facilitate performance in alternation.

FRANCO BAGGIANI

Romania [Roumania, Rumania] (Rom. România). Country in south-east Europe. Modern Romania corresponds roughly to the Roman province of Dacia (106–271 CE), and its people are of Latin stock. After the withdrawal of the Romans the area was successively overrun by Goths, Huns, Bulgars, Slavs and, in the 15th and 16th centuries, Turks. Romania was formed in 1859 by the unification of Wallachia and Moldavia, to which Transylvania, formerly part of the Austro-Hungarian Empire, was added in 1918. It became a people's republic in 1947 and a socialist republic in 1965. An uprising in 1989 led to the establishment of a non-communist administration.

I. Art music. II. Orthodox church music. III. Traditional music.

I. Art music

1. Before 1800. 2. Nationalism. 3. Since 1945.

1. BEFORE 1800. There were Greek colonies in Pontus in ancient times, and the whole of present-day Romania was part of Trajan's empire. The area then gained its religious institutions and practices from the Byzantines, and music flourished at the monastery schools of Putna, Neamţ, Suceava, Bucureşti (Bucharest), Tîrgovişte and Curtea de Argeş. Among important musicians were, in the 15th and 16th centuries, the *protopsaltēs* Evstatie of Putna (author of a songbook at Putna dated 1511), Ioasaf and Dometian Vlahul, in the 17th and 18th centuries, Filothei Sin Agăi Jipei (whose *Psaltiche romunească*, with texts in Romanian, dates from 1713), Şerban and Radu Braşoveanul, and in the 19th century Macarie Ieromonahul, Anton Pann, Dimitrie Suceveanu and Ion Popescu-Pasărea.

The influx of Western European music began in the 14th century, with the arrival of organs in Catholic churches in Transylvania and the Banat. The Transylvanian Valentin (or Bálint) Bakfark (1507–76) was a lutenist of international repute and activity. Towards the end of the 16th century Italian music began to be favoured at the court of Karlsberg (Alba Julia), and there were centres of Western music too at Kronstadt (Braşov) and Hermannstadt (Sibiu). Musicians who worked there included Hieronimus, Georg Ostermayer, Gabriel Reilich (?1630–77), Daniel Croner (1656–1740) and Petrus Schimert (1742–85), the last a Bach pupil who was conductor and organist at Hermannstadt. An important early collection of Protestant music is *Odea cum harmonis* (Kronstadt, 1548); the Catholic tradition too continued.

Johann Sartorius (1712–87) and his father, also Johann, were responsible for numerous lieder and cantatas, and instrumental academies began to perform around this time.

Meanwhile the southern and eastern bulk of Romania was under Ottoman rule, and musical life was affected accordingly. Dimitrie Cantemir (1673–1729) was a virtuoso on the tambura, composer of *maqāmāt* and theorist of Ottoman music.

2. NATIONALISM. In the early 19th century, after the withdrawal of the Turks, Romanian composers began to look west, and to create piano pieces based on folk melodies. The musicians concerned included Philipp Caudella, François Rouzischi, Ion A. Wachmann and Carol Miculi, while Alexandru Flechtenmacher wrote works for the theatre. Then in the second half of the century, the Romanian national school entered full strength, buttressed by new institutions and specialist magazines. The Teatrul Italian opened in Bucharest in 1843, and conservatories were founded in Cluj (1825), Iaşi and Bucharest (both 1864). In 1868 Eduard Wachmann established a symphony orchestra in Bucharest, the Societatea Filarmonică, and in 1885 George Stephănescu created the Opera Română, also in the capital. (A similar venture started in Cluj in 1920.)

The composers of this period, all born in the 1840s and 1850s, followed a common practice of using folktunes in works of western European style and genre. Stage works included Alexandru Zissu's opera *Magdalena* (1861), Ciprian Porumbescu's operetta *Crai nou* ('The New Moon', 1882) and Eduard Caudella's opera *Petru Rareş* (1889). Stephănescu's Symphony in A (1869) has the distinction of being the first Romanian symphony. Among choral works are Iacob Mureşianu's oratorio *Mănăstirea Argeşului* ('The Argeş Monastery', 1884) and compositions by Gheorghe Dima and Gavriil Musicescu. Constantin Dimitrescu wrote seven string quartets.

Thus the ground was laid for the work of George Enescu (1881–1955), who followed his predecessors in such early pieces as his *Poema română* (1898) and two *Rapsodia română* (1901) but went on to expand his stylistic range enormously, while continuing to draw on Romanian folk music (for example in his Third Violin Sonata of 1926 and Oedipe). His example, and his direct stimulus, contributed enormously to the 20th-century development of Romanian musical life.

During this time Romanian musicians began to exert themselves in many directions. Conductors included George Georgescu, Jonel Perlea and Constantin Silvestri; there were the pianists Dinu Lipatti, Clara Haskil and Valentin Gheorghiu; among singers were Hariclea Darclée (the first Tosca), Traian Grozăvescu and Viorica Ursuleac (the creator of several Strauss roles); and there was a renaissance of Romanian musicology, especially in the study of folksong and old sacred music, spearheaded by Constantin Brăiloiu, T.T. Burada, I.D. Petrescu, George Breazul and M.G. Posluşnicu (and also Bartók in the field of ethnomusicology). In 1913 the Enescu Prize for composition was founded, followed in 1920 by the Society of Romanian Composers, and the appointment of Alfonso Castaldi as composition professor at the Bucharest Conservatory encouraged such younger composers as Ion Nonna Otescu, Alfred Alessandrescu, Filip Lasăr and Marcel Mihalovici.

With Enescu an international figure, the period between the wars was dominated within Romania by a group of composers, all of them drawing on folk music. Sabin Drăgoi was responsible for the psychological music drama *Năpasta* ('The Calamity', 1928) and Marţian Negrea for the opera *Marin Pescarul* ('Marin the Fisherman', 1932), as well as symphonic suites that are descriptive and modal in character. In his ballets *La piaţa* ('The Marketplace') and *Intoarcerea din Adâncuri* ('Returning from the Depths') Mihail Jora brought to life subtle and vibrant characters with a touch of the grotesque and dramatic. Dimitrie Cuclin and Mihail Andricu composed numerous symphonies of traditional form, with a sensitive handling of folk particularities. Lipatti, more famous as a pianist, was also a member of this composing school, his works including the suite *Şătrarii* ('The Gypsies'). Theodor Rogalski's music abounds in caricature, while Paul Constantinescu's oratorios are marked by Byzantine melody. Also important are such other works of Constantinescu as his Simfonia in D flat and musically forward-looking opera *O noapte furtunoasă* ('A Stormy Night').

3. SINCE 1945. After World War II the network of institutions grew considerably. All the major urban centres came to have orchestras and opera companies; the audience grew in numbers and sophistication, and growth was prompted at the conservatories in Bucharest and Cluj-Napoca. The Society of Romanian Composers was transformed in 1949 into the Union of Composers and Musicologists, under new leadership and with a new aesthetic programme. Socialist realism was enforced, and many foremost musicians – including Enescu, Perlea, Lipatti and Silvestri – preferred exile. The composers who remained were constrained (Cuclin), marginalized (Jora) or called to account under humiliating circumstances (Andricu). But despite the oppression, new composers joined the ranks, among them Ion Dumitrescu, Sigismund Toduţă, Zeno Vancea, Gheorghe Dumitrescu, Alfred Mendelsohn and Tudor Ciortea.

In the 1960s a younger generation arrived, with a more modernist viewpoint, and some were able to study at Darmstadt. This new wave included Anatol Vieru, Pascal Bentoiu, Teodor Grigoriu, Stefan Niculescu, Tiberiu Olah, Cornel Tăranu, Aurel Stroe, Wilhelm Berger, Adrian Raţiu, Dan Constantinescu, Dumitru Capoianu and Myriam Marbe. Others, such as Liviu Glodeanu, Mihai Moldovan, Dan Corneliu Georgescu, Nicolae Brînduş and Ede Terény, continued to base their work on folk music. Later composers, coming to maturity under conditions of greater political and aesthetic freedom, include Octavian Nemescu, Costin Miereanu, Adrian Iorgulescu, Călin Ioachimescu, Doina Rotaru, Dan Dediu, Liviu Dănceanu and Adrian Pop.

Musicology has also flourished since 1945, in the work of Romeo Ghircoiaşiu, George Bălan, Viorel Cosma, Vasile Tomescu, Gheorghe Firca, Tiberiu Alexandru, Emilia Comişel, Gheorghe Ciobanu and Barbu Bucur Sebastian among others. Prominent performers have included the conductors Sergiu Celibidache, Sergiu Comissiona and Christian Badea, the pianist Radu Lupu, and the singers Ileana Cotrubas and Viorica Cortez. Roman Vlad and Marius Constant are among composers of Romanian origin to have made their careers abroad.

With the coming of capitalist democracy in 1989, Romanian music entered into a new epoch. Composition

was not much altered, since ideological bonds had long been relaxed, but institutions had to adapt to new ways, sometimes with difficulties. Nevertheless, there was optimism, as signalled by the foundation of the New Music Week in Bucharest each May.

II. Orthodox church music

1. Historical background. 2. Chant tradition.

1. Historical background. The Romanian's Dacian ancestors began to convert to Christianity during the first centuries CE through contact with Greek missionaries and after the Roman conquest and occupation. However, it was not until the 14th century that the organization of the Romanian Church (like the state) was complete; its model was the Bulgarian Church, whose own organization reflected that of the Byzantine Empire. Among Orthodox Christians, the Romanians are the only Latin people, but until the end of the 17th century the language of the Romanian Church was Slavonic (Slavonic and Greek alone were regarded as sacred languages); there is no evidence of the use of Romanian in the liturgy before the 17th century, and the language was not officially permitted until 1863.

In the 14th century Romania was divided into three principalities: Transylvania, Wallachia and Moldavia (they were not unified into a single state until 1918). Although Orthodoxy was the state religion of Wallachia and Moldavia, it was merely tolerated in Transylvania, which had been conquered by Hungary. Nevertheless, supported by the Wallachian and, particularly, the Moldavian princes and metropolitans, Transylvanian Orthodoxy survived both Roman Catholic and Reformed proselytizing and came to symbolize national unity. Very little of Romania's ecclesiastical heritage has survived, however, owing to the appropriation and destruction of monasteries during periods of repression, and a ruling that churches be built entirely of wood. No Romanian Transylvanian musical manuscript from before the 18th century exists.

After the second half of the 16th century, the great impact made by the Reformation on the Saxon population also influenced the Romanians (in particular in Transylvania), stimulating the work that had already begun of translating Slavonic liturgical books, including the oktōēchos (without musical notation), and issuing them in print. Although contact with Wallachia and Moldavia was maintained, the practice of Byzantine chant in Transylvania generally followed oral tradition, which no doubt accounts for the folk influences evident in the music. In Wallachia and Moldavia, Greek and Slav ecclesiastical dignitaries often occupied important positions in the Romanian Church hierarchy, thus allowing direct contact with Constantinople and Mount Athos, the most significant centres of Byzantine chant. Relations became closer after the fall of the Bulgarian and Byzantine Empires, in 1396 and 1453 respectively.

2. Chant tradition.

(i) Monophonic repertory. The Romanian Church adopted the Byzantine rite, whose musical repertory, notation and general development it followed closely. The

texts of notated musical manuscripts were in Greek and Slavonic, although it is not clear why priority was accorded to one or other of these languages (the practice probably varied from one principality or period to another). In all extant manuscripts up to the 18th century, the *Psaltikē technē* (music theory) appears in Greek, no doubt more for the sake of pedagogical precision than linguistic exclusivity. After the 1550s Slavonic fell into disuse in government administration, religious literature and historiography alike. This may explain why the first Wallachian liturgical compositions, which date from about 1400, had Slavonic texts, whereas the 16th-century musical manuscripts from the monastic school of Putna in Moldavia show a noticeable preponderance of Greek texts over Slavonic. The introduction of Romanian into the liturgical chants is attested from the second half of the 17th century. Paul of Aleppo, archdeacon to Patriarch Makarios of Antioch, travelled in Moldavia and Wallachia from 1653 to 1658 and remarked on the bilingualism of the antiphonal chants in metropolitan Romanian churches – Greek on the right lectern, Romanian on the left. The evidence of the chants themselves suggests that the path to linguistic emancipation was by no means straightforward.

The earliest Romanian chants are 20 short *troparia* (called *pripela*) for Orthros (the morning Office) written in about 1400 by Filotei the Monk, former chancellor to the Wallachian voivode Mircea the Old (1386–1418). They were widely distributed both in the Romanian territories and in the Orthodox Slav countries, for Filotei had written the texts in Slavonic and their melodies in accordance with Byzantine tradition. The texts alone have survived, in 24 manuscripts of the 15th to 17th centuries; the melodies were transmitted orally. However, the most remarkable musical phenomenon of the feudal period was the Putna monastic school, which flourished in the 16th century (*see* PUTNA). The manuscripts and original compositions produced in this centre are clear evidence of the high quality of its chants and scriptorium. The names of several copyist-*psaltēs* and three composers are known, including that of Evstatie, *domestikos* and *protopsaltēs*, author of a considerable number of liturgical compositions (*see* EVSTATIE OF PUTNA).

Over the following centuries, an increasing number of manuscripts of sacred music testify to the closeness of Romania's relations with centres of the former Byzantine Empire. *Polychronia* (acclamations) were dedicated to Romanian princes and metropolitans, and the names of copyists and, above all, composers are documented. Among 17th-century composers Giobascos (Iovascu) the Vlach (*fl* *c*1660–*c*1700) was a pupil of Germanos of New Patras and is mentioned later as *protopsaltēs* at the Wallachian court. His compositions were obviously popular, since they continued to be copied up to the beginning of the 19th century.

The most significant figure of the 18th century was Filothei Sin Agăi Jipei, hieromonk at the Wallachian court. He was responsible for the first adaptation into Romanian of the chants for the entire liturgical year. His *Psaltichie rumânească* ('Romanian *psaltikē*') of 1713 gives the melodic versions in use in the Greek Church together with the theory of music in Romanian; some of the author's own compositions are also included. Several complete and partial copies of this work were made before 1821, in particular for the Romanians of Transylvania. Other musicians, such as Mihalake the Moldo-Vlach, through their translations and compositions, further contributed to new developments in the chant. However, the installation of the Phanariote princes by the Sublime Porte – in Moldavia in 1711 and in Wallachia in 1716 – brought an end to this 'nationalist' impulse until 1821.

Towards the middle of the 18th century, Greek and Oriental secular songs began to influence the chant. Liturgical manuscripts from this time reveal the development in style and notation that would culminate in the Chrysanthine reform that began in the early 19th century. This reform was introduced (in Greek) into Romanian territories in 1816 by Petros Ephesios in his school in Bucharest. The first printed books of chant in Chrysanthine notation were the anastasimatarion and doxastarion-triōdion of PETROS PELOPONNESIOS (Bucharest, 1820). Through the work of Macarie Ieromonahul (Makarios the Hieromonk, ?1780–1836) and Anton Pann (1796–1854), pupils of Dionysios Photinos and Petros Ephesios, the Romanian translation of the new repertory and music theory was soon to follow, resulting in the adoption of Romanian as the language of the Church throughout the three principalities. The theoretikon, anastasimatarion and heirmologion were printed in Vienna in 1823; other books appeared during the course of the 19th century, some of them in several editions. Dimitrie Suceveanu (1816–98), Gheorghe Ucenescu (1830–96), Ştefanache Popescu (1824–1911) and Ion Popescu-Pasărea (1871–1943), among others, ensured that the tradition continued. At the same time, there was throughout the 19th century intense activity by Romanian copyists (and sometimes composers), notably at Mt Athos, a centre for cultural exchange where the Chrysanthine system was firmly established.

(ii) Harmonized repertory. In the 19th century, on the other hand, a new and parallel development took place in liturgical chant (in Moldavia through the influence of Russia, and in Wallachia and Transylvania through that of the West), namely, harmonization. At first this involved the arrangement of existing melodies, but original compositions followed that were inspired by Byzantine and traditional folk tunes. Such music entered the repertory of the metropolitan choirs, but also of the choral societies and associations, which became increasingly numerous and active in towns as well as in rural areas from the 1860s onwards. Chant thus spread beyond the confines of the Church: performed at concerts along with traditional songs, it became an active part of the nationalist cultural movement. The sacred element was also to be the inspiration for more complex musical works, including chamber music, oratorios, cantatas and concertos. Among the most representative composers of this tradition were Ioan Cartu, Gavriil Musicescu, Gheorghe Dima, Eusebie Mandicevschi, Ion Vidu, Dumitru Kiriac-Georgescu and Gheorghe Cucu. They were followed in the 20th century by Dimitrie Cuclin, Ioan D. Cirescu, Sabin V. Drăgoi, Nicolae Lungu, Zeno Vancea and Paul Constantinescu, among others.

After 1865, with the introduction into music academies and theological seminaries of harmonized chant and Western notation as a replacement for traditional monophony within the educational repertory, the two systems finally underwent a process of mutual adaptation.

III. Traditional music

1. General. 2. Dances. 3. Gypsy music.

1. General. Music found in Romanian villages at the end of the 20th century is a mixture of traditional songs (both new and old), religious music (Romanian Orthodox or Greek-Catholic), suburban music, popular musics of native and foreign origin, romantic ballads, choral music for schools and children's songs. The production of these alternates with or overlays the consumption of 'folkloric' music: the official version of the genuine article, broadcast by the media. In recent years the unfettered consumption of these diverse forms has prevailed over the production of traditional music.

Production itself is in large part entrusted to professional musicians, the *lăutari*, the majority of whom are Gypsies. They may be local or may travel from outside the village in order to perform. In everyday life, musical events occur relatively infrequently. Certain events in village life still bring traditional music to the fore. These are *nunta* (marriage), *înmormântarea* (burial), *botezul* (baptism), *colindatul* (wassailing/carol singing), certain fertility rituals related to the starting and finishing of agricultural work, invocation and prolongation of rain and the changing of the seasons. Participants in these events succumb easily to the atmosphere generated by this music, but its influence is felt only as long as the occasion lasts. These ceremonies have obligatory songs with specific significance, performed in places and at moments which are predetermined. There also exist sets of pieces from which people choose, during the more relaxed moments of the ritual, those they consider more appropriate for the situation.

During mourning and the more important Christian holidays (Easter, Christmas and the days of Sts Peter, Paul and Mary) singing was forbidden (now it is simply not recommended practice). By contrast, during many holidays, even if music and dance are not obligatory, they are still considered the most appropriate employment of the villagers' time. Playing instrumental music is reserved almost exclusively for men. Laments are the preserve of women.

Everyone may sing, but only in certain circumstances, depending on age, gender and marital status. Young boys and men sing in the village streets; the girls in the pastures, in gardens, in wedding processions and among themselves; women at their work and singing lullabies to their children; old people, less often, in the home. People remain aware of the norms of musical performance, even if it inconveniences them. It is expedient to know what is required to maintain good relations with the community and to be a villager worthy of respect.

Romanian traditional music is monodic. The only forms of polyophony used in the 18th and 19th centuries have been the drones of the *cimpoi* (bagpipe) and the double flute and that resulting accidentally from unison or antiphonic ritual singing. Villagers make use of groups

of *lăutari*. These groups are known as *tarafuri* (sing. *taraf*, a small ensemble of musicians, with or without vocalists). The *tarafuri* fit their melodies into a Western European influenced harmonic backdrop. They have enriched the relatively limited timbral range of Romanian music with instruments imported, via mostly urban channels, from the East and the West, e.g. the violin, *cobză* (lute) and *ţambal* (zither/dulcimer).

Vocal and instrumental musics are performed separately or in various combinations: e.g. voice with, or alternating with, an instrument (commonly flute or violin); a group of voices (male, female or mixed) and an instrument; and voice or voices with instruments (*taraf*). Alternation and superimposition are possible, through shared structures for both vocal and instrumental musics. It would be unwise to attempt to quantify vocal in relation to instrumental music. It is evident, however, that in the regions in which traditional music is more seriously affected by urbanization, the performance of vocal music has virtually ceased, while the instrumental forms have continued with much greater vigour. Instrumental music has even taken over some of the material previously belonging to vocal music, saving it from extinction. People still use traditional instruments, albeit less often than in the past (see §(iv) below).

The perpetuation of traditional music is greatest in the *tarafuri* and by the *lăutari*. Instrumental music appears to have greater persistence (or inertia), despite the fact that vocal music possesses the advantage of being available to all. In certain areas, however, the use of musical instrument is forbidden during significant moments of a ceremony (to do with marriage, death or agriculture): there the rural community takes on the task of resolving the everyday problems of existence through song.

(i) General characteristics. Romanian music appears to possess features of both Central European areas and the Balkans, retaining, however, its own distinct style. In each of the historical provinces of the country – Muntenia, Oltenia, Dobrudja and the Banat in the south, Moldavia (Moldova) and Bukovina in the east and north-east, the central region of Transylvania and Maramureş in the north-west – people fuse elements representative of regional culture with those of a wider, specifically Romanian, character. The common elements (among which the Balkan ones are prevalent) determine the overall stylistic framework and identity of Romanian music.

In present-day traditional music several historical strands co-exist and intermingle. The older elements are somewhat weakened and are less frequently manifest, but they have a distinct coherence and consistency. They are characterized by the use of closely stepped modes; a narrow melodic range; a limited number of motifs, phrases and movements; and a pronounced variability in the production of melodic figures. New layers of influence have pervaded almost the whole of Romanian traditional music. The music reflects the disintegration of traditional rural communities and the absorption of outside elements, resulting in an urban society which is still in a state of flux.

There are strong regional diversities in Romanian music. Each province, region and village exhibits its own stylistic devices, songs and even its own specific genres. This diversification must have happened relatively recently, as the oldest forms (particularly pastoral music and some that pertain to rituals) are more homogeneous. By contrast, regional differences in music of the second half of the 20th century have tended to blur in favour of a new 'unity', the result of generalizing stylistic influences, in turn based on a common origin.

Around World War I, Romanians from the southern Danube area, the Aromanians, settled in Muntenia and Dobrudja. They speak their own dialect and practise a music which is in essence Balkan, with characteristic features. For example, the Aromanian *fârşiroţi* practise a complex vocal polyphony, similar (but not identical) to that used by the peoples deriving from the same cultural area (Albanians, southern Serbs and the Greeks from Ipeiros).

Depending on the function it performs, Romanian music divides into non-occasional and ritual music. These two categories are not clearly delimited. In the majority of situations, a piece of music performs not one function, but a group of functions (in the case of a *colind*, 'carol', its group of functions include propitiation, appeasement, exorcism, social bonding or reinforcement and entertainment). One or more of these functions has a dominant role (in this case of propitiation, appeasement and exorcism). Functions are grouped in a flexible hierarchy (the ritual functions may or may not be dominant) and are always linked to distinct musical forms, building the essential elements of each genre. A particular song, however, is apt to drift from one genre to another.

Both vocal and instrumental music share a fundamental structure which is trochaic octosyllabic. A trochee is a succession of two beats in which the former is accented, but is not necessarily lengthened (ex.1). A second phrasal system, the hexasyllabic, is produced by a succession of three trochees. In practice, however, this occurs rarely and tends to be absorbed into the octosyllabic structure (ex.2). The octosyllable (as well as the hexasyllable) may be preceded, followed or intersected by syllables of completion and/or by refrains (ex.3). The shared structure of vocal and instrumental music means that any vocal

Ex.1 Lyric song from the village of Drăgus, Făgaraş county. Coll. C. Brăiloiu, 1929, transc. P. Carp

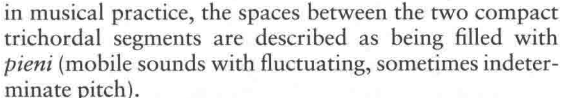
Ex.2 Lyric song from the village of Mohu, Sibiu district (Stoia, 1930) (Rădulescu, 1990)

Ex.3

(a) Lyric song from the village Cerişor, Hunedoara district. Coll. E. Comişel and M. Kahane, 1952 (Rădulescu, 1990)

(b) Lyric song from the village of Sâmbăteni, Arad district. Coll. T. Alexandru, 1936 (Rădulescu, 1990)

melody can be played on an instrument and any instrumental melody can be 'vocalized' (through association with texts).

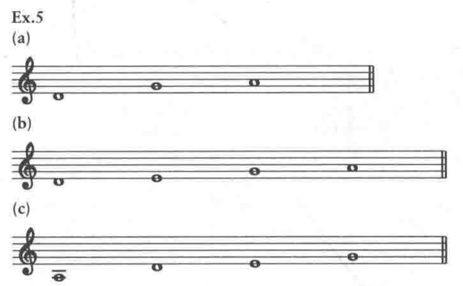


The metric system of eight beats allows text and melodies to detach from each other and recombine, apparently at the whim of the performer. However, this interchangeability is in inverse proportion to the strength of the link between the melodies and verse and the circumstances of the event; in general, ritual melodies and verse are more firmly connected to each other, while those of the occasional class are more 'detachable'.

Possibly the most active force for a musical piece to pass from one genre to another is variability. Like any music of oral tradition, Romanian folk music is not based on written music but on variations and versions of a score in the mind of the performer, a score which he or she reproduces according to an implicit grammar. Romanian variability is manifested through melody, rhythm and timbre (dynamic range and variation of intensity are little used). Generally this variability is most pronounced in the performances of older occasional pieces, often played parlando rubato, and more restricted in the case of newer occasional pieces. Variability allows the structural transformation of melodies, even as far as changing genres.

(ii) Structure. There are two modal systems dominant in Romanian music, both extremely old, possibly with differing origins: the anhemitonic pentatonic and elliptical pentatonic systems (the latter, according to Romanian researchers, came earlier) and an 'uncertain mode', with mobile third, fourth and seventh notes.

Anhemitonic pentatony was identified by Brăiloiu, who postulated that it was universally widespread (1973). He identified it in Romanian music as having a final note on *sol* (ex.4). Brăiloiu's theory attracted attention because,



Ex.4

in musical practice, the spaces between the two compact trichordal segments are described as being filled with *pieni* (mobile sounds with fluctuating, sometimes indeterminate pitch).

There are pieces which are based on three or four steps of the anhemitonic pentatonic scale (ex.5). Some of their variants, however, can make use of the whole pentatonic scale, of the uncertain mode or even of Western major and minor scales. The genres that use the pentatonic system and its variants are: the lyric song, the lament, *colind* and other ceremonial songs.

Ex.5

The 'uncertain mode' has several mobile steps in the scale (the third, fourth and seventh, sometimes even the sixth and second). Variations of the same melody can bring to the fore a particular modal version, or, by contrast, generate modal indeterminacy (ex.6). The

Ex.6

uncertain mode lies at the foundation of the *doină*, a large group of lyric songs, many ritual songs and dance melodies. Conventionally notated with the final note as the *re*, the uncertain mode displays some contact points with the pentatonic scale. In practice, the two systems – pentatonic and modal – succeed each other or mix in one and the same genre or even the same piece of music. Both demonstrate affinities with scales and modes from the entire Balkan region and both have in recent years been forced to undergo modifications to adapt to the harmony practised by the *tarafuri*.

Romanian melodies draw on one or other of five rhythmic systems, which co-exist in a state of mutual influence. Three of them, giusto syllabic, *aksak* and the children's rhythm, were defined by Brăiloiu (1973 and 1984). The fourth, parlando rubato, apparently the most complex, has not yet been studied in depth. The last is that of Western European art music.

The giusto syllabic rhythm is founded on two rhythmical units in the proportion 2:1, usually notated as a

Ex.7

crotchet and a quaver (ex.7). The giusto syllabic rhythm predominates in carols, other vocal ritual songs and some laments (see ex.11 below). However, it can also be seen in *cântec* (song), *doină*, epic song, etc., even if there it is clouded by ornamentation and rubato.

The *aksak* rhythm (the term, from Turkish, is accredited to Brăiloiu, 1973 and 1984) is of two rhythmical units, in the ratio 3:2, usually notated as a dotted quaver and a quaver. A musical phrase (vocal or instrumental) strings together four of these elements. Theoretically, these binary *aksak* formulae could combine into numerous eight-beat patterns. However, in Romanian traditional music the bichronic *aksak* formulae are repeatable, which narrows the possibilities for their combination (ex.8). The children's rhythm is born from a metric scheme of eight units

Ex.8

♪ ♪

which covers all the metres found in children's scanning games and dances.

Parlando rubato is an under-researched rhythmic system. It is probably very widespread, like those already mentioned. In Romanian music there are a number of musical pieces whose rubato interpretation is not the result of this distinct rhythmic system but of the relaxation of other rhythmic systems (giusto, *aksak* and divisionary). Parlando rubato predominates in the *doină*, lyric song (in local instrumental or vocal variations), declamatory-prose lament, lullaby and the alphorn signal.

(iii) Vocal music. The vocal register employed by singers depends on the performing circumstances. In public singers prefer to sing in a higher register, which is considered more expressive. In more familiar, intimate surroundings people sing at a lower pitch with the implicit reduction of intensity. Preferences have emerged in certain areas for particular vocal modes and styles. For example, in Oaş (in northern Transylvania) the men, as well as the women, sing at a very high pitch, the actual song being preceded by high-pitched shrieks called *ţipurituri* ('screams'). In the outlying districts of Bucharest some *lăutari* sing with a small, controlled head voice. Others have adopted a vigorous and emphatic style, unusually expressive for Romanian music. In the south and east of Romania – Muntenia, Oltenia, Moldova and Bukovina – one can find, in a romanianized form, many of the vocal styles employed throughout the Balkans and the Middle East.

(a) Non-occasional music. The basic genres of non-occasional music are: the lyric song; *doină* (or long song); dance melody; counting and scanning (rote recitation) songs for children; the epic song; the dirge or lament; and the lullaby (which, although listed here as a non-occasional genre, is in reality on the margin between non-occasional and ritual).

The lyric song is characterized by the number of its potential functions: the number and diversity of situations in which it may be performed; the variety of actual forms of performance (vocal, instrumental, vocal-instrumental, soloist or group); the varied ages of its musical forms; and the diversity of poetic motifs of which it makes use. Themes of the lyric song include love, *dor* (desire, pining, loss), sorrow, alienation and nature.

The musical structure is based on the flexible reiteration of strophes. The strophe contains between two to six different melodic phrase-lines, joined by a pause after the first or second phrase. Older pieces are densely ornamented and evolve freely in terms of rhythm; modern ones are simpler and their rhythms are more precisely measurable. In certain circumstances a lyric song may assume functions which are primarily ritual, at the same time being subject to structural adaptations which move it towards other genres. Its most recent manifestation is the *cântec de joc* (dance song), a heterogeneous but well-represented category which includes vocal song melodies with a dance rhythm, as well as dance melodies adapted for singing. The lyric song is heard throughout virtually the whole country. However, it is probably a relatively newly developed genre which in the last few centuries has gradually replaced the *doină*.

The *doină* is a lyric song, defined musically by its flexible structure, rubato rhythm and dense, complex ornamentation. Brăiloiu termed it the 'long song' (inspired by native terminology). The singer repeats the variable length stanza or strophe, omitting or including phrases at will. These are subject to intense variation of rhythm and melody. As a consequence, in a variation or in different variations of the same *doină*, the stanza or strophe is transformed by compression or expansion by structural, rhythmic and melodic modifications. However great these modifications may be the verse may not transgress the strict order of its components (ex.9): the introduction (an ascending arpeggio of some form); the initial section (a recitative of two adjacent notes); the melodic recitative; the final section (melodic recitative based on the tonic). The dominant themes of the *doină* are love, sorrow and the invocation of nature, even hero-outlaws are occasionally celebrated.

In the past the *doină* was found throughout Romania. Today it survives in Muntenia, Oltenia and to a lesser extent in Bukovina and the north of Transylvania (Năsăud and Maramureş). In the rest of the country its vestiges have been incorporated into the structure of some lyric songs. Most provinces of Romania preserve only one or two *doină* types of stanza. The verses of the lyric songs of a region were versions and variations of a single melody and were known to all the performers of that region.

Ex.9 *Doina* from the village of Corneşti, Gorj district. Coll. T. Alexandru, 1939 (Rădulescu, 1983)

Differences between regions are those of differences to the basic melodic structure.

The best represented *doină* extant today is the *doină de dragoste* (love song) from Muntenia and Oltenia. It is almost exclusively performed by a vocal and instrumental ensemble (*taraf*), by *lăutari* during wedding festivities. *De dragoste* develop during the course of collective improvisations, in a 'dialogue-contest' between the singers of the *taraf*, a dialogue encouraged and appreciated by the wedding party.

Children's scanning songs (counting, incantations, rules of games etc.) have simple melodic lines, often masked by their parlato execution. They come under the children's rhythmic system outlined by Brăiloiu (1973 and 1984).

Epic song (known as *cântec bătrânesc*, 'old person's song', or *baladă*, 'ballad') is found throughout the country in two forms, the 'old' and the 'modern'. Old epic song today survives only in Muntenia and Oltenia, performed particularly by *lăutari*. It is sung at the head table during wedding celebrations, after midnight for the benefit of older dinner guests. It consists of episodes (punctuated by musical interludes), composed from variable length strophes similar to those of the *doină*. The usual elements of the strophe are the introductory, medial and final forms, the melodic recitative and the *recto tono* (or *parlato*) recitative. As recently as the 1950s to 60s the epic song was preceded by an instrumental prelude entitled the *taxim* and the song itself was interrupted by dance melodies or lyric songs. The epic song texts were usually long, their performance taking several hours. Nowadays the average duration of an epic song is 15 minutes. This reduction is due to the omission of the *taxim*, the dance melodies and lyric songs and the elimination of some of the episodes of the tale.

The narratives divide roughly into fantastic, heroic and short-story forms. Many of the core themes of the epics are known throughout the Balkan area and even further afield. An epic song which is considered exclusively Romanian is *Mioriţa* (the confession-testimony of a shepherd who awaits his own murder, accepts his death and envisages the preparation of his burial in the form of a cosmic, hallucinatory wedding).

The amateur versions of the classic epic song are performed vocally or instrumentally on the same occasions as the lyric songs or the *doină*. They are shorter, they have rigid structure and omit the *parlato* recitative. In a given area the relationship between the musical and poetic components of an epic song remains stable over time. The 'modern' epic song is the result of the combination of well-known epic verses with the melodies of carols (in Transylvania), the *doină* (in Muntenia) or other songs (in the rest of the country).

The *cântec de leagăn* (lullaby) is a genre which possesses its own musical structure: a strophe of two to three simple phrases, performed slowly with a free rhythm, sometimes with verse referring to the falling asleep of the child. At the cradle, however, women often also sing melodies from other genres (lyric song, *doină*, etc.) which assume the function of a lullaby.

The *bocet* (lament) is the funeral song performed by women during the first three days following the death of a member of their family. It is performed in the home, at the crossroads, in the courtyard, en route to the cemetery and during the burial. The verse celebrates the deceased, the circumstances of his or her life and death, the relatives gathered around and the journey towards 'the white world'. The lament is also performed on the occasion of visits to the cemetery and on the days designated by the Orthodox Church for the celebration of the dead (e.g. *moşii de vară*, 'the ancestors of summer', *moşii de iarnă*, 'the ancestors of winter', *prima zi de Paşte*, 'the first day of Easter').

There are two forms of lament. The *bocet* of strophic form is built up from the repetition of two or three (maximum) distinct musical phrases. Its poetic text is improvised in the octosyllabic type, on the basis of a set of pre-existing motifs. This form of lament is found in the whole of Transylvania, the Banat, Oltenia, parts of Muntenia, of Moldavia and of Bukovina. Its melodies are characterized by a sober melodic profile, limited range and giusto syllabic rhythm (ex.10). In most of Transylvania each village has its own strophic *bocet* melody.

The 'melopeic' (Suliţeanu, 1976) prose or declamatory *bocet* is constructed from prose phrases, half recited, half sung, strung together into a sonorous construction which lacks predictable form. During its performance the melodies and words submit only haphazardly to the octosyllabic metre-rhythm. The declamatory *bocet* is met most frequently in Muntenia.

(b) Ritual song. The category of ritual songs is especially large. It includes those pieces whose significance make their performance obligatory. These can be songs for weddings, burials, the blessing of the new agricultural year (from the ritual *tânjaua*), blessing of the harvest (the *cununa* and *drăgaica* rituals), invocation of rain (*paparuda* and *caloianul*), the driving away of rain, etc.

In terms of their musical structure, ritual songs also divide into 'old' and 'modern'. Old ritual songs are performed monodically, or antiphonically, in a group at precise moments of the ceremony. Their melodies are based on a limited number of scales, simple architecture and giusto syllabic rhythm. Each ritual has its own dedicated song, but generally all of them are related in structure. Of them the most formulaic is the *colind* (also called *colindă*, *corind*), a ritual song for expressing good wishes and the exorcism of evil spirits from village households, performed throughout Romania on Christmas Eve. The *colind* is sung by groups, either monodically or antiphonally. In the Maramureş (northern Transylvania), it is accompanied by violins, guitars and drums. The *colind* consists of strophes (which are repeated) which include two to four melodic phrases, sometimes extended by the addition of refrains (some of which are long and metrically complex). They adhere more or less strictly to a giusto syllabic rhythm (ex.11).

The wedding displays the greatest range of ritual songs. For example, the *cântecul miresei* (bride's song), *cântec cul ginerelui* (groom's song), *cântecul bradului* (fir tree's

Ex.10 Lament from the village of Negreşti, Oaş county. Coll. C. Brăiloiu, 1934 (Brailoiu, 1938)

Ex.11 Colind. Coll. G. Breazul (Breazul, 1938)

song), *cântecul steagului nupţial* (song of the wedding banner), *cântecul naşei* (godmother's song), *cântecul găinii* (hen's song) and *cântecul verzei* (cabbage song). These songs display great diversity. In Transylvania some of these songs are still performed by groups of women (only rarely by men). In Muntenia, Oltenia, Moldavia and Bukovina nuptial songs have been entrusted exclusively to the *lăutari* and now bear the imprint of that style.

In the modern ritual songs, obligatory verses become associated with the melodies of other genres: lyric song and dance melodies. In this category there are numerous wedding songs, songs marking the young men's entry into the army etc. An important addition to the category of ritual songs is that of ritual dance (see §2 below). Among these, the most significant are connected with weddings and with *căluş* (the ritual of renewing the agricultural year, performed in Oltenia and northern Muntenia).

(iv) Dance melodies. *Melodia de joc* ('dance melody') is today the best represented of all genres. The village dance occurs on Sundays and on saints' days from the Orthodox and Greek-Catholic calendars, at weddings and at the closing party of most ritual events and family celebrations. Some male participants emit *strigături* (dance calls), lyric verses recited in octosyllabic metre. The verses of the callers are dance commands, remarks addressed to girls of the village or whatever they please. However, the dance melody can become independent of the choreography of the dance and assume the functions of a lyric song. As such, a melody may then be performed in almost any situation, on the flute, jew's harp, violin or other instrument.

The genre has an impressive number of distinct melodies, the majority being limited to specific regions. These forms fall into a number of metric, rhythmic and choreographic categories, among which the most important are: *hora* (ex.12); *sârba* (ex.13); *brâul*; *geamparaua* (or *geamparale*); *purtata*; *învârtita* (ex.14); and *feciorescul* (see also §2 below).

(v) Instruments. Romanians make use of many instruments in the production of traditional music. One of the principal distinctions appears to be whether an instrument is local or of non-Romanian origin. This distinction brings to light important differences in repertory and style of interpretation. In general, older musical forms are more closely associated with local (pastoral or agricultural) instruments, whereas instruments of non-Romanian origin are associated with interpretative differences and more modern styles and pieces.

(a) Instruments of local origin. The *bucium* (alphorn) is a one- to two-metre conical tube with a bell of varying size (called the *tulnic* in central Transylvania, *trâmbită* in Maramureş and Oaş and *bucium* in Moldova). The *semnal de bucium* (alphorn signal) is a rubato recitative, punctuated with notes from the 6th to the 16th harmonic.

Ex.13 *Sârba* from the village of Polovragi, Gorj district. Coll. C.D. Georgescu, 1963

Ex.14 *Învârtita* from Baia Mare, Maramureş county. Coll. B. Bartók, 1913 (Georgescu, 1984)

The signal is usually produced by shepherds for the driving out of evil spirits, driving of sheep out to pasture and their return to the fold, for milking, and to aid the curdling of milk for cheese. In sheep-rearing villages the signal is also used during the funeral ceremony, on the

day of burial and the two preceding days, at the home of the deceased and on the road to the cemetery. In central Transylvania the *bucium* (there called *tulnic*) is played by women. In some areas, it has been replaced by the bugle or other brass instruments of military origin.

Cimpoi (bagpipe) can have one or two chanters and a variable number of finger-holes. The *fluier* (flute or whistle), of which there are 17 varieties, may be single or double, transverse or lateral, open both ends or with one end stopped, with five to eight finger-holes, with no finger-holes (the *tilincă*) and large, small or medium sized (see also KAVAL). Other rudimentary aerophones include the *frunză* ('leaf', pear, plum etc.), *solz de peşte* (fish scale) and *fir de iarbă* (blade of grass).

The *drâmbă* (jew's harp) is an instrument on the verge of disuse. In Maramureş at the turn of the century it was played especially by women. The *buhai* is a friction drum whose sounds are obtained by rubbing a hank of horsehair which passes through a perforated membrane. It is used during the Christmas and New Year festivities.

(b) Instruments of non-Romanian origin. Instruments of Turkish origin used by professional musicians in the south-east of the country include: the *zurnă* (replaced in the 19th century by the *taragot*, a straight, single-reed brass instrument); *dairea* (tambourine); *nai* (panpipes, in the past practically unknown in rural areas); *cobză* (ten-string lute of the 'ud family); *ţambal* (small dulcimer of the *santūr* family, with two possible stringings, 'Romanian' and 'Hungarian'); and *tobă mare* (large drum) also called the *dobă*, in place of which the *lăutari* now use the Western bass drum and/or various other medium-sized drums.

Other instruments of non-Romanian origin came from Western Europe. The *vioară* (violin), sometimes modified, is bought in urban centres or built by local craftsmen. Variations include: the violin without resonating body, which is replaced by a metal horn, used in Bihor (local name *higheghe*); a very high-pitched violin from Oaş, with a small angular bridge; the five-string violin from Maramureş-Chioar; and the violin found in southern Moldova which uses sympathetic resonating strings. A 3-string viola with a small angled bridge, and played with a short, thick bow and the cello and double bass (both called the *gordon* in Transylvania, also sometimes made by local craftsmen) are also widespread. The accordion with chromatic keyboard type is found, as are the clarinet in B♭ and E♭ (the latter are used in folk brass bands). The most recent Western instruments to have been adopted are the trumpet, flugelhorn, tuba and guitar (acoustic and electric), various drums, cymbals and electronic keyboards.

New instruments are constantly being created through the 'improvement' of extant models or their remodelling using modern materials. Examples from recent years include the *buhai*, worked by a crank instead of friction, a set of whistles arranged in a circle all blown with the same breath and a *drâmbă* (jew's harp) with several tines and a form of resonator.

(vi) Ensemble music. The Romanian vocal-instrumental music known as *taraf* originated in the courts of boyars and princes, at wayside inns and in towns, probably towards the end of the Middle Ages. In Muntenia and Moldavia *taraf* music was the preserve (although not exclusively) of Gypsy musicians. In villages they appropriated the music of the locals and began performing for village dances (*hore*), weddings and other celebrations (see §3 below). A *Taraf* is made up of two to eight instruments, among which are: the violin, clarinet, *cobză* (*kobsa*, lute), *ţambal mic* (small dulcimer, in Muntenia and Moldova), a second violin and viola (Translyvania), guitar (Oltenia and Maramureş), drum (Bihor, Banat and Moldova), double bass (most regions) and in more recent times the accordion, electric guitar of various types and the electric organ. In Muntenia, Oltenia and Moldavia one or more of the *lăutari* in the *taraf* (in any event at least the leader, called the *primaş*) is at the same time the vocal soloist of the group.

The predominant genres of the *taraf* are the *cântece* (songs), *doine*, *melodii de joc* (dance melody) and ritual wedding songs (in Muntenia, Oltenia and Moldova). However, the genres to which they have brought a new brilliance are dance music, the classic epic song and the *doină de dragoste*. As villagers have become comfortable with them and have entrusted a large part of their music to the *lăutari*, the *taraf* has become today the principal source of music in the Romanian village.

(vii) State-sponsored 'folkloric' music. With the installation of the communist regime the Romanian state encouraged the establishment of professional folk ensembles similar to those in the USSR. Through its exponents (party activists, cultural educators and conductors), the state oversaw the ideological orientation of the repertory of these ensembles. Their 'folk' style was characterized by rigidity, conformism, ethnic purity, technical perfection and bombast. Their repertory was filled with pieces which were politically 'inoffensive', optimistic and exultantly elegiac towards their country and leader. Folkloric music was widely promoted in all media (including festivals and contests with the declared objective of the exaltation of the communist state). The idea simultaneously gained credence that folkloric music was related to traditional music. After the removal of the communist regime, folkloric music did not perish, rather it was put to use in the promotion of certain nationalist causes.

(viii) Research. The study of Romanian traditional musical culture began at the turn of the 20th century, through the work of T. Brediceanu, D.G. Kiriac and, most importantly, Béla Bartók. In the 1920s and 30s Constantin Brăiloiu, of the Bucharest School of Sociology, laid the foundations of the Society of Composers' Folklore Archive. This quickly became, with his collection of 15,000 cylinders, one of the largest in the world. He subsequently emerged as the leading light of the modern school of folklore. In the West where he settled (1943–58), Brăiloiu continued to conduct systematic and monographic studies which established him at the forefront of European ethnomusicology. Some of his contemporaries and students, remaining in Romania – G. Breazul, I. Cocişiu, P. Carp, T. Alexandru and E. Comişel – number among the founders of the Institute of Ethnography and Folklore in Bucharest, which took over and extended the archives of the Society of Composers. The principal activities of the Romanian folklore school have been monographs, the classification of genres (undertaken in the series Colecţia Naţională de Folclor), organology (T. Alexandru), case studies and the attempted synthesis of regional styles. The Romanian school has distinguished itself particularly for the thoroughness and pertinence of

its fieldwork and its use of musical notation. The newer generation of researchers – M. Kahane, G. Suliţeanu, A. Giurchescu, C.D. Georgescu and S. Rădulescu – have transformed the field of music folklore into modern ethnomusicology. Important ethnomusicological studies have also been carried out in Romania by A.L. Lloyd (UK), A. Briegleb-Schuursma, M. Beissinger, R. Garfias (USA), and J. Bouët and B. Lortat-Jacob (France).

2. DANCES. Romanian dance traditions combine group formations, existent in south Romania and the Balkans with the couple dances historically associated with Central Europe, which are predominant in Transylvania. The dance repertory is almost exclusively instrumental, unlike that of the Balkans where song-dances are still common. The few women's song-dances of central and northern Transylvania are a remnant of dance forms widespread in Europe in the Middle Ages. The main round and chain dance categories are *hora*, *sârba* and *brâu*, each comprised of many types, historically and geographically differentiated. The common *hora* is performed by men and women, holding hands in a circle, which serves ritual functions at weddings, funerals and *căluş*. *Sârba* is a shoulder holding chain dance with a tripodic movement pattern (ex.1 *Sârba*). The *brâu*, originally a men's dance of the Carpathian area, is characterized by a great variety of syncopated movement patterns.

The men's group of jumping dances is an important category comprised of: the shepherds' group dances characterized by stamping steps and heel clicks; leaping dances over sticks (hat, bottle, etc.), which also exists elsewhere in Europe; the particularly energetic and difficult stick dances of the ritual *căluş*; and *fecioreşte* ('lads" dances) of central and south Transylvania, rooted in a common central-east European dance tradition, and characterized by slapping various parts of the legs in a moderate or fast tempo.

The couple dance category is comprised of: the double column *ardeleana* of north-west Transylvania; *purtata*, a circular promenade of central and east Transylvania; and the widespread *învârtita* which combines, in an improvised succession, turning sequences, pirouettes, stamping and slapping movements in syncopated or asymmetric rhythms. Solo dances are primarily represented by zoomorphic and anthropomorphic masked dances performed at New Year.

In southern Romania the village repertory is comprised of some 25 dances, which can be reduced, however, to a few types. Conversely, in Transylvania and Banat three to six dances of the local repertory can represent as many different types. During an event these dances are fused in fixed suites based on historical, social and/or compositional criteria. The relationship between dance and music is primarily of a rhythmic nature. The duple rhythm and syncopation are characteristic of Romanian traditions. The *aksak* rhythms 3 + 2 + 2 or 4 + 3 + 3 may be indigenous and occur in the *brâu* of Banat and *învârtita*. Other asymmetric rhythms such as 2 + 3 (*rustem*), 2 + 2 + 3 (*geampara*), and 1 + 1 + 1 + 2 (*şchioapa*) common in the Danube Valley, are of Balkan origin. They tend to be progressively transformed into ordinary duple and triple rhythms. The simultaneous occurrence of different rhythmic patterns of movement, of the music and of the rhythmically versified shouts, create an exciting polyrhythm. In Transylvania and northern Moldova, dancing is accompanied by shouted or chanted verses (Maramureş, Oaş, Crişana). Some are commands or incitements to dance, others, often improvised, have poetic content.

The relationship between melody and dance is less consistent. Thus a large number of different melodies may accompany one dance type, while one single melody may be played for several dance types. Dances of the Danube Valley are predominantly characterized by a non-concordant or semi-concordant relationship between the dance and the structural units of the music.

Although village dancing has gradually lost its periodicity it is still very much alive in Romania, especially at weddings and on important holidays. The dance tradition is in a constant process of transformation: repertories are reduced and mixed with modern ballroom dances, group formations tend to split in couples, subtle movements and rhythms are simplified while the tempo speeds up. Increased mass media communication and numerous festivals contribute to progressively merge the specific traits of regional styles, and to transform native performers into consumers of staged spectacles.

3. GYPSY MUSIC. The first evidence of Gypsies in Romania dates from the 14th century when Gypsies were either nomadic or serfs belonging to monasteries, nobility or princes. As serfs they were the servants of horsekeepers, blacksmiths, shoemakers, cooks, brickmakers and, later, court musicians. During the period of the 1848 revolution, Gypsies were given their freedom and received property on the outskirts of villages. As a result Gypsy settlements and districts began to appear. At approximately the same time, other members of the nomadic population were ordered to settle down in a fixed place and adopt the life style of the majority of the population. During this process of change, many Gypsies began to lose the ability to speak Romany, their own language. In the cities, from the 15th century onwards, Gypsy musicians were engaged by *meterhanele*, court orchestras, or offered their musical services to inns and small businesses. Professional guilds were formed from the 18th century and by the 19th century, musically gifted Gypsies were recruited into the first Romanian symphony orchestras. In their new environment, Gypsy musicians began to assume the role of professionals providing music by singing and playing instruments, either individually or in *taraf* bands (see §II, 1(vi) above), at weddings, christenings, village dances, other celebrations and ceremonies. A result of this professionalization was the gradual replacement of the monodic instruments specific to rural agrarian and pastoral culture by instruments of Western and Eastern origin acquired in urban centres, leading to the development of harmonic accompaniment with a tonal structure.

The music performed for Romanian, Hungarian and Jewish communities, which has been adopted to a great extent as the main repertory, has been well researched. Many scholars have suggested that Gypsies bring to this public music in which their own distinctive style is strongly evident, at other times less so, depending on the practices of the respective communities. For Romanians, Gypsy *lăutari* (fiddlers) play ritual wedding songs, lyric songs, *doina*, dance music, marches, romantic songs and light music. Gypsies are fond of epic songs, and their creativity and mastery in interpreting this genre is considered unrivalled. At the funerals of young people or musicians (whether Romanian or Gypsy), *lăutari* from Transylvania will play a special *cintari mortesti* (a slow piece with funereal verses).

Little is known about the private music that both nomadic and sedentary Gypsies make only for themselves: in particular domestic and everyday music has not been studied. However, at their own parties, Gypsies usually perform the same types of music as in public. These pieces are interpreted in a *tiganesti* (Gypsy) manner, possibly with verses sung in Romany (usually translated from Romanian) distinguished by a sensuality underlined at times by a style of grandiloquence with rhythmic incisiveness. At the same time, as Lortat-Jacob has pointed out, it is often difficult to make a clear distinction between Romanian (Hungarian, Jewish etc.) and Gypsy music (1994). *Lăutari* have what appear to be two contradictory characteristics: they happily absorb musical innovations (including instruments, melodies and styles), while at the same time conserving older traditional pieces from the older strata of the tradition.

Gypsies form a minority of the Romanian population: the 1991 census statistics reported 400,000 people acknowledging a Gypsy heritage. While the actual number of Gypsies is certainly greater, according to Romanian demographers it is far below the estimated figure of 3 million indicated in some Western reports.

While for the most part Gypsies are subjected to discrimination, the *lăutari* are an exception: considered as the *tigani de matase* ('silk Gypsies'), such status enables them to gain more acceptance, and they are treated with consideration and friendliness in proportion to their professional standing and degree of social integration.

At the beginning of the 21st century Gypsies are more widely encouraged to express their identity. In this climate, the *lăutari* have begun to learn and re-learn Romany, to compose songs with verses in Romany, and to redefine their own particular musical style. Within this process they have shown their strong eclectic and synthetic tendencies, exhibiting a preference for musical elements whose origins lie in the Balkans, the Middle East and the eastern Mediterranean region.

Romano, Filippo. *See* RUGE, FILIPPO.

Romano, Giulio (i). *See* CACCINI family, (1).

Romano, Giulio (ii) (*fl* early 17th century). Italian composer. He has sometimes been confused with Alessandro Merlo (also known as Alessandro Romano), Romano da Siena and Giulio Caccini (also known as Giulio Romano). He is known to have composed a set of seven *Concenti spiriti* (Venice, 1612) for one to six voices, now lost. He was also probably the composer of *Fuggilotio musicale* (Venice, ?2/1613); Fétis's misattribution of this volume to Caccini was generally accepted until 1972. The *Fuggilotio*, dedicated to a Venetian nobleman by its composer, whose name is given on the title-page as 'D[on] Giulio Romano', is a collection of 18 monodies and 14 duets; the monodies (madrigals, arias and two pieces based on the romanesca), at least, are modelled on Caccini's *Le nuove musiche*.

H. WILEY HITCHCOCK

Romano, Il. *See* DE GRANDIS, VINCENZO (i).

Romano, Marcantonio (*b* Salerno, *c*1552; *d* Split, 1636). Italian composer and organist. He was composer and organist of Split Cathedral from 1609 to 1636. He probably went to Split with the help of the cathedral's composer and *maestro di cappella*, Tomaso Cecchini, who worked in Split under the immediate influence of the Archbishop, Marcantonio de Dominis. In the dedication of the work *Amorosi concetti il terzo libro de madrigali a una et due voci di Tomaso Cecchino Veronese* (Venice, 1616), Romano is mentioned as 'industriosissimo conciliatore dell'Arte dell'Imitazione'. Romano's madrigal for solo voice, *Mori mi dite*, was printed in the same collection. Two further works, *Donne noi siamo* and *Haggio fin qui patito*, appear in *Di Filippo Azzaiolo Bolognese Il terzo libro delle villotte* (RISM 1569[24]) and *Il primo libro della raccolta de napolitane* (1570[19]).

MILO ASIĆ

Romano, Remigio (*fl* 1618–1626). Italian anthologist and editor. His two series of early 17th-century Italian poetry, the *Scielte di bellissime canzoni* (lost, except for reprints of 1619–20) and the *Raccolte di bellissime canzonette* (*c*1618–1625), were reprinted several times. In the more extensive *Raccolte* Romano appended guitar *alfabeto*, printed above the verse without melodies or rhythmic indications, to 43 of the over 400 poems. 17 of these tablatures correspond to solo song accompaniments in monody collections by the Venetians G.P. Berti, Carlo Milanuzzi, Alessandro Grandi (i), and Guglielmo Miniscalchi (the remainder are unattributable); the high incidence of poetic concordance with musical collections by Flamminio Corradi and Bartolomeo Barbarino underscores this compiler's reliance on Venetians in deriving his anthologies. Since Romano published some selections as much as a decade before their appearance in musical collections, his volumes indicate that solo arias flourished in Venice before Grandi's arrival in 1617, and that he himself frequented the Venetian nobles' homes in which these songs were first heard.

ROARK MILLER

Romanos the Melodist (*b* ?Emesa [now Homs], Syria, late 5th century; *d* Constantinople, after 555). Byzantine hymnographer and composer. Perhaps of Jewish descent, he was a deacon in the Church of the Resurrection in Beirut and towards the end of the 5th century went to Constantinople, where he served at the Church of the Virgin in the city's Kyros quarter. A hymn in Romanos's honour mentions his acquaintance with the imperial court. He may have become famous during his lifetime, since an almost contemporary papyrus fragment containing part of a well-known hymn by him has been found in Egypt. It is, however, uncertain whether he was the 'presbyteros' and 'ekklēsiekdikos' mentioned in the acts of the Synod of 536. He was canonized and is commemorated by the Eastern Orthodox Church on 1 October as the patron saint of music.

Romanos's *vita* is lost, but summaries are transmitted in Byzantine synaxaria and menologia, according to which Romanos was inspired by the Virgin to write *kontakia*; this term was never used by Romanos himself, who described his hymns in more general terms such as *ainos* ('praise'), *ōdē* ('song') or *deēsis* ('prayer'). The KONTAKION is a metrical sermon that was chanted during a vigil (*pannychis*) of the cathedral rite (asmatikē akolouthia) of Constantinople. It normally consists of between 18 and 30 metrically identical stanzas (*oikoi*) and a shorter preface (*koukoulion*) in a different metre; all the strophes are bound together by a refrain, and the initial letters of the *oikoi* form an acrostic. The *kontakion* was clearly influenced by Syriac ecclesiastical poetry and indeed may have had its origins in that genre. According to the synaxarion, Romanos wrote 1000 *kontakia* and is the greatest representative of the genre; only 85 attributed to him have survived, however, of which about 60 (those with his name as part of the acrostic) are considered genuine. The *kontakia* of Romanos treat theological matters, often in a theoretical or polemical way, but they are nevertheless vivid and passionate, owing to his comparatively simple and direct language and his use of dialogue embellished by rhetorical devices such as parallelism, oxymoron and word play. It is possible that he wrote the famous Akathistos Hymn, but its authorship has also been ascribed to Sergios, Germanos and even Photios.

The full texts of Romanos's hymns first appear, without musical notation, in manuscripts of the 11th century, after which the number of *oikoi* copied diminishes rapidly to the point where only the *koukoulion* and a single *oikos* remain. With the exception of the Akathistos, the melismatic settings of the Slavonic kondakars and Byzantine psaltika are all abridged in this manner. Originally, the poems would have been recited in full during the services and, since the texts are very long, the musical settings were probably syllabic. This theory is partly based on the assumption that Romanos's metrical system is stable and conforms to the principles of homotonia (identical stress pattern in corresponding verses) and isosyllabia (identical number of syllables in corresponding verses). However, the texts that have come down to us do not always fit into the required rhythmical pattern, and for this reason supporters of the theory, such as J.B. Pitra, Karl Krumbacher, and Maas and Trypanis, have been forced to make a number of textual alterations. Advocates of the alternative view maintain that it is the number of principal stresses in the verse that remains constant; the position of the stress and the number of unstressed syllables can vary. In this case the music (which may have been simply cantillation) could have been adapted to varying metrical patterns, and it is unnecessary for a modern editor to 'correct' the text for the sake of the rhythm. This position was maintained implicitly by Tomadakes and to some degree also by Zuntz.

GUDRUN ENGBERG/ALEXANDER LINGAS

Romanov. Russian family of rulers and patrons of music. As patrons of the arts they exercised a decisive influence from about 1730 to 1800, effectively laying the foundations for the development of Russian secular music. Until the 18th century, Russian music had remained isolated from the evolutionary processes that had occurred in

Western music: sacred music had developed (and to a large extent continued to develop) only within the strict confines of the Orthodox tradition, while secular music, other than folksong, was almost non-existent. During the reign of Tsar Aleksey (1645–76), attempts to stage theatrical entertainments with incidental music had come to little, but with the more Westward-looking policies of Peter the Great (1682–1725) music played a more prominent, if purely utilitarian, role. Peter was no lover of the arts, but he revelled in ceremonial: the spectacular celebrations of his military victories were supplemented by vocal *kantï*, and from 1711 each of his regiments maintained a wind band, trained initially by musicians imported from Germany. The court musicians were responsible for fanfares at state occasions, music for banquets and, above all, dance music for the tsar's newly established *assemblées* – gatherings (deliberately copied from France) which were intended to acquaint the boyars with the principles of etiquette, but, more often, were mere excuses for wild debauchery. Peter also formed at St Petersburg the choir that in 1763 was named the Pridvornaya Pevcheskaya Kapella (Court Chapel Choir) and that exists to this day as the St Petersburg Glinka Academy Choir.

Not until the reign of the Empress Anna (1730–40) did music in Russia take a more professional turn. Before her accession she had lived at Mitau (now Jelgava, Latvia) and was therefore more fully aware of cultural developments abroad. She invited to St Petersburg a number of foreign opera companies, the most important of which was the Italian troupe headed by Francesco Araia, whom Anna appointed *maestro di cappella* in 1735. He remained at St Petersburg until 1759, thriving on the court's taste for Italian opera and also composing (in 1755) the first opera to a Russian text, Sumarokov's *Tsefal i Prokris*; and he paved the way for a vast number of other foreign musicians who worked at the Russian court and educated the native Russian composers who began to appear towards the end of the century. After Anna's death and the subsequent deposition of the infant Tsar Ivan VI, the crown passed to Elizabeth (1741–62), a daughter of Peter the Great and one of the most artistically enterprising of Russia's 18th-century rulers. Italian music in particular played an important part at the sumptuous court functions, and it was through Elizabeth's influence that new theatres were opened in St Petersburg and Moscow.

Catherine II (1762–96), widow of the murdered Tsar Peter III, contributed most to the early development of Russian art, though she herself was no connoisseur: she bought paintings indiscriminately from England, France and Germany (forming, incidentally, a priceless collection which is still at the Winter Palace, St Petersburg), and she furnished her palaces with the finest tapestries, silks, furniture and porcelain. She knew little about music and commented to her confidant, Baron Grimm, 'I want to listen to and love music; but I have to confess that it is a noise, and that's all'. Nevertheless, she employed a large number of musicians, who not only performed duties at court but also played for the operas which were rapidly increasing in popularity: in addition to the Kamennïy Teatr (Stone Theatre, founded in 1783) she established her own theatre in the Hermitage (the cultural centre that she built on to the Winter Palace), and the direction of the several different opera companies in the capital (French, German, Italian, Russian) became the responsibility of the government. Catherine also wrote competent librettos (some in collaboration with A.V. Khrapovitsky): her *Fevey* was set by Pashkevich (1786), *Novgorodskiy bogatïr' Boyeslayevich* ('Boyeslayevich Champion of Novgorod') by Fomin (1786), *Khrabrïy i smelïy vityaz' Akhrideich* ('The Brave and Bold Knight Akhrideich') by Vančura (1787), *Gorebogatïr' Kosometovich* ('The Sorrowful Hero Kosometovich') by Martín y Soler (1789), her 'historical spectacle' *Nachal'noye upravleniye Olega* ('The Early Reign of Oleg') by Canobbio, Pashkevich and Sarti (1790) and *Fedul s det'mi* ('Fedul and his Children') by Pashkevich and Martín y Soler (1791). Catherine's influence on her countrymen was far-reaching, and with the spread of musical activity and patronage among other leading members of the aristocracy and with the increase of public concert-giving during the 19th century the crucial importance of the Romanov family declined. Although artistic institutions continued to enjoy imperial patronage until the Revolution of 1917, the family's valuable pioneering work of the 18th century remained their major contribution to Russian music.

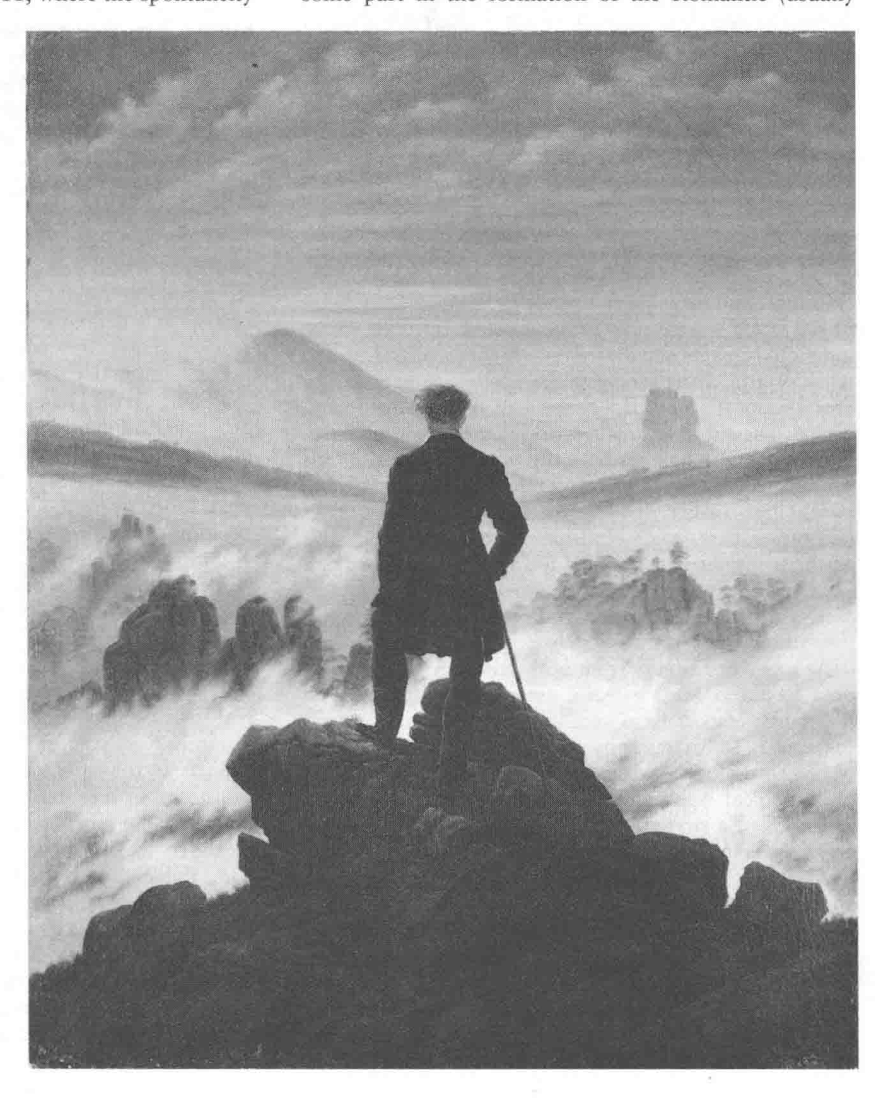
Romanticism. A movement or, more commonly, period of cultural history. When understood as a period, Romanticism is usually identified with either the first half or the whole of the 19th century. The term is used with reference primarily to the arts, but it can also embrace philosophy, socio-political history and, more widely, the 'spirit' of the era.



1. History of usage. 2. Meaning. 3. Styles.

1. HISTORY OF USAGE. In literature Romanticism is commonly taken to cover roughly the first half of the 19th century, though the philosophical origins of the movement lie well back in the previous century. Literary Romanticism took its definitive form in the late 18th century in polemical and creative writings by the Schlegel brothers and their circle in Germany, and in the early 19th century by Wordsworth and Coleridge in England, and by Lamartine and Hugo in France. It is usually accepted that Romantic features continued to exert an influence after the middle of the century, but as a period term 'Romanticism' gives way at that point to 'Realism' and 'Symbolism', movements associated initially with French writers. Historians of the visual arts have conventionally adopted a broadly similar chronology, identifying early Romantics such as Géricault and Delacroix in France, Turner in England and Caspar David Friedrich in Germany, and again arguing for a dispersal of the original Romantic impetus following the middle of the century (1863 is a key date, with the death of Delacroix and the *Salon des refusés*). In music, however, the Romantic movement has often been located somewhat later, beginning in the post-Beethoven era (*c*1830) and continuing into the early 20th

century, though terms such as 'Late-Romantic' and 'Neo-Romantic' are applied by some historians to the later stages of this period.

Well before its appropriation by late 18th-century writers to define a movement in art, the adjective 'romantic' already had a decisive meaning. It took its name from the ancient *lingua romana* of France, and from derived Romance literatures, especially 'romances' in both verse and prose (e.g. of Arthur, of Charlemagne and of the Iberian peninsula). In the 17th century the term was adopted, initially in England, to describe the perceived tone or character of those literatures, one defined by an opposition to the real, the concrete, the predictable and the rational. By the middle of the 18th century both the specific evocation of an idealized medieval heritage and a more generalized embrace of the irrational, the fantastic and the freely imaginative were firmly established meanings of the word in England and France. The introduction of the term as a generalized literary label is usually attributed to German writers, in particular Friedrich Schlegel in his contributions to *Das Athenäum*, founded in 1798, Jean Paul in his *Vorschule der Ästhetik* of 1804, and August Schlegel in his lectures *Über dramatische Kunst und Litteratur* of 1809–11, where the spontaneity of the medieval romance is contrasted favourably with a rule-bound (French) 'Classical' tradition. It should be noted that within some philosophical systems of the 19th century, notably Hegel's, a 'Romantic period' is taken to embrace the arts of this entire era, from the Middle Ages through to the 19th century.

Musical applications followed on from literary, though there are isolated references in the late 18th century, as in Grétry's *Mémoires* of 1789. Indeed throughout the *Mémoires*, Grétry's language is already that of romantic idealism: only through sensitivity to poetry and attunement to the inner truths of the emotions will a composer come to greatness, to 'genius'. Grétry's text is of some interest, not just because it offers a distinctively French perspective on a subject later to be dominated by German thought (he favoured dramatic over instrumental music and argued for melodic rather than harmonic priority), but also because its obvious and acknowledged debt to Rousseau establishes a direct musical link with one of the major influences on the Romantic movement generally. Rousseau's belief that the artist should aspire, through spontaneity of expression, towards the dignity of 'natural man' left its mark on both Goethe and Schiller, and played some part in the formation of the Romantic (usually

'Wanderer above a Sea of Fog' by Caspar David Friedrich, c1818 (Kunsthalle, Hamburg)

tragic) hero in literature generally. One might regard Goethe's novel *Die Leiden des jungen Werthers* (1774) as the exemplary work in this respect, and it caught the imagination of composers as well as writers. Rousseau also inspired that idealization of nature and the 'folk' which was an important dimension of early Romanticism, notably in Herder. Here too there was a musical resonance in an increasing interest in folksongs in the late 18th century, with notable consequences for the development of the lied. Rousseau's specific writings on music also had a marked influence. In several entries of his *Dictionnaire de musique* (on 'genius', the 'pathetic', 'expression' and especially 'imitation'), he took a step beyond an affective towards an expressive aesthetic, celebrating the elusive, suggestive powers of music in ways that depart significantly from Classical thought.

A more sustained application of the term 'Romantic' to music awaited E.T.A. Hoffmann's extended review of Beethoven's Fifth Symphony (1810), together with his subsequent article on Beethoven's instrumental music (1813). The major significance of these essays lies in their synthesis of existing aspects of Romantic theory, the transfer of these to the musical sphere, and a prophetic inference that music should be regarded as the supreme Romantic art. The concept of creativity embraced by Hoffmann was already familiar from the Schlegel brothers and was shared by a younger generation of German writers, notably Ludwig Tieck, Wilhelm Wackenroder and Jean Paul. Above all, that concept highlighted the privilege attaching to the individual creative genius. Characteristics that had already been attributed to art in general within philosophical aesthetics of the late 18th century – its capacity to access a plane beyond the real (variously characterized as the transcendental, the inexpressible or the infinite), its power to arouse the strongest emotions, and its value as a mode of intuitive knowledge of the world – were now particularized, referring to the individual creator and the individual (original and 'great') work of art. Moreover, such characteristics were associated specifically with the potency of the creative imagination. The vision or dream-world of the Romantic artist, informed and made aesthetically whole (unified) by his genius, would give the rest of humanity a privileged insight into reality. It is worth stressing the notion of unification here, since Hoffmann supported his central aesthetic insight with detailed technical descriptions of a kind one might today describe as analytical.

In applying such ideas to Beethoven, and also in preparatory measure to Haydn and Mozart, Hoffmann drew together insights from both criticism and philosophy: he fused ideas already associated with the term 'Romantic', especially as used by younger German writers of the early 1800s to signify an opposition to the strictures of Classical models, with a tendency (common to several philosophical writings though variously regarded as a weakness or a strength) to classify music as the primary art of the emotions. This conjunction cleared the path for a powerful 19th-century idea: the pre-eminence of music, and specifically of instrumental or 'absolute' music. (It is worth adding that this idea, central to German thought and German music, played a more peripheral role in non-German cultures). Thus it was precisely music's independence of reference, its imageless, ineffable, unknowable quality, that gave it privileged access to the 'wonderful, infinite spirit-kingdom'. The idea would be given its most explicit philosophical expression within Schopenhauer's system, where music, as the only non-representational art, speaks directly of the noumenal (as opposed to the phenomenal) world. But long before the impact of Schopenhauer's seminal work was fully registered (in the second half of the 19th century), music had come to be viewed, at least within one major strand of German thought, as the very essence of Romanticism. Schumann, for instance, remarked that 'it is scarcely credible that a distinct Romantic school could be formed in music, which is itself Romantic'.

It is striking that Hoffmann described not just Beethoven, but also Mozart and to a lesser extent Haydn, as Romantic composers. In other words, he identified Romantic tendencies in the music of the late 18th century, parallelling rather than succeeding comparable tendencies in literature. This conformed to a general usage of the term from around 1800. In the same year as Hoffmann's famous review of the Fifth Symphony, for instance, Johann Reichardt described Haydn and Mozart as Romantic composers. And some years later Goethe confirmed this usage by describing an antithesis of Classical and Romantic art, characterized in terms of 'objective' and 'subjective' tendencies respectively. Significantly, his account of Romanticism ('the new fantastic essence ... the longing and restlessness, bursting all bounds and losing itself in the infinite') drew on contemporary music (Beethoven) as well as on contemporary literature (Schiller). In such early 19th-century polemics Romanticism was clearly identified as a movement concurrent with Classicism rather than a period succeeding it.

The idea that Mozart as well as Beethoven might be regarded as a Romantic remained current to around the 1840s, at which point a change in the understanding of Romanticism seems to have occurred, allowing it to emerge as a definable period term in something like the modern sense. This perspective sharpened subsequently in the measure that the Viennese 'classics' became literally that, with all the Hellenistic connotations. The formation of a classical canon – a central theme of 19th-century music history – carried with it the corollary that modern, 'Romantic' music defined itself increasingly through its separation from a Classical golden age, though the position of Beethoven remained purposefully ambivalent within this chronology. Nor is it a coincidence that the modern sense of a Romantic period crystallized around the middle of the 19th century, just when bourgeois musical life in Europe was stabilizing into institutions expressly designed to promote a validating repertory of classical music. An early suggestion that there might be a real division between Classical and Romantic periods is found in Karl August Kahlert, who (in 1848) described Mozart as 'the most truly Classical of all composers' and Beethoven as 'a Romantic composer', whose 'tremendous hold over the minds of his contemporaries' provided the means by which 'music's Romanticism made its presence felt'. Kahlert's proposal that Beethoven inaugurated a 'Romantic era' already approaches modern usage, even if his later remarks suggest that he had by no means lost sight of an earlier understanding of the term: 'The contrast between the Classical and the Romantic will none the less continue, Classical composers being more interested in the formal structure of music, Romantic composers in free, untrammelled expression'.

It was later in the 19th century, when music history was subjected to the quasi-scientific study of styles, notably in the work of Guido Adler, that a cleaner separation of Classical and Romantic periods was proposed. Adler was a key figure in the emergent discipline of *Musikwissenschaft*, and as that discipline congealed into established themes and categories the division of history into style periods was to a degree formalized. For Adler the Romantic movement crystallized (or achieved full maturity, to adopt his own organic model) in the post-Beethoven generation of Chopin, Schumann, Berlioz and Liszt. Beethoven and Schubert were viewed as 'transitional' but linked essentially to so-called Viennese Classicism. From this perspective (positioned around 1900), the composers of the New German School, together with several leading composers from late 19th-century nationalist schools, were classified not as Romantics but as 'moderns' or even in some cases as 'realists', and that view remained largely intact until the upheavals of the early years of the 20th century cast new light on their achievements. 20th-century music historians have wavered between 1790 and 1830 as starting-points of Romanticism, and have often refined the chronology by identifying late 18th-century movements such as *Sturm und Drang* and *Empfindsamkeit* – in C.P.E. Bach, Haydn and Mozart – as 'pre-Romantic'. Inevitably, too, they have reconsidered the classification of late 19th-century music. Probably the most common tendency (as, for instance, in Alfred Einstein and Donald Grout) has been to regard the radical changes in musical syntax of the early 1900s as a natural caesura, and thus to extend the Romantic period through to the first decade of the 20th century, at which point it may be understood to give way to Modernism.

There are, however, two significant variants of this model. Several historians (Paul Henry Lang, Peter Rummenhöller and Carl Dahlhaus among them) have been anxious to draw a line between the two halves of the 19th century, and have employed such terms as 'Neo-Romanticism' to describe its second half. An old guard of Romantic composers died or stopped composing around the middle of the century (Chopin, Mendelssohn, Schumann), and a new, very different generation came to maturity (Brahms, Bruckner, Franck). For both Liszt and Wagner, moreover, the mid-century signalled new creative directions, with important consequences for the wider world of music. According to this view, articulated most forcefully by Rummenhöller, the heyday of musical Romanticism lay in the 1830s and 40s. Following the mid-century there was a distinct change of tone – a new and often selfconscious working-out of the ideals of Romanticism, an earnest preoccupation with forms, systems and theories, and at times too an anti-subjectivism remote from the exuberance and spontaneity of the earlier movement.

The second variant (associated above all with Friedrich Blume) identifies a single Classic-Romantic era reaching back into the 18th century and extending well into the 20th. To some extent this view seeks to recover something of the early 19th-century sense of the term as a movement or tendency running concurrently with Classicism. It is striking, moreover, that even the patterns of more recent, pre-World War II music history (expressionism, neo-Classicism) can be absorbed comfortably within Blume's larger scheme.

2. Meaning. The term 'Romanticism', whether understood as a movement or as a period, has thus notoriously resisted synoptic definition. Its students have preferred lengthy typologies of Romantic characteristics, registering their contradictions as well as their similarities, and in several cases citing contradictoriness as itself a defining feature. Yet, as Lilian Furst has argued, such typologies are as dangerous as they may be helpful. The principal danger is that the effects will obscure, or even be mistaken for, the causes. It is perhaps best to avoid definition altogether, and to begin rather with context, so that primary causes may be at least partly revealed. Such an approach would regard Romanticism as the counterpart within imaginative culture to the rise of political liberalism (given radical expression in an age of revolution) and to the parallel investment in subjectivity within philosophical systems, notably those of Kant and his successors within German idealist thought, Fichte and Schelling. Above all, Romanticism shared with these developments in political and intellectual history the invention or re-invention of the individual as a potent enabling force. Indeed, this focus on the individual – on the self – takes us close to one of two 'essential' meanings of Romanticism. The Romantic artist, privileged by his genius, would reveal the world in expressing himself, since the world (according to the influential position established by Kant) was grounded in the self. Hence the growing importance of expression as a source of aesthetic value, overriding the claims of formal propriety and convention. Music in particular was viewed as a medium of expression above all else, and crucially its power of expression was at the same time a form of cognition, albeit one precariously poised between sensory perception and intellectual understanding, between *sensus* and *ratio*.

Undoubtedly the French Revolution and its aftermath created the conditions in which this pretension might be sustained. As music (like art in general) disengaged itself increasingly from existing social institutions, composers were inclined – if not always able – to 'make their own statement'. It is not difficult to see why Beethoven should have acquired such an exemplary status for the Romantic generation in this respect. Even if his political commitment was to a generalized, abstract and utopian notion of liberty, it was not something superimposed on his activity as a composer, but a shaping factor of that activity. As a committed or engaged artist, he promoted – and bequeathed to the later 19th century – an increasingly influential view of music as a discourse of ideas as much as an object of beauty. His directly ideological motivation easily transcended earlier attempts to express the politics of liberalism through music, and might be compared rather to the 'social Romanticism' which formed a significant strand of early 19th-century literature. For later composers, that motivation was increasingly difficult to sustain, especially in the aftermath of the 1848 revolutions. Yet even when it was either lost to formalism (Brahms, Bruckner) or diffused into autobiography and metaphysics (Berlioz, Mahler), it left its trace in the ambition and pretension of the musical work, its quest for an epic status.

This invokes a second essential meaning of Romanticism, one that generates considerable tension with the first. It might be described as an investment in the self-contained, closed work of art. There was a growing tendency to regard musical works in particular as monads,

containing their own meaning rather than exemplifying a genre, articulating a style or confirming an institution. Moreover, this 'work concept', itself a product of the growing autonomy of the aesthetic, resulted in a significant change of focus in the relation between art and the world, as mimesis (imitation) made way for what has been termed an 'ideology of organicism'. Through the creation of monadic, organically unified works, art was presumed to project an idealized image of what the world is or, more pertinently, of what it might become. And 'absolute' music, free of any obvious representational capacity, was especially well placed to bear the burden of this meaning.

Several manifestations of these two central facets of the Romantic ideology are apparent in early 19th-century music. Under pressure of a powerful individualism, there was a change in the nature and role of virtuosity, for instance. The bravura styles of such post-Classical composers as Hummel and Weber, intimately linked to the rise of the public concert, acquired new layers of meaning under the weight of Romantic individualism. The career and reception of Paganini is one obvious example of this. But an even more potent archetype of the transformation of post-Classical into Romantic virtuosity was the recomposition by Liszt of his 1826 *Etude en douze exercises*, first as the *Douze grandes études* of 1837 and then as the *Douze études d'exécution transcendante* of 1851. The second set in particular exhibited the virtuoso as Romantic hero, 'overcoming' his instrument in a powerful symbol of transcendence. The third set sustained this position, but at the same time threatened to displace it by proposing the composer (rather than the virtuoso) as hero. Moreover, Liszt's revisions at this third stage supported a set of newly introduced poetic titles, drawing suggestively on Hugo, medieval romance, the cult of nature and the dream-world of the artist.

This use of poetic titles was itself a further manifestation of Romanticism, signalling music's putative expressive powers, while at the same time securing its greater status or 'dignity'. The latter point is important. It was a key motivation underlying the marked inclination of post-Beethoven composers to look outwards to the other arts, and especially to poetry. This tendency was given its clearest expression, of course, in the development of the art song, and especially the lied. Indeed the art song might sustain a claim to be the quintessential Romantic genre, born with the early Romantics, fading with the rise of Modernism and surviving in the 20th century where the spirit of Romanticism survives. In its intimate, confessional character it epitomized the autobiographical character of Romantic art. In its narrative, descriptive aspects it reflected the programmatic, referentialist tendencies of the music of the period. In its evocation of folksong it echoed a wider 19th-century idealization of the *Volksgeist*. And above all in its response to the new lyric poetry of the early 19th century it provided a model of the Romantic impulse towards a fusion of the arts, an impulse which would be given theoretical, if not always practical, formulation in Wagner.

The category 'poetic' extended well beyond any specific literary or musical genre, however. Above all, it embraced the concrete (epic) expression of that lofty idealism to which the Romantics aspired, the attempt to elevate art to a powerful metaphysical status. And it is in this sense that it became a part of Liszt's renovative programme for an instrumental music that might itself become the highest form of poetry through its association with a poetic idea. Liszt's conflation of music and the poetic required well-known topics – real or fictional heroes from world literature and known legend – so that the programme might take on the character of an essential and familiar background, orientating communication rather in the nature of a genre title. One theme of this kind to which composers constantly returned was the Faust legend, especially as represented by Goethe. This touched a nerve close to the heart of Romanticism. For many 19th-century artists, including composers, Goethe's masterpiece seemed the perfect symbol of humanity's new-found independence, representing the human being as a visionary whose quest for knowledge of the world and of the self would admit no constraining influence, however drastic the consequences. Faust challenged the Godhead, and Romantic composers responded.

Yet poetic programmes were by no means confined to the heroes of world literature. For some composers, the licence of the programme invited music to attempt to express the beauties and terrors of nature, now sublime and ordered, now destructive and irrational; for others it was the invocation of a glorious, idealized past that appealed, as either a nostalgic retreat from, or a necessary validation of, the present; for yet others an exotic dream-world of folktale and legend, of grotesquerie and fantasy, became their alternative reality. And most common of all were nationalist themes. The attempt by so many composers to lend their support to nationalist causes is revealing both of the unprecedented ambition of music in the Romantic era, and of a widespread belief in its expressive competence. As the century unfolded, an ever clearer differentiation between national styles was actively cultivated, influencing Italy, Germany and France every bit as much as Russia and east central Europe. Nationalist projects were registered by musical institutions (national theatres, publishing projects and the like), by subject matter (national histories and myths) and by musical style (the rediscovery or manufacture of ancient stylistic roots, and of course the cult of folksong). This last is of special importance. Indeed, the role of folksong in colouring the musical styles of the century could scarcely be overestimated. And the underlying impulse was Romantic to the core – a characteristically Rousseau-esque notion (adopted and transmitted by Herder) that the 'spirit of the people', which quickly became synonymous with the 'spirit of the nation', is embodied in its folk music, as in its language.

Whatever its subject matter, the status of 'poetic' (programme) music was hotly debated in late 19th-century music criticism, and it naturally invoked the polemically related concept of absolute music. We need to be clear that absolute music was more a metaphysical than a technical concept. Far from requiring an alliance with poetry to achieve its full dignity, the absolute musical work was deemed to be uniquely privileged. Through organicism it would establish a purpose in nature, healing the division of subject and object by uniting both in the self. The unified work would thus transcend the divisions of the self, its individual moments cohering in a whole which might present a sort of utopian promise; in short, it could stand for the indivisible Absolute, beloved of idealist thought. Viewed in these terms, the rival claims of poetic and absolute music echoed conflicting early 19th-century positions concerning the meaning and

classification of music, positions articulated above all by Hegel and Schopenhauer. But the claims themselves were argued out later in the century – by critics and historians such as Karl Brendel and Hanslick, as well as by leading composers such as Liszt, Brahms and Wagner. There may be a case for according special privilege to Wagner in this debate. Dahlhaus has argued that Wagner's apparently contradictory views on the role of music in the music drama established a kind of synthesis between poetic and absolute music, a single 'twofold truth', which recognized that music may serve poetry on a compositional level while embodying it on a metaphysical level. The potency of this idea lies in its implicit proposal that Wagner might indeed be seen to embrace the apparently contradictory tendencies of a Romantic aesthetic.

3. STYLES. It is arguable that any attempt to define a Romantic period in narrow stylistic terms will founder on inherent diversities. How do we deal with neo-classical tendencies in Mendelssohn and Brahms, with realists such as Musorgsky, or even with the Italian operatic tradition, which although clearly influenced by the Romantic ideology, remained essentially separate from it? More radically, how do we accommodate that extensive repertory of ephemeral music that formed the mainstay of public taste, to say nothing of publishers' incomes, during much of the 19th century? Such difficulties suggest that we are on safer ground considering Romanticism in relation to ideas and motivations rather than styles, and that if we must invoke styles, we will do better to confine the term to a description of the larger tendencies flowing from those ideas and motivations that apply it to the period as a whole. Such tendencies were dictated above all by the investment in subjectivity and the ideology of organicism, in short by the two essential meanings outlined above. And since both these projects were born of the Enlightenment and ran into difficulties with the rise of Modernism in the 20th century, there are perhaps further grounds for considering this period (roughly from the late 18th century to the early 20th) as something like a unit. In technical terms, then, we would trace some of the effects of an expressive aesthetic, notably on harmonic practice, while recognizing the arguably opposing impulse towards organically unified works, notably in thematic working.

One strength of this chronology, essentially that of Blume, is its implicit recognition that the structural foundations of most Romantic music remain firmly embedded in late 18th-century Classical practice. Even the rhetoric of gestural contrast, so characteristic of the Romantic century and so neatly embodied in the name and character of its archetypal medium, the pianoforte, accentuated rather than displaced Classical tendencies. What really changed in the 19th century was the weighting of existing components of musical syntax rather than the components themselves. Under the expressive imperative there was a subtle but decisive shift in the balance between the diatonic and chromatic elements of a tonal structure, for instance, and this operated both at the level of the musical phrase, and, through far-reaching modulation schemes (tonicizing non-diatonic scale degrees), that of the musical work as a whole. There was no obvious dividing-line between Classical and Romantic practice in this respect. Yet by the late 19th century, notably in works by Wagner, Reger, Mahler and Schoenberg, the capacity of tonal harmony to shape and direct the musical phrase was already compromised. Likewise there was a shift in the balance between triadic and dissonant harmonies, culminating in the poignant dissonance of some Wolf songs, for example, or alternatively in the aggressive dissonance of Richard Strauss's *Salome* and *Elektra*. Here, too, there was a threat to an underlying tonal structure. As Schoenberg later remarked of the tonal crisis of 1908–9: 'The overwhelming multitude of dissonances cannot be counterbalanced any longer by occasional returns to such tonic triads as represent a key'. In short, the increasing weight of both chromatic and dissonant elements prepared the ground for those radical changes of syntax which accompanied the rise of modernism.

Thematically, we can identify two opposing tendencies in Romanticism, and again both were rooted in late 18th-century practice. The melodic-motivic balance characteristic of that practice separated out into sustained songlike melody on one hand, and an ever more closely integrated motivic process on the other. In some late 19th-century music, notably in Brahms, these two tendencies achieved a new balance or synthesis, where a powerful motivic rigour informed the melodic process. The term 'developing variation' has sometimes been used (particularly by Schoenberg) to describe this tendency in Brahms, and it tells a yet larger story, easily relatable to an ideology of organicism. Like the thematic transformation of Liszt and Wagner, it signifies the enhanced structural weight assigned to thematic working in late 19th-century music in response to a weakening tonal foundation. In this respect Webern identified a kind of ideal when he remarked of Schoenberg's First String Quartet: 'There is . . . not a single note . . . that does not have thematic basis. If there is a connection with another composer then that composer is Johannes Brahms'. This was symptomatic of a more general preoccupation with unity, with the integration of part and whole, which would find its culminating expression in the 12-note technique devised by Schoenberg in the early 1920s. That technique formalized the late 19th-century perception that music took its unity from a *Grundgestalt*, a single basic shape – in effect the basic 'idea' of the piece. Thus Wagner, writing of Beethoven: 'At every point in the score he would have to look both before and after, seeing the whole in each part and each part contributing to the whole'; and of the *Ring*: '[It] turned out to be a firmly entwined unity. There is scarcely a bar in the orchestral writing that doesn't develop out of preceding motives'. Indeed, Wagner might well be identified as a determinate pivotal stage in the progression from a Classic-Romantic to a modern syntax, the point at which 'statement' and 'development' are fused in endless melody.

There were distinctive national variants to these larger tendencies in harmonic and thematic process, and of these the achievements of Russian composers merit special mention. In Russia, modal and symmetrical chromaticisms supported a uniquely colourful, often exotic and pictorial blend of national Romanticism, distinctly at odds with Austro-German introspection. The harmonic practice of 19th-century Russian composers, together with a thematic process favouring melodic repetition and variation over motivic working, and a tendency to give unprecedented structural status to timbre, texture and rhythm, would later prove of special importance to early 20th-century modernists working outside Austria and Germany, notably Debussy, Janáček and Stravinsky.
